He that loveth pleasure shall be a poor man; he that loveth wine and oil shall not be rich.—Proverbs 21:17.

Is there something inherently wrong in pleasure that the writer of the Proverbs should declare that he who loves it must therefore be poor? It hardly seems so, if pleasure be defined in a broad sense. But as certainly as day follows night, trouble follows in the wake of him who loves temporary pleasure above things of lasting and true worth.

Unbridled love of pleasure is the cause of much of the world's distress today. The love of joy-riding has led to the failure of many a man and woman. The love of the so-called pleasures of the gambling hall has wrecked homes and destroyed manhood. The love of the false pleasures of idleness signs the death warrant of worth-while living.

Too many people today are seeking their pleasure in the superficial things of life; too few find it in real living.

There is unexcelled pleasures to the right-minded man or woman in every small success that crowns his relentless effort to do something worth while. Nothing wrong with that kind of pleasure! There is mighty pleasure to the honest heart that strives ever to do the right thing in the right way for friend or foe, and there is no penalty attached for the loving of such pleasure.

No, the penalty follows him who seeks out worthless things and activities and thinks he takes pleasure in them. The second part of the text better suggests the meaning which the writer intended. He that loveth wine and oil shall not be rich, for these things typify the superficial, the fleeting things of life, and neither spiritual nor material prosperity can result from them. Like the flowers of the field, the wind passeth over them and they are gone. But he that taketh pleasure in the things that are real, the things that are permanent, eternal, everlasting shall be rich indeed.

FARM BUSINESS AND MARKETS OUTLOOK

HIGH prices for factory products which farmers must buy are due chiefly to high wages in industry and commerce, but those self-same wages explain the record rate at which many farm products are being consumed. At least a few crumbs from the urban prosperity banquet table are falling to the former.

More butter, cheese, eggs and poultry are disappearing into consumptive channels, as shown by the combined records for Chicago, New York, Boston and Philadelphia, than ever before at this time of year. The hog market is handling the largest summer runs ever known at better prices than seemed possible for such heavy production and per capita consumption of pork in the last 12 months has shown a phenomenal increase. Nor is this heavy consumption of pork at the expense of the market for beef. Receipts of cattle are as heavy as a year ago and prices are higher.

Index numbers of retail prices of 22 principal articles of food in the principal cities in the United States were 3.5 per cent higher in July than a year previous. Clothing prices certainly are higher. Not only is the consumer buying more, but he is paying more per unit.

Cattle Supply in Expansion Stage.

The summer and fall beef harvest became more general last week. Receipts at the leading markets increased about 15 per cent and are now nearly one-third larger than the first week in August

Demand for good beef maintains surprising breadth and prices have held remarkably considering the size of the run. Prime heavy steers have held to the levels recently attained with a new top of $13.10. On all grades below choice only a moderate decline was registered.

Shipments of stockers and feeders from the 12 leading markets in the last four weeks have not been quite so heavy as in the same period last year, but feedlots will probably be about as well filled as a year ago. Higher prices for fat cattle than last August tend to offset the advance in corn.

New Top on Hog Market.

Advancing hog prices have not started a deluge in the last three weeks and the gains have been held. Evidently the old crop of hogs is being cleaned up at last. Top prices last week went above $9 at Chicago for the first time this year.

The course of the market is uncertain, but a further bare spot and high prices now seem probable in the next month before many spring pigs are ready for the shambles.

Lamb Supply Far Below Average.

Receipts of sheep and lambs at the 11 leading markets were the largest of the year last week, but in spite of the 35 per cent increase over the preceding week they totaled only about 245,000, compared with a 10-year average for the corresponding period of 340,000. Dressed lamb prices were aviating as a result of the small runs in the preceding two weeks and feeder buyers are taking all thin lambs as well as many with considerable flesh and weight. Prices were advanced during the week on both

Wool Buyers in Waiting Mood.

But little wool is changing hands at present, as mills are awaiting developments in the cloth markets and the trend in foreign wool markets, including the London series starting September 4, and on new clip wools in Australia, New Zealand, South Africa and Argentine, which will begin to be offered in the next month.

Excess Wheat Mostly Vanished.

Numerous revisions in the world's wheat supply statistics have disposed of most of the excess which was in prospect two months ago. The crop estimate for the United States has been reduced about 42,000,000 bushels in that time and the official estimate for Canada is about 50,000,000 bushels under the July promise. In addition, our spring wheat was damaged by rust and winter wheat by excessive rains at harvest time, while rust and blight have made an unusually high percentage of the Canadian crop of low milling quality. With good wheat selling at low prices, the off grades are extremely cheap, increasing the probability that a large amount will be fed.

Corn and Oats.

This year's corn crop will probably exceed 3,000,000,000 bushels if it is not injured by frost.

Seed and Feed.

Cloverseed and timothy prices advanced last week.

The feed market is firm, with both wheat and corn feeds quoted higher than a week ago.

Country loadings of hay are reported to be of small volume, receipts at the leading distributing markets are light and demand from consuming sections, particularly the southeast, is increasing, so that prices are firm.

Eggs, Butter and Cheese.

The trend of the fresh egg market is unquestionably upward, with high grades advancing much more rapidly than low grades.

A moderate setback in the butter market occurred last week as a result of a small increase in receipts at the principal markets, a temporary decline in the distributing demand and belief on the part of the butter trade that fall production would be relatively heavy.

Know Your Chickens by Their Parents

Owing to a strong demand for high class chicks from flocks that have been inspected under uniform supervision and clearly defined rules and in order to maintain the same high standard of all flocks, Washington recently placed itself on the list as the second state in the Union to organize a statewide accredited hatchery association. The accredited hatchery plan was already operating in the state before the organization of the Washington Accredited Hatchery and Breeders' association, but only by county units. Mason county was the first to establish itself. The breeders who delivered eggs to the central plant at Shelton were well pleased, their hatch this year being 70 per cent of all eggs set. They ordered the greater part of the chicks to build up their own flocks, but hope to have more chicks to sell outside of the county next year. Whatcom county has also found the accredited plan to work successfully. Now the poultrymen of the entire state of Washington, which has as good stock as can be found anywhere in the world, are on a basis where they can work together and call for supervision and certification from the state college, thus establishing a standard which will sell the chicks on the name of the association.

Twenty-five thousand chicks were hatched in the Mason county accredited hatchery this year, all of which were purchased or spoken for before the hatchery started. The loss of chicks from the hatchery was very small, the percentage being as low as 4 per cent in a large number of cases, while the heaviest loss was 20 per cent. The cause for the heavy loss was the removing of the chicks from the incubator while too young, the buyer himself taking the blame because of being unable to make a second trip.

One thousand breeders have been added to the number that have already supplied eggs to the hatchery and the 1924 hatch will be from some of the highest class hens as well as from the flocks that have been culled over and accredited by the state accredited plan. The hatchery will have to increase its capacity for next season and furnish room for a third more eggs than were hatched last year.

Much of the credit for the success of the hatchery is due H. E. Drew, the county agent, who helped the breeders in drawing up the plans which would enable them to produce high class chicks from their own flocks. The plan has been a splendid example to other districts of the state and has doubtless helped to influence the establishment of the statewide accredited hatchery plan which will soon be in operation.

The object of the new state association is to improve the standard of poultry by means of official supervision and certification of hatcheries and breeding flocks in cooperation with the state college. Any individual, firm or corporation within the state, engaged in hatching chicks or producing hatching eggs, is eligible to membership when they shall have complied with the rules of the association and been approved by the supervisor.

The officers are Jay Todd, Seattle, president; E. R. Wills of Prosser, vice president, and P. S. Dickey of Tacoma, secretary-treasurer. The annual meeting shall be held the second Monday in September of each year.

In order to become accredited a hatchery must first file with the state college, through the association secretary, not later than October 1, a list of all flocks from which he intends to use hatching eggs, and a supplementary list of later purchases. It must agree to hatch no eggs and sell no chicks except from accredited flocks, provided that it may sell chicks other than Leghorn if they are plainly marked "Not Accredited." When a hatchery has complied with all the rules of the association and all the flocks furnishing it with hatching eggs have been passed by the supervisor it will receive a certificate entitling it to a place on the accredited list and to use the seal o remblem of the association.

Hatching eggs must average 24 ounces to the dozen, with no individual egg under 1 1-12 ounces, and eggs shall be uniform in size, shape, color and shell texture. Fowls used for breeders must be in good, healthy condition, vigorous, well-developed, fully matured and free from foreign color. The females must be culled according to the standards of the state college and passed on by the supervisor as to vigor and maturity. The males shall be passed on by the supervisor as to vigor, maturity and standard size. They shall be from trap-nested dams of not less than 200 eggs for season of 1924 and 225 eggs thereafter.

After the 1924 breeding season all males used shall be from accredited trap-nested flocks, or flocks certified to by other state or national associations. A sealed leg band shall be placed on each male bird passed by the supervisor.

No artificial lighting shall be used in longer than 12 hours and none on 1-year-olds or older, prior to January 1.

Adequate range must be allowed breeders from November 1 to end of breeding season and grain must constitute at least 50 per cent of all grain and mash fed and an ample supply of green feed must be provided at all times.

There shall be a charge to cover cost of supervision of 2 cents per hen, with a minimum of $5 per flock and $2 per thousand eggs hatching capacity, with a minimum of $10 per hatchery. The minimum fee must accompany application, 50 per cent of additional fees shall be paid by January 1, and the balance on or before March 1. Surplus funds shall be returned to members.

General supervision of the work is in charge of the state college, which will appoint and train supervisors, issue certificates to supervisors, hatcheries and the breeding pens prior to January 1, and none after that date will make the day breeders and publish a list of all accredited hatcheries.

At least five times during the breeding season the supervisor or a deputy supervisor shall make official visits to each flock and hatchery.

The accredited trap-nesters' rules are made a part of the rules and regulations of the association. Under these, all stock entered shall be trap-nested on the owner's premises, during the period of 52 consecutive weeks from day first egg is laid in trapnest. Only eggs actually found in trap-nest shall be counted and the entrant shall record each egg laid and shall keep posted in the house in which the fowls are kept, for the information of supervisors and others, a record of same. All flocks will be under unannounced supervision, official visits being made at least once every 30 days and may be at irregular intervals.

The rules adopted by the association were first outlined by W. D. Buchanan, poultry specialist at the college.

Fair at Elma Makes Good

By HORACE ADDIS.

Judged by the quality of the exhibits, taken as a whole, and by the attendance, the Grays Harbor fair held at Elma, August 29-September 1, was the most successful in its history. It is the goal of Secretary Palmer, County Agriculturist Cowan and others of the management to have each succeeding fair at least a little better than the one preceding. Even the races set a new record by the lowering of the track record over three seconds, in one of the most hotly contested races seen on the ground, in the 2:14 pace. Good racing was one of the attractions every day. As much can not be said of the carnival, where game of chance were permitted. This is the one criticism, and I feel it should be made of every fair which allows this class of entertainment.

Potatoes and Honey.

The agricultural pavilion was well filled, but two classes of exhibits were of an outstanding nature. Greeting the eye as one enters, the exhibit of potatoes of Perkins & Wedekind of Brady, was remarkable both for quality and for style of arrangement. There were 28 boxes, in four rows. Each represented a variety, and small potatoes, seed potatoes, larger commercial size and the large baking size each had its own box, the potatoes ranged together on end. Probably nothing in the entire fair attracted so much attention or is such an advertisement of Garys Harbor county potatoes, Foster & Brinkley of Elma had an exhibit of almost if not quite as good quality, though not so large or as well displayed.

Honey was the other striking exhibit of this building. Few know that Grays Harbor ranks second only to Yakima as a honey producing county. J. J. Mahoney won first; M. Townsend, second, and William Highland, all of Elma, third. Miss Helen Shermer of Garden City, a young lady of 20, had a unique display, showing the mountains and the "queen bee," on which she was awarded a special prize. Mr. Mahoney had specimens of cooking and canning, with honey in place of sugar. The Grays Harbor Bee club of five boys had a big exhibit of good honey.

Oakville Community club, the Elma Parent-Teacher association and the Porter Community club each had a creditable community exhibit, winning in the order named. There was a beautiful display of grains and grasses and good vegetables. Boys' and Girls' club members had about 30 entries in this department.

The women's art department was filled with those notable specimens of needlework and other handiwork of women that it seems always possible to secure, in any community. A simply wonderful display of flowers was made, of which dahlias formed the major part. Commercial displays were good and largely made by local firms.

The Baby Show.

The baby show was in realty a baby clinic, in which valuable advice rather than prizes and information was given.

A large part of one building was devoted to home economics work, in charge of Miss Mabel Webber. Three canning clubs made exhibits and one gave demonstrations each day. These were Oakville, Satsop and Montesano. In addition to this, demonstrations of labor saving devices in the kitchen were given, such as the fireless cooker. Miss Minerva Lawrence's college booth, showing the hanging of curtains and draperies, was among these exhibits. One booth showed what a family of five should have in the cellar, including fruits, vegetables and meats, most of them home-made products. There are 11 clothing clubs, three canning clubs, one cooking club and one room improvement club, in the county, and all were represented. The clothing club takes up not only sewing processes, but the selection and choosing of clothes and the knowing how to wear them.

Autos and dairy machinery were displayed in tents and the dog show, an excellent one, had its own building.

With the Poultry.

The poultry pavilion, which is an excellent one, large, light and well ventilated, was filled with birds of the best quality this fair has ever had. White Leghorns easily led in numbers, with Barred Rocks second. Fancy as well as utility breeds were well represented, and there was a good show of turkeys, ducks and geese. County birds were shown mostly in the utility classes, but there were some good Grays Harbor birds in the fancy classes.

The Live Stock.

The live stock barns were well filled with the best and most uniform lot of animals this fair has ever had. There were not as many animals as a year ago, when a sale was held, but the average quality was better.

Jerseys led in both numbers and quality. John R. Martin of Satsop showed nine head; John H. Taylor, Montesano, eight; Parker Askew, Montesano, eight, besides his two boys, Benjamin and Walter, one each; Ford Twidwell, two, and Dollie Twidwell, one calf; Mr. Beckwith, Elma, one, and George Hepworth, Elma, one. Taylor's senior yearling bull, Oxford Fern's Theater Cup, was made champion of the breed and grand champion of all dairy breeds. Taylor won champion honors on his mature cow, Gertie's Lucy, and she not only won championship of dairy breeds, but the first prize for dairy cow, based on both production and show type, given by the Aberdeen chamber of commerce.

Holsteins had a number of exhibitors, including a few club boys, A. A. Seifert, Elma, showed four head; Edward Valentine, Montesano, three; Jordon Pierce, Montesano, one cow, Blossom Wayne Boone, on which he won championship; W. J. Burns, Montesano, three; George Mouncer, Elma, one; Warren Brown, Montesano, one, in a club class; Ellis Mouncer, two grades, in club work. Seifert's bull, Sir Viceroy Longfield DeKol, was made champion of the breed.

J. M. Olson, of Elma, made the entire Guernsey show, with 10 head. His mature bull, Chicona Premier, and his junior yearling heifer, Skylark Topsy of Orchard Hill, were the champions. The later is a granddaughter of the great cow Samamish Topsy, that died last year.

F. H. Porter, of Halsey, Ore., showed the 14 head of good Red Polled with which he is making the circuit. As usual Peach Knot was made champion bull and Violet champion cow.

Milking Shorthorns were represented by the herd of E. C. Truesdell, of Centralia, 14 head. Foothills Clansman, a mature bull, and Ora Jewel, a roan two-year-old heifer, were placed as champions.

Berkshires led in numbers in the big barn, but the show was made by one exhibitor, the Earlken Berkshire compny, of Goldendale, Wash., with 16 head. Riverby Laurel Epoch, that could have won in strong competition, was made champion, with Royal Dominator's Fussy, champion sow.

Poland Chinas had the largest number of exhibitors. Fred Mouncer, Satsop, had three head and won championship on his boar, King of the Harbor. Robert Paulson, Montesano, with three head, had

(Continued on page nineteen.)

Effect of the Tariff on Wheat

In the Fifth congressional district of Washington, where the resignation of Congressman J. Stanley Webster, to take appointment as federal judge, has brought on a special election, the effect of the new tariff law on farm products has become an issue. Judge Sam B. Hill of Waterville, the democratic nominee for congress, and other democratic speakers are contending that the tariff is more detrimental than beneficial to the farmers. State Senator Charles Myers, the republican nominee, is telling the wheat growers that they would have a harder lot if it were not for the tariff, which is keeping out Canadian wheat. Mr. Myers is a grower and has 320 acres in wheat this year near Davenport.

Two Spokane authorities in the grain trade, who look at the industry from different angles—one a wheat buyer, the other a miller—were recently interviewed on the subject, as was also the attorney for the American Wheat Growers, Associated. "Certainly the tariff does protect our growers on the milling varieties," said R. J. Stephens of the Stephens Grain company. "If it were not for the tariff American millers all along the Canadian boundary line would be free to bring in western Canadian wheat and use it to depress the prices paid for American-grown grain. We repeatedly have seen the milling prices here run well above the export prices."

G. I. Toevs, vice president of the Centennial Mill company, concurs in Mr. Stephens' view that the tariff of 30 cents a bushel gives the growers in the Inland Empire better prices than they would receive if there were free trade in wheat. Mr. Toevs said that just now both millers and exporters are offering better prices than are warranted by the export market. "This is due entirely to the fact," he explained, "that early in the season ships are chartered for wheat and flour and when they arrive for loading and wheat is not available an artificial demand for early delivery is created, and the dealers are compelled to pay a premium in order to get the wheat to market promptly."

Mr. Toevs thinks that the wheat growers will find it profitable to sell a part of their crop for quick delivery. "I should like to see us export, or sell for export, 200,000,000 bushels in wheat and flour before the first of the year. We should then be in position to get better prices for what was left. But as long as we have a large surplus available we can not hope for higher prices."

Julius H. Barnes, who was head of the United States grain corporation for the government during the war, says that the grain growers of the northwest are getting benefit from the tariff on wheat. "For instance," said Mr. Barnes, "the new crop of northwest spring wheat of strong milling quality has advanced in price recently in the Minneapolis market until today it could be sold for fall delivery at $1.15 per bushel. The same quality of wheat of equal milling value for fall delivery in the Winnipeg market will not bring above 95 cents at the time this comparison is written. Moreover, the Canadian farmer is paid in Canadian dollars, which are 2 per cent below American dollars in their buying value today."

The democratic point of view is expressed by F. A. Garrecht, attorney for the American Wheat Growers, Associated, the national cooperative marketing organization, who declares that the principal agency of disaster to the farmer today is the manner in which the tariff system operates against the farmer. "The tariff must be revised to insure agricultural equality and a fair exchange value with other commodities on the domestic market or the protective principle will perish," says Attorney Garrecht. "The 6,000,000 farmers are producing a surplus of wheat far above home consumption. This surplus must find a market abroad. It is fundamental both in theory and experience that the world price for this surplus fixes the home price for the whole crop. Therefore, no tariff can increase the home price of a crop of which we export a surplus. There is a slight exception in some localities near the Canadian border where ordinarily millers might import certain hard spring wheat for blending and where growers in Montana may receive a slight benefit as to certain quality and a limited quantity. But growers of winter wheat receive no benefit and for all practical purposes the ordinary general price is the Liverpool market less cost of transportation. From this it follows that the price of wheat, being controlled by world price, receives no benefit from the tariff.

"Besides, to whatever extent the tariff affords protection to industry it becomes a differential against the farmer for he is compelled to buy in a protected market, but must sell or accept the price made in a free trade market.

"Manufacturing industries, entrenched behind the tariff wall, resist the slump in world conditions. They are so thoroughly organized that they can regulate supply to demand or hold their surplus, and not being compelled to sell abroad the world market does not fix the home price for them. Thus organization and the tariff hold up the price. The result of this system is a spread so wide between the price for which the farmer sells, which is the world price, and the price of what he buys, which is the highly protected domestic price, that the farmer's buying power is destroyed with the dire results we see on every hand."

Popular Model Embroidered Gabardine for Stouts

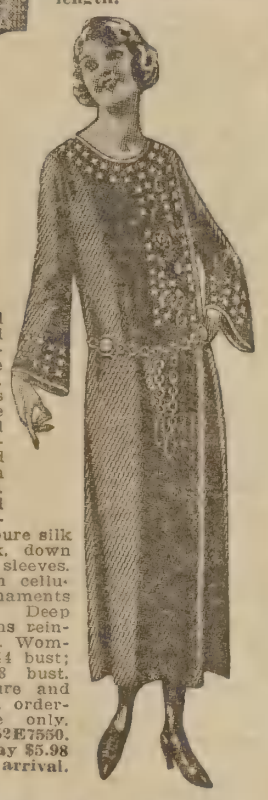
$3.48

For Stout Women

Sharood heartily recommends this attractive frock of good quality cotton gabardine. It is designed along slenderizing lines for stout women. The skirt is finished with two wide loose panels attached at waist and bottom. The edges are bound in black and embroidered in contrasting color. Collar is in the new long roll shawl effect, embroidered to match panels on skirt, as are also the vestee and tabs on the bell-shaped sleeves. Dress is gathered at waistline at back and finished with tie sash. Sizes 44 to 54 bust measure. State length desired. **Order navy by No. 52-E7610; brown, No. 52E7612. Send no Money. Pay $3.48 and postage on arrival. State size and length.**

Richly Embroidered All-Wool Serge

$5.98



For women and misses of refined taste, this charming dress will have a strong appeal. The material is an unusually fine quality all wool storm serge. Model has neck and sleeves bound with red silk braid. Hand embroidered in beautiful contrasting colors of pure silk floss around neck, down front and on sleeves. Metal girdle with celluloid and metal ornaments encircling waist. Deep hem and all seams reinforced and serged. Women's sizes 34 to 44 bust; misses, 32 to 38 bust. State bust measure and skirt length when ordering. Navy blue only. **Order by No. 52E7550. Send no money. Pay $5.98 and postage on arrival. Money back if not satisfied.**

SEND NO MONEY

Here is the very pick of the choicest fall styles—the most fetching garments of the season—at positively unequaled bargain prices Sharood challenges the world to match these values. Order right from this page. Get the most fetching advanced styles at the lowest prices in America.

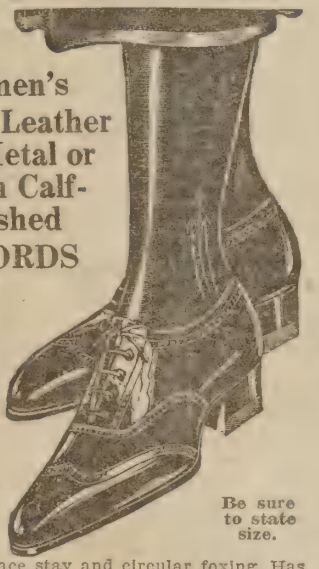
Bulgarian Effect Gabardine Frock For Women and Misses

$2.98

An exceptionally attractive fine quality cotton gabardine dress for women and misses. Long roll collar in shawl effect, sleeves and belt piped in red. Entire front of blouse enhanced with exquisite allover embroidered design in Bulgarian effect with rich harmonious colors. Two streamers at both sides and front. Wide belt embroidered to match blouse. Sizes for women, 34 to 44 bust; for misses, 32 to 38 bust. State length desired. Colors, navy or brown. **Order navy by No. 52E7500. Brown by No. 52E7502. Send no money. Pay $2.98 and postage on arrival for either color. State size.**

Women's Patent Leather Gun Metal or Brown Calf-Finished OXFORDS

$1.98



Choice of Three leathers

Made with imitation shield tip and medallion perforated vamp, perforated lace stay and circular foxing. Has medium rubber heel and medium pointed toe. Sizes 2½ to 8. Wide widths. **Order patent by No. 52A121. Order gun metal by No. 52A122. Order brown by No. 52A123. Send no money. Pay $1.98 and postage on arrival.**

Be sure to state size.

Popular One-Strap One-Buckle Pump, Black Patent or Brown Calf Finish

$1.98

Always Mention Size When Ordering

A leading style in all the big cities for fall wear. One-strap one-buckle pump of rich black patent or brown calf finished leather. Is well made with perforated sewed tip and medallion toe. Fancy perforation on vamp, strap and quarter. One-piece medium extension oak sole; low flapper walking heel with rubber top lift. Sizes 2½ to 8; wide widths. **Black patent No. 52J20. Brown calf finish No. 52J21. Send no money. Pay $1.98 and postage on arrival for either leather. State sizes.**

Women's Classy Stitchdown Oxfords

$1.98 Up

Classy stitchdown Oxford for women. Wonderfully comfortable and stylish. Uppers of brown or patent leather. Smooth leather insoles. Flexible stitched down oak outsoles. Low rubber heels. Sizes 2½ to 8. Wide widths.

Child's Middy Dress Attractive Two-Tone Combination

$1.98

One of the most novel and attractive children's garments ever produced, and sure to be a big favorite for fall and winter. A charming two-piece middy dress, including snappy Balkan middy of all red flannel cotton warp with round collar and cuffs. The front, collar, cuffs and Balkan bottom are embroidered in exquisite contrasting colors. Rope girdle with tassels at waist. Skirt of navy blue serge in clustered plaited style hangs from a white muslin under-waist. Furnished in red blouse and blue skirt combination only. Sizes 7 to 14 years. **Order No. 52G8326. Send no money. Pay $1.98 and postage on arrival. Be sure to state size.**

Men's Vici, Cushion SoleShoes

$2.98

Men's comfort and dress shoes. Cushion soles and rubber heels. Sizes 6 to 12. **Order soft toe model by No. 52A618. Order blucher cut with tip toe by No. 52A617. Send no money. Pay $2.98 and postage for either style.**

Novelty Cross-Strap Model in Rich Black Patent Leather

$2.98

State Size

Every one will admire this early fall style cross-strap pump. The vamp and quarter are of selected black patent leather with rich black suede four-bar effect cross straps. Medium pointed dress toe has imitation perforated tip. Vamp and quarter neatly perforated. Straps fasten on each side with buttons. One-piece leather sole with Baby Louis leather heel and metal plate. Sizes 2½ to 8; wide widths. **No. 52J12. Send no money. Pay $2.98 and postage on arrival. State size.**

FREE BARGAIN CATALOG.

Your order from this ad brings you our beautifully illustrated 160-page catalog of more than 4000 bargains in everything to wear. You get a new bargain catalog every 6 weeks. This is Sharood's way of keeping you supplied with fresh, up-to-date merchandise at the lowest prices in America—a method vastly superior to the old way of sending out a big catalog only once or twice a year.

Rich Black Satin Pump for Women

$1.98

Women's black satin dress pump, one-strap, one-button style, with fancy buckle and ornament on strap. Plain vamp with medium toe and close edge trim sole with low rubber heels. Genuine oak soles. A dressy, stylish new spring fashion that will be all the rage among the best dressed women. Sizes 2½ to 8; wide widths. **Order by No. 52J252. Send no money. Pay only $1.98 and postage on arrival. State size.**

Underwear Specials

Men's Winter Underwear .. $1.19 Up

They are the best bargains you'll find at anything near this sale price. Heavy weight flat knit union suits of select long fiber cotton in popular Jaeger or gray Random color. Heavily brushed fleece lining on inside. Wrists and ankles are elastic knit. Sizes 34 to 46 chest. Buy a year's supply right now—today. **Jaeger color No. 52C-1279. Pay $1.19 and postage on arrival. Gray Random No. 52C-1280. Pay $1.29 and postage on arrival. State size.**

Men's Work Shoe

$1.98

Brown or black work shoe of durable leather. Solid leather inner soles. Heavy double soles. Green chrome outsole. Leather heel. Sizes 6 to 12. Wide widths only. **Order brown by No. 52A758. Order black by No. 52A760. Send no money. Pay $1.98 and postage on arrival.**

Men's DRESS SHOES

$2.98

Give Size.

Men's French-toe dress shoes or oxfords, in brown mahogany calf-finished leather. Have medium toes, oak soles and rubber heels. Perforated on vamp, toe and eyelet stay. Sensational values. Sizes 6 to 11, wide widths. **Order Oxfords by No. 52A658. Order Shoe by No. 52A660. Send no money. Pay $2.98 and postage on arrival for either style. State size.**

Bedrock of Cooperation in Denmark

By CHRIS L. CHRISTENSEN
United States Department of Agriculture

AN interesting and rather unique aspect of the Danish cooperative associations is that in the constitution and by-laws of practically all the cooperative associations provision is made that all disputes and disagreements arising between members and the associations are to be settled by a board of arbitration, and in most cases the association's constitution and by-laws specifically state that such disputes and disagreements can not be carried into the courts. The members of this board of arbitration are elected from among the members by the associations. The system has worked out satisfactorily, the men on the arbitration boards have a sympathetic understanding of the farmers' problems.

III. PRINCIPLES OF SUCCESS.

In their 40 years of experience in cooperative marketing the Danes have evolved certain fundamental principles upon which each of their associations must rest in order to be successful.

Strictly Business.

1. The Danish cooperative associations are strictly business organizations. They are organized, operate and function purely along economic lines and are developed free from all political, state, religious or social class influence. They have found that to build on a business basis is not only sound but highly essential, as it always provides a common ground upon which the membership may meet.

As to Government Aid.

In the whole field of agricultural cooperation in Denmark there is only one instance where a cooperative association has received financial support or aid from the government, that being the cooperative breeding associations for cattle, horses and swine. These associations are undoubtedly looked upon as of high educational value in furthering better live stock improvement. They may be classified as improvement rather than business associations.

Sufficient Patronage.

2. No cooperative association is organized in Denmark, whether it be local or national, until a sufficient amount of patronage is assured to enable the association to operate in an economical and efficient manner. In the cooperative bacon factory it was found in building the plants in pre-war years that such a plant could not operate efficiently unless it handled at least 25,000 to 30,000 pigs annually.

Consequently, before an association built its plant, sufficient membership guaranteeing this necessary supply of hogs was subscribed before the association was completed.

The same principle is true of the cooperative creamery. In pre-war days no community would go ahead with a cooperative creamery unless it was sure that the total milk production from at least 500 or 600 cows in that community would be delivered to the creamery for a definite period ranging from 5 to 10 years. No effort, however, has been made among the Danish farmers to control the volume of production unless the volume is necessary for efficient operation. Efficiency and economy in operation, and not monopoly, is the goal.

Intelligent Membership.

3. The structure of the cooperative organizations from the local to the central association rests upon an intelligent membership. The Danish cooperation organization is characterized by strong local organizations which possess an intelligent, well-informed producer membership, informed of the activities of both the local and central associations. While the Danes fully appreciate the value of sound central organization, they insist that a strong local development is essential to efficient cooperative busines operations. It is of further significance to find that the large Danish cooperative associations which have now been operating successfully for 25 to 35 years have in each case started from a comparatively small beginning and as its management and membership gained wider experience, it enlarged its business activities along sound lines.

One Man One Vote.

4. In all Danish cooperative associations one man has one vote. The vote of the small farmer with two or three cows counts as much as the vote of the larger farmer with 200 or 300 cows.

Membership Control.

5. The affairs of the local associations as well as of the central associations are managed through a democratic producers' membership control. In the local associations a board of directors is elected by the members. This board appoints a technically trained, qualified manager to lead the actual business operations of the association. In the central associations representatives are appointed by the members of each local association, which in turn appoints a board of directors for the central association.

Sound Business Management.

6. Sound, capable business management is recognized as one of the most essential factors for the success of any cooperative association in Denmark. The members have come to recognize more and more the value of employing highly trained technical and efficient business men, familiar with the trade, to handle the business of their association. It is appreciated that only the right salary can attract the right type of manager.

Along Commodity Lines.

7. The Danes have found it sound business to organize their cooperative marketing and selling associations along commodity lines. The trend of agricultural cooperation in Denmark has been toward specialization. Both in the selling of agricultural products and in the buying of farm supplies special associations for special purposes are formed. As a result of organizing along commodity lines it is not uncommon in Denmark today to find a farmer on a 40 or 50 acre tract who is a member of 12 or 15 cooperative associations. His milk is delivered to the cooperative creamery, his pigs to the cooperative bacon factory, his eggs to the cooperative egg marketing association; he will be a member of a cooperative buying association through which he purchases his feeding stuffs, such as corn and oil cakes, and of another through which he is supplied with commercial fertilizer, and so on.

The value of organizing along commodity lines is the assurance that the members within a particular association handling a single commodity have identical interests, and that each commodity, whether in selling or buying, requires special treatment and handling, which necessitates the employment of skilled men who possess expert knowledge of that one commodity.

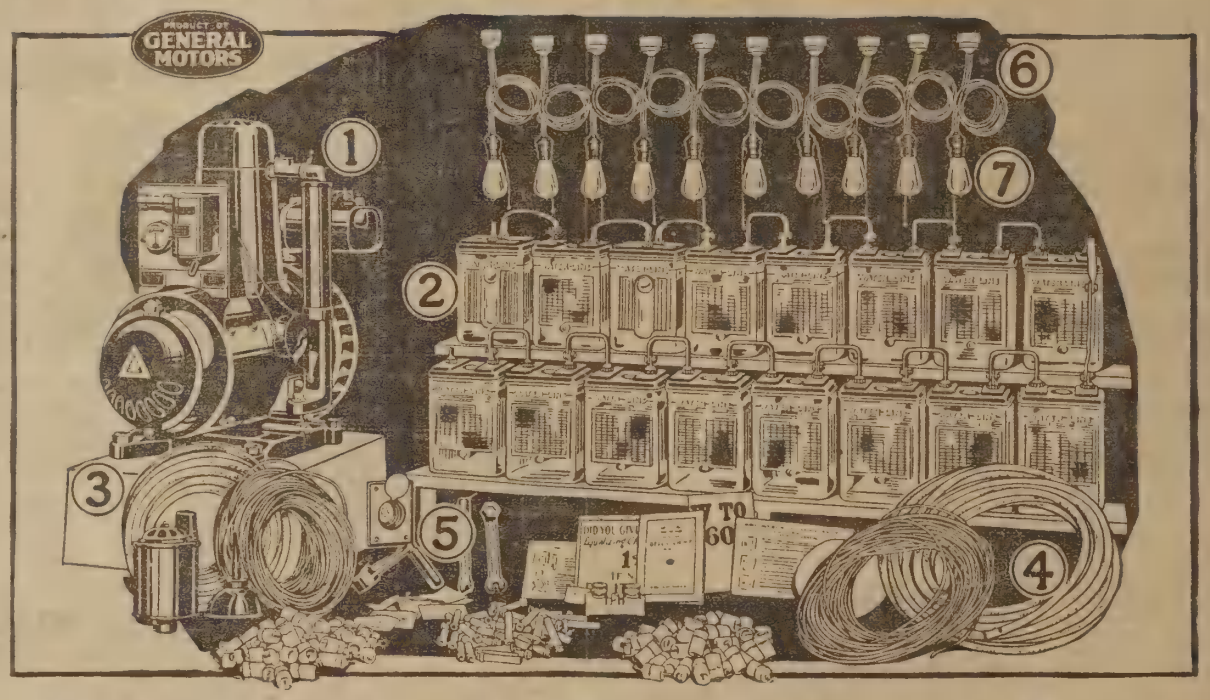
In organizing along commodity lines, the Danish cooperative movement is characterized by a strong local development, the local association being usually formed in a local community for one purpose, which with similar associations formed for similar purposes in other communities will federate to form the central association. In practically all cases the membership of the central association consists of local associations, which in turn are made up of individual members rather than the individual members being tied to the central association directly.

Contract Agreements.

8. That an association may be assured of a proper volume of business, contract agreements are made between the association and its members for the delivery of their total production for a definite period. The same principle applies to the purchasing associations. These contract agreements exist between both the central

(Continued on page fourteen.)

Here's a Standard DELCO-LIGHT Outfit!



FOR the new remarkably low *completely installed* price of Delco-Light you get more than merely a lighting plant. You get the full outfit shown above, installed completely in your home, ready to turn on the lights. This full outfit consists of the following:

1—One standard Delco-Light plant, the most popular size—Model 866, 850 watts capacity, 32 volts.

2—One standard Delco-Light Exide Battery, 16 large capacity cells, extra thick plates and heavy glass jars.

3—The installation of plant and batteries — except purchaser to furnish concrete base for battery rack.

4—Wiring house for ten (10) lights —to be located wherever specified by purchaser.

5—One general power outlet to be located in house wherever specified by purchaser.

6—Standard set of ten (10) drop lights with sockets installed in house.

7—Ten (10) standard electric light bulbs.

You have wanted a Delco-Light plant. Here is your big opportunity to get it. See the Delco-Light Dealer today.

DELCO-LIGHT COMPANY
DAYTON, OHIO

508 First Ave. So. MODERN APPLIANCE CO. Seattle, Wash.

— and you get all this *for the* Lowest COMPLETELY INSTALLED Price ever Announced

See your Delco-Light Dealer or Mail *the* Coupon

Open Cab, Express Body
with Grain Box

$1425

at Lansing; add tax

SPEED WAGON ©

REO

The Rapid Transit System for Grain Growers

QUICK movement of grain often turns loss to profit. Changing weather, unexpected twists of the market, changes in car-loading dates—or a dozen other occasions may require fast moves.

Speed Wagon fleetness lugs load after load of grain quickly and cheaply while ponderous trucks crawl under excess tonnage. In a day, Speed Wagon does more work.

Speed Wagon agility carries the standard grain box nimbly into the fields, or close to the loading platform. Time is saved; handling minimized.

Certainty of performance, and endurance qualities for a quarter-million (or more) miles of service are built in, because of:

—Inner-frame anchoring of power units

—Thirteen-plate clutch

—Amidship mounted transmission

—Super-powerful brakes

—Vital parts 50% oversize.

The sum total is ECONOMY. On the basis of *lasting* economy, *the Speed Wagon is the lowest priced commercial car in the world!*

Designed and manufactured in the big Reo Shops,—not assembled!
Chassis $1185 at Lansing, plus tax. Capacity 500 to 2500 pounds.

REO MOTOR CAR COMPANY, Lansing, Mich.

LIVESTOCK AND DAIRY

Ration for Milk Cow

By P. M. BRANDT.

Will you please give me a balanced ration for milk cows from the following? Oat hay, oil meal, bran, wheat and oats.
Perrydale, Ore. T. B.

It is not possible to develop a satisfactory dairy ration without the use of a legume hay and some succulent feed such as kale or roots. Neither is wheat an entirely satisfactory feed for cows, although it can be used successfully when the price is low. This does not mean that I would advise selling the feed and buying some other food, but merely indicates that while a fairly satisfactory ration can be developed with some of the feeds that you have given it will not be as satisfactory as some other rations should be.

I suggest that you mix your grain in the following proportions—oats, five parts by weight; wheat, three parts by weight; bran, one part by weight; oil meal, one-half part by weight. A good way to mix this feed is to have the oats and wheat ground. The oats do not necessarily have to be ground, but can be chopped coarsely or rolled. The wheat, however, should be ground coarsely. Take 500 pounds of oats, 300 of wheat, 100 of bran, 50 pounds of oil meal and mix them all up thoroughly and then feed this mixture at the rate of one pound for each three or three and one-half pounds of milk the cows produce each day. At the same time allow them to eat all the oat hay they will eat up clean and not waste. This will amount to probably not more than 10 or 12 pounds a day for each animal. If you are not planning on feeding all of your wheat or can not economically feed all of it it might be a good thing to have it screened, so that you feed only the wheat of low grade, selling your best grade wheat. The bran is light in body, as will be the ground oats, and the combination will probably be fairly satisfactory with the wheat.

Wheat for the Cow

By E. V. ELLINGTON.
Head, Department of Dairy Husbandry, State College of Washington.

Wheat has practically the same feeding value as corn or barley for milk production. Inasmuch as wheat is the chief cereal used in America for human consumption, it usually is so high-priced that its use for cattle feeding is precluded. However, conditions at this time indicate that there may be wheat available for that purpose. If any of the grain is damaged or discolored so that it will not command the best market price, it may well be sold or marketed through the dairy cow. Wheat that is discolored or damaged differs little in composition from the best marketable product, though it usually contains a slightly larger amount of moisture and protein.

Since wheat, barley and corn have practically the same feeding value, they can be substituted for each other, pound for pound, in the cows' ration. Wheat is slightly higher in protein than either corn or barley, but is slightly lower in fat than corn. Wheat, like corn, should always be cracked or ground before feeding. It is a heavy feed, therefore it should never be fed alone. It is best to mix it with some bulky concentrate, such as mill run, bran or oats. If it is not mixed with a bulky feed it will form a pasty mass of the same consistency as dough in the alimentary tract and may thus cause digestive disturbances.

A Good Ration.

It has been found that the following mixture forms a very satisfactory grain ration for dairy cows: Four parts of mill run, two parts of wheat and one part of oil meal. Another good ration consists of 2 parts of mill run, 1 part of wheat and 1 part of ground oats. These rations should be fed at the rate of one pound of this mixture for every four pounds of milk produced daily.

Because of the phosphorus and potash which wheat contains, it is an excellent feed for the growing animal. A good calf ration would then consist of a grain mixture of equal parts of mill run, whole oats, ground corn and linseed oil meal. This is fed at the rate of two to four pounds daily, depending upon the age of the calf. A calf three weeks old will consume about one pound a day.

Write for free booklets on Farm Sanitation

ANIMAL INDUSTRY DEPARTMENT OF

Parke, Davis & Co.

DETROIT, MICHIGAN

VETERINARY

By DR. S. B. NELSON.

Bloody Milk—I have a cow that gives bloody milk in her right front teat. She was fresh early in the spring. W. H. H.
Coulee, Wash.

Give your cow one teaspoonful of sodium hypo-sulphite in a pint of water night and morning for some time.

Bloody Milk—I have a cow with a calf about 2 months old that began giving bloody milk a few days ago. Is there a cure? E. W. B.
Anatone, Wash.

Give your cow one teaspoonful of hypo-sulphite of soda in a pint of water morning and evening for from 10 days to two weeks.

Boils—I have some hogs about 8 months old. Last winter some boils broke out on them and they have never healed up. They scab over and then break again. What can I do for them? C. A. H.
Dayton, Wash.

I think you ought to have the boils and scabs examined to see what the disease is. Your local veterinarian can do this and offer you treatment.

Hairless Pigs—We had a sow farrow a litter of 10 pigs. They were all dead and without any hair. What is the cause of this? E. H. L.
Okanogan, Wash.

Professor Kalkus of the State College of Washington determined in his research work on this disease affecting your sow that the trouble is caused by a lack of iodine and he recommends a grain of potassum iodine given to the sow daily while she carries the litter. Also sometimes good results are gotten from dropping a few drops on the back of the back of the prospective dam daily for some time.

One Test—Is there any way to tell if a heifer is with calf? L. L. O.

There is only one way to know whether the heifer is with calf and that is to press on the lower edge of the abdomen on the right side, giving a firm, deep pressure, letting go quickly, but not letting the hand leave contact with the outside of the wall of the abdomen. If she is with calf the disturbance of the liquid in the womb will cause the calf to float and hit the hand. That is the way experienced cattlemen frequently determine.

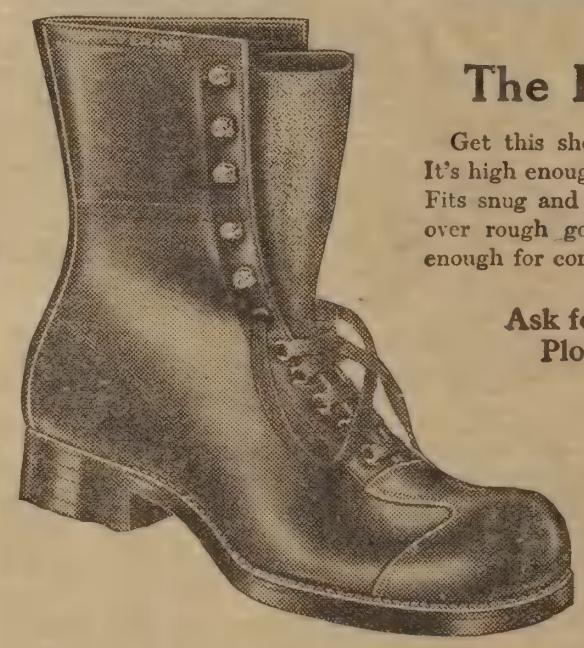
WOLVERINE

The 1,000-Mile Shoe
Double-Tanned—Double Wear



The Plowboy

Get this shoe for fall plowing. It's high enough to keep out dirt. Fits snug and protects the ankles over rough going. And it's low enough for comfort.

Ask for Plowboy

1,000 Miles of Wear

Always Dries Out Soft

Here's a double-tanned horsehide work shoe that will never get stiff or hard. Many leathers dry out hard after they get wet. But this horsehide, double-tanned by our own private process in our own tanneries, dries out as soft as velvet. You can soak these shoes in mud, water and slush. They will always dry out soft and pliable.

We are work shoe specialists. Our goal is to make the world's strongest shoes. To get the best leather we do our own tanning. We use horsehide exclusively. For it is the toughest leather known. For centuries the fine saddles of the hard-riding Cossacks were horsehide covered. Big league baseballs are covered with it too—because it is the only leather that withstands such hard knocks.

And our special double tanning makes this leather soft and pliable as buckskin. Note its extra thickness. Feel its flexibility. Even after soaking it dries out soft as velvet. You'll get a new idea of foot comfort from Wolverine horsehide shoes.

You'll also be surprised by their long wear. They usually wear at least 1,000 miles. But customers tell us they wear 3,000 and 4,000 or more. We are frequently told they outwear three ordinary pairs.

If you are naturally hard on shoes, you'll say these are the most economical shoes you ever wore. See how tough and thick this horsehide is—and how soft. Then you'll understand why Wolverines wear like iron and do not tire your feet.

For every job there's a special Wolverine shoe model that fits your need exactly. For farm, mill or mine, for woods, field and camp we make a shoe that suits the conditions. And all are the same tough, pliable double-tanned horsehide.

If your dealer cannot supply you with Wolverines, we'll see that you are supplied from our nearest dealer. Write for catalog

Wolverine Comfort Shoe

Tenderfeet welcome these shoes. They're soft and flexible as a moccasin, yet wear like iron. And so light and easy, you'll never know they're on duty. For tender feet, or where you do not encounter wet weather, wear this comfort shoe.

Improvement of Live Stock

(Continued from page three.)

sential elements that the body activities demand. Animals frequently give evidence that they are ill-nourished by licking and chewing bones, metal, leather and any old thing that promises to satisfy their craving.

Man's first act under domestication was to build a fence about them and restrict their natural tendencies. If all the essential body building substances were to be found on every square mile or square acre of land there would be no objection, but without being trained geologists we are aware that small areas do not contain all the elements of a great region. Is it impossible that our animals are denied some of the essential body building substances? We may take it for granted that the elements that their bodies require are to be found in the grains and other foods that are supplied them? We know, however, that crops grown for years on the same soil extract the elements from it until succeeding crops are deficient in certain substances. Animals fed on such forage may actually starve for certain elements that are essential to body development. Too long the ration was determined upon the ratio of carbon and nitrogen in the feed and no thought was given to other essential substances that animal bodies require. It was simply assumed that the feeds contained them in sufficient amounts.

The superior mind of man has successfully improved upon nature's methods in some notable instances, but in selecting feeds for animals and providing a substitute for nature's methods I am not prepared to say that he has been altogether successful so far; certainly there is ample room for improvement. Feeding has another aspect that might well be considered and that is the use of foods of various kinds that are not well cured or contain poisonous substances. The swill feeders frequently have serious trouble caused by certain chemicals that find their way into this class of foods. Lye and strong soaps are particularly bad. Ptomaine poisoning is common in fowls that have been fed on spoiled feeds such as canned goods, etc. The larger animals suffer similarly from eating spoiled hay at times.

As we review the events that have occurred within the time that man has exploited animals for his gain we may logically wonder whether he has done as well by his dumb helpers as he might have done. Are conditions as satisfactory just now as we would like to have them, or do the animals show ill effects of man's artificial handling? Wild animals seem to thrive very splendidly in their natural surroundings, but when they are brought under man's care they often cease to stay healthy.

Foxes are the latest animal to be extensively cultivated and already we hear the cry of troubles from ricketts, worms, distemper and so on. Domestication versus natural conditions!

The program for the future is to continue to improve our live stock by the methods used in the past. We can not turn back now and we never shall retreat and give up the gains already made. The obstacles are plainly before us and we may have to "dig in" to hold what we have gained. Progress of the future is going to be slower than in the past. More extensive preparation will be necessary before future advances are made, and that preparation is going to be in the nature of more carefully guarded animal health. We must learn how to give our animals better protection from the influences of domestication or the stamina will be so reduced that the high speed of present-day production can not be maintained. Then to make advances in the future we must take a better hold of the problem of the living conditions of our animals and we must also supply them abundantly with the essential elements that their bodily activities require.

I believe this is the biggest problem that ever confronted the live stock industry and we need the best brains of this country to take up the work in animal medicine and give their best efforts to the solution of the problems that I have indicated above. Animal disease is like fire —you never know when or where it is going to appear. The losses from it are enormous. It isn't a thing that one can play with with safety. For protection against it we need men who are well trained to combat it, and today the thing that the animal world needs is more scientifically trained veterinarians to protect the animals from inherent troubles of domestication while the animal breeder intensifies their producing qualities. Our high school graduates will do well to consider this great field so full of splendid opportunities.

WENATCHEE FRUIT, 17,000 CARS.

District Horticultural Inspector Frank E. Nielson estimates the fruit crop of the Wenatchee district at over 17,000 cars. He also reports that the earliest season in years and favorable growing conditions have given the apples remarkably fine color and the quality will be high.

CHEVROLET

for Economical Transportation

OF

Farm Products

Transportation is the big problem of today in manufacturing, merchandising and farming.

No matter what you make, grow or stock, it brings no profit until moved to the place of sale.

Modern, progressive farmers, being also business men, now depend on fast economical motor transportation to save time, save products and get the money.

Chevrolet Superior Light Delivery, with four post body was built especially for farm needs. Although not a heavy-duty truck, it has the space and power for a big load, which it moves fast at a very low cost per mile. Its engineering features are modern and complete: powerful motor, electric starter, standard transmission—3 speeds forward and one reverse, demountable rims and extra rim, etc.

For heavy work, Chevrolet Utility Express Truck at only $550, chassis only, offers remarkable value. Fits any standard truck body.

POULTRY AND RABBITS

Cockerels

Need Special Care When Young

There is always an abundance of information as to how to feed and care for the laying hen, but many writers seem to overlook the care and feed that is needed to keep the head of the flock in the best of condition, according to Mrs. George R. Shoup, poultry specialist at the western Washington experiment station at Puyallup. The male stamps his characteristics on every chick, and it is important that his vigor be looked after while he is growing up.

With the effort that is put forth to better the health, vigor and production of the flocks, each owner of breeding hens must and will be more interested in the feeding and care of the promising young breeding cockerels.

In room brooder flocks they get along nicely till they are 8 weeks of age if left with the general flock, but when separated from the pullets the care and feeding of these breeding cockerels are in themselves a problem. They fight among themselves, "run" any that will submit to being chased, and successfully starve out a few that are scared to risk coming off the perch. Out of a hundred promising 8-week-old youngsters, one is likely to discard half or more before they reach maturity by either the "survival of the fittest" or the selective culling process. The most disappointing loss is the actual killing of each other. A flock of 100 cockerels seems to require a new "goat" every day for a period, until one wonders if any of them will be saved. After a few weeks the loss from this source is over, whether due to the less vigorous ones having succumbed or to the flock having been reduced to a smaller size with a proportionately less number of the villainously inclined. The loss is always greater in the larger flocks, so it would seem desirable to plan to handle them in as small units as possible.

Cockerels Neglected.

As far as care and equipment are concerned the cockerel is always certain to get the worst of it. He only gets the quarters which have been vacated by some other unit. If yards are available they are quite certain to be worn out and probably infected with internal parasites from the former occupants. If time is lacking the cockerels' quarters go uncleaned. When the milk is scarce the females get all they need first; in fact, it is fortunate that the poultry men raise as many vigorous cockerels as they do.

But there are many cockerels that go into the breeding pen in a weakly and undernourished condition. The result is less fertility of the hatching eggs, weaker chicks, greater mortality among the chicks, and an appalling spread of disease.

The fear is often expressed that modern methods of getting high production will ruin the vigor of all our flocks. Human nature will always demand the utmost return for time and endeavor spent, and poultry men are certain to practice all and every means which will increase production. It seems hopeless to urge against early morning lighting and the feeding of overrich protein feeds.

We are convinced that much of the vigor which is lacking in present day flocks can be returned by intelligent and careful handling of the male and offer the following routine as means to this end:

At 8 to 10 weeks, remove all market cockerels of suitable size to the fattening crates, or sell at once if marketable. Leave the cockerels to be used for breeders and sale purpose in the brooder and move pullets to the pullet developing houses, if such houses are available, placing about 200 birds in each 8x18 house. This relieves the congestion in the roosting quarters and feeding floor and subjects the brooder yards to much less contamination because of much smaller number of users.

In Old Birds' Pens.

One other disposai can be made of the very high grade cockerels at about 12 weeks. These may be taken from the brooder house flock and placed in the old birds' pens, five or six in a pen of 100 birds. Of course the old breeding males have been previously removed, most of them going to market. The old hens should first be dipped for lice, using the one ounce of sodium fluoride to gallon of warm water solution to prevent the lice preying on the tender feathers and skin of the young males and also to make the old birds more comfortable.

These young males may be kept in the breeding house till a few weeks before mating time, when they should be removed to rest up for the breeding season. Under this method these special males certainly thrive. They have the large range of the breeding yards and they are too few in number to seriously injure each other and the warmth generated by the hens keeps the combs of the males from freezing in the early winter cold spells.

The only serious drawback to this plan is the tendency of the precocious young cockerel to keep the moulting hens on the roosts and the danger of the breeding hens not getting enough to eat and of their being retarded in their accumulation of flesh and pigment preparatory to the lay of hatching eggs in February. Occasionally we have had to shut these youngsters out doors part of the time each day so that the more timid of the hens can get down to eat.

Mating the Leghorns.

In mating Leghorn cockerels use one male for each 15 hens or six to each 100. The flock mating of the heavier breeds does not seem to be as successful as with Leghorns. One male to 12 rock hens is the limit with usually better results when only eight or 10 hens are used. Cock birds 18 months old can mate successfully with not over 12 Leghorn hens or six to eight hens of American or other heavy breeds. Always plan to keep a few reserve cockerels to use in place of one which is injured or moulting. Very early hatched cockerels usually go into a partial moult in December and are unfit for January mating. Cockerels should be at least 8 months old before mating them, although adequate fertility can be secured when they are several months younger.

Problem in Caponizing

By B. T. SIMMS,

I would like to know something about caponizing roosters. Ours seem to be all right, only several have what is called wind puffs. Can you tell what causes these and a cure? We were very careful and disinfected our instruments in water containing carbolic acid. We greased the cut edges with clean lard and turpentine before sewing. Would this cause the cut to heal too rapidly and make the puffs?

Dallas, Ore. A. L.

It is quite possible that the trouble which you are having with your birds is the result of sewing the wounds up after the operation was done. We have found that results were probably more satisfactory when no stitches were used than they were when the wounds were stitched up. Another thing which might possibly have some influence is the method of making the incision. If the skin is pulled to one side when the incision is made so that after it is released the incision in the skin is not directly over the muscle incision the results are usually better than when the skin is not pulled to one side in this manner.

As treatment I am suggesting that you prick the skin with a pin or needle and allow the air to escape. Sometimes it is necessary to repeat this three or four times before a bird has completely healed.

Side Hill Poultry Houses

By W. D. BUCHANAN.

I wish to build some poultry houses in a deep canyon sheltered on three sides, opening to the south. Some one suggested that I build them on th eside hill, excavating so that the entire rear wall and half of the end walls will be dirt, and covering the entire roof with straw and dirt. I would like to have your opinion. They claim that root cellars made in this way have remained dry and retained an even temperature throughout the year, and are well ventilated in eastern Washington. Is it practicable? J. A. B.

R. 2, Cashmere, Wash.

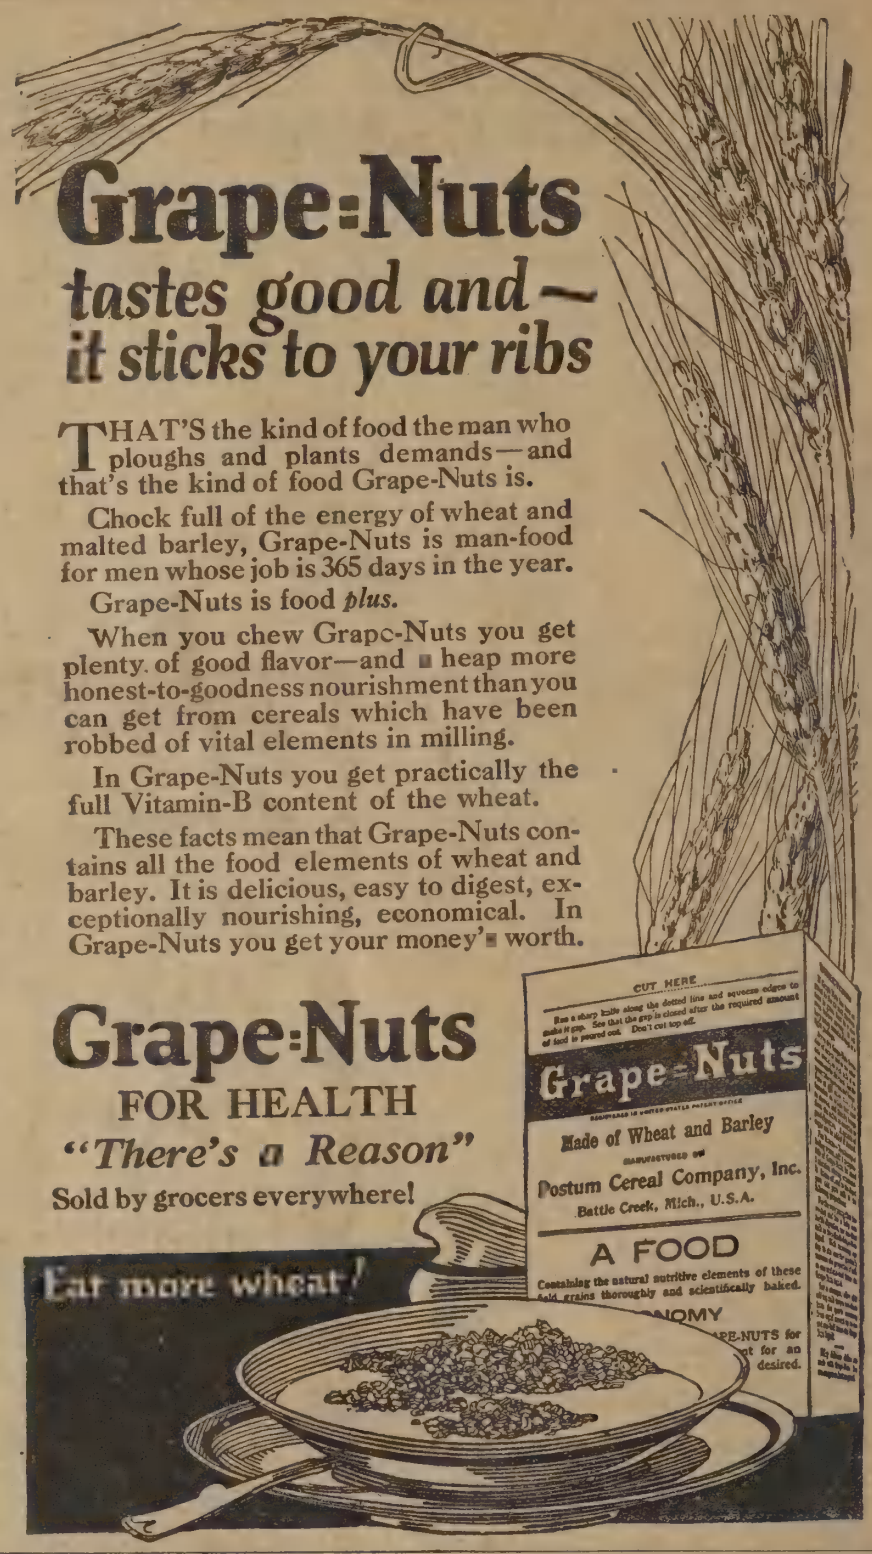
A house built as you suggest would, no doubt, maintain an even temperature; but I doubt the ventilation. A root cellar needs about one twentieth the ventilation of a chicken house. Some houses are built on side hills, but they are usually built two story, each story being a distinct and separate chicken house. One flock runs north and one south. The trouble with any house, built into the side hills, is that one side and both ends are likely to be dark. You are so well protected that a house in the open, facing south, would be ideal.

TO WATER 30,000 ACRES.

Ernest B. Hussey announces that Seattle men with whom he is associated have obtained water rights from Oregon which will permit diversion of water from the Walla Walla river near Milton. This water will be stored and used to irrigate about 30,000 acres in the valley. It is proposed to store flood water in five large storage basins, one on Dry creek and four on Couse creek, in Oregon. The highest dam will be 125 feet and the lowest 70 feet. Aabout 4000 horsepower will be developed and the current will be sold.

A DISEASE PREVENTIVE.

Clean water is insurance against poultry diseases.



THREE big improvements make the 1924 Harley-Davidson even better than ever for the farmer. You have never felt such a surge of smooth power as the new *alloy pistoned* Harley Davidson delivers. And the new side car with its *ful-floteing, semi-elliptic springs*—you won't have to worry about the loss of eggs you're taking to town. Another great improvement is the *Alemite Lubrication* (first on any motorcycle). Use a Harley-Davidson for business errands—50 miles for a dollar (gas, oil, tires and all) and leave your car in the garage. Thousands of farmers save money this way.

Ask your dealer about his Pay-as-You-Ride Plan. Write for free literature.

ORCHARD AND GARDEN

Pruning Berries

Not to Be Neglected Even a Year

By C. L. VINCENT,
Department of Horticulture, State College of Washington.

If one is to be successful in the production of the various small fruits, the pruning can not be neglected for even a single season. More and better fruit is the reward for the grower who prunes his raspberries, blackberries, etc., regularly and well

Nothing is more simple than the pruning of the small fruits, provided a few principles are kept in mind. In pruning the grower should have two aims in mind: First, to remove the old canes which are of no more value to the plant; and second, to provide a supply of new shoots for bearing the crop the next season.

In order to prune intelligently one ought to know something of the fruiting habit of the plant to be pruned. In common with other brambles, the canes of the red raspberry are biennial in their growth. During the first summer of the life of any cane, its entire energy is devoted to vegetative growth. The fruit buds for subsequent growth are not even set during this summer.

During the second summer of the life of the canes, the fruit is borne. The growth starts from over-winter lateral buds. These shoots attain a length of 9 to 20 inches, with alternate three-leaflet leaves. Fruit clusters are produced in the axil of these leaves along nearly the entire length of the shoot. The clusters contain from one to three or more fruits in the form of a short receme. Of these the terminal flower opens first and the terminal fruit from it is the first to ripen.

This succession of bloom on the fruiting shoot affords a measure of insurance for this crop against late frosts, because, though the tip blossom may be killed, those lower down, being less developed, are likely to survive. The loss of the earlier fruits is, however, serious, as it is just these which are likely to bring the highest price for the season.

The number of bearing shoots on a cane and the number of fruits on the shoots vary with the size of the cane and the stored plant food in the cane. The bearing shoots are distributed from the tip of the cane downward, while the strongest and best bearing shoots are found on the middle half of the cane. Heading back the canes, if done before growth starts in the spring, will induce shoot growth and fruit production from the buds situated lower down on the cane than the normal limit of growth.

It is of interest to note that the cane growth of the red raspberry is indeterminent; that is, no terminal bud is ever produced on the cane, such as is found at the tips of apple, pear or cherry twigs. The cane simply continues to grow from the tip until stopped by cold weather during the late fall. Usually this poorly matured growth at the outer end of the cane will be winter killed.

Three Parts to Pruning.

The work of raspberry pruning is naturally divided into three parts. The first is the pruning given at the time of setting the plant. Pruning at this time may well be considered part of the setting operation. The young plants, if they are good ones which grew the greater part of the preceding summer under favorable conditions, will have a large fibrous root system and one or two canes of varying length. If the plant has two canes, one of them should be cut away close to the crown and the other headed back to a length of about eight inches. A very common error made by unskilled growers at planting time is to allow the long cane or even two or more of them to remain in order to obtain a small crop of fruit the first season. Under normal conditions the plants are so weakened by the shock of transplanting that the production of fruit during their first summer in the field reduces the cane growth, which will be the bearing wood for the next year's crop, to such an extent that a heavy loss is incurred by the grower. However, in case strong plants are set in the fall on good, rich soil and under favorable conditions, the canes may be headed at a height of three feet and some fruit harvested the first year without serious subsequent injury. Even then the practice is questionable.

When to Prune.

Since raspberry canes fruit but once, the second pruning consists in removing these fruited canes. Opinion differs as to whether this should be done immediately following harvest or left till spring. Pruning at either time possesses some advantages. Personally I believe this work should be done as soon after harvest as time may be found and the pruned out canes piled and burned at once. Emphasis should be given the necessity of cutting the canes close to the crown of the plant. Various types of tools are used to do this work. Whatever the type of tool used, care must be taken to avoid unnecessary injury to the growing canes. Burning the canes is one of the most important steps in controlling the crown and cane borers. In this way we are protecting the growing canes for upon their health and vigor depends the next year's crop.

The third step in pruning the red raspberry has to do with the current season's canes or the fruiting wood for next year. This involves two distinct operations. First, surplus new canes must be removed either at the time of cutting out the old canes after harvest or early the next spring. The later time being preferred in most cases, especially in places where winter injury is severe. The necessity for the removal of the surplus canes arises because the crown of the plant will always produce more canes than should be allowed to bear fruit, whether the soil be rich or poor. If the excess is not removed the size and total amount of the fruit is reduced and the plants are materially weakened. It has been found through experimenting that five to eight or 10 canes, depending on moisture supply, vigor of plant and the fertility of the soil, are the best number to leave to get maximum annual yields. The last step in pruning these canes consists in heading them back. The average height of the cut-back canes in western Washington is about seven feet. This is done in the spring immediately before the canes are placed on the trellis. The height at which they should be headed will depend to a certain extent on the system of trellising used.

In a second article Professor Vincent will discuss the pruning of blackberries, and in a third the subject will be pruning currants and gooseberries.

LEGUMES GO DOWN.

One of the benefits from legume cover crops is their tendency to penetrate deeply into the soil.

Drainage Progress

Campaigns by State College Expert and County Agents

David Strait of Skamokawa plowed land in 1922 which in June, 1921, was under a foot of water, and drained 10 acres more. J. E. Timmen of Ilwaco, though he had completed only his open storm-water ditch, 3000 feet long, plowed land which was a slough 12 months before. Messrs. Sonner, Grunsted and E. M. Whitten drained 80 acres in a community project with one open outlet ditch. F. V. Grimes and G. H. Nechner together drained 35 acres, J. R. Stott 40, John McEvoy 25, Russell Irving 30, H. Peterson and Harry Gill 20 each, Robert Whidby 15 and Weglund Brothers 15.

These remarkable beginnings in drainage are the result of the work of state college drainage specialists A. B. Crane and the county agents. The bog lands are all in Wahkiakum county, mostly in the Skamokawa and Alokomoa valleys.

In Pacific county most of the work was on the peninsula, near Ilwaco, though some was done on the south fork, near Willapa. One hundred acres on Otto Wehtje's farm were affected, and Martin Goisler drained 35, Joe Bianchi 25, A. A. Smith 20 and J. O. Johnson and S. R. Kirsch 10 each.

This summarizes only the first of the work in the district. Of late the affected acreage has increased very rapidly, and Specialist Crane consequently is much pleased.

"Most of those for whom work was laid out followed it up and put in drainage," he said. "This gave good results, and nearly all I worked for wanted more. My first two trips into the district merely served to wake them up, but now they are clamoring for assistance.

And why not? Slough ground is worth about $6 per acre for dairy pasture, but if drained and cultivated it will yield $40 to $60 in hay or grain; and where a farmer formerly ran about eight cows, his land if put in shape will furnish feed just as easily for 25. The expense is comparatively slight. J. G. Wester of South Fork reports that the cost of his drainage, complete, ran $12.40 for each 100 feet of line put in."

JIM WHITE passed Joe Black at the roadside 4 miles from town. Jim's Ford was clipping off its 6000th mile, smoothly and powerfully. He was *timer-wise*, for months ago he had installed a Milwaukee Timer. Joe's car, with but half the mileage was stalled with timer trouble. He tinkered for an hour, then — hot, dirty and tired — he walked a mile to a telephone and had a garage mechanic bring him out a Milwaukee Timer.

Get your "ignition insurance" today. It is the best two-dollars'-worth you can buy for your Ford, for it assures more power and smoother running for many thousands of miles. The Milwaukee also fits the Fordson tractor — gives it more power and makes it start easier.

Bedrock of Cooperation

(Continued from page eight.)

association and the local association, and between the local association and the individual members. The period covered by contract agreements varies with the nature of the commodity handled and in many cases varies with different associations, the time ranging from 1 to 20 years.

Pooling Is Common.

9. Pooling is a common practice. The members' products are shipped to the association, where they are classified according to grade and quality, which serves as a basis on which each individual member is paid. A partial payment, usually representing between 85 and 95 per cent of the actual price which the product will return to the producer, is made when products are delivered to the producer. In many cases this partial payment is a price which is approximately near the market value of the particular product. To determine what the partial payment shall be a "quotation" service has been established, to quote prices as determined by market conditions and representing a price near the actual market value. At the close of the year the difference between the price paid the producer on delivery of the product and the sales price is turned over to the producer.

No Special Legislation.

10. Denmark has no special cooperative legislation, as the Danes have found by experience that real cooperation is not promoted by protectionist methods or government favoritism. They prefer to be treated as any business agency, relying upon their own powers in the business world.

The validity of contracts existing between cooperative associations and their members is recognized by the courts. Practically all cooperative creamery and bacon factories and egg, butter and bacon selling associations are nonstock, unincorporated associations. There are a few share-stock associations incorporated under the Danish corporation laws, such as the Danish Cooperative Bank of Denmark.

11. The necessary capital for equipment and operation is provided by a loan executed by the association and guaranteed jointly by the members of the association on their personal credit. In the local association the members are usually jointly and severally liable for all financial obligations incurred by the association. However, when a local association joins a central association the amount of this guaranty is always limited, the individual members in the local association signing guarantee pledge certificates stating the specific amount for which their association is liable. These certificates are forwarded by the local association to the central association, which in turn delivers them to the bank to secure loans or credit. This method is typically Danish and adapted to their credit system.

CUTTING THE COVER CROP.

To make hay out of a cover crop largely destroys its value to the trees.

—It Doesn't

Hammer Pistons Down

—this non-detonating gasoline

There are two ways in which gasolines explode.

One explodes instantaneously—**detonates.** It hammers the piston down by a single, crashing blow.

It has a tendency to explode **prematurely,** thus reducing compression in your cylinders and delivering less power.

Detonation frequently causes "knocking," which you notice particularly on hills. The smashing blows increase vibration—which means more wear and tear.

The Sustained Thrust

Union **Non-Detonating** Gasoline explodes in a different way.

The explosion is progressive and prolonged. It **thrusts** pistons down, delivering power throughout the entire stroke.

It permits increased compression because compression is limited by the tendency of a gasoline to **detonate.** All authorities know that.

An increased compression means increased power and efficiency.

Hill-Climbing "Gas"

With Union **Non-Detonating** Gasoline you'll note a new "lift" on hills and no "knocking" due to gasoline.

There's new speed on the level and a swifter rush in the pickup.

Sustained impulse reduces vibration—saves wear and tear.

There's higher efficiency for motor cars, trucks and tractors, therefore, in a gasoline like this.

Union **Non-Detonating** Gasoline is the product of progressive refining methods. Its quality is governed by exhaustive tests.

The research of able chemists, equipped with the finest facilities for studying refining methods, is constantly devoted to its improvement.

Union Oil Company of California

Union Gasoline

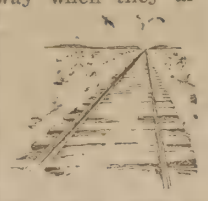
CHAPTER X.

Battle Royal.

Mr. Worth had built for himself a plank house with shingled roof—the first real house the boys had entered since they left Bismarck.



Their father was away when they arrived, to be gone for some weeks, so the boys had a chance to have some of the fun they had longed for. They expected to have great sport with the miners' sons, but were keenly disappointed to find that their tastes were utterly different. The latter were as a rule eastern boys, and were versed in civilized amusements: baseball, marbles, tops and all the games of skill and strength dear to the town dwellers. Of all these our boys knew nothing; their amusements were akin to their work—to ride well and shoot straight was a matter of business as well as pleasure for them. And so the Worth boys and those of the camp stood aloof from one another, and John and Ben were soon almost as unhappy as they had been on the sheep range.

They still hoped to have an opportunity to show their skill as wrestlers and fighters in the emphatic way that was the custom in that day and place, but for a long time the camp boys gave them no provocation. As time went on, however, the mining boys grew overbearing and insulting and never lost an opportunity to taunt and aggravate the young westerners.

"I'm going to lick that Jake Adams within an inch of his life," said John, wrathfully, one day to his brother. "He's the worst one of the lot."

"All right," said Ben. "I'm with you."

Pretty soon an opportunity came, and John challenged Jake to fight. He accepted at once. A ring was formed on the outskirts of the camp by the boys and some of the men, who guaranteed fair play. The contest that followed was short, sharp and decisive. John kept his head and made every blow tell, while Jake in his anger forgot all he knew and defended himself so poorly that his opponent soon satisfied him he was the better man.

After this such contests, generally not quite so earnest, were frequent. From most of them John came out victorious, and for a time the others ceased to taunt the Worth boys. But the feeling was far from being as friendly as it ought to have been between the two factions. Even the settlement of the arguments in so thorough a manner failed to clear the air entirely.

The miners admired pluck and skill, and John had many friends among them. His father, too, did not disapprove, for he also admired one who could give and take hard knocks. His approval was never outspoken, however; on the contrary he made John's bruises the subject of his chaffing. To John—who, in spite of his apparent indifference, was very sensitive and craved sympathy—this was almost unbearable.

As John predicted, young Watson failed to get the mails in on time. John at once offered to undertake the job, and after some questioning the authorities decided he was capable of accomplishing it. Here was something he could do that would test his intelligence, his strength and his courage. It was work and amusement at the same time, and he accepted it gladly.

Ragged Edge had sprung up in a gulch 14 miles from the coal camp. It was a new camp of the mushroom variety, called suddenly into being by the discovery of some gold-bearing gravel in the creek there. Deep snows on the range nearly cut off communication with the outer world for three months in the year. By following the high, wind-swept ridge, the mountain could be crossed by a venturesome horseman till winter came on and the snows grew too deep, when snowshoes must be resorted to. Even late in the summer snowshoes were necessary to travel over the soft masses of the snow which always crowned the summit.

When John presented himself as a candidate for mail rider, Burns, the boss at Ragged Edge, looked at him in good-natured amusement. "Well, kid, if you think you can do it, go ahead and try. But it means work and p'raps danger." John told of his snowshoeing experiences in Dakota modestly but straightforwardly, and satisfied him by his resolute mien that he had the pluck to do it if any one could.

The boy spent several days in going over the ground, noting the best line to follow and making sure of his landmarks before the snows should cover up everything. He found at the top of the pass an old abandoned cabin and marked its location in his mind in case of future necessity. This bit of precaution served him well before the winter was over.

"You had better get a good, strong horse," said Mr. Worth, as John was mounting Baldy—for the trips had already begun. "Baldy's too old. You'll need a good, young horse."

John said nothing for a minute, but patted his steed as if to express his confidence in him.

"Oh! no, sir. Baldy knows me and I know Baldy, and I think I can get along better with him than I could with any other horse," he said, rather anxiously, for he was afraid that his companion would be denied him. "Besides," he continued, "Baldy can smell a trail through two feet of snow, and isn't he in good condition? You can't see a rib."

"All right," returned his father. "He's yours, and the job's yours. Go ahead and work it out the way you think best."

So boy and horse encountered the perils of the mountain pass together, friends always, but now sole companions.

While there was no sign of snow in the valleys, it was falling steadily in the mountains. John did not carry out his first plan of tethering Baldy at the snow line on the mine side of the mountains and covering the rest of the distance on snowshoes. He found that by following the bare ridges he could go the whole distance on horseback. His route was changed almost every day, for the wind formed drifts in different places and blocked the old way 10 feet deep over night. In certain places cuts in the ridge would become filled with snow, and through this horse and rider had to flounder till a hard trail had been packed. It was in such spots that Baldy's cleverness manifested itself; he rarely missed the narrow, packed path, though it might be buried two feet or more. An incautious step to one side was sure to cause both horse and rider to disappear in the soft mass.

"Well, I must say you have done pretty well so far," said Burns one day, as John dismounted and handed him the packet of mail.

"Yes; haven't missed a trip," he answered rather proudly. "Don't know if I'd have made such a good record if I hadn't the best snow horse going though. Been snowshoeing it two weeks ago if it wasn't for Baldy." He stopped to stroke the animal's nose affectionately. "I vowed this should be his last trip; it's getting harder and harder; but he's such good company I hate to give him up."

Next morning, as Burns handed out the return mail, he warned the boy that bad weather was coming, and suggested that he leave the horse behind, for he would be more of a hindrance than a help. "Those black clouds mean that we're in for a big storm," he said, "and I tell you that you and your horse had better stay here. I can't boss you, kid, but I advise you not to fool with that storm—it's coming sure and you don't know what it means up here." In spite of this John decided to go on Baldy, for he wished to leave him safe at his father's camp.

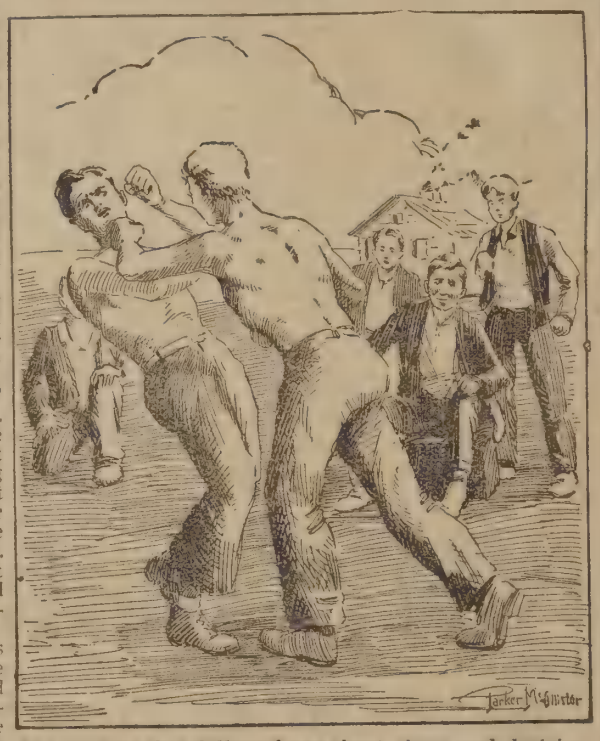
The hard traveling had begun to tell on the sturdy little horse; his body was not so round as formerly, nor his step so springy, but he carried his young rider well for all that and was as knowing and careful as ever.

John tucked the package of precious letters in his saddle-bag, and after calling out a good-by to Burns, he set out. He had barely reached high ground when snow began to fall heavily and with it came a blustering, roaring wind that buffeted the travelers roundly. The horse slackened his speed, and, by signs that John knew well, advised retreat. The boy urged him forward, however, saying aloud—for he always felt as if Baldy could understand everything he told him—"No, old man, if we go back now you'll have to winter in the Ragged Edge gulch and you'll die sure. We can make it all right." The good beast seemed to acquiesce in his master's judgment, for he went along without further hesitation. The trail now was covered almost knee deep, and the blinding mist and whirling flakes blotted out nearly all landmarks. They pushed forward, at one moment right in the teeth of the blast, at the next turning a sharp corner and running before it, heads down, eyes almost closed, the rider depending on the keen senses of his steed to find the way.

At length Baldy stopped, and John felt, with a thrill of real alarm, that he had lost the trail. To go forward seemed impossible, to go back almost as bad. To and fro they went, in vain efforts to find the way. Baldy still floundered along, his hoofs covered with gunny sacks to prevent their sharp edges from cutting through the crust; but his sides began to heave and his legs to shake under him, for the exertion of breaking through the drifts from one wind-swept ridge to another was most exhausting. John could stand it no longer; he slipped off his back and caught his head in both arms: "Why did I bring you out here?" he said, in bitter self-reproach. It was evident that if he did not find shelter soon his old friend would freeze to death.

There was one chance for himself; he was light and might be able to make his way over the snow to Ragged Edge camp, perhaps; but what would then become of his faithful friend? Could he leave him to such a fate after he had so spent himself for his master's sake? Baldy stood knee deep in the cruel, treacherous, white snow, his head down, quick, spasmodic puffs coming from his nostrils, his body steaming, and his flanks all in a tremble. There was only one chance for the lives of both. John remembered the abandoned hut at the top of the pass—if they could possibly reach that, they might be able to weather the storm together. He determined to try. Fastening Baldy's bridle rein to his fore leg, so that he could not follow, and giving him an affectionate pat on the nose, he started off, his teeth set determinedly. A few yards away the driving snow shut Baldy off from his sight entirely, but a gentle whinny reached him and brought a lump into his throat.

"That's all right, old boy," he called aloud; "I'm not going to leave you. I'll be back." He turned in the direction he thought the cabin should be and fought his way on. The wind seemed like a howling fiend; it tore at his clothing, blew the particles of snow into his eyes, and raised such a veil of mist and frost that he could not see 10 yards ahead of him. On the high, bare ridges the blast nearly took him off his feet and in the hollows the snow banks engulfed him. Still he stuggled on, straining his eyes forward into the gray chaos that confronted him, determined to find the shelter. A vision of Baldy standing dejectedly alone, his rough brown coat turned white by the sleet, his faithful old eyes half closed, drove the boy on irresistibly, for, next to his brother, he loved his horse better than anything else in the world.



The contest that followed was short, sharp and decisive.

He ploughed through drift after drift, following one ridge, for only by keeping one such landmark in sight was it possible to go in any given direction. Would that haven of rest ever come into view? Even his stout heart began to despair; he was weary, his body bathed in sweat, yet his face, feet and hands numb with cold; the elements seemed to conspire against him. He was only a boy, and it seemed hard that he should give up his life. He stood still and looked drearily down the hillside. Nothing, nothing but the deadly snow. He began to wonder if it was worth while to fight against such odds any longer.

And then in his abjectness he suddenly gave a cry of delight. For the wind rent the snow apart for an instant and he caught a glimpse through the driving flakes of a dead tree and near it a peculiarly shaped, great gray rock. They seemed positively human, like old friends, for the shelter he sought stood just to the left of them.

He began at once to look for a place where Baldy might be led down in safety. This was impossible where he stood—it was far too steep and rocky. A detour made with infinite pains and exertion brought him to the cabin by a path that he thought the sure-footed beast might follow.

How John found his way to the half-frozen beast and then slowly got him back to the cabin he never knew. Only his indomitable pluck and his training pulled him through. But at last the terrible journey was safely accomplished, and boy and steed stood before the low door.

John took off the saddle, and the intelligent animal, bending his knees a little, squeezed through. The boy followed, throwing the saddle blanket over the horse's shivering flanks and wondering if they were safe, even now. At best it was a poor shelter; the wind blew the sharp, powdery snow through the chinks in the logs and kept the temperature almost as low within as without, but at least there was a roof and a wind break.

After a short rest John scrambled up the slope to the dead tree and broke off some branches. The wood was still dry, except on the very outside, and made good kindling. Soon a fire was blazing, and boy and beast absorbed the heat gratefully. Only those who have suffered great and deadly cold can realize the delight of sitting before a blaze once more. The very sight of the flames puts life into the veins and makes a mere nightmare of what was just now a grim and awful reality.

Thoroughly warmed, and with new courage and strength, John went outside again and began to stop up the chinks with snow and to scrape banks of it up against the walls. The heat from within melted the inner surface, which afterwards froze and prevented the wind from blowing it away.

All day John was kept busy gathering wood and patching the walls. By nightfall a good supply of fuel had been collected and the little cabin was by comparison comfortable. There was little sleep for the boy that night, however. The fury of the storm did not abate, the wind howled round their little refuge, shaking it so it seemed as if it would be impossible for it to withstand the blast.

All night long he listened to the roaring of the wind, taking "cat naps" during the short lulls that came at intervals. The fire required constant replenishment, and Baldy, unaccustomed to confinement in such a small space, was so restless that continual watchfulness was necessary to keep from under his feet, though the good horse would never have harmed his young master except by accident. Both boy and beast began also to suffer greatly from hunger.

At dawn the gale subsided somewhat, and John realized that he must get food at once if his life and that of his horse were to be saved. Breaking through the snow bank which had piled up against the rude door, he made his way to a creek half a mile down the mountain and cut with his knife an armful of poplar saplings and carried them back to the hut. Baldy tore off the bark from these and munched it contentedly; another armful was added to the store, and then John bade his equine friend good-by and started off to find food and shelter for himself.

The six miles that separated the lonely cabin from the mining camp were the longest and most trying that John had ever traveled, he thought. Great drifts barred his way, the wind, still strong, blew in his face and seemed bent on his destruction, his empty stomach weakened him, and lack of sleep undermined his resolution.

From dawn till noonday he battled with the snow, and when at last he reached his father's house he was hardly able to answer the questions which his overjoyed family put to him.

A man was sent back to look after Baldy. He found that good horse chewing poplar bark as calmly as if he was in his own stable, though the cabin was so small and the horse so large in comparison that it appeared to be resting on his back, like the howdah on an elephant. For several days Baldy was kept in the cabin and fed on hay, which had to be carried to him on foot; then, after considerable trouble, for a trail had to be stamped down much of the way, he was led back in triumph to the camp, where John, rather weak in the knees, greeted him joyfully.

For a week Ragged Edge camp did not receive any mail. Late one afternoon John appeared on snowshoes, bearing the precious packet. He had to repeat his story many times, and Burns had the satisfaction of qualifying his admiration of the boy's pluck with an emphatic "I told you so."

John continued to carry the mail between Ragged Edge camp and the railroad every three or four days; at first on foot, then, as the snow melted, on his faithful Baldy once more.

Though his work took him away from camp much of the time, John was continually running foul of the boys who belonged to the other faction, and Ben was the object of their unceasing abuse. A crowd of these fellows would stop their games and yell at them those taunts which are so exasperating to a boy:

"There go those western jays."

"Look at the kids that don't know the difference between a baseball and a lump of mud.

It was true that our boys were not up on the national game or any other game

played simply for amusement; their sports were merely another form of some kind of work.

Then the camp boys began to taunt John on his fighting abilities, their object being to get him to stand up against some one who would be sure to beat him. This was one of John's weak points; he was immensely proud of his prowess as a fighter; so when one of the boys said in his presence: "Worth said today that he could lick Casey," he did not correct the falsehood there and then, but put on an air of superiority that had the effect desired. Casey, though not a big fellow, was out of his 'teens, and had the reputation of being a "scrapper from 'way back," as the boys said. He also heard the young mischief-maker's statement. "Jab him, Casey; he's only a blufter," said several of his companions. He could not ignore the challenge which was plainly indicated, and, according to boy customs, not to be avoided. Few boys know how much bravery it takes to dare an unjust imputation of cowardice. John and Casey were soon talking hotly—not that they had anything against each other, but they were being egged on and neither could withstand the pressure. The result was a fight, the consequences of which had great influence, on one of the principals at least.

Casey was really a grown man, and John had never fought in earnest with one old enough to wear a mustache, but his blood was up now and he would not back down.

The two retired behind a large stable and a crowd of men and boys formed a ring.

"Keep him at arm's length," whispered Ben, as he took off his brother's coat and cinched up his belt firmly round his waist. "Don't let him hug you and you'll lick him, sure." Ben spoke confidently, but he was in reality consumed with anxiety. John said nothing, but the look of reckless determination on his face spoke volumes.

The two antagonists now stood face to face, but neither had yet struck a blow. "How do you want to fight?" Casey asked.

"You fight your way and I'll fight my way," John answered; and at the word struck out. The crowd yelled "Foul," but neither took any notice. The blow was not a hard one, but it served its purpose, for it stopped the talk and began open hostilities.

Casey came at John, his arms jerking back and forth, but hitting nothing. John drew his lead and then, as his guard was lowered, threw in his own left with staggering effect. This angered Casey greatly, and he rushed his opponent in a vain effort to get in a deciding blow at once; but his rushes were avoided nimbly, and as his defence was careless many blows were rained on his head and body. Evidently the boy knew more about boxing than he did, Casey thought, and as the method of fighting was left undecided he determined to change his tactics. In a rough-and-tumble fight he knew his age and strength would tell. To close in and grapple with John was his purpose now. So far the battle was in the boy's favor, and a number of the wavering ones came over to his side. "He's getting low now, Worth. Swing on him," said one of them, and John, acting on the advice, quickly landed a stiff one on the jaw. Casey fell, but John stood to one side and waited till he got up. He was angry clear through. Again and again he rushed, but was beaten off each time. He aimed a savage blow, which John almost succeeded in dodging. It landed lightly, but gave Casey the opportunity he sought and they clinched, the miner hugging with all his might.

"Oh, John!" muttered Ben.

"Good work," yelled the crowd, who had suddenly deserted to Casey's side.

It was the greatest squeeze that John had ever had. The blood rushed to his head, his breathing became more and more difficult, but still he struggled, twisted and strained, and at last both fell and the man's terrible grip was loosened. He did not let go, however, and in a couple of seconds both were on their feet and struggling with might and main to gain the mastery. Again they went down, this time John underneath and on his back. The crowd paused an instant before pulling Casey off, but during that pause he made good use of his time, raining blow after blow on John's upturned face. John was licked.

Make Their Own Hats

The farm women of King county have been doing much work with millinery projects with the assistance of Miss Edna E. Walker, county home demonstration agent. Early in the spring of 1923 Miss Belle Algier helped Miss Walker put on a training school at the chamber of commerce at Seattle with twenty of the community leaders of the county. These women were given as many details in hat-making as possible in a short time in order that they might continue work in their community and help the women make new hats or remodel old ones, as the case demanded.

"While there have been a number of made-over hats finished this spring, we found that the women were making more new hats since they are finding it is not a hard job to do," said Miss Walker. "Many of them bought better material and made better hats than they have ever done before. Some of them found that they could make two home-made hats for the price of one purchased at the store. As a general rule they have turned out good work with but very little practice in millinery and the women find that hat-making is a great help to them in getting their spring clothes ready.

"As a further step in hat-making the women are being taught to make the proper selection of material before starting their hats. The right color has much to do whether or not the hat will suit the wearer and whether it will be becoming to her. Before she starts to make a hat she takes the material and pins it on a frame in order to get an idea how in will look. Many hats are being made with the same material, or material that will go with the new dress."

Picked Americans

Thirty-five hundred close-crammed pages, revised every two years, keep track for busy Americans of the deeds and addresses of yet busier Americans, 25,000 of them of the celebrities and the semi-celebrities of the land. No one has to be told the title of that volumn. "Who's Who in America" can knock down more interrogation points to every play than almost anything else in print compressed within the same space. Age and educational career, social and religious affiliations of the subject, as well as environment and achievements, are skeletonized for the busy man and the limited bookshelf, within its covers. "What has he done?" If he is an American, and if he has done anything differently than, better than or more noisily than somebody else, the answer is in "Who's Who in America."

The new edition, we have just received notice, is on the market. A. N. Marquis & Co., publishers, Chicago.

State College Chips

Every weed means a leak in the soil moisture supply.

There are two things to swat—flies and roosters.

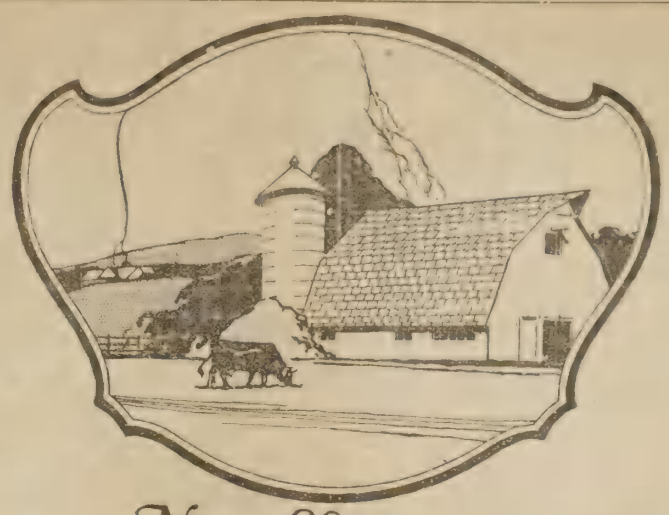
Plug up the leaks in the farm or home by keeping records.

Saving an old can rubber may mean losing a can of fruit or vegetables.

If you win at the fair, don't crow; if you lose, don't grouch. Find why you did either.

This is the vegetable season, make the best if it for they contain many essential elements of food.

Roadside markets have helped more than one family, living on a much-traveled state highway, to add a neat little sum to its bank account.



New Life for shingled roofs

Oronite Shingle Oil assures maximum preservation of shingles—penetrates the pores of the wood and holds in the natural oils. Shingle roofs and side walls treated in this way are safeguarded against splitting, warping, leaks and moss growths.

If you mix a little color paste with the oil you can beautify your farm buildings as well as check the costly damage of warm sun and soaking rain. The expense is slight.

Ask our agent to give you tested color formulas for Oronite Shingle Oil.

You Can Make $5,000 a Year
as an Expert Auto Mechanic

It is easy to be an auto expert, the Adcox way. The Adcox way is approved by the leading auto-repair men of Portland and the Northwest, and they snap up my graduates as fast as they finish their courses. 1924 will be the biggest year of the auto industry. There are big positions in store for those who prepare now.

The monkey-wrench mechanics who experiment with high-priced cars and charge full price for their work can't get jobs any more. The public is tired of them. A lot of them have come to me to really learn their business. And I have made experts of them, taught them things they never knew existed. After my training they have gone right out and landed fine jobs.

A real auto mechanic knows a car from top to bottom. I teach you on Packards, Cadillacs and all other makes, the costly as well as the cheaper cars.

When they get to running automobiles and tractors by wireless I will add a course in radio, but right now I am doing nothing but make real, honest-to-goodness auto experts.

If you are tired of mucking around at thank-you-mam jobs, working long hours for short pay, learn to be an auto expert. My graduates make $400 a month with less sweat than you make $80 a month, and they are working all the year around when you are laid up for months on account of the weather.

Quit thinking it over. You've been doing that long enough without getting anywhere. Do something about it and do it now.

Grab the nearest pencil that comes handy, fill in the coupon below, tear it off and mail it to me. Within a couple of days you will get back my big 112-page book that explains the secret of making $5000 a year, how to become an auto expert and my guarantee. It will cost you nothing to get this book and you won't be tied up to anything if you are not interested.

Send for it now

L. L. ADCOX, PRESIDENT,
ADCOX AUTO AND AVIATION SCHOOL,

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

WHY NOT TODAY?

There's a happy time a-coming when your worries will be over,
When your blues will all be golden and your frowns all smoothed away,
When your soul will be in merriment, your fortune be in clover;
Why not today?

There's a happy time a-coming when you'll count the gold of heaven
As you balance up your ledger—what you get and what you pay;
When you'll raise your human spirits with the angel's happy leaven;
Why not today?

—AMOS R. WELLS.

Experience Letters

Dear Mrs. Barland: It has been some time since I wrote to the Circle, but I have enjoyed it immensely. I am very glad to know that there are so many girls and boys who do not approve of smoking. Whenever I know of a girl doing this I class her among the lowest society.

I wonder what the Circle thinks about swearing? I hear so many girls swear and even mothers of young children. Is it not for the parents to set the example if they expect to raise their children to be good, moral citizens?

I think parents should take more interest in their children's amusements, should go with them to the theaters, dances, church, picnics and parties. They would then know what forms of amusement the young people were indulging in. If they went with them more frequently it would do away with their choosing improper company and going on late night rides.

Too many fathers stay home and read all about who won the fight and the mothers sit and crochet all evening while their young girls and boys are seeking any sort of company, unsupervised and uncontrolled. Very few girls ever realize before they are married that their mother is really the best friend and chum a girl can have. And this is usually the mother's fault.

I want to thank the Circle for the good recipe for canning corn, and will some one tell me why fruit shrinks one-third when cooked in the old-fashioned jars? I fill the sterilized jars, pour over the sirup, which is just warm, put on rubbers and caps and screw down till about one more turn is needed to make air tight. I put them in the boiler with lukewarm water and have them covered and after boiling the desired time and I remove from the boiler, the water is colored and the juice seems to escape. I always take out of the water and seal immediately, but when cold the fruit has shrunk about one-third. I should be thankful for information as to what makes it do so.

(I think you do not pack enough fruit into the jars before you add the sirup. All fruit like strawberries and raspberries should have all packed in that you can get without crushing.—Editor.)

Greetings to Mrs. C. D. of Washington: I am glad that others are as interested in rabbits as I am. I have three does, two are Belgian. One has 12 bunnies. I have one pink eye, which I am planning to use as a start in a fur-bearing variety. I breed my does to a big blue Flemish Giant; they grow quickly and make fine meat. BILL'S WIFE.

Oregon.

Dear Mrs. Barland: What an interesting little paper THE FARMER is and we all enjoy the Family page. I have always been content to be just a reader, but think now I shall write something.

We are trying to "prove up" on a grazing claim in Montana. We have a fine start of children, and I mean just that, too, as they are a strong, healthy lot, and we hope to realize enough from this claim to get a little home some place where all the family may be on a somewhat self-supporting basis, not entirely dependent upon husband's daily wage.

We believe in the Golden Rule and try to practice it at our house. Our purse, though a flat, little thing, is a sort of family affair and whoever goes to town takes it along. If it is I who goes my husband never asks me how much I've spent or what I've used it for. When the children and I want to go he always looks the car over to see that all is O. K. with it before we start. And I, for my part, if I expect to be gone from home for a day or two, always see that there is plenty of bread and fresh cookies or cake for him and I put out clean towels and socks, etc.

Life is too short to be fussing over the expenditure of a few cents and to lay down laws of thou shall or thou shalt not, between husband and wife. Wishing all the Family Circle success and happiness, I will close. HOMESTEADER.

Montana.

Dear Mrs. Barland: Please tell M. D. that if she will grease the loaves of bread when she puts them in the pans, then, when she takes them out of the oven, place them flat on the table with nothing over them till they get cool, I think she will be satisfied with the crust. J. F. B.

(Never turn hot bread out onto a table without a cloth under or you will grease the table if unpainted or will cause the bread to taste if varnished.—Editor.)

Family Circle Girls

Dear Mrs. Barland: I have read the Circle for a long time with pleasure.

Like M. D., I had begun to think I was about the only girl who didn't believe in "cutting up" after the manner that has caused the recent discussions. But since I have been reading the Family Circle I have changed my mind and have learned that there are many boys who know how to conduct themselves like gentlemen.

I live on a farm several miles from town and wouldn't exchange country life for the city, for I have lived all my 19 years on a farm.

Sewing, crocheting and reading are my pastimes and, though there are not many young people in our neighborhood, we get together and have some fine times just the same. A COUNTRY GIRL.

Oregon.

Dear Mrs. Barland: I have been a silent reader of THE FARMER for over two years. I am only 15, but am nearly through high school and I am going to college for two or three years, anyway.

You asked what we liked best to do. I like to roam through the woods and sit by the lake or river and read. I have tamed about 20 chipmunks and squirrels so that they will eat from a pail or pan. The birds are not afraid of me, either.

I like to have some fun once in a while, but I can't see where young people get fun out of being so wild. I have a better time at a public dance. I have attended two public dances and thought them really horrid.

I don't believe in smoking or drinking and I belong to a girls' club and we all do what we can to stop that sort of things. L. W. W.

Washington.

Dear Mrs. Barland: Have long read and enjoyed your department in silence. After reading M. S. P.'s, I thought that I might be able to help some one by giving my formula for finding happiness. There are so many interesting and worthwhile things to do that I never have time to think of or to regret that I do not care about dances or "petting parties."

I enjoy life so much that it is sometimes a question of where work ends and pleasure begins. It is, I believe, one of the main secrets of life, to be able to receive most of our pleasure from the little things.

We can always read good books and I get a great deal of enjoyment from that source. Sewing is my main pastime, and while my results are usually a bit unusual and more than a trifle weird, that does not detract from my pleasure. Mother and I are the greatest and best of pals and we enjoy many a musicale, show or walk together. Just at present we are planning a long hike for this summer and if it never becomes more than a plan we will have enjoyed it immensely.

Will not some one write and give me the benefit of their experience? For those of us who are athletically inclined there are an endless variety of interesting sports, particularly in the summer.

Hoping that this will help some of you, I am, sincerely, "TOMBOY."

In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

The Sheet Writer's Busy Season

It gives The Washington Farmer real pleasure to know that most of the fair managers throughout this state are awake to the menace of bogus farm paper solicitors, fraudulent carnival features and other fakes and fakers of similar character. This magazine, as our readers know, has been conducting a campaign of education for a long time with a view to protecting its readers from unscrupulous solicitors. We have had in mind the person who represents himself as the agent for a farm paper, frequently though falsely as the agent of The Washington Farmer, when he is in fact the representative of no bona fide farm paper, but is merely using the paper's name to separate the farmer from his cash. Solicitors of this class are commonly called sheet writers. They usually carry cheap premiums of some kind, such as a pocketbook, shiny pencil, wall map or pair of glasses, telling their intended victims that they are giving these supposedly valuable articles away merely to introduce the paper. By one fraudulent means or another, they frequently secure anywhere from half a dollar to two or three dollars, give the subscriber a bogus receipt, leave the community and are heard from no more. The subscriber discovers that he has been victimized when the paper which he expected to get does not come.

Some time ago we wrote to fair managers throughout the state, urging upon them the desirability of strictly prohibiting this class of faker on their fairgrounds this year. Among the many favorable replies received, A. E. Rusco, secretary of the Whatcom county fair, says: "I wish to state that we are heartily in favor of your plan, also that we do not allow that class of salesmen on our ground, requiring all salesmen to purchase booths the same as any other dealer." W. G. Hannam of the Spokane Interstate fair says: "Subscriptions can not be solicited by itinerant sheet writers. We have invariably forbidden any premiums being offered by sheet writers to secure subscriptions." Other fair officials have expressed similar sentiments, some even going stronger.

While the exclusion of these tricksters from fairgrounds is a great protection to those who attend the fair, let no one feel that the fight against them is won. They will be just outside the fair gates or on the street corners of fair towns during fair week plying their trade. Not only that but there are still a few fair managements that are not excluding them from the grounds.

The Washington Farmer has no fault to find with the bona fide solicitor of any bona fide farm paper. It merely wishes to warn its readers against the faker. Representatives of The Washington Farmer offer no premiums with the paper. They sell nothing but the paper itself, and that at the regular price of $1 for five years. If any one claiming to represent The Washington Farmer makes any other offer he is not to be trusted. Neither will our bona fide representative offer to send the magazine if a subscriber will merely pay the postage.

WheatGrowersUnite

Announcement was made last week that the activities of the Northwest Wheat Growers, Associated, will from this time on be taken over by the American Wheat Growers, Associated.

The northwestern organization is the selling organization for the cooperative associations of the four states of Washington, Oregon, Idaho and Montana. These associations have been pioneers in the cooperative marketing of wheat, and have been largely instrumental in the creation and development of the American Wheat Growers. Their amalgamation with the latter is said to mean the broadening out rather than the cessation of the cooperative endeavors of this territory.

Hereafter the cooperative wheat of the northwest will be sold by the American Growers in common with that of half a dozen middlewestern and southwestern states. Northwestern wheat, however, will be handled through the present office in Portland, with no change, it is said, in the manner of handling in so far as the individual grower is concerned. The activities of the larger organization are expected to increase the influence of cooperation on the ger[illegible] grain market.

Fair at Elma Makes Good

(Continued from page six.)

the champion sow, in Liberator's Girl 2d, a granddaughter of Liberator. Robert Eaton, Cosmopolis, showed two pigs; Warren Brown, Montesano, two pigs, and Ernest Bargmeyer, Melbourne, one.

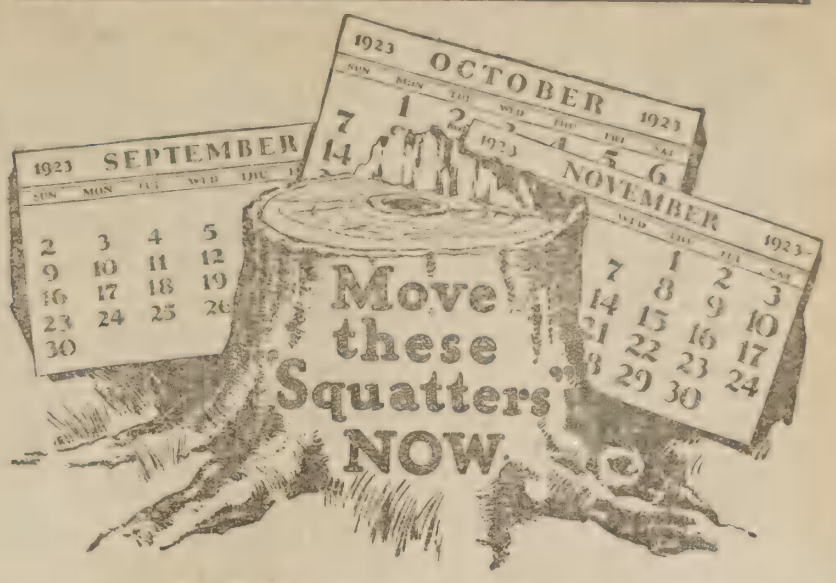
F. Von Derheyden, Wapato, had two excellent Chester Whites, and Howard Norris, of Goldendale, one. Von Derheyden had both champions in Wapato Boy and White Lady.

Two breeds of sheep were represented. Howard Norris, of Goldendale, showed six head of Hampshires and Norris & Kenneth Hinshaw of Goldendale, five Southdowns. They were awarded firsts and championships.

The entire horse show was made by J. D. Norton of Elma with the good black Percheron stallion Modeler, although three standard bred were judged at the race barns.

THE CUD-CHEWER.

The animal that chews the cud is called a ruminant.



THEY use your good land and pay no rent—*you* pay the taxes. Get them out *now*—after your crops are harvested and stored or sold—now's the time to make more land ready for bigger crops next year.

Use Pacific Stumping, the new du Pont explosive, for this work. It has approximately the same strength, stick for stick, as any standard stumping powder, yet leaves no larger hole in the ground than a 20%. Then, you get one-half more sticks for your dollar. It's non-freezing, too.

Let us send you the free booklet "Clearing Logged-off Lands," which gives complete information on land-clearing, ditching and tree-planting.

Watch What Happens!

Lubricate your automobile with Zerolene, which costs about half what you pay for many other oils, and watch what happens.

First, you find that your gasoline bills are lower. Repeated tests have demonstrated that, other factors being equal, the car lubricated with Zerolene makes about 5% better gasoline mileage than cars lubricated with other oils.

Second, your car goes from 25% to 50% farther before you need to grind valves or remove carbon. This fact, too, is fully substantiated by numerous tests.

Insist on Zerolene—even if it does cost less.

High Points in News of the Week

The fourth regular meeting of the league of nations opened at Geneva, Switzerland, this week. The league faces questions this session which may go far toward determining whether or not it can function as an effective agency in maintaining world harmony. In all probability it will be called upon to act between Italy and Greece in the solution of a problem which at this writing is of such magnitude as to lead inevitably to war unless some such authority as the league prevents.

Recently the Italian members of a boundary commission were assassinated on the Albanian frontier presumably by Greek subjects or at least, supposedly under the protection of Greek authority. The Italian government immediately called upon Greece for certain formal acts in apology and the payment in addition of 50,000,000 Italian lire as indemnity. Greece agreed to certain parts of the requirements but refused to accept others on the ground that to do so was to humble unduly her national dignity. This resulted in the seizure by the Italian military authorities of three Greek islands near the mouth of the Adriatic sea.

In the meantime, Greece has made formal application to the league of nations to intervene with a view to preventing war which otherwise is imminent. Italy is expected to oppose this intervention on the ground that world peace is not jeopardized by action which may result between the two nations.

The ability of the league to handle this problem may do much to determine its efficiency as a permanent world agency.

A report is current that both Germany and Turkey will apply at this meeting for membership in the league of nations. The Irish Free State is also expected to apply.

* * *

A severe earthquake, followed by fires, last Saturday and Sunday devastated several of the leading cities of Japan, including the capital city, Tokyo, and the noted seaport, Yokohama. At this writing it is estimated that 100,000 persons have perished, though nothing like accurate figures are yet available. The two cities mentioned, together with neighboring towns and villages, are reported to be practically laid waste. In addition to the dead, thousands are reported to be without food and shelter. The earthquake wrought havoc over a territory nearly 100 miles wide, centering about Tokyo. A resultant tidal wave did immeasurable damage to shipping, with probably considerable loss of life at sea.

* * *

The predicted strike in the anthracite coal fields of Pennsylvania has taken place, though it is called a "work suspension" rather than a strike. About 153,000 miners are idle, leaving only enough on duty to protect the mines. Pending settlement of the controversy under the leadership of Governor Gifford Pinchot of Pennsylvania, no attempt will be made by the mine owners to produce coal.

* * *

Great progress is being made in the movement to establish the eight-hour day in the steel industry. Several thousand employees are now working only eight hours, the number being increased regularly. It is now believed that by December the entire industry will be on an eight-hour basis.

* * *

United States government officials have reached a definite decision to extend recognition to the Mexican government under President Obregon.

* * *

Russia is on the road to recovery from the effects of bolshevism and communism, according to the report of Colonel William Haskell, who has been in charge of the American relief work there under the supervision of Herbert Hoover. American aid during the last two years has amounted to about $60,000,000, he says. A little less than 1,000,000 tons of food, seed, clothing and medical supplies has been bought in America by the relief administration, making about 250 shiploads to Russia.

* * *

The American Bar association last week at its convention adopted a resolution favoring the joining of the international court of justice by the United States. This is the action so vigorously urged by the late President Harding. The court of justice operates in connection with but largely independent of the league of nations.

What's the Farmer's Test of a Tire

Simply this: Tires that do a farmer's work at the least ultimate cost; tires that meet the road conditions he must meet; tires that will take him back and forth between his farm and town.

Silvertowns meet his test.

Stop, and think it over. The first tire had to meet road conditions now found in the country. Goodrich, the pioneer tire maker, couldn't choose the roads for its tires any more than a farmer can choose his. So Goodrich built tires to meet them.

Your dealer sells Silvertowns, Goodrich "55" Clincher Fabrics, and Goodrich inner tubes.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Civilization is doing many proud things. To my mind, the finest of these is what she is giving the baby. The improved health of the little ones and their constantly increasing chance of living are the accomplishments of civilization.

Dr. Copeland.

It is natural to assume and it is the popular belief that the pioneer days were safer from a health standpoint. But this is not the fact.

Within a period of half a century 11 years have been added to the expectancy of life. This statistical fact is founded to a great extent upon the improved conditions in the early age groups—the babies and the children under 5. Civilization owes this labor of love to the children, because many of the conditions of modern life are very trying to little folks. For instance, a baby's chance of living is three times greater if he is born in a house of six rooms than if he arrives in a house of two rooms.

One of the diseases which may be counted among those civilization has brought to children is rickets.

Rickets is a disease due to a deprivation of lime, or to the failure of the system to assimilate the lime offered by the food. Just exactly what is wrong is not fully understood, but certain clinical facts have been well established.

Without material change in the feeding, continuous exposure of the child to the sunshine will overcome rickets. This indicates that sunlight has some mysterious effect upon the system to cause it to function in such a manner as to absorb the minerals needed.

The administration of cod-liver oil several times a day will correct the rickety condition. A teaspoonful or more may be given three times a day.

Needless to say, the child should have the bathing, regular feeding and the daily

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you

4456. Lady's Dress. Cut in 7 sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 5 yards of 40-inch material. The width at the foot of the dress is 2 1-2 yards. Price 10c.

4207. Girl's Dress. Cut in 4 sizes: 6, 8, 10 and 12 years. A 10 year size requires 3 1-2 yards of 32-inch material. Price 10c.

ST. LOUIS MAN DISCOVERS A NEW KIND OF HEAT

Mr. B. M. Oliver, of St. Louis, has invented an amazing device, which ends forever the days of woman's slavery to dirty, mussy coal and wood fires. It sets into the firebox of any kind of heating-stove, cookstove or furnace without changes, and just turning a valve, it gives any degree of heat—3 times the heat of coal.

Mr. Oliver calls his invention the Oliver Oil-Gas Burner, because it burns 95 per cent air and 5 per cent oil (kerosene). Over 100,000 Oliver Burners are being used by American housewives. Mr. Oliver wants every woman to have the use of his invention if you will write to him at 2121-I Oliver Bldg., St. Louis, Mo., you will receive an attractive booklet FREE that tells all about it. Mr. Oliver is now making a special low price offer, including a 30-day free trial. He is also looking for live distributors, and will tell you how to earn $500 a month in full or spare time if you will request his sales plan.—Adv.

TRADE MARK—PATENTED

DAZZELITE Gasoline Mantle

Creates the most dazzlingly white light known. 50% more light. 50% longer life. Lower cost. Guaranteed

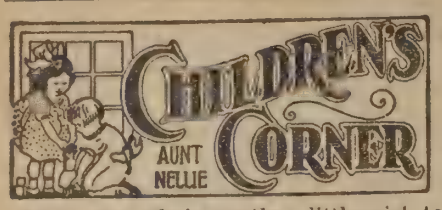
Just What You Want

may be offered in this week's want ads at a bargain. It's a good idea to look them over every week

Glance over the bargains on the "Want Ad" page.



"Will you admit another little girl to your group of happy cousins?" inquires Marie Jensen, living on Puget sound, Washington. (Yes, Marie, we are very glad to have you with us.) Marie's home is in the city now, but she has lived on a farm where she could have pets. She says they hope to be on a farm again soon. Marie attends Sunday school where there are 600 children. She is 9 years old. Her birthday is January 11. She has three sisters and ■ brother.

Lillian Ward is another new cousin who will be 10 October 7, 1923. She lives neighbor to Helen Owens of southern Washington, who writes to the Corner. Lillian has promised us a picture before long, which we shall be happy to receive.

Jimmy Engle writes his first letter to us. He says: "I live on a large wheat farm not far from town in Grant county, Washington. We have a number of horses, five cows and two calves. I have eight brothers. The youngest one is just ■ months old and his name is Harvey. I go to Sunday school at the schoolhouse almost every Sunday and teacher gives me a card. My birthday is January 24. I am 5."

We are glad to hear from Ellen Sanger, who writes that she with her mother and sister picked strawberries for a week at Green Bluff. Ellen's home is in Spokane county, Wash. This is her first letter for a long time. (Thank you for the poem, Ellen.)

Evelyn Olsen, whose home is on the Coast, is spending her vacation on a farm with her cousin. She says she likes to live on the farm very much and nearly every day she rides her cousin's pony. This new cousin is 9. Next year, February 21, she will be 10.

Esther Simila, a graduate this September, says she has been too busy to write many letters this summer. Recently she spent a whole day at ■ park, where she went swimming. "Swimming is great sport," says Esther, and we agree with her. She is a Lewis county(Wash.) girl.

Birthday Greetings

THURSDAY, September 6—Wilma Grace Cross, 10 years old.

FRIDAY, September 7—Helen Pendell, 10 years old.

SATURDAY, September 8—Mildred Medley, 11 years old.

SUNDAY, September 9 — Elizabeth Schmauder, 9 years old; Elsie Cramer, 8.

MONDAY, September 10—Marie Albin, 9 years old; Thelma Amon, 11; Thelma Engbretson, 11; Dolly Gifford, 11.

TUESDAY, September 11—Donna Farmer, 11 years old; Vilno Hanki, 10; Esther Schorzman, 9.

WEDNESDAY, September 12 — Eugene Kanta, 11 years old; Arthur Olsen, 7; Billy Watson, 10.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Vallborg Carlson, Mabel Bear, Frances Flanik, Edna McCash, Norene Rinehart, Clementine Deary, Margaret Peters, Esther Bonnet, Jimmy Lew Woodyard, Muriel Briggs, Margaret Liebing, Marguerite Duffy, Eleanor Brandt, Dorothy Haverill, Edna Garrison, Violet Dingerson, Annie and Violet Anderson, Arthur G. Chess, Anna Olson, Ethel Lucille Boawn, Dorothy Alice Hutson, Selma Peterson, Margaret Matthews, Cynthia Harlow, Doris Schy, Iva Ida Schrag, Lavern Nichols, Peter Kragt Jr., Della Haines, Dorothy Lowe, Lucille Hardung.

BEDTIME STORIES

By THORNTON W. BURGESS.

HELPING FARMER BROWN'S BOY.

The time was when every single one of the little birds and animals had looked on Farmer Brown's boy as the chief of all their enemies and had hated him just in proportion as they feared him. That was in the days when he had delighted to chase them and throw stones at them and hunt them with ■ terrible gun. That was before he had begun to get acquainted with them and had learned that the little people of the green meadows and the green forest have feelings just as he has and know love and joy and fear and suffering just as human people do.

But since he learned all this Farmer Brown's boy has been the very best friend the little people have. It took them a long time to find this out, because, you see, they had been afraid of him so long that they were suspicious of everything he did, and when he tried to make friends with them they thought it was a trick to catch them. But patience accomplishes a great deal in this world, and Farmer Brown's boy was very patient. He began to understand just how they felt, and he didn't blame them a bit, not ■ bit. He knew that if he had been in their place he would have felt just the same way. So when they ran or flew away from him or hid the moment he came in sight he just sighed to think that he should ever have done things to make them feel that way, and then tried to do something to show them how his heart had changed and that he no longer wanted to harm or frighten them. In the winter when food was scarce he put good things to eat where they could find them. When he found any of them in trouble he helped them out of it.

Little by little they began to understand that he wanted to be their friend. Tommy Tit the Chickadee was one of the first to realize this, and Tommy met him half way. It was not long before Farmer Brown's boy and Tommy were chums and Tommy's bright little eyes twinkled with pleasure every time he saw Farmer Brown's boy. Then Chatterer the Red Squirrel and Happy Jack the Gray Squirrel and Peter Rabbit and Striped Chipmunk and Johnny Chuck and Mrs. Grouse discovered that he was doing his best to make life easier and happier for them, and little by little they lost their fear of him. They began to look on him as a friend. He was forever trying to do something for them and for the other people. After a while some of them began to want to do something for him. They talked it over among themselves, but they couldn't think of a thing that they could do.

Old Mr. Toad listened gravely to all that was said, but with a twinkle in his beautiful eyes. When everybody else had confessed that they could think of nothing to do for Farmer Brown's boy he spoke:

"Catch bugs," said he, gruffly.

"What have bugs got to do with Farmer Brown's boy?" demanded Peter Rabbit.

"Everything," retorted old Mr. Toad. "They eat up the things that he is trying to grow. I know because I work in his garden. I've been helping him for a long time and he knows it. But I can take care of the bugs in only a small part of his garden. He needs a lot of help there. And he needs a lot more in the old orchard and in the berry patch. The worms and bugs are just spoiling the trees and bushes. If all who like bugs and worms to eat would get busy in the old orchard and the berry patch and the garden they would do more for Farmer Brown's boy than they can do in any other way. I know."

"Then let's do it!" cried Jenny Wren excitedly. "That little house is the nicest home I've ever had, and I'd like to do something in return. I catch bugs to eat, but I never supposed that doing that would help Farmer Brown's boy. I'll hurry right around and get all the other birds and we'll clean the old orchard of every bug and worm."

(Copyright.)

The Washington Farmer is welcomed just ■■ much by the wives and daughters on the farm as it is by those who hold the plow handles or who drive the big reaper. It devotes articles, pages and departments in every issue to the special field of women. It aims to lighten the work of those who must perform the endless tasks of the farm home, and to carry a word of inspiration and cheer to those who keep the wheels in the farm household turning smoothly.

The "Family Circle," with its constant interchange of experiences, ideas, opinions and methods, becomes more and more popular as the weeks pass.

The friendly interest of our women readers makes them warm adherents of our cooperative plan for securing and renewing subscriptions. Here is the idea. Many publications charge a high subscription price because it costs so much to gather the subscription orders. We eliminate the expensive system of having a force of agents go from town to town and from farm to farm to secure and renew subscriptions. Instead, we ask our friends to send in their own orders at least sixty days in advance of the expiration date stamped on the wrapper of your paper, and to include the orders of friends and neighbors with your own.

You get the benefit of the money saved by this economical plan. You receive this big, entertaining farm and family magazine for five years for only $1.

Continued cooperation is necessary. We hope to make 1923 even more successful for cooperation than the past years have been. Please do your part.

Subscription Rate to The Washington Farmer:

$1.00 for Five Years

25 Cents for 1 Year.
50c Cents for 3 Years.
In Canada add 1 cent a copy for extra postage.

Sept. 6, 1923.
The WASHINGTON FARMER,
Review Bldg., Spokane, Wash.

I desire to take advantage of your Cooperative Plan in securing new and renewal subscriptions.

Honor Roll

Holstein-Friesians for 1922-23

Analysis of the Holstein-Friesian honor roll for 1922-3 shows that several northwest bulls are among the leaders on the list of 624 whose daughters appear on the roll, and that a cow bred in the northwest, Hollywood Lilith Palmyra Abbekirk, now owned in California, was the second highest prize-winning female of the year. She appears six times for 77 points, while the leader scored 82 points. The standings of various sires are computed on the basis of combined milk and butterfat production by their daughters.

The place of honor goes to a California bull, with 250 points, and all of the next 11 places are taken by eastern bulls. In 13th place, however, and leading for the northwest, appears Judge Segis, formerly herd sire at Hollywood farm, with 87 points. In 16th is Segis Walker Matador, one of Carnation Stock farms' sires, with 80 points, and further down the list appears Matador Segis Walker, Carnation's senior sire, with 48. Their combined score puts them in third place for the year among combinations of full brothers. One group of four scored 260 points, and one of three 198.

Sir Korndyke Ormsby Piebe, formerly a Todd & Sons herd sire, but now in the east, ranks next to Judge Segis, and at least two other bulls used by the Todds, including Sir Johanna Ruth Fayne, are in the list. Two bulls bred at Hollywood appear among those scoring 50 or more points, and there is a third in the list. Chimacum Spring Farm King Pontiac, another good northwest bull that was sold back east, ranks 45th, with 58 points, and there are three others bearing the trademark of "Chimacum." One of these is in the "Bang" herd at Steilacoom, but he has sired some of the highest producers in the state. At least two well-known "Bessie" bulls appear, one of them being the sire that rose to fame in the Yakima valley herds of Marks & Davis, the other the Tillamook bull that sired last fall's outstanding show cow of the breed and 32,000-pound 4-year-old. With 37 points, Sir Bessie Fayne De Kol Fobes is well toward the top of the list. Still another good bull in the first division whose service the northwest has lost is Mutual Fobes Longfield De Kol, with 28 points. King Segis 10th, sire of Segis Pietertje Prospect and many other good producers; his son, Paul Segis Fayne, head of the Bergsma herd at Ferndale, Wash.; Dutchland Governor Sir Colantha, the old bull being used by Ralph Tuttle of Walla Walla; three bulls bearing the "Hazelwood" trademark of John L. Smith; two bearing that of J. Luscher & Sons, Fairview, Ore., and several others obviously of northwest breeding are to be found in the list.

THE "BANG" HERD.

During 11 years' operation on the "bang" herd at the Western State hospital at Ft. Steilacoom, Wash., only one of the progeny of the tubercular females confined there has reacted, and 113 head of pure-bred Holstein cattle have thus been saved. The members of this herd pasture by themselves and are never allowed in contact with healthy cattle. Attendants of the healthy herd do not visit the bang herd without changing their clothes before and after, and any visitors to the enclosure where the tubercular cattle are kept enters and leaves over a mat soaked with disinfectant. Calves born to tubercular females are taken immediately in a sterilized blanket to the other barn, and there are raised exclusively on milk from healthy cows.

AYRSHIRE LEADERS.

Wenatchee Ayrshire farm of Wenatchee, Wash., has eight animals in the Ayrshire "50-pound list" for April, and two of them are leaders of their respective classes, while two others stand second in theirs. This is a remarkable showing, for Ayrshires from every section of the United States compete for the honor of being included in this list.

HOLSTEIN HERD NAMES.

One Idaho and two Oregon Holstein breeders have had reserved recently prefixes or herd names for their particular use. They are John Kaeser of Filer, Idaho, who will use "Filervale" in his breeding operations, and Jesse J. Gilbert of New Lebanon and M. E. Guenther of Gaston, Ore. Gilbert has reserved "Gilcrest" and Guenther "Chehalem."

DELAY FATTENING PROCESS.

Shoats should not be fed for fattening until a few weeks before marketing or butchering time.

BETTER PRICES For Your CATTLE, HOGS and SHEEP when sold on the open competitive market. We handle consignments for you on a commission basis only. Community shipments our specialty. Put your name on our mailing list for weekly quotations.

COMPLETE DISPERSAL
WILLIAMS' JERSEYS
Sherwood, Oregon, Tuesday, September 18, 1923

Twenty-six head gold and silver medal cows, show prospects, young stock and the great herd bulls. Entire herd, including five daughters of Rosaire Olga Lad, four daughters of Captain Tristram and others close up to the world's heaviest producers. Among the cows are St. Mawes Boise Rosaire, gold medal cow, record 891.54 lbs. fat at 3 years 7 mo., she also has been a winner in the show ring and sold at auction in 1919 for $5100. Ediths Oxford Rosie, St. Mawes Boise Queen, etc. Be sure and be there. Catalogs now being prepared. If your name is not on my 1923 catalog list, send name to sales manager and one will be mailed as soon as published.

E. A. RHOTEN, SALE MANAGER, Salem, Ore.
R. C. WILLIAMS, Sherwood, Ore., Owner.

Hollywood Holsteins

Our show herd will be exhibited at Chehalis, Spokane, Lewiston (Idaho), Yakima and Salem (Oregon.)

Remember that none of these animals were purchased for show purposes, have all been in the herd three years or over, and with only two exceptions, the whole herd was bred at Hollywood Farm.

Hollywood Farm Hollywood, Wash.

4 Gold Medals
5 Silver Medals

PLEASE LOOK.

The Tiddledywink Noble family have made both gold and silver medals in two years testing. During test period they traveled across the continent, were exhibited in 3 shows, winning premier honors each time shown. They have won junior championships, grand championships, and, still better, have never been defeated as a dairy herd (5 cows in milk). They have show ring quality, along with producing ability.

May we quote you prices on better quality sires. We have two for sale.

Meadow View Jersey Farm

Red Cross to Direct $5,000,000 Relief

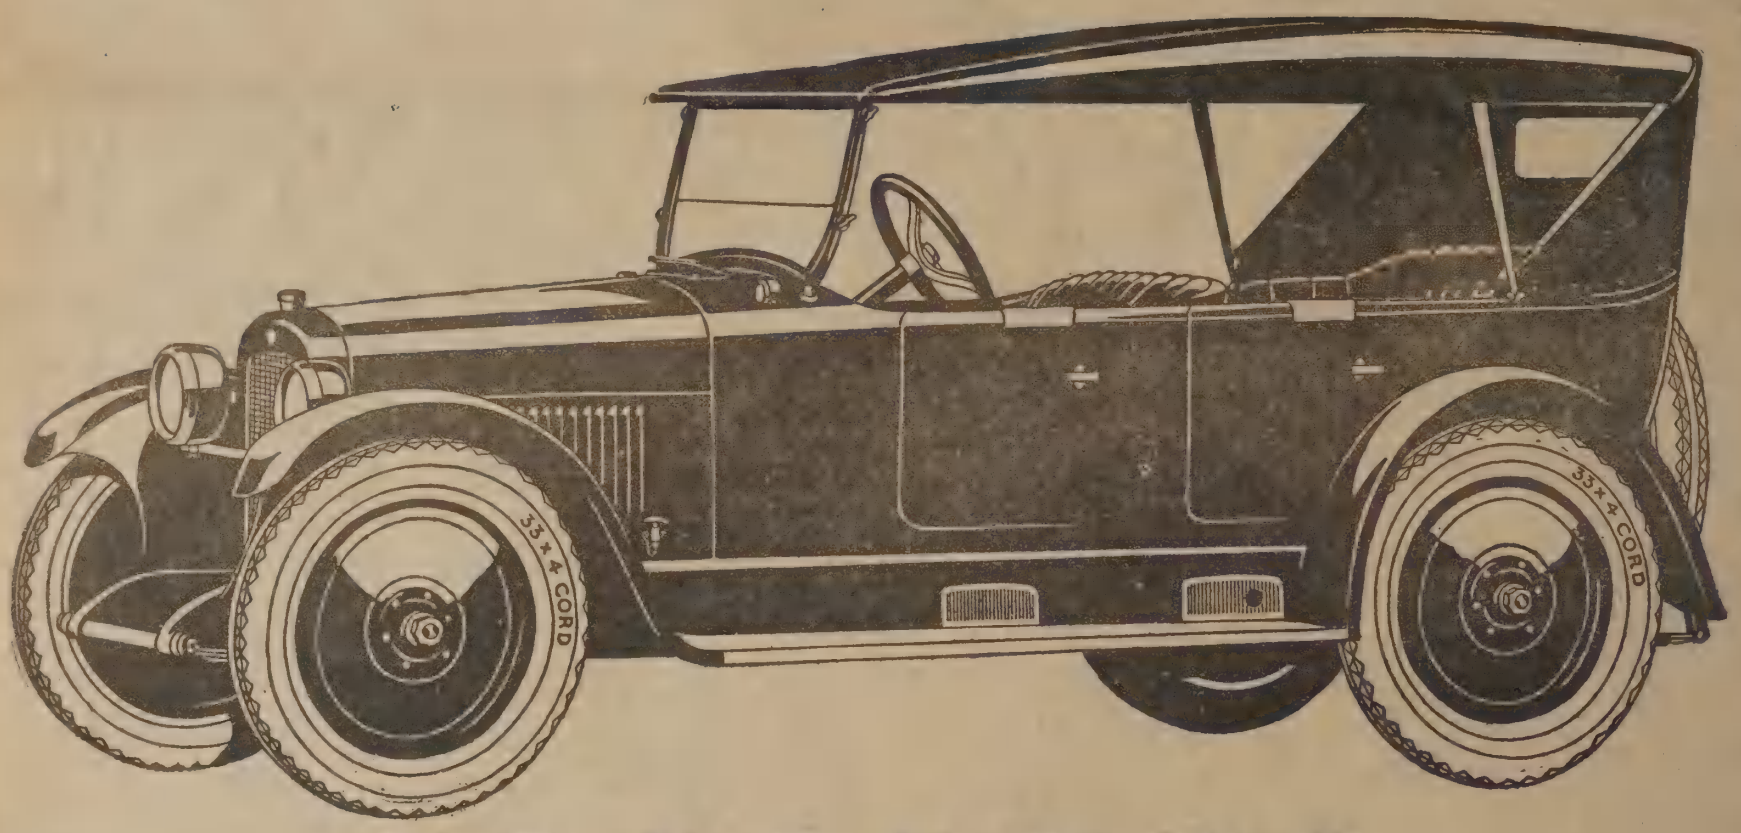
Japan's Appalling Disaster Centers World Thought on the Pacific

PRESIDENT COOLIDGE has been early at his desk announcing that the business of first importance before the executive branch of the government is the Japanese relief effort put forth by the American nation. The president personally has directed the state, war and navy departments to go the limit in extending aid, emphasizing that nothing that is possible to do should be left undone.

The Red Cross already is well under way in its appeal for a relief fund of $5,000,000, having taken over the entire purchasing and shipping department of the American relief administration. The shipping board also has placed at the disposal of the Red Cross approximately 320,000 tons of shipping. Continued on page eight

Do You Know How to Drive Safely on a City Street?---Page 18

NASH



PRESENTS

The New Four-Cylinder Touring Car

In the development of this new Four touring car Nash focused engineering effort directly upon those elements of performance of most vital importance to the farmer.

So you find in this car a structural ruggedness and solidity well calculated to accept the sternest kind of employment without faltering or weakening.

And so aptly and scientifically is the car sprung and balanced; so ably has the motor and carburetor been refined; that upkeep figures kept from week to week will show clearly that Nash Four economy in gas and oil is a very considerable saving.

The braking system has been given even greater sureness, power, and efficiency by reason of a special Nash application of time-tried and positively proved braking principles.

In addition, Nash has included in the extensive equipment a number of new and practical features that serve to give the car even broader value as an investment.

The Nash Motors Company, Kenosha, Wis.

Spokane Interstate Fair Educates and Entertains

Perfect Weather and Good Programs Make It a Financial Success, Also

Perfect weather prevailed every hour, day and night, for the Interstate fair. The exhibits and the entertainment were well above those often found at similar fairs. As a result, President T. S. Griffith and Manager W. G. Hannam were able at the close to announce a total attendance of over 98,000 and proceeds sufficient to cover all expenses and take up part of the outstanding indebtedness growing out of less favorable years in the past.

Two hundred and fifty hens that lay 120 eggs each per year pay their owner nothing for the work he does caring for them. If they lay 180 eggs a year they give him a labor income of $304, and if they lay 200 each they pay for their raising, board and lodging and give the owner $375, or about $1 a day, for his work. And then here's another figure. Read it and weep. The average hen in the state of Washington lays—how many eggs do you guess? Ninety-five! Therefore, the average hen in Washington is not paying for her keep, much less paying for the trouble she is.

Did somebody ask what that has to do with a report of the Spokane Interstate fair? Beg your pardon. Maybe we got started on the wrong foot. We'll try it again in the good, old-fashioned way.

The 30th annual Spokane Interstate fair was held all of last week and was bigger 'n better 'n ever, which is saying a lot. Good horses, big watermelons, the merry-go-round and all the trimmings were there. But the fact lingers in the writer's mind that if you're going to keep hens you should keep the kind that will keep you. If it is just company you want, get a friend to come and live with you. Don't board hens.

Yes, the fair at Spokane was a little better than ever this year. The entertainment before the grandstand was worth the money that it cost. The lemonade and soda pop seemed to give general satisfaction and the toy balloons did not burst for quite a while. There was a nice little scrap on the race track just after the running of the derby on Thursday that would have doubled the day's attendance if the management had forecast it and advertised it properly. And in addition to all that, the agricultural show, the live stock show, the poultry show, the art exhibit, the state college extension service booths, the automobile display, the tractor and machinery field, the department of agriculture section, the boys and girls' department and several others that just at this moment escape from memory provided enough information, stimulus and courage to make life interesting for the 12 months between now and next year's fair. It was in one of the extension service booths that we learned about the hens. If we tried to tell all that was in these booths worth remembering we would run out of paper before we got half way around. But we must tell one more thing about eggs right now. W. D. Buchanan, poultry extension specialist, has figured out that the people of the United States eat just a little more than half an egg a day each, on an average. If the average production per hen were increased five eggs a year (which the poultrymen are undertaking to do) it would mean that still the average consumption would be less than three-quarters of an egg. Hence the conclusion that the poultrymen should organize and advertise and not be afraid to increase production. Mr. Buchanan had a toy train in operation in his booth carrying eggs from Washington to New York. It bore evidence that a five-egg increase per hen in Washington would mean 110 carloads this year, with a value of $450,000.

Better Seed Urged.

In George L. Zundel's booth in the extension service exhibit was a real argument for better seed. It applied directly to potatoes, but the principle holds for anything from cabbage to cattle. Mr. Zundel showed how potato diseases could be controlled by hill selection and how failure to reduce these diseases through the production and use of good seed reduces the value of Washington's potato crop nearly $1,475,000 a year.

There was a milk goat at the fair that gives about a gallon of milk a day. Her feed bill for the entire week, the owner said, was 21 cents.

In the Holstein cattle barn W. E. Meyer, field man for this breed, had on exhibition a model bull. He was a model in more ways than one. He was made by a sculptor and he represented the ideal type of the breed as worked out by experts in the Holstein-Friesian association Meyer explained the points of that bull to a host of folks during the week who never knew before that the bull was half the herd, whether he was a good one or a scrub.

Down by the hog sheds one day four or five club boys or former club boys proved the value of club work when they sent a whole flock of veteran breeders of Duroc Jerseys away talking to themselves. The boys knew how to raise hogs and fit them for show. They won most of the first prizes and all but one championship in that breed.

Over in the club department proper a 14-year-old boy demonstrated, as few girls or grownups could do, what foods a baby of 2 years or so requires and how they should be prepared and administered.

Education Everywhere.

And so on the story might go with illustration after illustration of the strictly educational features of the Spokane Interstate fair. The excellent program of entertainment before the grandstand had nothing on the entertainment that the inquisitive visitor could find in any department on the grounds.

Notwithstanding that harvest was still on, the farm attendance was fairly good and the exhibits of agricultural products and live stock were above the ordinary. Competition in the agricultural pavilion was keen in many departments. Crops of all kinds were on display, from the honey crop to the grains and grasses. Incidently, the honey and bee display across the east end of the building was something sweet to look upon.

In the agricultural displays the booth winning first place was of the Camden grange No. 687, which won a total of 729 points. Second place went to an individual, J. H. Pennick of Valleyford, with a score of 629 points. The Espanola grange took third place, with 615 points. The 13 competitions divided premiums totaling about $700. In the individual competition $150 was divided among the following: First, J. H. Pennick, 629; second, Mrs. G. G. Lawson, 575; third, J. R. Orrock, 570; fourth, Mrs. A. Janny, 253.

In the county competition a total of $912.50 was divided among the following:

For the best exhibit of grain: Kootenai (Idaho), $100; Nez Perce (Idaho), second, $75; Lewis (Idaho), third, $50; Asotin, fourth, $25.

For the best exhibit of grasses and forage crops: First, Kootenai (Idaho), $100; second, Lewis (Idaho), $75; third, Asotin, $50; fourth, Ferry and Okanogan, $25.

Vegetables and root crops: First, Ferry and Okanogan, $100; second, Grant, $75; third, Kootenai (Idaho), $50; fourth, Asotin, $25.

For the most artistic display: First, Ferry and Okanogan, $75; second, Asotin, $50; third, Kootenai (Idaho), $25; fourth, Grant, $12.50.

Among the individual winners in the apple show were the following: W. R. Sanders, Mead; C. W. Scott, Neppel; C. W. Bennett, Opportunity; L. B. Nelson, Colbert; Hans Piterson, Colbert; Pettigrew Brothers, Neppel; Moses Lake Horticultural company, Neppel; William Kaysen, Trinidad; Mrs. M. Lamotte, Opporunity; F. D. Timm, Opportunity; Gerald Boyle, Opportunity; Bert Porter, Opportunity; Mrs. G. Dhaenens, Vera; G. A. Schleier, Opportunity; J. L. Gillispie, Veradale; Mrs. Sara Gatten, Colbert; W. M. Mihm, Colbert.

Good Poultry Shown.

An excellent poultry show was held, with most of the leading breeds well represented. The award for the best display by one exhibitor was won by Mrs. J. N. Critzer of Opportunity, second going to Jacobson Poultry Yards, Tacoma, and A. Greener, Spokane. For the best display ane one breed, the awards were Jacobson Poultry Yards, first; Greener, second, and Mrs. Critzer, third. For the best five male birds, any breed, the three won as last above.

Among the winners in the poultry show were the following:

S. C. Buff Orpingtons—L. M. Varney, Spokane; Mrs. J. N. Critzer, Opportunity.

White Wyandottes—Frank Thompson, Spokane; Mrs. N. Sabadin, Spokane; University of Idaho and V. C. Rae, Spokane.

Partridge Wyandottes—John P. Coffeen, Spokane; Bruce B. Burke, Spokane.

S. C. White Leghorns—A. Greener, Spokane; L. M. Patterson, Spokane; University of Idaho; White Poultry Yards, Oak Grove, Ore.

S. C. Black Orpington—R. H. Finley, Opportunity; R. C. Black Orpington, R. H. Finley.

S. C. Buff Leghorns—Boone Avenue Poultry Yards, Spokane; John Flemming, Spokane; J. G. Wilder, Everett.

R. C. Brown Leghorns—Boone Avenue Poultry Yards. S. C. Brown Leghorns—W. G. Salmon, Spokane; Boone Avenue Poultry Yards.

S. C. Black Leghorns—C. I. Doll, Hillyard.

Blue Andalusians—Boone Avenue Poultry Yards.

Silver Campines—F. W. Hoffman, Spokane.

Silver Spangled Hamburgs—E. E. Enos, Spokane.

Black Minorcas—Rendle & O'Brien, Spokane; University of Idaho; Boone Avenue Poultry Yards; W. H. Wooster, Opportunity.

Buff Minorcas—Mrs. B. Sammons.

White Plymouth Rocks—University of Idaho.

Light Brahmas—Adam Schaffer, Hillyard; Mrs. Agnes Masser, Spokane.

S. C. Anconas—Brainard Electric Hatchery, Seattle; Owen & Partridge, Spokane; Mrs. L. A. Thuma, Spokane; Frank Scarpelli, Spokane.

R. I. White—Mrs. J. W. Ince, Spokane; John S. Ovey, Spokane.

Red Cuban Games—Melwin Porter, Hillyard. Old Family Pit Games—H. L. Needham, Greenacres.

Black Tail Japanese Bantams—Forest Sammons, Spokane; H. C. Grimes, Spokane.

Australian Kiwis—Mrs. Ethel Ellithrope, Lamont, Wash.

Australian turkeys—Boone Avenue Poultry Yards, Spokane.

Golden Seabright bantams—Frank Thompson, Spokane; Forest Amsden, Spokane.

White Pekin ducks—Mills brothers, Spokane.

White Pekin ducks—Mills Brothers, Spokane.

White African guineas—Mills Brothers.

Bronze turkeys—J. Demsey, Sharon; Mrs. B. F. Watson, Chester.

Rouen ducks—F. W. Ferrell, Chattaroy.

Toulouse geese—Mills Brothers.

White Emden geese—Mills Brothers.

THE LIVE STOCK SHOW.

The live stock show was unusual. In many breeds there was little competition, yet throughout unusual high quality prevailed. In the horse barn, for instance, R. C. McCroskey of Garfield had it all his own way in the Clydesdales, except for one animal shown by H. T. Whitman of Spangle, that was made senior and grand champion stallion. McCroskey's herd made up an excellent Clydesdale division. Similarly, in the Shire breed, H. W. Merritt and his father, M. W. Merritt, showed their great string, taking most of the first premiums, but dividing honors with a few other breeders exhibiting from one to three or four head. In the Percheron classes there was a little more competition, though the greater part of the show was made up by animals belonging to C. K. Thayer of Waverly and H. C. Doepke of Fairfield. Here also the quality was high class.

One of the leading features in the horse department was the competition in draft teams. McCroskey's Clydesdales won first for two-horse, four-horse and six-horse teams in harness. W. A. Clark showed the second two-horse team. H. W. Merritt won second in four-horse and six-horse teams, with Doepke taking third in both these lots.

Another interesting feature was the boy's colt show, in which Max Merritt, age 7, won first place with Henry-Retta, a Shire; Orville Clark, second with Tandridge Lad, a Shire, and Doris Thayer, third, with Belmont, a Percheron. In ad-

(Continued on page sixteen.)

Three Ambitious Club Boys

Take Carload of Good Live Stock Out on Show Circuit

When three club boys can scrape up enough animals and courage to take a carload of stock out on the show circuit all of their own accord, it proves what kind of stuff the boys' and girls' clubs are made of. It shows that they have initiative and want to get wider experience in the showing of farm animals.

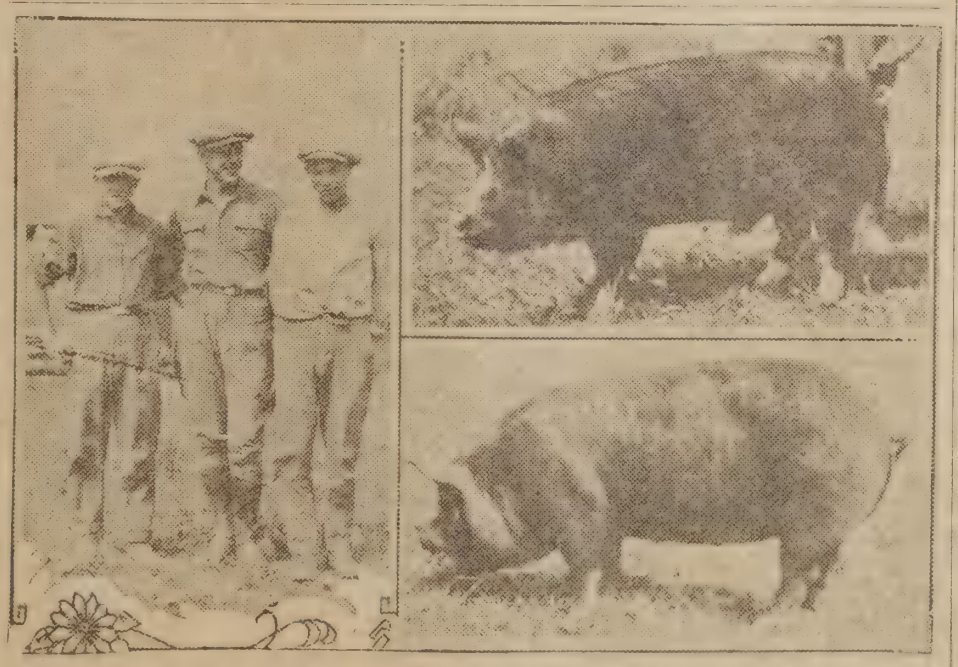
It was early in the season when Kenneth Hinshaw, Howard Norris and Earl Selle, all from Goldendale, appeared at the Skagit County fair at Burlington with a carload of Berkshire and Duroc Jersey hogs, together with seven sheep and a Jersey calf. Although they made no effort to conceal the fact that they were club boys, they entered all animals in the open classes, prepared to take their chances against all comers.

The 18 head of Berkshires included in this shipment were owned jointly by Kenneth and Earl, who are in partnerships and are raising what they call "Earlken Berkshires." A junior yearling boar, River Bank's Laurel Epoch, heads the herd. He comes originally from the River Banks' farm at Grants Pass, Ore., and is a grandson of Epochal, and also a grandson of Laurel Champion. A sow of the same age, Quasti's Royal Lady's 2d, is one of their main show animals, sired by Champion Type the 2d. This is the sow which Kenneth picked out at one of the California fairs last fall after asking her owner if he would let him have his pick out of the pen for $50. He never dreamed that Kenneth knew pigs as well as he did and of course had no idea that he would pick the sow that would be made the champion of the show.

The other sows in the Berkshire herd are practically all of Grape Wild breeding, while two others were purchased from the Italian Vineyard company, also of California. One sow from the latter herd was junior champion at the California state fair last year.

The Duroc Jersey hogs were shown by Norris, who brought along five head, including two boars of the Pathfinder and Sensation strains. He also has one Chester White, having both these breeds at his home at Goldendale. To complete the variety, he entered seven of his purebred Hampshire sheep, including an aged ram, two ram lambs and one aged ewe. He obtained his start of the purebred Hampshire breeding from the Foothills farm at Carleton, Ore. In addition to his hogs and sheep, he brought along a junior Jersey bull calf, which is owned by Will Horneybrook, one of the other club boys at Goldendale, who could not make the trip. This animal is of Mountain View breeding, and at six months of age weighed 550 pounds.

Earl Selle is the oldest one of the boys and he is only 20. While Kenneth Hinshaw is only 17, his size, however, puts him officially in charge of the trio, while Howard Norris is the youngest of the three, being only 16. All three of the boys show that they have had excellent training in caring and feeding of live stock, and their appearance at the show has caused no little comment among other club boys, as well as some of the grown-up breeders of the state.



Below, Guasti's Royal Lady, a junior yearling sow owned by Kenneth Hinshaw and Earl Selle of Goldendale. She placed grand champion of the show at the Skagit county fair at Burlington, this year.

Above, River Bank Laurel Epoch, the junior yearling boar owned by Hinshaw and Selle. The boar is sired by one of the River Bank boars at Grants Pass, Ore., and was made champion at Burlington. The three boys are Howard Norris, Kenneth Hinshaw and Earl Selle, all of Goldendale. The boys are showing a carload of club animals on the northwest fair circuit.

THE WASHINGTON FARMER

Successor to
THE RANCH, PACIFIC DAIRYMAN, HORN AND HOOF.
VOL. XLIX. NO. 11.

Trade Mark Registered U. S. Patent Office.
Entered as second-class matter, January 13, 1916 ,at the postoffice at Spokane, Washington, under the act of March 3, 1879.

Published Weekly on Thursday.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Value of Testing

With a clear increase in the production of both butter fat and milk in every herd in the Thurston County Cow Testing association, with one exception, for the 1922 period over that of 1921, the value of the association seems proved beyond cavil. County Agricultural Agent E. B. Stookey has worked out the figures to his own satisfaction and to the satisfaction of all who have seen them. In fact, the increase of production is so large as to be sensational. And the increase in profit above feed cost, amounting to about 50 per cent, is even more remarkable.

It is true that several of the low herds dropped out at the end of the first year, but in going over the figures, Mr. Stookey found that the average increase of profit for the entire association was less than the average increase for the eight herds that were in the association both years. There were 189 cows completing the test for 1921-22, and 163 for 1922-23. The first year the average fat production was 262.7 pounds, while for the second year it was 346.2, or an increase of 83.5 pounds. The average milk yield for the two years was 6418 pounds and 8140 pounds, an increase of 1722 pounds. The average profit above feed cost was $68.67 per cow and $99.52, or an increase of $30.85 per cow. Taking the eight herds referred to, that were in the association both years, Mr. Stookey found there were 11 cows on test the first year and 108 the second year. The average fat production for these herds the first year was 284.8 pounds and the second year it was 332.5, showing a gain of 47.7 pounds per cow. The average milk yield rose from 7229 to 8122 pounds, an increase of 895 pounds. The average profit per cow went from $68.43 to $105.06, or a gain of $36.63 per cow. This is a gain of $5.78 greater in profit per cow for these eight herds than the increase shown for the whole association, showing that the members in the association two years profited more than did those in only one year.

Another fact worthy of notice is that for these eight herds the feed cost per cow was $90.88 the first year and $104.78 the second year, or $13.90 more per cow. The fact that the profit per cow was $36.63 more the second year than the first not only indicates that the more feed used the greater should be the profit, if fed judiciously, but that the extra cost was not due to a higher price for feed. During the year 27 cows were sent to the butcher. This undoubtedly helped to raise the production records and the profit above cost of feed. The herd making the greatest percentage of increase was that of T. A. Rutledge, of Little Rock. With ten cows in the herd both years it showed an increase of 104.3 pounds of butter fat per cow and the profit above feed cost rose from $43.58 to $86.33 per cow.

The highest production of any herd for the past year was made by 14 Jerseys belonging to E. Munn & Son. They averaged 421.7 pounds of fat and 7791 of milk. The high cow of the association was St. Mawes of Glen Thelma, a four-year-old pure bred Jersey, belonging to A. E. Lundeen of Rochester. She produced 574.3 pounds of fat from 11,335 pounds of milk. Six cows in the association each made over 500 pounds of fat.

Women's Clubs Help Dairymen

J. A. Scollard, president of the United Dairy associations of Washington, says that the women's clubs of the state were the largest single factor in putting over the anti-margarine bill in the last legislature. He gives full credit to all the friends of the bill and of the dairy interests in the legislature, and recognizes the influence of the organization which he heads, but when all is said, he believes the women exerted more power over the legislators than any individual or body of people. And Mr. Scollard is just as confident that, when the time comes that an active campaign is begun, these same women's clubs will be found standing shoulder to shoulder with the dairymen to banish imitation butter from the state.

Supplements Summer Feeds

The idea is prevalent that silage is a feed for winter only. It is true that the original purpose in putting up silage is to provide a succulent feed through the months of the year when the natural green feed is not available. On this principle there is a period every summer when silage may be fed as appropriately as in the winter time. In almost all localities the native grasses dry up in the summer, resulting in a marked decrease in production of milk unless a succulent feed, such as silage, is used. Hence many good dairymen are making it a regular feature of their system to have a silo full of silage for summer use.

An Educational Feature

While the regular fall fairs furnish much education along a wide variety of lines, the winter show devoted exclusively to a single subject is of special value to those interested in that subject. For instance, there is a wealth of information in the potato show for the potato-grower or for the farmer who merely produces a small acreage for home consumption or local markets. The same is true of the poultry show, of the hay and grain show and of the live stock show.

Such events as this are held in a large number of localities throughout the northwest each winter. They should be enthusiastically patronized by the people of such communities.

Early Apple Harvest

Wenatchee reports that the apple crop is fully ten days earlier this year than last. September 20 has been officially set as the date of the opening of the 1923 apple harvest by the growers and shippers, acting in connection with the Wenatchee employment office. This means that upon that day thousands of outside men and women will be given work in the orchards and the warehouses of the district. Usually the opening of the apple harvest occurs about October 3. Of course many cars of apples will be picked and shipped before September 20, but the great rush of harvesting will begin on that date and will continue until the end of November.

Walla Walla Fruit Shipments

Last year, 1922, was a record year for the fruit growers of Walla Walla, the shipments totaling 2112 cars. This year the fruit growers of that valley expect to ship a total of 2400 cars. Prunes contribute largely to this total. Already 896 cars of prunes have been sent out, and about 300 cars more will be added to the shipment.

Washington State Gleanings

The best authentic oat yield of the season is that obtained by Robert Lyle, eight miles west of Pullman, who reports an average of 103 bushels an acre from eight and three-fourths acres. Oats in the Pullman region are yielding better than for several years.

FUR SALE AT TACOMA.

The fourth sale of Alaskan and Siberian furs held in Tacoma this year resulted in 31,557 pelts bringing approximately $100,000. One lot of 27 white fox skins brought $1170, and a lot of 56 marten sold for $1950. Among the furs sold were red fox, muskrat, white fox, ermine, mink, lynx, beaver and black, grizzly and brown bear. Another shipment of Alaska and northern furs will be out before the cold weather and the fifth sale of the year will be held in November.

SUNNYSIDE CANNERY OPERATING.

About 100 persons are employed canning pears in the Younglove cannery in Sunnyside, which has begun operations under management of F. C. Armstrong. New equipment, including two large cooking retorts, a new boiler and filling and capping machines, have been added. The cannery makes a specialty of salad pears, canned whole with the stems on. Last fall the plant canned 10,000 cases of solid pack tomatoes.

OATS YIELD 75 BUSHELS PER ACRE.

Thirty acres of oats threshed on the farm of Charles H. Greely, about 16 miles north of Vancouver, Clarke county, returned 2240 bushels of oats, averaging about 75 bushels to the acre.

Many farmers throughout the county, who have completed harvesting their grain crops, report that most of the wheat and oat crops have not been threshing up to pre-harvest predictions. More straw than usual is being found.

PLAN FOR PACKING SCHOOL.

Fruit warehouse owners in Wenatchee are seeking to open a packing school to train workers for packing season, which opens there about September 15. One concern offered its buildings and all of their equipment, including two instructors, to the county agent if he would arrange a school session. Under present plans instruction will be given at several points in the Yakima valley also to insure plenty of help when the peak of the apple season is reached.

CABBAGE SEED SHIPPED EAST.

Cabbage seed valued at more than $7000 has been shipped east from Skagit county. The shipment, which totaled 5623 pounds, was made through the Skagit Valley Seed Growers' association for distribution in Illinois and Wisconsin. J. C. Walker, seed expert for the Kraut Manufacturers' association in these two states, and who made the selections, accompanied the shipment.

The seed for this shipment was selected from the farms of O. T. Atfelt, Ed Dahlstadt, Elmer Johnson, W. E. Jennings, Francis Johnson, Morris Jensen, H. M. Karison, Nels Larson, J. T. Ovenell and R. F. Smith.

MORE COLD STORAGE FACILITIES.

The Wenatchee district has materially increased its cold storage space this year. Available facilities will accommodate about 7500 cars in common and cold storage, as against 5748 common and 633 cold storage last year.

Since the first of the year the Pacific Fruit and Storage company has completed its warehouse in Wenatchee with a capacity of 150 cars. Sgobel & Day have taken a new warehouse, Crenshaw & Bloxom will have additional space in their new building, R. A. Tedford & Co. will have several floors in the Eagle Transfer warehouse and the Columbia Ice and Cold Storage company has added to its space. It is said that this district is in better shape than it has ever been, so far as storage is concerned.

LIKES OIL WRAP FOR FRUIT.

"The oil wrap for fruit has absolutely solved the storage problem," said L. A. Day, federal fruit inspector at Wenatchee recently.

"I am convinced," said Mr. Day, "that our troubles with scald will be over for all time as soon as the oil wrap comes into general use. Last year I took special note of fruit with and without oil wraps coming into Wenatchee. I found that fruit shipped without the oil wrappers came in with from 16 per cent to 40 per cent scald, while that shipped oil wrapped showed not a sign of this blemish."

"I am not alone in my belief that the new wrapper has solved the scald problem. Such men as Earl Barnhill of the American Fruit Growers and many others have adopted this method of wrapping this year and every one of them is an enthusiastic booster."

REPORT ON HAY TONNAGE.

The general organization committee of the Northwest Hay Growers' association met in Yakima August 25 and reported nearly total figures of the hay tonnage of the four counties where virtually all the alfalfa hay is grown, Kittitas, Yakima, Benton and Walla Walla, which is placed at about 160,000 tons. This tentative organization has had the indorsement of bankers, who believe its method of operation will, under capable officers, be of great value to hay growers of the state.

Members of the general committee are Herbert Adams, Ellensburg; Everett S. Dam, Seattle; W. S. Hedger, Walla Walla; H. L. Hull, Yakima; Charles Huston, Prosser; Lee Lampson, Kennewick; W. F. Medaris, Parker; J. F. Schreiner, Yakima; J. O. Sorenson, Ellensburg; L. L. Todd, Benton City, and W. R. Wilson, Sunnyside.

CANNING TONS OF BEANS.

Ferndale's berry crop was a winner and the bean crop will be as good and possibly better than in 1922, according to John McCush, manager of the Ferndale Canning company.

The strawberry and raspberry packs of the local institution were three times as large as last year, while gooseberries and loganberries were also packed in excess of 1922. Only in cherries was there a decrease in the pack and the untimely rains caused a shortage that could not be avoided.

Beans are coming to the cannery by the ton loads.

One day recently receipts totaled more than 100 tons. The cannery contained beans from the front door of the receiving room to the shipping doors on the spur track. A hundred or more women and girls are employed preparing beans for the cans, while a score of men and women handle the cans through the processing.

Reassuring Wheat Figures

Tends to Offset Vast Volume of Price-Knocking Propaganda

As an offset to the price-demoralizing propaganda on the world's wheat crops and markets, it is encouraging to turn to the August 15 review of the Continental and Commercial bank of Chicago, the largest bank in the west. As this calm review says, "'For many weeks there has been much agitation as to crops, particularly the wheat crop. There has been a vast expenditure of emotion."

What are the facts as they are gathered and stated by this authoritative review?

The United States department of agriculture says that the crop in this country this year will be 793,000,000 bushels. The Chicago bank authority says "It will be, in the final summing up, less, rather than more."

The same authority puts domestic consumption of wheat, including seed wheat, at 633,000,000 bushels. That would leave only 160,000,000 bushels for export, of this year's crop, which is considerably less than we have been exporting in recent years. In the fiscal year which ended June 30, 1923, the country's exports of wheat, including wheat flour, were 221,923,184 bushels. In the previous fiscal year they were 279,251,776 bushels.

If the Chicago authority is right, and we have an exportable surplus from this year's crop of only 160,000,000 bushels, it will be nearly 100,000,000 bushels less than the average exports of the preceding two years.

The Chicago bank authority reminds us that "in considering the export question it must be remembered that Europeans are accustomed to buying wheat in the American market. Tales of the stopping of export sales of wheat, long current, are refuted by the figures. Since January 1 last, wheat in the form of wheat and wheat flour has been exported to the amount of 88,752,000 bushels."

And here is another reassuring fact that the market-demoralizers are not quoting: "In September and October the American wheat growers have the world market to themselves. Argentina and Australia have no crops until January, and Canada's spring wheat is not yet ready. Reports of crop conditions in the wheat-growing countries of the southern hemisphere are entirely speculative, and their influence on the market is now insignificant. Reports from Russia, once a country having wheat for export, are at least conflicting.

"If Russia has wheat for export its transportation facilities are worse than inadequate. Moving a wheat crop or part of one requires financial resources and machinery. Russia has neither. In Australia and Argentina they are deficient, and even Canada is not well equipped."

"But," say the calamity howlers, "foreign demand is going to fall off. The European people are eating less wheat." To that the Chicago authority says: "There is nothing in the situation to indicate that Europe's demands for American wheat will be smaller in the next 12 months, or that her buying will not continue at the rate maintained in the past year. There is probability of good demand for export in September and October for the reason given. European buyers are familiar with American markets and methods, and there is precision in grades, quality and in certainty of transportation which makes the American market attractive."

The same authority notes other phases of the situation which indicate larger demand and therefore higher prices for wheat. Millers in the Atlantic coast states, it says, are searching the markets for supplies. Their home product is short of their need.

THE FARMER is not attempting to forecast the future prices of wheat, but is glad to give the foregoing reassuring facts, which are badly needed now to offset the vast volume of price-knocking propaganda which, if it should be traced to its source, would be found to come from foreign buyers who are trying to throw our wheat growers into a panic and get their surplus at a sacrifice.

Wine Is a Mocker

"Unintoxicating" Delusion Exposed by Visit to England and France

Wine is a mocker, strong drink is raging, and whosoever is deceived thereby is not wise.—Proverbs, 20:1.

Charles J. Brand, former chief of the United States bureau of markets, is back from a tour of Europe with a conviction "that the United States, by sticking to prohibition, even though it may not be thoroughly enforced, will outdistance the world in the sharp economic competition of the next 25 years." Mr. Brand admits that he went to Europe more or less impressed with the statement, so often asserted in America, that "light wines and beer" are unintoxicating. But sights in England and France cured him of that delusion. "One need not visit more than two Parisian cafes to have the opposite fully proven," he now declares.

Mr. Brand adds that "the unsteady steps, the red faces and redder noses that one sees everywhere leave no doubt that alcohol is one of the most threatening dangers in all Europe. "England is spending more than $2,000,000,000 a year in drink; France about $1,500,000,000.

But that is the smallest part of the price that the European countries pay for alcoholic beverages. It is but the small change passed over in the settlement. The bigger price is paid in social degradation, crime, increased disease, insanity and mortality; in the impaired condition of the workers, in the reduced production of the drink-cursed countries.

All this easy talk about the harmlessness of "light wines and beer" is intended to deceive the public. If congress should violate the Constitution and pass a law legalizing the manufacture and sale of wine and beer, the old saloon evil would come back upon the country. That is proved by the present experience of British Columbia, where the distribution of beer is under government operation. Conditions have sprung up in Vancouver, B. C., and other cities of the province that are a disgrace and a scandal.

FARM BUSINESS AND MARKETS OUTLOOK

ANOTHER wave of southwestern grassers and western rangers struck the leading cattle markets last week, raising the beef supply indicator another 10 per cent to the highest point of the season and about 50 per cent above the May and June level even after allowing for larger purchases of stockers and feeders. Only in a minor degree is the heavy movement a result of forced selling because of drouth or tight money.

The increased burden fell on the intermediate and lower grades which declined about 25 cents in price. Volume of receipts considered, the decline was small and the general average of values remained high, indicating that the dressed beef trade has not developed hardening of the arteries. The dearth of choice steers continues and a top of $13.10 was repeated on the Chicago market with further advances probable.

Cows and heifers have been relatively scarcer than steers and made moderate gains for the week. The veal calf market developed an unsteady gait and declined 75 cents to $1.25 at Chicago.

Shipments of feeder cattle in the last two weeks were larger than during the corresponding period in either of the last three years. It begins to appear that feedlots will be filled as full as last year in spite of higher feed costs. The supply of suitable steers has been steadily increasing and price changes were in favor of buyers last week.

Hog Prices Higher Than Year Ago.

Receipts of hogs have expanded as a result of the recent upturn, but not enough as yet to cause much of a setback from the high point. The total supply is far in excess of normal for this season, but the market is performing exceptionally well. Last week, for example, receipts were about 20 per cent larger than in the same week a year ago, when they were larger than ever before at that time, but the Chicago top was $9.75 and the average reached $8.70, compared with $9.45 and $7.75, respectively, a year ago. Evidently, consumptive demand is better than last year. A feature of last week was an advance of 3 to 4 cents a pound on pork loins in eastern markets.

During the rest of the year it is probable that the supply will not run a great deal higher than last year and if domestic per capita consumption is maintained at the rate which has prevailed for 12 months, as there is reason to believe it will be, prices should average but little lower than last year.

Setback in Lamb Market.

Lambs have been coming a little too fast in the last two weeks, as the movement has expanded nearly 50 per cent and prices lost about half of recent gains. The supply is beginning to run larger than last year, but is considerably below normal for the season. Further increases in receipts can be expected in the next month, by which time the peak usually is reached, but this increase will be offset partly by larger purchases of feeding lambs, so that the price edifice is not in great danger. Thus far the number of thin lambs which feeders have been able to obtain does not indicate that the fed lamb market will be overloaded later on. Thin lambs outsold fat lambs about 25 cents last week.

British Wool Market Strong.

The wool market is beginning to show more life. The London auction, which buyers have been awaiting, opened with prices 5 per cent higher on all grades in spite of the absence of Japanese operators. The rate of mill operations has been declining, although it is still fairly high. Stocks of goods are being distributed and mills have bought such a small amount of wool recently that they are expected to enter the market on a larger scale before long, although they still report that new orders for goods are coming in slowly.

The new clip in Australia is estimated at 1,918,000 bales and in New Zealand at 583,000 bales, compared with 1,941,000 bales and 533,000 bales, respectively, last year.

Steady Tone in Wheat.

Wheat prices have been covering a narrow range in the last two weeks, but have made some progress upward. The market appears to be adjusted to such bearish influences as exist, so that changes in the situation are likely to favor higher values.

Primary receipts in the last two months have been about the same as in that period a year ago. Sales from farms have been reduced, according to reliable estimates, as a result of the holding movement and the smaller crop, but the absence of any car shortage has permitted more prompt shipment from country elevators to terminals than was possible last year. Mills have ground about as much wheat as last year, but there has been a notable lag in clearances for export. As a result, wheat has piled up in the visible supply, which has gained 33,000,000 bushels in the last seven weeks, compared with an increase of 12,000,000 bushels in the same period a year ago. The total is already practically the largest on record at this time of year.

The peak of the winter wheat movement has been passed, but spring wheat is taking its place, so that heavy receipts and a further accumulation at terminals can be expected for six or eight weeks. The Canadian wheat movement usually reaches its pinnacle in October and November, so that there will be no scarcity of wheat in commercial channels for some months.

While such conditions will be a drag on any upward trend in prices for a while, worldwide conditions appear to be changing in favor of higher values.

The range of cash grain prices for the week ended September 5 was as follows:

Chicago—Wheat—No. 2 red, $1.03@1.05 1-4; No. 3, $1.00 3-4@1.04; No. 4, $0.96 1-2@1.00; No. 1 hard, $1.03 1-2@1.11; No. 2, $1.02@1.10; No. 3, $1.00@1.05 1-2; No. 4, $0.96 1-2@1. Corn—No. 2 mixed, 86@88 1-2c; No. 2 yellow, 87 1-2@90 1-2c; No. 3, 87 1-4@ 88 1-2c; No. 2 white, 86@88 3-4c. Oats—No. 2 white, 38 1-4@41 1-2c; No. 3, 37@40c; No. 4, 35 1-2@38 1-4c. Rye—64 3-4@70c. Barley—53@70c.

Seed and Feed.

A sharp advance in timothy seed prices featured the seed markets last week.

The sharp advance in byproduct feeds dulled the demand from retailers and consumers to some extent.

Further Advances in Hay Markets.

Hay prices made additional gains last week. Demand for good timothy exceeds the supply at nearly all markets and prices of low grades have been boosted. The south and southwest states are buying alfalfa actively.

Prices per ton in carlots: Chicago—No. 1 timothy, $26@28; No. 2, $23@25; No. 3, $21; No. 1 light clover mixed, $24@26; No. 1 clover, $22@23; No. 2 clover, $15@17; No. 1 and choice alfalfa, $18@28; upland prairie, $17@20; packing and feeding, $12@16; rye straw, $11@12; oat and wheat straw, $9.50@10.50.

Egg Prices Continue Upward.

Egg prices continued their upward trend last week as an active demand for the light receipts of select quality eggs developed. Receipts of fresh eggs continue far ahead of last year, but withdrawals from cold storage are light, as compared with a year ago, when larger supplies were moved out to supplement current receipts. This situation is responsible for the general belief that storage egg prices are in line for a decline.

Latest Quotations.

Chicago—Eggs—Miscellaneous, 28@29c; dirties, 21@22c; fresh firsts, 28@29c; ordinary firsts, 26@27c. Live poultry—Hens, 23c; broilers, 23c; springers, 23c; roosters, 14c; ducks, 23c; geese, 18c; turkeys, 20c.

Butter and Cheese.

Light receipts of fancy butter was the price sustaining

Only Unified Effort Can Rid Locality of Weeds

"It is difficult to eradicate weeds that have an underground stem, such as the Canadian thistle, quack grass and others, but one of the most effective methods is that of smothering," according to M. E. McCollam, agronomist of the Western Washington Experiment station at Puyallup. "Tar paper has been used by many with good results. It is spread over the infested spot from May until September in the case of quack grass, as explained in Farmer's Bulletin 1307, which says in part:

"The tar paper should be of a heavy grade and laid so as to overlap about three inches, and the laps should be weighted with earth to make a tight joint and prevent the paper from blowing away."

Hand digging is another very effective method of eradicating small areas of these weeds. It should be done carefully, however, so that all pieces of rootstock will be removed.

Eradication in extensively infested fields is an extremely doubtful accomplishment, but there are a few cropping practices which will tend to control the weeds. Seeding a smother crop of wheat and vetch early in the fall to be cut in late spring for silage or green feed, followed by fallow during July and August or a late sown cultivated crop, is one method. Another excellent control measure is a short rotation of crops on the infested land, such as fall grain seeded down to clover and grass one year, and a cultivated crop one year. One should always have in mind the control of the weed. The utilization of the crop becomes a secondary consideration.

For working badly infested land there is no better type of harrow than the disc, especially in the case of quack grass. The disc harrow when sharp is, in fact, the only harrow which will make much of an impression on an infestation of quack grass. Harrows which tear out only part of the rootstock and drag many away to infest other portions of the field should be avoided.

In berry fields the orchards weed control will have to depend upon the thoroughness and frequency of cultivation.

A Community Problem.

Doubtless the spread of these weeds is being facilitated by patches in waste places and along roadsides which are allowed to mature seed. Many weed seeds are light enough to be carried some distance by the wind. This is especially true of thistles. Preventing noxious weeds from seeding is a consideration for the whole community and the man who tries to control his weeds should have some recourse against his neighbor who makes no attempt whatever.

The state of Washington has a noxious weed law which requires owners, lessees or occupants of lands, improved or otherwise, to take steps to control such weeds if he knows his land to be infested with them. If this is neglected and the weeds allowed to ripen seed such landowner is, under the law, guilty of a misdemeanor The law excludes logged-off or cut-over lands.

The road supervisors under the direction of county commissioners are given responsibility in enforcing part of the law. Although it is also one of the duties of all officials of the state department of agriculture to observe and report the existence of noxious weeds, the enforcement of the law still rests with the road supervisor of the district, and it should be possible to get immediate action through this official.

In his description of three weeds that are particularly troublesome in western Washington, Mr. McCollam says that every one should become familiar with these weeds in order that they may be recognized at first sight.

Quack Grass.

Quack grass has one of the worst records in the kingdom of weeds, and as we come to get better acquainted with it there seems to be hardly a chance of doing ought but add to its already adequate denunciation. Quack grass is also called couch grass, witch grass, wire grass and wild wheat. It is found most abundantly on land that has been brought under cultivation. It is a typical grasslike plant growing from 40 to 60 inches high under favorable conditions. The seed head resembles somewhat a slender head of wheat. The plant propagates by means of seed and creeping, underground rootstocks. These rootstocks are pointed, quite fleshy, white in color and capable of spreading extensively, but do not go very deep. Together with the feeding roots they tend to form a dense mat in the surface soil. If the rootstocks are broken into small pieces each bearing a joint is quite capable of propagating a new plant.

The seed produced by the plant is ripened during July and August. Fully half the seeds will germinate and will propagate new plants if they come in contact with the soil. Very commonly unripe quack grass seed will sprout well and it becomes necessary to cut the grass as soon as the seed heads have formed if one wishes to be sure of destroying the seed.

The surest way to identify quack grass is by its seed head, which is long, slender and wheatlike, and by its relatively large, white, fleshy underground rootstocks. Kentucky bluegrass and red top also have underground rootstocks, but they are smaller and the seed heads of these grasses are of the spreading, feathery type, much different from the seed head of quack grass.

The Canadian Thistle.

Canadian thistle is an erect thistle, usually from two to four feet in height. The leaves have deeply cut edges, waved and curled, and are armed with many hard, slender, very sharp spines. The most troublesome feature of this thistle is its persistent underground rootstocks, which have a creeping habit and send up new shoots at close intervals. Some of the plants may have perfect flowers and produce seed, while others may have imperfect flowers and not produce seed. Canadian thistle is not regular in its seed production and its seeding habits are affected also by locality. There may be years when no seed at all is produced. Seed is produced most abundantly in the northern states. In this state seed production appears to be fairly regular, and is one of the principal means of propagation which should be guarded against at all times. As is characteristic of thistles, the seed has a fringe of hairs and is readily transported by the wind. Distribution of the weed is also effectively accomplished by its underground, creeping rootstocks. One root may produce many shoots, which may appear throughout the entire growing season. The possibilities of distributing pieces of these roots to all portions of a field by carrying them on plows, harrows and other implements is evident.

Other Kinds of Thistle.

Canadian thistle is best identified by its relatively small and numerous purplish colored flowers, by its extremely curly and prickly foliage, and by its underground, creeping rootstocks. Bull thistle is often mistaken for the Canadian thistle, but the two are quite unlike upon close examination. The bull thistle has no rootstocks, has large and less numerous flowers of a blue color, and usually occurs isolated, while the Canadian occurs in patches.

Perennial sow thistle is a worthy running mate of each of the aforementioned and has caused enormous losses in land values and in crop yields because of its exceptional ability to propagate by both rootstocks and seed.

The plants have a dense mat of smooth leaves at the base. The flowering stems have few leaves and are usually four to six feet, growing erect and bearing numerous yellow blossoms, resembling a dandelion in size and shape. The whole plant contains a milky juice which will exude if a leaf or stem is broken. The underground rootstocks are fleshy and tender. A piece of this rootstock will produce a new shoot with remarkable rapidity and from considerable depth in the soil. The seed produced by the sow thistle is quite viable, and easily spread by the wind.

Act Now to Get Lower Taxes!

Readers of The Washington Farmer will remember the articles we have published from time to time by Lester M. Livengood, vice president of the State Federation of Taxpayers' Associations, dealing with fundamentals in the problem of bringing about lower taxes. We are glad to give space just at this crucial time to another, in which Mr. Livengood urges immediate action on the part of taxpayers if they wish the burden of taxes lowered, or even kept within its present excessive limit.—Editor.

A year ago at this time farmers all over the state, aroused by crop failures, excessive taxation and prospects of even greater taxation through the possible enactment of the 30-10 initiative, were keenly alive to the necessity of reducing public expenditures, and some mighty good work was done in the various counties. This year the farmer is still in a serious position and his tax burden is still excessive. To reduce his taxes requires constant pressure. Merely protesting during the days of adversity and forgetting the tax problem when conditions are a little better is what has permitted the tax burden to reach its present unreasonable rate.

This Is the Day!

The month of September is the time of year when the sun shines for the haymaker in tax reduction work. Therefore, the farmers must not overlook the fact that if they want lower taxes for next year or even taxes kept down to the present rate, they must exert themselves with their public officials during this month or it will be too late. The public officials all over the state are making up their budgets now which will determine next year's tax burden. Everything unnecessary that goes into their budgets means more taxes for the farmer. The urgency of even a keener scrutiny this year of public expenditures is evidenced by occasional press dispatches over the state that here and there public officials are padding their budget estimates from 10 to 15 per cent, claiming that the new budget law is so strict that they must have some leeway. If the farmers and other taxpayers let this sort of proceedings go by, they need blame only themselves if their tax burden is increased for next year.

The Taxpayers' Own Law.

It is human nature to chafe under any additional restraint and it can not be but expected there will be officials who resent the additional restrictions of the budget laws, however beneficial they may be, and their only way to strike back at the taxpayer is to pad their estimates and thereby discredit the law. Since the budget law is merely a tool to provide information for the taxpayer, it requires that the taxpayer make use of it; otherwise it will be as useless as an automobile without a driver. These budget laws do not impose unreasonable restrictions on public officials and where the taxpayer is on the job there is no evidence of intention to estimate more than is really needed. For the farmer who does not have in mind the provisions of the budget law it may be said briefly that they require the setting up of the estimates in a tabular and comparative form, which has been difficult for taxpayers to get heretofore, and that once the estimates are adopted the public officials can't spend more than the limits of the various items except for real emergencies. Among expense items free transfer is permitted under certain regulations, so that if an officer overestimates one class of his expenses and underestimates another, he can get the commissioners to transfer the surplus to the place needed. Where exceptional things happen demanding expenditures not in the budget—and these things will always happen—the commissioners can make the necessary expenditures by issuing emergency warrants which will have to be replaced in next year's tax levy. These warrants will draw interest only in case the fund on which they are drawn has no cash on hand, which is a rare condition with the current expense fund covering most of the county's expenses. The taxpayers and farmers should study each item of expense in the budget and compare with this year's appropriations and last year's expenditures to see if anything has been added on the theory of not having enough for unforeseen items. The theory of the law is that an official should estimate his exact needs and take up the slack for unforeseen demands through the emergency clause, which concentrates all contingent items into one place and puts a damper on using the emergency method except for real emergencies. The preliminary budget will have been adopted probably by the time this is public, but the taxpayers have until the first Monday in October, that is to say, October 1, to study these estimates and to prepare for the public hearing on October 1, whereat the estimates can be reduced, but not increased.

Kalkus in Charge

The resignation of H. E. McNatt, dairyman of the Western Washington experiment station, took effect September 1, and his place will be filled by Dr. J. W. Kalkus, who will take charge of the dairy barns and herd. This department will be handled as a demonstration herd for the experimentation with such diseases as are prevalent in western Washington. From 20 to 25 cows will be milked and any abortion that shows up will be isolated in order to show that such diseases can be controlled by isolation and blood tests.

Ninety Thousand Dollars!

Live stock breeders and students competing in the various contests at the Pacific International Live Stock exposition in November this year have opportunities to take home with them a good many thousand dollars in the form of premium money won. The total money offered at this great western show this season is over $90,000. It is divided as follows:

Beef Cattle Division.

Shorthorns—By the exposition, $2500; by the American Shorthorn Breeders' association, $2085; total, $4585.

Herefords—By the exposition, $2500; by the American Hereford Breeders' association, $1665; total, $4165.

Aberdeen-Angus — By the exposition, $2500; by Congdon & Battles, Yakima, Wash., $500; by the American Aberdeen-Angus Breeders' association, $400; total, $3400.

Dual Purpose Cattle.

Milking Shorthorns—By the exposition, $2500; by the American Shorthorn Breeders' association, $500; total, $3000.

Red Polled—By the exposition, $1000.

Dairy Cattle Division.

Holsteins—By the exposition, $3250; by the Holstein-Friesian Association of America, $2750; total, $6000. (This includes the $1500 offered for the special extension service state Holstein-Friesian herd competition.)

Jerseys—By the exposition, $2500.

Guernseys—By the exposition, $2500.

Ayrshires—By the exposition, $2500.

Brown Swiss—By the exposition, $1000; by the Brown Swiss Cattle Breeders' association, $500; total, $1500.

Sheep and Goat Division.

Rambouillets—By the exposition, $500; by the American Rambouillet Sheep Breeders' association, $300; total, $800.

Southdowns—By the exposition, $500.

Shropshires—By the exposition, $500; by the American Shropshire Registry association, $250; total, $750.

Hampshires—By the exposition, $500; by the American Hampshire Sheep association, $320; total, $820.

Oxfords—By the exposition, $500; by the American Oxford Down Record association, $200; total, $700.

Dorsets—By the exposition, $500.

Cheviots—By the exposition, $500.

Corriedales—By the exposition, $500.

Romneys—By the exposition, $500; by the American Romney Breeders' association, $100; total, $600.

Cotswolds—By the exposition, $500; by the American Cotswold Registry association, $100; total, $600.

Lincolns—By the exposition, $500.

Suffolks—By the exposition, $500.

Leicesters—By the exposition, $500.

Angora goats—By the exposition, $1000.

Milk goats—By the exposition, $500.

The Hog Division.

Poland Chinas—By the exposition, $750.

Poland China futurity—$1000 guaranteed by the Poland China breed promotion committee and by the exposition management.

Duroc Jerseys—By the exposition, $750.

Duroc Jersey futurity — $1000 guaranteed by the National Duroc Jersey Record association and the exposition management.

Chester Whites—By the exposition, $750; by the Chester White Swine Record association, $100; total, $850.

Berkshires—By the exposition, $750.

Hampshires—By the exposition, $750.

The Horse Division.

Percherons—By the exposition, $1500.

Belgians—By the exposition, $1500.

Shires—By the exposition, $1500.

Clydesdales—By the exposition, $1500.

Jacks—By the exposition, $350.

In addition to the above there will be awarded $23,000 to winners in the fancy horse show which is given each evening of the Pacific International. This is appropriately divided between the draft, roadster and saddle breeds.

The Fat Stock Division.

Fat Shorthorn cattle—By the exposition, $500; by the Shorthorn Breeders' association, $415; total, $915.

Fat Hereford cattle—By the exposition, $500; by the Hereford Cattle Breeders' association, $335; total, $835.

Fat Aberdeen-Angus cattle—By the exposition, $500.

Beef cattle car lots—By the exposition, $1075.

Feeder cattle car lots—By the exposition, $575.

(The American Shorthorn Breeders' association offers $250 for the grand champion steer if a Shorthorn and $500 for the champion car lot of fat steers if Shorthorns.)

Fat Sheep—By the exposition, $1100.

Fat hogs—By the exposition, $1935.

The Stock Judging Department.

Boys' and girls' clubs—By the exposition, $2135; by the Portland Union stockyards, $1000; by the exposition management, $750; miscellaneous prize contributions, $475; total, $4330.

Students' judging contests—By the exposition, $2000.

In addition to the foregoing premiums numerous special premiums in the form of silver trophies, ribbons and so forth will be awarded by various individuals and institutions.

After Grain Crop

What to Do to Harvested Fields

"After removing the grain crop the farmer may do one of several things to his field," reads a U. S. D. A. bulletin on "Experiments in Wheat Production on Dry Land of the Western United States."

"He may:

1. Disk the stubble land in the fall.
2. Burn the stubble in the fall or spring.
3. Plow the land in the fall.
4. Leave the stubble standing and disk the land in the spring.
5. Leave the land uncultivated until it is plowed in the spring.

"Each of these practices is followed by farmers in the states of Oregon, Washington, Idaho and Utah.

"Plowing for fallow is usually done in the spring. Advantages claimed for fall disking are apparent rather than real, for it has actually reduced yields at Moro, Lind and Nephi (experiment stations). Spring disking of stubble generally is beneficial if done late. A good double disking then usually will kill all plant growth, which is the chief object of disking.

"The chief purpose of the summer fallow system is to conserve moisture for crop use during the growing period. The average moisture content of the soil to a depth of six feet on the Moro station after a season of fallow rarely exceeds 14 per cent, and a winter wheat crop usually reduces this content to about 5 per cent. There are other effects of tillage, however, which have a very important bearing on production and which should not be overlooked in considering the problem of fallow. Indirectly, because of its influence on soil temperature, aeration, moisture location, etc., tillage has a very marked effect in promoting the activity of soil bacteria; and as a result of this action and the direct effect of soil stirring and moisture additions, the chemical makeup of the soil and, consequently, the availability of plant food is very materially altered by tillage. Early, clean tillage in particular promotes the development of nitrogen and after a year of fallow there are much larger supplies of it in soils so treated than in those plowed late or on which weeds have been allowed to grow."

The bulletin was written jointly by D. E. Stephens, M. A. McCall and A. F. Bracken, respectively superintendents of the experiment stations at Moro, Lind and Nephi.

Hand-Power Sprayer

The Western Washington orchardist who has only a few trees to spray but does not feel justified in purchasing a large power outfit, yet can not get along with a small hand power sprayer, can do as A. J. Linstad did with a small 1 1-2 horsepower stationary engine. He bought a small spray pump and connected the engine direct to the shaft of the pump and mounted the two machines on a frame which fitted on a wagon bed. Enough room was left at one end for two barrels, which were filled with the spray material and pumped out as needed. Two hose connections were connected to the force pump and the machine operated in the same manner as a large spray machine.

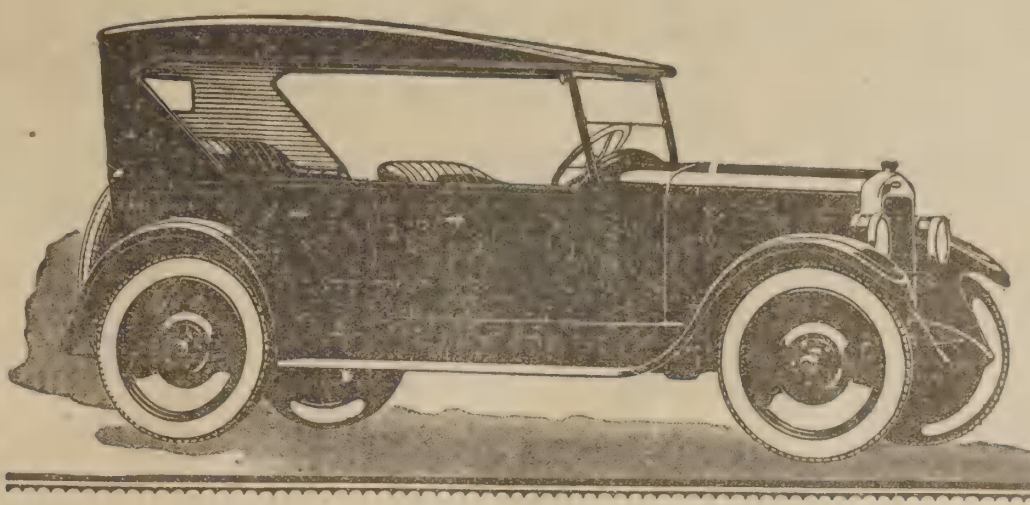
Mr. Linstad says he has been able to get a 250-pound pressure on the two hose lines, and he has been able to use it for any job needed at his orchard. The whole arrangement was installed at a total cost of $110 at the time it was built. This, however, includes prices which were prevalent nine years ago, but the machine has stood up during this time and is expected to last many years to come.

Bulletins of Interest

The "Eat More Lamb" campaign appears to have reached the printshop of the United States department of agriculture, for "Lamb and Mutton and Their Use in the Diet" is the title of a 14-page farmers' bulletin on the latest list available for free distribution. Others that may interest northwest farmers are "Rural Planning" (F. B. 1325), which deals with the improvement and beautification of rural recreation places, public grounds, and trade and civic centers; "Back-Yard Poultry Keeping" (F. B. 1331); and "Tomatoes as a Trunk Crop" (F. B. 1338). One which will be of greater interest because of the author is "Distribution of Types of Farming in the United States (F. B. 1289), by W. J. Spillman, formerly of Washington State college. Any of these may be had without cost upon application to the department at Washington, D. C.

FARM BUREAU CORPORATION.

Articles of incorporation have been filed at Olympia for the Spokane Farm Bureau corporation, Spokane. The capital stock is $4000 and the incorporators are George H. Johnson, H. R. Anderson, A. G. Craig, C. H. Anderson and J. L. Miller. This is a pooling organization which will handle the prune, potato and apple crop this year for members of the county farm bureau. A Spokane warehouse is proposed. T. S. Brown, secretary of the county farm bureau, is in charge of the business of the new company.



Announcing the 1924

Oakland "6"

Brand New and True Blue

Embodying Exclusive Features of Engineering Design and Superior Coachwork Never before Associated with Cars of Moderate Price

This True Blue Oakland was deliberately planned to be the most perfectly balanced, the most accurately engineered and the finest built light-six in the world.

Two years have been devoted to its design, manufacture and test. Two years—plus the wealth of Oakland experience gained through many other years of exclusive light-six manufacture and the limitless resources of the General Motors Corporation in money, machinery, materials and men.

From axle to axle—it's new! It embodies features of mechanical superiority—of beauty and comfort and performance—heretofore unheard of in cars of its price! Every single part—from the new engine to the new bodies—was designed and built to fit and function in perfect harmony with every other part.

And because it has been so carefully designed, so soundly built and so thoroughly tested—Oakland places upon it, without hesitation, the same written 15,000 mile engine performance guarantee and the same Mileage-Basis gauge of value that have proved the quality and the value and the excellence of Oakland cars for years!

Four-Wheel Brakes—Brand New Engine—New Bodies—Centralized Controls—Disc Steel Wheels

The finest light-six is now also the safest! Four-wheel brakes are on the True Blue Oakland! But four-wheel brakes—remarkable as they are on a car of Oakland's price—are only one of the many improvements and refinements built into this new and true blue car!

It has a brand new engine—smoother, quieter and more powerful than even its highly successful predecessor, the Six-44.

Its beautiful new blue bodies—built by Fisher—are wider, deeper, and more luxuriously upholstered. The top is permanent, accommodating a distinctly new type of door-opening side curtains comparable in snugness and utility to the door of a closed car.

A satin-wax finish stamps the open models with individuality never before attained in cars moderately priced.

Instruments are grouped on a single glass-covered panel, indirectly lighted. Controls are centralized on the steering wheel. Disc steel wheels are standard equipment, at no added cost.

See this new Oakland—see it at once! Come with a critical mind—because the more exacting you are, the more quickly will you realize that no other light-six in all the world approaches it in dollar-for-dollar merit.

Roadster Touring Car Sport Roadster Sport Touring Business Coupe 4-Passenger Coupe Sedan

OAKLAND MOTOR CAR COMPANY, PONTIAC, MICHIGAN

Division of Oakland *General Motors*

A Fleet of "True Blue Travelers"

—of which the 1924 Oaklands are exact counterparts—is engaged in a nation-wide demonstration! With thousands of miles of test service already on their speedometers—they are out to demonstrate, at first hand, the high quality of Oakland construction, and the remarkably efficient performance buyers may expect from their True Blue Oaklands.

Red Cross Directs Relief

(Continued from page one.)

The United States shipping board steamer City of Spokane, laden with 6000 tons of flour, anchored in Kobe, received instructions from the American government to offer the entire cargo for relief of the destitute.

All shipping board vessels scheduled to leave the harbors of San Francisco and Portland for Japanese points in the next 30 days are ordered to reserve all available cargo space and to make no more passenger reservations.

Naval foodstuffs stored on Mare Island near San Francisco, will be used immediately for shipment to Japan for the relief of earthquake sufferers, in compliance with orders received from Secretary of the Navy Denby. Eight ships in San Francisco bay have been under sailing or loading orders.

General George W. Goethals, builder of the Panama canal, has declared his readiness to organize an expedition of reconstruction to Japan. Other men of large affairs in construction work are ready to put their services at the call of Japanese leadership.

Previous Earthquakes.

Previous to the present catastrophe in Japan, in which about 240,000 lives are estimated to have been lost and 450,000 persons injured, probably the largest number of victims of an earthquake in recorded history was that at Yeddo, Japan, in 1703, with 200,000 victims. Ten years before this 54 cities and towns and 300 villages witnessed the disastrous earthquake in Sicily, the victims being numbered at 100,000. In 1628 Naples was shaken by an earthquake disastrously, 40,000 persons being victims. Lisbon, Portugal, was destroyed by an earthquake in 1755, where 50,000 people were victims. Only one survivor was recorded, 40,000 persons being victims, occasioned by the eruption of the volcano Pelee at Martinique and St. Pierre. As late as 1908 the earth opened at Chang, China, and engulfed 75,000 persons, and in 1918, 10,000 people lost their lives in an earthquake at Amoy, China.

Empire of Japan.

The empire of Japan consists of a chain of islands, as the school books would say, bounded on the north by the sea of Okhotsk, on the east by the north Pacific ocean, on the south by the eastern Sea of China, and on the west by the Sea of Japan These islands extend along a total length of about 2400 miles.

Some one says that were the Japanese empire stretched out in the Atlantic, off the coast of the United tates, at the same latitude Formosa would lie across Cuba and southern Florida; Tokyo would be due east of Norfolk and Sakhalin would be off Newfoundland and the northernmost island off Labrador.

The area of the Japanese empire is given at nearly 260,000 square miles and the population as 77,000,000.

Extremes of Climate.

Japan has extremes of climate, the southernmost island being nearly tropical and the northernmost nearly arctic in weather conditions.

For centuries closed to foreign influence, the U. S. expedition commanded by Commodore M. C. Perry, which arrived in Yokohama in 1853, broke through the reserve and the treaty he sought of amity and the opening of the ports of trade were signed in March, 1854.

Japan's Greatest Statesman.

Iyeyasu is regarded as the greatest statesman that Japan has known. He assumed the reigns of government in the early part of the 17th century. To his genius is due the system of government under which Japan enjoyed peace for two and a half centuries, and grew enormously in wealth, enlightenment and civilization. The vital feature of his reign was the arrangement for the control of the feudal nobles.

In Japan books are written either in Japanese or in Chinese. Chinese is preferred for history, science, law and theology—in short, for all serious subjects—while Japanese is the language of essays, poetry, fiction, the drama and in recent times for the magazine and newspaper press.

The literature of Japan owes much to inspiration from Chinese sources and to imitation of Chinese models. The works of Confucius and Menchus and other Chinese classics are familiar to educated Japanese at a very early period. Apart from this, there is abundance of literature in Japan, dating even from the earliest time, which displays originality of thought and of expression. The Japanese are not unlike the Athenians in their love for novelty and news. The marvelous growth of the newspaper press in Japan is doubtless due to this characteristic.

Japan has a large variety of religions, 12 sects of Buddhism, 13 sects of Chintoism and 12 forms of Christianity.

Service in the army is universal and compulsory; actual service begins at 20 and lasts for two years in the ranks for all armies. The peace strength of the active army is 300,000, with a reserve of 2,350,000.

Intensive Farming.

Though only 14.37 per cent of the soil of Japan is cultivable, owing to the mountainous nature of the islands, that arable portion supports 60 per cent of the population, and production per acre is high. Laborious terracing, the use of fish manures, intensive planting, assiduous labor—even the carrying of water up hillsides to pour it down—render productive every possible foot of soil. The proportion of her food supply which Japan herself produces is further increased by the fact that she has developed a sturdy and courageous race of fisherfolk. And yet the island empire, with a population—that of Japan proper—more than two-thirds that of the United States, and an area—Japan proper—very little greater than that of Montana, and so little of it arable, depends upon commerce for an essential proportion of her food supply. Her strength is essentially that of Britain—the strength of an industrial and maritime nation.

Agriculture and the industries are often represented in the same individual, however, for the small farm unit does not support all the family all the time. Straw-braiding, mat-weaving and other handicraft occupy such moments as could not, with all the Japanese farmer's ingenuity, be spent in further coaxing the precious soil. For this reason industrial manufacture will go on less interrupted than in countries where factory methods have supplanted handicraft, and where manufacture is solely the province of the city.

Chief Crop Is Rice.

More than half the cultivated land is in rice, with barley or rape grown as a second crop. Rice production normally lacks only about 12 per cent of supplying Japan's own need in that respect. The imported rice is largely in the unhusked form.

The populace being in a high measure vegetarian, peas play an important part in the diet. Japan both imports and exports peas, sending out the green product for the French market, while the incoming supply probably takes the dried form in large measure. Likewise, though she imports

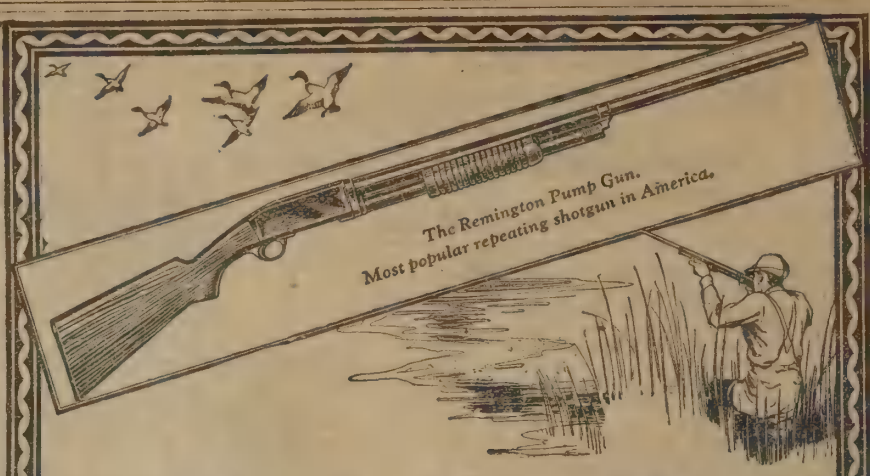
Made only of wheat and barley scientifically baked 20 hours — Supplies Vitamin-B and mineral elements.

How can Grape-Nuts be other than a wonderfully appetizing, healthful food?

"There's a Reason"



Why the Good Old Remington Pump Gun Still Outsells all Others

There's a new 20-gauge model, too—the best of the light-gauge guns. See it at your dealer's

ASK any of your friends who shoot a Remington 12-gauge Pump Gun—there are lots of them—what it is that has made this the favorite 12-gauge ever since Remington brought it out in 1900—the *first* solid-breech hammerless repeating shotgun ever produced.

Or better yet—if he'll let you—borrow his Model 10 and take it out in the fields or down by the water for an afternoon and try it for yourself.

* * *

Fire arms experts always comment on the precision and finish of the Model 10—the result of 245 separate inspections in the Remington plant.

And they remark that the receiver is *machined out of solid* steel—instead of made of stamped metal or a cored casting as is done with many shotguns.

But the man who goes out for a day's sport or to get a few ducks or rabbits for supper isn't so apt to say anything about these technical features.

He'll tell you that the Remington Model 10 shoots *harder and straighter* than any other 12-gauge he ever had in his hands, has an action that never balks or clogs—and seems to get *better* the longer he uses it.

If you're in line for something specially good in a 20-gauge—

Get your dealer to show you the new Remington Model 17. This is a hammerless, solid-breech pump action, too. Chambered for 2¾ inch shells which gives it the power and range of a 16-gauge. It is comparatively new—but already many old-timers swear by it as a "real man's gun."

The first time you get a chance go to the gun rack at the store and look at these Remingtons. Your dealer will be glad to tell you anything you want to know about them.

THE AUTHORITY IN FIRE ARMS, AMMUNITION AND CUTLERY

Hard Red Spring Wheats

Twenty-Four Distinct Varieties Are Grown

FIRST ARTICLE.

Wheat is graded in five classes under the official grain standards of the United States. The first class is designated as hard red spring. About 24 per cent of the wheat acreage of the United States is of this class. The varieties which make up this important class of wheat are distinguished by having hard red kernels and are grown from spring sowing, chiefly in the north central part of the United States. The states of North Dakota, Minnesota and South Dakota lead in its production. A considerable acreage also is grown in Montana, Iowa, Illinois, Wisconsin, Nebraska, Washington and Idaho and smaller quantities of but little commercial importance in 21 other states.

There are 24 distinct varieties grown, one-third of which are important.

Flour of high bread-making quality is manufactured from the principal hard red spring varieties.

About 14,000,000 acres of this class of wheat are grown annually in the United States, comprising about one-fourth of the total wheat acreage in the last 10 years.

Wherever the winters are not too severe winter or fall sown wheat is usually more productive than spring wheat.

In the northern intermountain region and in the Pacific northwest certain varieties of hard spring wheat are fairly successful. In most of this region, however, the yields of hard red spring wheats are less than those of winter wheats, including common and club varieties of white spring wheat. In the irrigated sections of this area hard red spring varieties give comparatively lower yields than on the dry lands.

The 24 distinct varieties of hard red spring wheat in the United States are known under about 80 different names.

Marquis Most Important.

The Marquis is the most important variety of hard red spring wheat. Although it has been grown in the United States only since about 1913, it is now the leading spring wheat variety and is exceeded in acreage by only one variety of winter wheat. Approximately 11,800,000 acres of Marquis wheat were grown in the United States in 1919. The Marquis variety has rather short straw, heads, chaff and kernels. It matures fairly early. It has beardless heads, smooth, white chaff and red kernels. The chaff is rather firm, so the heads are not easily shattered.

Marquis is a selection from a hybrid produced by crossing a hard red wheat from Calcutta, India, and the well-known Red Fife. The cross was made by Dr. A. P. Saunders about 1892. The Marquis was selected and named by Dr. C. E. Saunders, dominion cerealist, and was first grown as a pure line at Ottawa, Canada, in 1904. The commercial growing of Marquis wheat in Canada began in 1909. The largest acreages are in North Dakota, South Dakota, Minnesota, Montana, Illinois, Iowa and Wisconsin. Marquis has given the highest average yields of any hard red spring variety in nearly all areas where this class of wheat is grown. In the quality of its flour for breadmaking, the Marquis excels all other varieties of hard red spring wheat which are now commercially grown in the United States.

The Red Fife.

The Red Fife variety (known also as Canadian Fife, Fife, Saskatchewan Fife and Scotch Fife) differs from Marquis in being somewhat taller and later and having longer heads and kernels. The original Red Fife wheat is supposed to have come from Poland or Russia by way of Germany and Scotland. About 77 years ago David Fife of Otonabee, Ontario, Canada, received a sample of wheat from a friend in Glasgow, Scotland. The friend had obtained the sample from a shipload of wheat from the German port of Danzig, but supposedly of Russian origin. Mr. Fife sowed the wheat in the spring, but it proved to be a winter wheat. One plant of spring wheat developed, however, which was saved and increased. This was the beginning of the Red Fife wheat, which became widely grown in Canada. The cultivation of Red Fife in the United States began in 1860. Prior to the introduction of Marquis it was our leading spring wheat. The Red Fife variety was grown in 22 states in the United States in 1919. It is most widely grown in Minnesota and the Dakotas.

Power (Power's Fife) is practically identical with Red Fife, although in the length of head and kernel it is shorter and very similar to Marquis. The original Power's Fife was developed from a single plant found growing in an oat field by James Holes of Fargo, N. D., about 1885. Some of this seed was obtained by J. B. Power of Power, N. D., who increased it and distributed it in large quantities under the name of Power's Fife. The North Dakota agricultural experiment station, which grew this wheat under the designation of station No. 66, made some selections from it and distributed one of them from the Williston substation as Power or North Dakota No. 313, which is the origin of most of this variety now grown.

Power is commercially grown only in North Dakota and Montana.

Minnesota No. 163.

Glyndon (Minnesota No. 163) differs from the Red Fife and Power varieties principally in having longer and more open heads. The kernels also are slightly longer. This strain of Red Fife dates from about 1891, when it was first grown by the Minnesota agricultural experiment station as No. 811 at the Glyndon substation in western Minnesota. Glyndon is still grown to some extent in Minnesota, North Dakota and South Dakota. The yields of Glyndon usually have been less than those of Red Fife and Power. In milling and baking value Glyndon is inferior to Marquis, and it is slightly inferior to Red Fife and Power in the percentage of flour produced, but in breadmaking Glyndon consistently produces a much larger loaf than Power.

Wellman (Wellman's Fife) differs from Glyndon in being slightly taller and in having a longer and more open head and a shorter and softer kernel. This variety was developed by D. E. Wellman of Frazee, Becker county, Minn., from a plant selected from Red Fife wheat, which he called "Scotch Fife." The original sample of Scotch Fife was a mixture and had been

(Continued on page thirteen.)

Now— the Exide first cost is low

For a great many years Exide has been known as the long-life battery. It stays on the job so long that thousands of car owners have found it to be by far the most economical battery in the end. At the present prices of Exide Batteries, even the *first* cost is low.

Now, no man need deny himself the satisfaction of getting a willing, rugged Exide. It will serve you so long and with so little expense for upkeep that you will find it the soundest kind of economy.

The quality remains the same that has brought world-wide acceptance of Exide as the standard storage battery. Exide was on the first electrically started automobile in 1911. Today, more new cars leave the factories equipped with Exides than with any other battery.

For your comfort and for the sake of economy, go to the nearest Exide Service Station and get the Exide Battery made for your car.

Before putting a New Battery in your car, get the New Price of the Exide at the nearest Exide Service Station

Beef Supply

Is Now Consumed by Home Folks

Growth of population in the United States to a point at which the domestic market has become large enough to absorb the country's normal beef production is the chief reason why American beef is no longer an important source of supply for Great Britain, says Charles J. Brand, marketing specialist for the department of agriculture, who recently studied the meat trade situation in Europe. Another factor working against an increase in our beef exports, he declares, is the lower cost of beef production in countries like Argentina which are still in the pioneer stage.

Mr. Brand points out that from 1891 to 1921 the human population of the United States increased from 62,948,000 to 107,833,000, while the number of cattle in the country increased only from 51,363,572 to 66,652,559. It is thus obvious that the growth in population has absorbed the increased beef production, and the same is true of mutton. Our increased production and exports of beef during the war proved, according to Mr. Brand, that given the stimulus of a profitable market the American live stock grower can and will quickly expand his beef output, but many factors are at present diminishing his incentive to do so.

Among these factors the most important, in Mr. Brand's opinion, is the relatively high cost of beef production in the United States compared with its cost in countries now in the pioneer stage. This fact, he says, has convinced the meat trade of Great Britain that the future will see greater and greater production in Argentina, until the supply from that country overshadows that from any other source. Next in importance as sources of additional supplies are Australia and New Zealand.

Arsenic as a Tonic

To the Editor: I notice in your paper that Dr. E. E. Wegner of W. S. C. has had numerous inquiries relative to the conditions of hogs that can not raise their hind parts. He gives a prpeventive but does not give the remedy. Here is a simple and cheap remedy that will work in two or three days if given according to directions.

Give in one gallon of milk or slop a little arsenic the size of a small army bean or just what will lie on the point of a pocket knife blade, morning and evening for three days.

Five cents' worth of arsenic will be more than is needed. The hog will not eat an overdose of it and when they have had enough will refuse to eat it, but be careful to not give too large a dose or they will not eat it. There is no danger of poisoning at all. J. W. WILDE.

Boyd, Ore.

Referring to the above letter, Dr. S. B. Nelson of the State College of Washingtan, says: "The remedy that Mr. Wilde gives can not do any harm, if given within the range of dosage for hogs, which is about one grain two or three times daily. Arsenic is a pretty strong tonic and might be of value in this case."

PORTLAND, ORE.
(Vitamineral Pro. Co., Peoria, Ill., Mfrs.)

VETERINARY

By DR. S. B. NELSON.

Abscess—Last spring a lump grew on the side of our cat's neck. It got hard and then burst, running for a long time. Now another one just like it is coming on again. R. R.

Goldendale, Wash.

The abscess should be opened and the wound dressed with tincture of iodine and this dressing of iodine continued until the wound is healed.

Cows Chew Mangers—I have a number of cows and recently they have developed a tendency to gnaw the mangers, fences or any wood they can find. They are fed on alfalfa hay, small quantity of potatoes morning and night and at all times have salt available. W. C. H.

Granger, Wash.

Try giving the cows one tablespoonful of the following mineral mixture: Precipitated calcium phosphate, one part and sulphur, two parts; magnesium sulphate, three parts; charcoal, four parts, and salt, five parts.

Wire Cut—We have a horse that was badly cut with barb wire. We have never been able to heal the leg. Now it has large bunches of proud flesh on it. What will remove this? M. D.

Moiese, Mont.

The quickest way of removing proud flesh is to sear it or burn it with a hot iron. Great care should be used not to bring the hot iron too close to the healing edges of the wound.

Of course, it can also be operated with a knife, but that is a little more difficult than with a hot iron.

Fistula—My 3-year-old colt has what I beleve to be a fistula. It is a large running sore just behind and a little to the left of where the collar would work on the top of the shoulder. It is not the result of a collar bruise, for the colt is unbroken. He is in good condition. The sore is of six or seven weeks' standing. M. M.

Springdale, Wash.

It si quite probable that frequently a fistula is caused from something besides a bruise. I remember the first time I saw a fistula at the state college, some 20 years ago. We had seven in less than a week, four from a place where they had never had fistula before, and not a single one of these animals had been broken to work. It is a disease that requires the services of the best veterinarian you can get.

Ration for Sow—Would you suggest a ration for a sow we have? Last spring she had 19 pigs, but 10 were born dead. This was her third litter. Her other litters were 13 and 15, the sow raising one litter of 10 and 11 of the second. We thought wrong feeding might have caused the loss in the last litter. She is bred again. We thought of feeding tankage, but do not know how much to feed. J. C. H.

Ridgefield, Wash.

The following farrowing ration has been recommended by William Hislop, former animal husbandman of the state college: 45 pounds ground oats, 45 pounds barley meal, 10 pounds of tankage, alfalfa or clover hay in rack. After farrowing he recommends 50 pounds barley, 20 pounds shorts, 15 pounds bran, 10 pounds oil meal, 5 pounds tankage.

These are simply samples of any ration and may be dependent upon the availability of the materials, or the low cost of them.

CAUSES OF CALF ILLS.

Nearly all disorders or diseases of calves, says the United States department of agriculture, are caused either directly or indirectly by lack of cleanliness. Filth, whether it is in feeds, pens, bedding or pails and utensils, is dangerous to the health of the calf. To be on the safe side use nothing but clean milk (sweet or sour), scald the pails with hot water or sterlize them with steam, remove old feed from the boxes and clean them daily. Filth and dirt are the natural breeding places of many bacteria that will cause disturbances in the young animal's stomach. Freedom from filth usually means freedom from disease.

The Truth About Railroad Valuation

For many years it was charged the railways of the United States were "overcapitalized."

The Interstate Commerce Commission in 1920 placed upon the railways a "tentative" valuation of $18,900,000,000. This was $1,500,000,000 more than the bonds, stocks and other securities they had outstanding in the hands of investors.

The valuation has since been attacked as excessive by the same persons who previously attacked the capitalization as excessive.

Senator LaFollette's Valuation Law

What are the real facts about valuation?

Congress in 1913 passed a law directing the Interstate Commerce Commission to make a valuation of all the railways. Its author was Senator Robert M. LaFollette of Wisconsin. He estimated the valuation would cost two and one-half million dollars. It has already cost the government 24 million dollars and the railways 66 million dollars—total, 90 million dollars.

How the Valuation Was Made

The Transportation Act of 1920 directed the Commission to make a "tentative" valuation as a basis for regulating rates until the final valuation could be completed.

It has been charged this tentative valuation was based upon stocks and bonds. E. E. Clark, then Chairman of the Interstate Commerce Commission, testified before the Senate Committee on Manufactures in January, 1921: "Stocks and bonds were not considered at all. It is the fair value as closely as could be estimated and approximated at that time of the **physical property** which was devoted to the transportation service."

Henry C. Hall, a member of the Commission, testified before the Senate Committee on Interstate Commerce on January 5, 1922, that the commission **used the information it had gathered under the LaFollette Valuation Law of 1913.**

It has been claimed the valuation was based on the high cost of labor and materials in 1920. Chairman Clark testified: "The principal figures used in our valuation are as of 1913 and 1914." The wages of labor and prices of materials in these years were not half as high as in 1920.

An Argument for Confiscation

It has been claimed the valuation should be reduced because it exceeded the market value of railway securities on the Stock Exchange.

The Interstate Commerce Commission was not authorized by either the La Follette Valuation Law or the Transportation Act to consider the market prices of securities. Their prices, like those of wheat and corn, rise and fall constantly, **and in 1920 were the lowest in history after the government had operated the railways at a heavy loss and returned them to their owners incurring a huge deficit.** For the government to base a valuation upon prices of securities, made so low by the way the government itself managed the railways, would be the most colossal and indefensible act of confiscation ever committed outside of Russia.

The valuation has been criticised because it was not based solely on what it cost to build the railroads.

The railways of the United States have been in course of construction and development for almost 100 years. In this long period many records have been lost, destroyed by fire and otherwise become unavailable. Therefore, the actual cost of many roads can not be ascertained. Furthermore, the Supreme Court of the United States always has held that in the valuation of a railroad or public utility, what it would cost to construct it at present, as well as what it actually has cost, must be considered.

What the Railways Are Seeking

It has been claimed the railways are seeking a valuation of 30 to 35 billion dollars. All the railways ever have asked is that any valuation made shall give to railway owners the protection from confiscation guaranteed to owners of every kind of property by the Constitution of the United States.

Railways' Net Return Less Since Valuation Was Made

It has been claimed the valuation and the net return the railways have been allowed to earn on it have been the reason why rates have been higher than before the war.

Higher rates have been made necessary entirely by increased operating expenses, principally wages and taxes. The railways have earned less net return since the valuation was made than before. In 1916 and 1917, the last two years before government operation, the net return earned by them averaged over 82 million dollars a month. Since the valuation was made their net return has averaged less than 60,000,000 dollars a month.

Valuation and Rates

It has been claimed a large reduction of the valuation would make possible a large reduction of rates. But operating expenses and taxes, which are costing 85 cents out of every dollar the railways earn, would not be affected at all. If one-third of the valuation were arbitrarily wiped out the resulting permanent reduction of the net return the railways were allowed to earn would bankrupt many of them and stop railroad development; **but this reduction of one-third in the valuation could not possibly make a difference of more than 5 per cent in rates.**

Why Valuation Is Important

From the standpoint of rates the question of valuation is comparatively unimportant. From the standpoint of railroad development and service it is vital. Upon the valuation finally made will depend the net return the railways will be allowed to earn and their ability to raise new capital and expand their facilities. Upon their ability to expand their facilities and render increased transportation service will depend whether the farmers and other producers and shippers will be able to do a prosperous business in future.

This is one of a series of advertisements published to give the farmer authentic information about railroad matters. Any questions that you would like to ask will be cheerfully answered. Address:

Quality of Eggs
Is as Vital as Is the Number Laid

How many eggs does your flock average? What was the highest individual production?

How much do your eggs weigh per dozen? How shapely are they? Is their color uniform or is it a bit uncertain?

The foregoing are two sets of questions worthy the consideration of any poultryman. The former set usually receives the bulk of the thought, and hens are bred and fed with a view to number of eggs rather than size, shape and color. Quality, of course, includes much besides size, shape and color, but these are prominent points and go a long way toward determining the market value.

It is exceedingly common to find small eggs in the nests along with the medium and the large. It is just as common to find eggs with certain very noticeable characteristics that render them unattractive to the market. For instance, among the white eggs there is one that shows distinct touches of brown. There is one that shows a tendency toward being speckled—a shower of little brown spots on it. There is one with a rough, unfinished point to the shell. Among the brown eggs there are pales and darks; eggs with even coloring and uneven.

Now it may be plain prejudice on the part of city folks that use our eggs, but they want uniformity. They want attractiveness. If they want a white egg they want it beautifully white. If they like the brown they want it uniformly colored.

Likewise, they want eggs that fill the little compartments of the cartons reasonably snugly. Every purchaser of eggs at the grocery store feels that he is cheated if he can feel and hear the eggs roll about in the carton; even one loose egg gives an uncomfortable feeling.

The point at issue is that number of eggs is not the only evidence of a valuable hen. The producer of 200 eggs in a year that grade No. 1 or fancy is worth more than the producer of 210 or even 225 that grade low.

Therefore, is it not time for more attention to be paid to the second set of questions at the head of this article? Is it not time for the poultryman to become as careful about the size, shape, color and general quality of the eggs laid by individual hens in his breeding flock as about the number of eggs they lay?

As stated before, quality includes much more than size, shape and color, but the other elements are more easily controlled. Feeding and care of the eggs after laying are outstandingly important in the matter of getting quality. The feeding is more of a scientific matter than the care, perhaps, but plenty of fresh water, plenty of green feed, a grain and mash ration balanced and fed, according to the many experiment station recommendations, and charcoal, grit and oyster shell are the fundamentals of feeding. Care means, among other things, frequent gathering during warm weather, keeping in well-cooled quarters and early delivery to market.

Did you ever break an egg into a saucer and try to pick it up with the thumb and fingers of one hand? Try it. You can not pick up a saucerful of water that way. If you can lift the entire egg, leaving only a little moisture in the saucer, the likelihood is that it will qualify as a first-class egg. At least, the cook in the high-class restaurant or hotel depends to a large extend upon this test when considering an offering of eggs. But you may depend upon it that an egg that has been held a long time and become stale will not thus pick up. Neither will it if it has remained in the nest for several warm hours after being laid. Nor does quality hold up when improper feeds are given, though usually a hen goes on strike and will not lay at all if she gets feed that is lacking in some essential in the production of good eggs. Hens do not cheat you; they will not put poor materials in their product if there is a chance to avoid it.

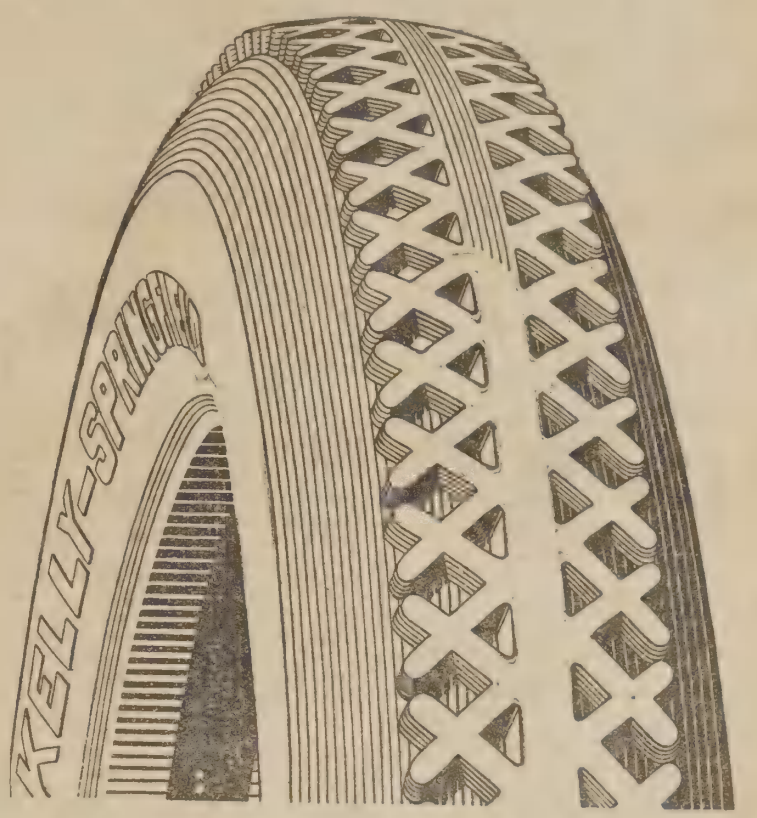
Apple Harvest Early

September 20 has been officially set as the date of the opening of the 1923 apple harvest by the growers and shippers of the Wenatchee district acting in conjunction with the local employment office. This means that upon that date many outside men and women will be given work in the orchards and warehouses of the district. Usually the opening of the apple harvest is about October 1, but the crop is fully 10 days earlier this year than last. An effort will be made to keep people from reaching the field before September 15 to 20, as they will probably not get work before that time.

THURSTON COUNTY, TOO.

Thurston county now comes to the front with plans for an accredited hatchery which will raise the state-wide standard of 200-egg record cockerels to 250 eggs for the males that are to be used in the breeding pens. Sufficient breeders have been signed up to warrant the completion of the plans and O. B. Gregory of Olympia has been selected to operate the model incubator house which will have a capacity of 12,000 eggs.

KELLY SPRINGFIELD TIRES



Kellys Give Good Service in a Hard Job

Mr. H. H. Tanner is a R. F. D. mail carrier in Milledgeville, Georgia. He drives his car over all kinds of roads and in all kinds of weather. He puts his tires to the severest sort of test. Here is what he says about Kellys:

"I have used practically every standard tire in my twelve years of auto driving in the R. F. D. mail service and my conclusion is that there is no tire made that will give the service and satisfaction that the Kelly-Springfield will, so when I bought my new Superior Chevrolet, eight weeks ago, I told the dealer that I wanted him to change the tires for me so that I could 'keep smiling with Kellys'.

"Kellys are the best tires in the world for the roughest service in the world because we hit all the rough spots going to the roadside mail boxes and then the excessive stopping and starting is hard on tires."

Every farmer knows the hard usage which tires receive on a R. F. D. mail carrier's car. That is why we have printed this letter here. If Kellys can give satisfaction for this work, they will give satisfaction anywhere.

It costs no more to buy a Kelly

POULTRY AND RABBITS

Poultry Culling
Is Taught in Many Communities

By RALPH ERSKINE.

Although the culling demonstrations have their place in the training of farm men and women to cull their flocks of hens for better egg production, W. D. Buchanan, poultry specialist of the state college, is working out a plan which he believes will reach more people and therefore result in the culling of more hens than other methods that have been used. This plan is the culling school which differs from the demonstration in that a number of project leaders in each county are given a whole day's training in the culling of hens by the use of a revised score card. These leaders will in turn train the flock owners in their own locality to do their own culling.

The plan is a unique one and has been put on in 21 different places throughout the state this summer and Mr. Buchanan expects to reach a large number of people. In fact, as he himself put it, the point can best be illustrated by two verses of an old poem in which the word SERVICE is substituted for the word LOVE.

Make channels for the stream of love,
Where they may broadly run,
And love has overflowing streams,
To fill them ever one.
But if at any time we cease,
Such channels to provide
The very fount of love for us
Will soon be parched and dried.

When one understands that those who enroll in the culling schools are well versed in the art of poultry raising before they are allowed to enter, he can better understand that they can fit themselves for the training of others and thus fill the "channels of service" in their neighborhood after a full day's instruction under the supervision of an expert. In order to show that they are capable of training others they are each given a culling card, a kind of certificate, by the state college on completion of the school. This can also be used in case there should be any doubt on the part of a breeder as to their ability to cull poultry.

But to begin with the opening of a day's work and follow the instruction to the close when the grades are given out.

The first detail is to give out the score cards and explain every point. The card is one that Mr. Buchanan has revised with the assistance of a number of other poultry authorities in the northwest and other parts of the country. The purpose of such an outline, which is really a utility score card, is not to give the leaders something to follow while they are working, but is rather a basis of comparison for the different points which must be considered.

THE UTILITY SCORE CARD.

The figures indicate the number of points of credit to be given for a perfect bird:

Head.	
Eyes bright and bulging	6
Beak short and curved	3
Comb and wattles red and velvety	6
True to sex type	4
Ear lobes smooth and of standard color	1
Body.	
Back broad and angular	5
Deep from center of back to front of keel	10
Span from keel to pelvic bones, wide	4
Pelvic bones, medium, thin and wide apart	6
Handling Quality.	
Body solid and well meated	5
Abdomen soft and pliable	10
Late moulting	10
Legs and Toes.	
Legs flat and scales fine	3
Toe nails short and blunt	2
Pigmentation.	
Vent and beak, white	5
Shanks entirely bleached	20
Total	100

The above score card can be applied only to the breeds that have yellow skins. If desired to grade by the number of eggs that the bird will lay, a separate column can be made by multiplying each set of points by three. This will make a total of 300, which is considered the standard production for an ideal laying hen.

"I don't want you to try and follow the score card every time you pick up a bird," said Mr. Buchanan as he explained the plan, "but I am giving you this outline so that you will not forget any important points which should be considered. The card is by no means perfect, but it is the best that we have and it has been checked and found to comply very closely with the trap nest record of birds on which it has been applied. While it applies best to the hen with a capacity of 150 eggs and better, there has been a tendency to overestimate the medium capacity birds. If this point is considered it will prevent a possible error in the hens of this class.

"It should also be understood that where the late moulting bird is graded 10 points, she could not be given as much if graded during July or August. For this reason we have decide to allow only three points if she has not moulted by July and six points in August if there is no sign of shedding the feathers. In September the 10 points could be given provided it was not too early in the month and she showed no signs of beginning a moult."

Estimating Egg Production.

In order to estimate the number of eggs which the hen will lay in the year it is first necessary to know about when she began to lay. If she has been laying only one month when graded the score given should be multiplied by one-fourth. If she has been laying two months, multiply by one-half, and so on. Such a check, if properly done, will not be far off from the trap nest record, which proves that the score card is accurate enough for any practical use.

Practically all of the forenoon was spent in going over the points of the score card and applying its points to one bird each for every person at the school. After all had made their score, Mr. Buchanan took the hen and made his marks and then a check was made between the two grades. In the mjority of cases there two grades.

During the noon hour the subject of poultry was dropped only long enough for the folks to eat their lunches, and it began where it had left off. After lunch the real examination began. Each member took a bird and graded it and turned it over to Mr. Buchanan for his verdict. If their grade was correct they were marked 10. If the bird should have been put in

Swedish Inventor Has New Oil Light

Claims Whiter and Much Cheaper Light Than Electric or Gas.

Edison enabled us to enjoy the benefits of electric light, Count Welsbach's mantle made it possible to have the incandescent gas light, but it remained for a Swedish engineer named Johnson, now living in Chicago, to devise a lamp that would burn ordinary, every day kerosene oil and produce a light said by the many scientists who have seen it to be whiter than electric. The lamp is as simple to operate as the old style oil lamp, burns without odor, smoke or noise and is proving a sensation where oil light is needed.

Mr. Johnson offers to send a lamp on ten days' free trial and will even give one to the first user in each locality who will help introduce it. A letter addressed to W. R. Johnson, 31 N. Fifth St., Portland, Ore., will bring full particulars about this wonderful new lamp. He has an interesting agency to offer, too.—Adv.

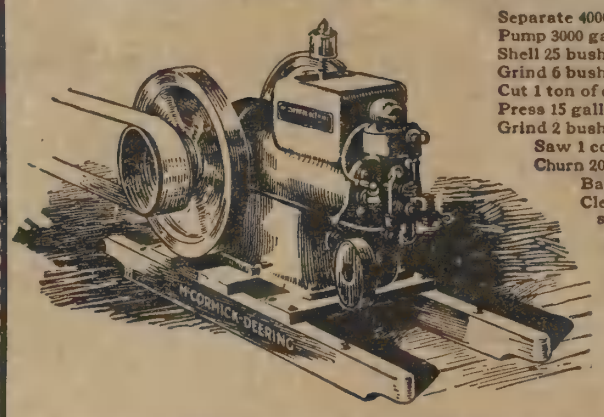
The Great Usefulness
of the New 1½ h. p.
McCormick-Deering Engine

TO SEE the new 1½ h. p. McCormick-Deering Engine standing quiet, compact and unassuming at the dealer's store, it is hard to realize the great range of its usefulness and the degree of the power it will deliver at trifling cost of operation.

Two cents worth of fuel in this McCormick-Deering Engine will do any of these jobs:



Separate 4000 pounds of milk.
Pump 3000 gallons of water.
Shell 25 bushels of corn.
Grind 6 bushels of feed.
Cut 1 ton of ensilage.
Press 15 gallons of cider.
Grind 2 bushels of corn meal.
Saw 1 cord of wood.
Churn 200 lbs. of butter.
Bale ½ ton of hay.
Clean 30 bushels of seed wheat.
Grind 25 gallons of cane juice.
Light up the farm for 2 hours.
Do a family's weekly washing.
Grind the mower knives for a season.

Such many-sided labors may be turned over to this tireless hired man the day it is set down on your place and for years to come. It is of lasting reliability and you will know why when you have inquired into the details of its construction.

The new McCormick-Deering runs at low speed (500 r.p.m.). It is equipped with Bosch high-tension magneto and spark plug, removable cylinder, enclosed crank case, throttle governor, simple fuel mixer, and large, well-made, replaceable bearings. It has a simple cooling system and an unfailing oiling system.

This 1½ h. p. size operates on gasoline. The other McCormick-Deering Engine sizes, 3, 6 and 10 h. p., use kerosene as fuel. All are made of equally high grade materials throughout and include many of the features named above.

Write for detailed information. Stop at the McCormick-Deering dealer's store and go over the engine of the size you require.

Boost your Egg Yield Now!

HANG a Coleman Quick-Lite Lantern in your hen house a few hours these winter nights and mornings. It puts your hens on a spring laying schedule. Longer feeding hours greatly increase egg production. Users report from 15% to 20% more eggs. Poultry authorities and practical poultrymen recommend artificial light to boost the egg yield. Thousands are now making bigger profits by selling more eggs than ever at high prices.

Style L0-327 Coleman Quick-Lite
"The Sunshine of the Night"

Makes and burns its own gas, from common motor gasoline. Gives 300 candle power of brilliant white light. Brighter than 20 old style oil lamps. Can't spill fuel or explode, even if tipped over. 12 hours of light on one filling. Lights with matches—no torch needed.

Built of brass, heavily nickeled. Will last a lifetime. Mica globe and reflector. Won't blow out. Handiest and most convenient light you ever saw. For very large hen houses we manufacture the same form of lighting in a complete plant, equipped with fixtures, globes, etc.

30,000 DEALERS sell Coleman Quick Lite Lanterns, Lighting Plants and Lamps. If yours can't supply you, write us for booklet "More Light—More Eggs." Address Dept. PN18.

Sell Apples in the Middle West

The Farmers' Union of Washington and Northern Idaho is taking steps by which it is hoped to improve the apple market of its apple-growing members, and, at the same time, furnish farmers' union members in middle western states good northwestern fruit at lower prices than the retail market in those states generally affords.

Negotiations have been under way for some time between President J. Q. Adams and other officers of the Washington union and officers of state farmers' union exchanges in the middle west. It is proposed that Washington locals shall place upon their boxed apples a label copyrighted by the state organization and that these apples shall be shipped direct to the middle west union exchanges to be sold to individual members in those states at the price paid to the producer plus normal costs of transportation and handling.

The label that has been prepared for pasting on the boxes is both attractive and educational. It takes the form of a large wheel, around the outside of which are the words, "Farmers' Union Fruit Department." The emblem of the farmers' union is the hub. Each spoke carries the name of a variety of apple and the months of the year during which it is in best condition for being eaten. This information is given to protect the eastern exchanges against the purchase of fruit of certain varieties at times when they are not satisfactory for general consumption. The label also carries a guarantee of the quality of the fruit and an explanation of the grades fixed under state law.

President Adams is this week holding meetings with farmers' union fruit growers in the Wenatchee district preparatory to putting the new plan into execution.

The farmers' union has state exchanges in Nebraska, Kansas, South Dakota, Iowa, Kentucky and other states. Officers of some of these exchanges with whom the proposition has been taken up express enthusiasm over it as a means of providing their members with good fruit at a small margin over the price received by their fellow producers in the Pacific northwest.

Seek Lower Rates

Alleging that, due largely to excessive railroad rates, the live stock industry of Oregon and southern Idaho is close to bankruptcy, the Oregon Cattle and Horse Raisers' association, Portland Live Stock Exchange and the Northwest Live Stock Shippers' Traffic league have filed complaint with the interstate commerce commission asking rate reduction and reparation payment of approximately $100,000. The league membership includes four packing houses of Frye, Carstens, Henry & Barton on Puget sound and 1700 live stock shippers. The three northwest states' complaint charges that rates have never been adjusted by the commission but were set arbitrarily by railroads and never changed to meet present conditions. Establishment of maximum mileage scale is asked and largest reductions south are from southern Idaho, rates asked constituting reduction of from $5 to $35 on each carload cattle and double deck carload sheep, $10 to $40 on each carload of hogs and $30 to $50 per double deck carload of hogs from southern Idaho. Establishment of tariffs for double deck carloads of hogs from eastern Oregon and of calves from eastern Oregon and southern Idaho is asked and high rates from branch line points are attacked, comparison showing, it is declared, that rates from Montana to Seattle, Tacoma and Portland are much lower than from Idaho and Oregon.

The Northern Pacific, North Bank, O.-W. R. & N., Great Northern, Oregon Short Line and Oregon Trunk are defendant railroads. S. O. Correll, secretary of the Cattle and Horse Raisers' association; R. L. Clark, secretary of the Portland Live Stock exchange, and William Pollman, president of the Northwest league, sign the complaint.

Hard Red Spring Wheat

(Continued from page nine.)

obtained from the Saskatchewan valley in Canada. The Wellman strain, however, is identical with an older variety called White Russian, which apparently was mixed with the sample of Scotch Fife gorwn by Mr. Wellman. This variety of wheat has almost disappeared from cultivation.

Ghirka (Ghirka spring, known also as Early Russian, Russian and Russian Fife) differs from the true Fife strains in having a longer and more tapering spike and larger and softer kernels. The straw or ripe stem usually is tinged with purple. It is slightly earlier than Red Fife. Ghirka was an important variety in Russia, grown principally in southern Russia and the Volga river district, when it was introduced into the United States. During the period from 1898 to 1904, inclusive, eight lots were obtained by the United States department of agriculture. Other importations were made by Russian immigrants. Owing to the phenomenal success of Marquis, the Ghirka is now grown only sparingly in North Dakota, South Dakota and Wyoming. Ghirka is quite drought resistant and will often yield well in dry seasons in the Great Plains area. Farmers' bulletin No. 1281, from which these facts about hard red spring wheats were taken, says decisively that the growing of Ghirka should be entirely discontinued.

Kitchener.

Kitchener differs from Marquis in being slightly later and taller and in having a purple straw and a slightly longer kernel. Kitchener originated from a head of wheat found in a field of Marquis in 1911 by Dr. Seager Wheeler at Maple Grove farm, Rosthern, Saskatchewan, Canada. Kitchener is grown to some extent in Canada, but it is not yet important in the United States.

Red Bobs.

Red Bobs usually can be distinguished from other varieties because of the absence of short beards on the tip of the head. The heads of practically all beardless wheats have short beards, varying from one-fourth to one inch in length, near the tips of the heads. Most of the heads of Red Bobs, however, do not have the short beards. The Red Bobs is several days earlier than Marquis. Red Bobs originated from a head found in a field of Bobs, a white wheat, in 1910, by Dr. Seager Wheeler at Rosthern, Saskatchewan, Canada. It probably is the result of a natural field hybrid between Bobs and Marquis. Red Bobs was first distributed in 1918. As yet it is grown only to a limited extent in the United States, having been introduced but recently. In experiments in central and northern Montana Red Bobs outyielded Marquis during two years. Under conditions of extreme drought Red Bobs is declared to be likely to yield more than Marquis, owing principally to its earlier maturity. It is a good wheat for milling and baking.

Grape Growers Meet

A meeting of the Island Belle Grape Growers' union was held recently at Stadium, in Mason county, where the members discussed problems concerning marketing of this year's crop.

From all reports received from growers and commission men there is every indication of a bright future for this variety in western Washington. Although the acreage is increasing each year, the greatest trouble has been in getting enough grapes to supply the demand.

Displays of the Island Belle grape will be made both at the Mason county fair and at the Western Washington fair at Puyallup, in order to show the people the excellent qualities of this variety. Yields of six tons to the acre have been known and an average has been estimated at four tons, under proper management.

The election of officers resulted in the following: Adam Eckert (re-elected for the sixth time), president; J. L. Rauschert, vice president; Charles Somers Jr., secretary, and the following directors: Ed C. Suiter, Ed Wilson, Jacob Wingert, Karolina Sund, W. R. Polk and Edgar J. Wright.

The fair is a worthwhile school.

Here's ideal
fuel for farms

for ranges, heaters, brooders, smudge pots, furnaces, boilers and wherever heat is needed use

Diamond Briquets

You probably need two kinds of coal. One kind to give quick, intense heat—a free burning coal. Another kind to hold the fire, keep it steady and make it last—a coking coal.

Now you can get these two kinds of coal in one single fuel—Diamond Briquets!

Diamond Briquets are a lump fuel containing two high grade coals, Black Diamond, a free-burning coal, and South Prairie, a coking coal. These two brands lead all others for quality in Western America.

Open your drafts—Black Diamond, the free-burning coal, takes the lead and brings the fire to quick intensity. Close your drafts—South Prairie, the coking coal, will not let the fire die, but will hold it steadily, evenly and for a long time. Thus these two coals BLENDED into Diamond Briquets work hand in hand to give you the kind of heat you need, wherever you need it, and as soon as you need it.

There is nothing better. Diamond Briquets are the latest and best in fuel. They contain no other coal than these two, which are thoroughly washed, carefully pulverized like sugar to get a complete blend and then compressed under 2000 pounds pressure into uniform, hard, clean lumps. Diamond Briquets are harder, decidedly cleaner and, best of all, substantially lower priced, than the raw lump coals they so satisfactorily displace.

181 agents and dealers in 126 cities and towns of the Pacific Northwest are ready to supply you with Diamond Briquets.

Grading Lettuce

Big Factor in Marketing Crop

The lettuce growers of King county and the adjoining country seem to agree that grading is the big factor in the marketing of the crop. There is too much of a tendency on the part of some growers to sell all of the crop as the heads mature and thus get many heads in the crate that lower the grade and consequently the price.

There were about 35 growers and others interested in the industry who met at the Seattle Chamber of Commerce to listen to Professor E. F. Dummeier, instructor of economics at the state college, who explained many of the problems that confront marketing organizations. He told the growers that he believed there were good opportunities for those engaged in this business to form an organization that would help in putting their product on the market at a more uniform price.

"The one thing that will do more than anything else to sell any product is to establish a system of grades which can be advertised," he said. "The state or federal grades can always be depended upon, as they are inspected at the loading point and shipped as such. This prevents the buyer from making any false claim as to the condition and grade of the shipment on its arrival.

"In order to have an organization that will function successfully it is first necessary to have an efficient manager who knows his business and who has the confidence of the majority of the members. No organization can be carried on under poor management and it is just such practices that have given cooperative organizations a bad name in the past."

At the close of Professor Dummeier's talk the growers discussed the marketing situation and appointed a committee to discuss the organization of an association that would work on the plans outlined by the speaker. The Japanese growers who were present agreed with the others that by shipping the best grades out to the more distant markets, a better market would be created at home for the surplus and yet not necessitate the dumping of the lower grades on the local markets.

The committee named to look into the plan of organizing consisted of J. G. Robinson, Kirkland, chairman; Joe Desmone, Tony Aries, Bellevue; S. Nakatsuka, Kent; K. Yamane and David Yates, Seattle. It is interesting to note that there were three Japanese banks of Seattle represented at the meeting. There were also a number of commission men present who were favorable to the formation of some organization that would improve the quality of the lettuce and help the growers to work together for their mutual benefit.

The meeting was arranged by W. W. Henry, the county agent, who offered to assist the growers in getting such information as was given by Professor Dummeier, but he insisted that any organization details be taken up entirely among the producers themselves, since the extension service can not participate in marketing organization work.

Poultry Culling

(Continued from page twelve.)

the next class, one point was taken off and so on. The culling continued until each member had culled 10 birds, when their grade could easily be determined by adding up all of the grades given.

In all of the schools held there were very few cases where a grade below 90 was made and there were some that made 99. The grade was generally between 94 and 96.

The classes passed on were:

1. Culls, anything below 120 eggs.
2. Low medium, between 120 and 130 eggs.
3. Medium, between 130 and 140 eggs.
4. High medium, between 140 and 150 eggs.
5. Good, anything above 150 eggs.
6. Extra good, above 200 eggs.

It is on their ability to place birds in these classes that students are graded.

Twenty-One Schools.

"At Burlington, Skagit county, there were 24 enrolled for the school," said Mr. Buchanan, "and 100 per cent were present and 12 extra, which brought the total attendance to 36.

"Mr. H. L. Willis of Mt. Vernon added to the interest by furnishing 20 trapnested hens to beb scored. Sixteen of them varied but a few eggs from the trapnest record, and of the four 'missed,' two were afterwards rescored. One of these, it was discovered, had laid fine at the beginning and end of the year, but had been a very low producer for four months in the spring. The other, on rescoring, showed an error in multiplacation, and tallied exactly with the trap-nest record."

The 21 culling schools have been held in the following counties: Thurston, Mason, Kitsap, Kittitas, King (2), Snohomish, Whatcom (2), Skagit, Clallam, Wahkiakum, Pacific, Lewis, Grays Harbor, Yakima, Benton, Franklin, Walla Walla, Spokane (2, one adult, 1 club) and Stevens.

The culling demonstrations differ from the culling schools inasmuch as more people are allowed to attend and there are no cards given out, as is done at the schools. The people are merely shown how to cull hens by the use of the score card, and in most cases have been asked to practice what they have learned on the flock when the demonstration is held. These culling demonstrations have been held in Pend Oreille, Douglas, Island and Grant (4 demonstrations) counties.

Succeeds With Berries

From the 479 gooseberry bushes on one-half acre of the P. B. Gedelman farm in the Blyn district, east of Sequim, Clallam county, Mr. Gedelman picked 2159 pounds of berries. The bushes in their third summer are all in fine shape. They were planted six feet each way. They are all the Oregon Champion variety and are said to be less apt to mildew than some of the more common varieties. The whole patch is sprayed with Bordeaux to prevent trouble of this kind.

Six and one-half acres of bottom land on the Gedelman farm are devoted to loganberries. In addition, Mr. Gedelman has three and a half acres of raspberries. This bottom land, when well drained, seems to be adapted to all berries.

CLEAN-CULTIVATE ROSES.

Rose chafers, which are small, long-legged beetles that eat the flower of the rose, do not breed in clean-cultivated ground. Five pounds of arsenate of lead to 50 gallons of water, with an added gallon of molasses, makes an effective spray for an extensive rose plantation. These beetles attack also the blossom of the grape and the fruit of the cherry.

Fertilizers

Different on Different Crops

Fertilizers have different effects on different crops and very often the same soil will need an altogether different fertilizer for one crop than it will for another. This fact was brought out in a fertilizer demonstration on the A. J. Linstad orchard at Vashon, King county, Washington. A block of 80 Baldwin trees were selected three years ago with the assistance of A. B. Nystrom, then county agent, and the alternate rows were treated with nitrate of soda, potash and superphosphate. Every odd row was used as a check row, and no application was made.

The rows treated with nitrate of soda showed the best results of any of the three fertilizers for the trees that were bearing fruit, according to Mr. Sunstad's records. There were twice as many apples on the trees thus treated than there were on the check rows, which received no fertilizer. Neither the potash nor the superphosphate gave satisfactory increase and it was therefore concluded that the apple crop needs more nitrogen than is supplied from the soils in this particular district. Mr. Linstad found, however, that it was best to apply only a light application of nitrate of soda, as too much is harmful to the trees. When applied to young growing trees it seemed to retard their growth more than on the check rows.

Mr. Linstad also tried seeding half of his orchard with a vetch cover crop while the other half was plowed and left in the rough during the winter. The experiment is yet incomplete, since the best results will be shown next year, but it is safe to say that the vetch cover crop is producing a better growth and there is a noticeable difference in the color and growth of the foliage in the trees in this part of the orchard. The vetch was turned under early in the summer and the soil was left in a clean condition during the summer months. He had very little trouble in getting this crop started, and believes it is one of the best ways to add humus as well as nitrogen to the soil and thus increase the growth of the foliage as well as producing a better crop of fruit.

Honey Yield Is Big

Last year there were 50 colonies of bees lost from spray poisoning on the M. J. Leak farm at Naches, Yakima county, Wash. There has been practically no loss from this source this year on this farm and the bees have done extra well.

The best record by a swarm of bees he has ever known for the short space of 10 days of honey gathering was made by a swarm which he caught recently. The bees were provided with complete but empty frames. So industriously did they go to work that at the end of 10 days, when he weighed the hive it tipped the scale at 128 pounds. A hive filled with empty frames but no bees weighed 41 pounds. The honey and the bees thus weighed 87 pounds. Allowing seven pounds for the bees, they had made 80 pounds of honey in 10 days from the time the swarm was hived and put in its place.

Giving may be easy or giving may be hard, but giving remains one of the half dozen biggest words in the language.

BEST TRACTORS

Partners!

YOU, Mr. Poultryman, are in the poultry business to make egg-money. The Sperry Flour Co. is in the business of mixing and milling feeds to make a fair margin of profit for itself—yes!—but primarily to help *you* make more egg-money. If you do, we both win. If you don't, we both lose.

Partners!—that's the word! We realize that we can succeed only as you do; that our future depends upon your future. It is this spirit of partnership that is back of every sack of Sperry Feeds; that is back of the hard-pan, experimental work we have been doing for years; that is back of the expert Poultry Service Bureau we maintain for the benefit of *every poultryman*—whether or not he uses Sperry Feeds. In short—

The Sperry Flour Co. is interested in your success, not only as a feeder, but as a poultryman!

If you will look at it in this "we-are-here-to-help-each-other" way, you will see where Sperry Feeds fit in, in your poultry profit-program. You will see why we, as manufacturers and millers, can produce a uniform, top-grade feed like Surelay better and cheaper than you can hope to. You will see how our every-hour laboratory tests enable *us* to check what we are mixing and enable *you* to check what you are feeding. And with not a cent's extra cost to you!

In fact, if you—as a poultryman partner—want to see how and why Sperry mill-made, mill-mixed feeds are the biggest co-operative asset you have, you will not be content until you have read "Why Mixed Feeds?" Written especially for us by Dr. Kaupp—one of the greatest national authorities on feed investigation—this book is full of meat and meaning. And it's free—simply mail the coupon below.

Interstate Fair

(Continued from page three.)

dition to the cash prize of $10, Max Merritt was awarded the John H. Roberts silver trophy cup in this competition.

Horse Championships.

The championships in the draft breeds were as follows:

Percherons—Senior champion stallion, Stadacona, owned by A. H. Poston & Sons, Spokane; junior and grand champion stallion, Star, owned by Mr. Doepke; senior champion mare, Madam, owned by Mr. Thayer; junior and grand champion mare, Belmont, also owned by Mr. Thayer.

Shires—Senior and grand champion stallion, Champ Clark; junior champion stallion, George Cooper; senior and grand champion mare, Martha Washington, and junior champion mare, Princess Victoria, all owned by the Messrs. Merritt.

Clydesdales—Senior and grand champion stallion, Majesty's Best, owned by Mr. Whitman; senior and grand champion mare, Garfield Bell, and junior champion mare, Bonnie Brae Gem, both owned by Mr. McCroskey of Garfield.

There was a good, though not large, showing of the lighter breeds, made up of standard breds and Morgans, exhibited by Harry L. Needham, Greenacres; William Williams, Lewisville, Idaho; George A. Kelly, Walla Walla, and Fred Aldrich of Spokane. Thoroughbreds were exhibited by Richard Allman, Coulee City, J. T. Clark, Raymond, Alberta, and Meiks Brothers, Raymond, Alberta.

There was a small showing of Shetland ponies.

J. A. Marion, Fairfield, showed one jack.

The Beef Cattle.

In the beef cattle barns Frank M. Rothrock, with a herd of young Hercules Shorthorns, made up the entire exhibit in this breed, with the usual high quality for which Hercules farm has a reputation. Across the aisle the outstanding milking Shorthorn herd of Northwood farm from Redmond, on Puget sound, made a great showing, though with no competition. Competition, however, was keen in the Hereford classes, with four well-known breeders dividing the honors. The strong herds of O. A. Boggs & Sons of Alberta and Herbert Chandler of Baker, Ore., divided the greater number of the top awards, with Diamond B ranch of Lowell, Ore., and Weatherford Brothers of Dayton, Wash., adding real interest to the rivalry.

In the Aberdeen Angus department Congdon & Battles showed their superior herd without competition.

The beef cattle championships were as follows:

Shorthorns—Junior and grand champion bull, Hercules Marshall, and junior and grand champion heifer, Hercules Sylvia 3d, owned by Mr. Rothrock.

Herefords—Senior and grand champion bull, Alberta Panama; senior and grand champion cow, Panama Lady 2d, and junior champion heifer, Panama Lady 4th, all owned by Boggs & Sons, and junior champion bull, Prince Donald, owned by Mr. Chandler.

Aberdeen Angus—Senior and grand champion bull, Prizemere 10th; junior champion bull, Prideman C. B. 22d; senior champion cow, Erica 7th of Rosemere, and junior and grand champion heifer, Barbara C. B. 2d, all owned by Congdon & Battles.

Milking Shorthorns—Senior and grand champion bull, Gretna Challenger; junior champion bull, Northwood Lad; senior champion cow, Lily L. 3d, and junior and grand champion heifer, Northwood Maggie, all owned by Northwood Farms.

The Dairy Cattle.

In the dairy show ring there was interesting competition between the Holstein herds of John L. Smith, Spokane, and Hollywood farm of Hollywood, near Seattle. Most of the top honors went to the Smith cattle, with Hollywood capturing the senior championship on their typy aged cow, Snow Ball Powers Mutual.

In the Jersey department Glen Tana farm, Spokane, won nearly all of the first places and took all championships with its high-class show herd, headed by Glen Tana Morocco Wonder. Glenwood farm of Buckeye, a neighbor of Glen Tana, and R. J. McGebran, E. J. Roberts and Margaret Campbell, a club girl, divided the secondary premiums. The Jersey show was especially interesting in that the greater number of the animals shown were close descendants of the old herd sire at Glen Tana, now dead, Morocco Pioneer. Both bull champions were his sons, while the junior champion heifer was his granddaughter.

A small showing of Guernseys was made by Indian City farm, Spokane; J. C. Trotter, Rockford, and Mrs. Anna J. Odell, Valleyford.

No Ayrshires, Brown Swiss or Red Polled were shown.

The championships in the dairy breeds were as follows:

Holsteins—Senior and grand champion bull, Hazelwood Heilo Butter King; junior champion bull, Hazelwood Ormsby King, and junior champion heifer, Hazelwood Heilo Fayne Bessie, all owned by Mr. Smith, and senior and grand champion cow, Snow Ball Powers Mutual, owned by Hollywood farm.

Jerseys—Senior champion bull, Glen Tana Morocco Wonder; junior and grand champion bull, Glen Tana Morocco Majesty; senior and grand champion cow, Glen Tana Sybil 2d, and junior champion heifer, Glen Tana Wonderful Dorothy, all owned by Glen Tana farm.

Guernseys—Senior and grand champion bull, Amy's King, owned by Indian City farm, and junior champion bull, an unnamed calf owned by Mr. Trotter.

The Swine Show.

In most respects the hog show lived up to the Interstate fair's reputation. Indian City farm and F. M. Curtiss, Fruitland, Wash., made up the Berkshire show, each winning two championships. In the Poland China classes B. F. Kammerzell & Sons, Colfax; A. Kloppenburg, Spokane; A. J. Gage, Valleyford, and John F. Lynn & Son, Peach, Wash., competed. Kammerzell and Kloppenburg divided the championships evenly. In the Chester Whites, C. M. Meenach of Sharon, H. S. Curtis of Palouse, J. L. Davidson, Tekoa, and Charles Meenach, a club boy, made up the show, with all championships going to Mr. Meenach.

The Duroc Jersey show was noteworthy as a demonstration of the value of live stock club work. Boys who have had from one to three years' club experience took the majority of first prizes and captured all but one championship. Edwin Pease of Usk won senior and grand championship on his aged boar. Jack Adams of Spokane captured senior and grand championship with his yearling sow. Lester Hartley, Cheney, showed the junior champion boar, leaving the junior sow championship to the only veteran breeders able to break in, A. H. Poston & Sons of Spokane. Willard Brown of Spokane and Edgar Boucher of Cheney also won prizes as club boys.

The best Hampshire hog show in recent years at this fair was made up by the entries of J. M. Fruitts, Cambridge, Idaho, and Hayes & Harter of Grants Pass, Ore. Fruitts was the heaviest winner, taking all but one championship. His three purebred barrows win the sweepstakes over all breeds in the fat barrow classes.

The Sheep Show.

Nine breeds of sheep were shown with fairly well filled classes in all cases. J. G. S. Hubbard & Sons, Monroe, Ore., and the University of Idaho divided most of the Hampshire honors. Floyd T. Fox, Silverton, Ore., was leading winner in Shropshires. Hubbard & Sons and the University of Idaho competed in Southdowns, Hubbard taking all firsts but two. In the Oxfords, Mr. Fox, Harold W. Hastings, Thornton, Wash., and E. F.

(Continued from page eight.)

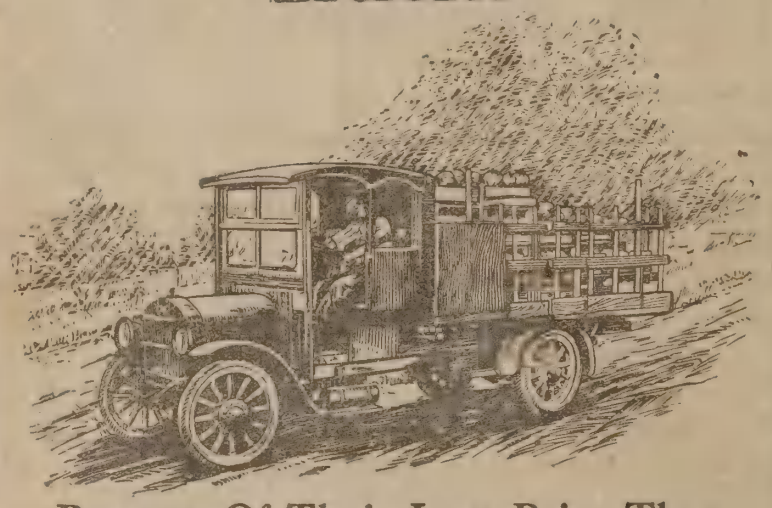
raw beans, condiments in which the bean is an ingredient are exported. Even at that, the value of the imported beans and peas, together, exceeds that of their value in her export, and it may be deduced that her production of the two is below consumption's requirement. Indeed, we find specific statement that her beans are insufficient. Soy bean dishes enter daily into the diet. Sweet potatoes, and, of late, Irish potatoes, are used, and some Irish potatoes are exported. New grains and succulent vegetables are being introduced. The use of an edible seaweed increases the food supply.

The fish supply is more than adequate for her needs, and Japan has foreign markets for several species.

Her imports in sugar are about twice in value that of her export sugar.

About three-fifths of the arable land is owned by small peasant proprietors, the holdings of an acre, more or less, each. The rest is mostly worked by tenant farmers. More than half the land is used for growing rice, the staple food of the country. Large crops are raised of wheat, barley, rye, millet, buckwheat, maize, beans and potatoes, also tobacco and tea. Mulberry trees are widely grown and the number of families who are engaged in silk culture reaches nearly 2,000,000. Nearly 4000 factories have been engaged in the silk industry, employing 64,000 men and 430,000 women.

General Motors Trucks



Because Of Their Low Price They Reduce Farm Costs Materially

Farmers find that the use of GMC trucks materially reduces farm costs not only because of the continuous and dependable transportation they provide, but also because of their unequalled low price and remarkably low operating costs.

Built by the General Motors Truck Company—a division of the General Motors Corporation—every economy that it is possible to make through purchasing in large quantities and through similar advantages enjoyed by a large organization—goes into every GMC Truck built.

Their great economy is only one advantage enjoyed by GMC truck owners. No other truck is more dependable, more accessible, more powerful for its size, or built to give more dependable and continuous service.

Ask for our catalogue "Motor Trucks On The Farm".

Where Orchard Limbs Hang Low—

there's where you will especially appreciate this low, narrow plow. Only 26 inches high over all when plowing six inches deep; only 37 inches wide.

John Deere No. 45-A
For Small Tractors

Gets under the low limbs, up close to the row.

Levers set low when plow is working, and are lowered as depth is increased.

No projections outside of narrow wheel base to interfere with trees.

Wide offset of plow to right or left of tractor for work close to row is permitted by adjustable reversible hitch. (Note this hitch in illustration at right.)

Good clearance — 21 inches from beam to share point; lots of clearance at other points. A big advantage when plowing deep or turning under cover crops.

Mighty strong — beams, braces and axles made of special hard and tough John Deere steel. Braces hot-riveted to beams—frame has lasting rigidity.

Pulls light — a real fuel-saver. Simple, positive power lift.

See this plow at your John Deere dealer's. Complete stocks of plows and repairs at San Francisco, Los Angeles, Portland, Seattle, Spokane and Boise.

FREE FOLDER—write today for your copy. Address John Deere, Moline, Illinois; ask for Folder CA-347

ORCHARD AND GARDEN

Pruning Blackberries

By C. L. VINCENT.

Department of Horticulture, Washington State College.

In a previous article Prof. Vincent discussed the pruning of raspberries.

The fruiting habit of the blackberry is quite similar to the red raspberry. When the canes go into their winter condition there may or may not be side branch development. Whether this is the case or not will depend somewhat on the system of training the grower wishes to follow and somewhat on the culture and the variety. The loganberry and Evergreen blackberry usually form side branches.

In Puyallup valley canes with very little side shoot growth are desired. At the end of the first season then, lateral buds only will be formed on the main canes in the greater number of cases. The following year leafy growths start from these lateral buds, on which are produced from three to five three-leaflet leaves. This growth terminates in a dense cluster of flowers, and it is only seldom that leaves are found scattered among the blossoms.

The blackberry may be pruned in practically the same way as the red raspberry. It is a very simple operation, if done regularly every year. A blackberry patch which has had its pruning neglected for any length of time is difficult to prune.

Four Steps in Pruning.

The first pruning given the blackberry is at planting time, when the canes are cut back to about a foot long; the second consists of cutting out the old fruited canes, as soon as harvest is over, and while the canes are more easily cut. Later the canes become woody and hard. Burning the old canes at once disposes of any fungus spores or insect pests which may be on them. The third step in pruning blackberries is to remove the surplus new canes. If all the suckers and new canes which appear are allowed to grow, the berry field would become unmanageable in a year or so, making the berries hard to harvest and materially reducing the yield. The plants must be kept in individual hills, which will necessitate some hand hoeing to keep the suckers out. The space between the rows is kept free from sucker growth by frequent cultivation. New canes to take the place of the old ones removed come up as suckers during the growing season around the crown of the plant and should not be touched until spring. In the spring select six or seven of the strongest canes to produce that year's crop, removing all the rest. Care must be taken to cut the canes all close to the crown. In the case of the loganberry, growers in parts of Willamette valley do not consider six canes enough, hence the practice at present is to leave 10 and 12 or even more. The final step in pruning is to clip back the fruiting canes slightly if there is any evidence of winter injury on the ends of the canes or if they are too long to be easily handled.

If side branches are produced on the young canes during the growing season instead of just the lateral buds, these should also be clipped back in the spring if they are too long or if there is any evidence of winter injury. It is best not to cut the side shoots back to less than 20 inches.

A third article by Professor Vincent will discuss the pruning of currants and gooseberry bushes.

Strawberry Root Weevil

In districts where the strawberry root weevil have been doing their deadly work there have been many growers who have plowed their patch up as soon as the injury has spread enough to indicate that the entire patch would soon be affected. Such a practice is not always necessary, since there are times when control methods can be applied and the plants saved for another crop.

H. B. Carroll Jr., county agent of Whatcom county, gives the following plan of controlling the pest as is being tried in that district:

Do not plow out an infested patch just after harvest. If the patch is plowed out during the summer the beetles are caused to leave and to infest surrounding fields and to lay their eggs there, thus spreading the pest. Leave the infested patch lie until about September 1.

At that time hook out the plants and remove them from the field and plow the ground. Leave no vegetation whatever for the grubs to live on. Keep the ground absolutely clean cultivated and entirely free from any growing matter for three months.

The result of this treatment is that the beetles are induced to remain in the infested field through the summer and lay all their eggs there. The beetles that have come over from last winter then die. These eggs in this infested field then hatch and their grubs come out. If the field has been plowed and the vegetation kept down these grubs find nothing to live upon and then perish.

The same ground is then free from grubs and it may be planted to any crop desired, even back to strawberries, the next spring. However, if strawberries are returned to the land at once it is recommended that the barrier be used to keep beetles from coming back onto the ground and reinfesting it. Several growers in western Washington have used the barriers with crude oil and were successful.

Another control method that looks very promising is one tried by T. N. Clapsaddle of Arlington, who finds that by running a few young pullets on the patch as soon as the crop has been picked the weevil will practically all be destroyed. Although he had but a small patch, he turned the chicks onto the strawberries, since he figured they had been destroyed by the weevil and he planned to plow the patch the following spring.

The plan has been recommended by those who have made a study of the strawberry pest, since they find that both the larva and the adult weevils are above the surface of the ground during the month of July, so if the young pullets can be given the run of the strawberry patch at this season, or as soon after the crop has been harvested as possible, the birds should pick up a large part or possibly all of the weevils.

At least this is an easy remedy to try out and there have been a number of growers who have determined to keep their plantings another year and be prepared to run chicks over the patch and thus avoid further ravages of the pest, which have gotten only a foothold so far.

WHAT DETERMINES PROFIT.

It is not always big yield that insures profit. Prices are usually low when there is a large crop. But high quality always counts.

SMUT In Wheat Can Be Prevented

by dusting 60 lbs. seed wheat with 2 ounces of our pure

Copper Carbonate

specially prepared as wheat fungicide. Much more effective than formaldehyde. Easy to apply. Saves seed. Write for particulars.

Watch Teeth Whiten

See new beauty come
Make this free test

Millions of dainty people now brush their teeth in a new way.

Look about you. Note the prettier teeth you see. Then ask us for this ten-day test. Learn how people get them.

By combating film

You feel on your teeth a viscous film. Much of it resists the tooth brush, clings and stays.

Film soon becomes discolored. Then it forms dingy coats, and the teeth lose their luster.

Film also holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay. It breeds millions of germs, and they, with tartar, are the chief cause of pyorrhea. Thus film does damage which very few escape.

Must be fought

Film must be fought. Film-coated teeth are not pretty. Nor are they clean.

Dental science, after long research, has found two effective film combatants. One acts to disintegrate the film at all stages of formation. The other removes it without harmful scouring.

A new-type tooth paste has been created to apply these methods daily. The name is Pepsodent. Now careful people of some 50 nations use that tooth paste daily. And the prettier teeth you see everywhere now show you one of the results.

No harmful grit

Pepsodent also multiplies the alkalinity of the saliva. It multiplies the starch digestant in saliva. Those are Nature's methods for fighting acids

PAT. OFF. Pepsodent REG. U.S.

The New-Day Dentifrice

A scientific tooth paste based on modern research, now advised by leading dentists the world over.

and starch deposits on the teeth. Pepsodent, with every use, gives them manifold effect.

Thus Pepsodent brings the desired results without using harmful grit.

Learn what they mean to you. Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

You will be amazed and delighted. You will know what clean teeth really mean. Cut out coupon now.

Protect the Enamel

Pepsodent disintegrates the film, then removes it with an agent far softer than enamel. Never use a film combatant which contains harsh grit.

When Driving in a Large City, Look Out

By L. J. SMITH, State College of Washington

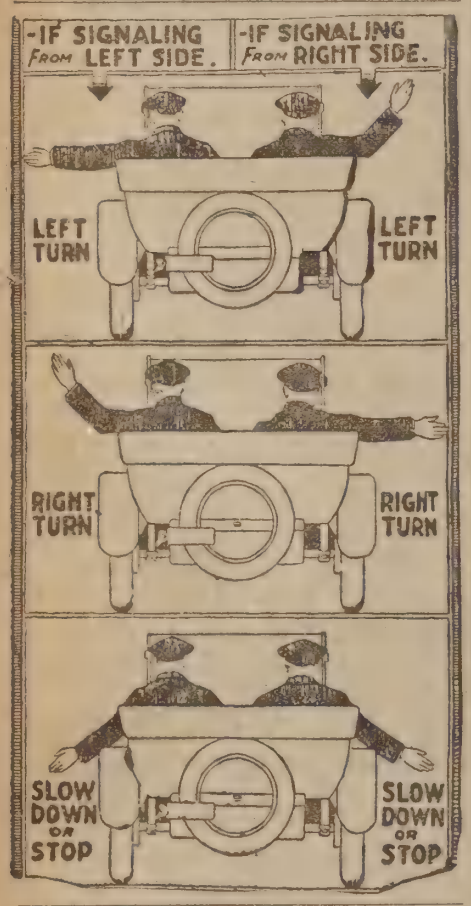
Those of us who live and drive our cars in the freedom of the open country and smaller towns often feel embarrassed and hampered by the strict traffic regulations of the teeming streets of the larger cities, and at first thought are often inclined to resent the many city laws governing the use of the streets.

Without these rules, however, it would be impossible to conduct the business of our large cities at all. We must also remember that most of the regulations are for our own safety and to assist us in passing through congested districts as rapidly as possible.

The traffic regulations of most cities are, in their fundamental particulars, fairly uniform. The restrictions increase with the congested areas until the stranger breathes a sigh of relief if he gets through a day in the city without getting into trouble with the police.

Last year, while driving in Spokane, I passed an office building, and recalled that I wanted to visit an office in it, and stopped hurriedly and went in. Upon my quick return, I found a tag on my wheel inviting me to visit the police station. I went over at once, which is the best thing to do, and the sergeant at the desk was inclined to be cross; but when he found that I was from out of town and that it was my "first offense," he let me off with a copy of the city traffic regulations, and this remark: "You people from the country cause us a lot of trouble."

Parking cars presents no small difficulties in the cities. In Los Angeles it has come to such a pass that people are willing to pay 35 to 50 cents a day to park their cars in a convenient vacant lot. While in that city last month the writer, with some

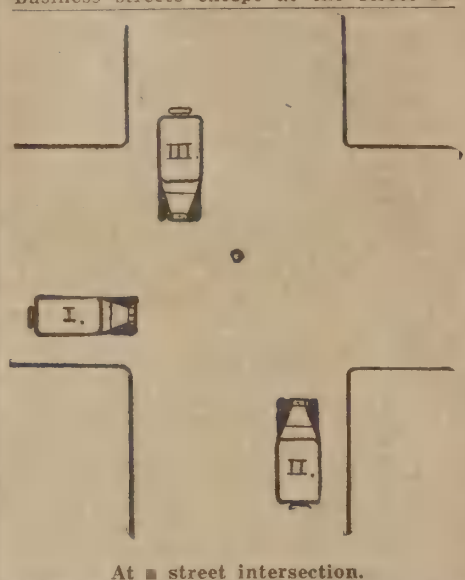


difficulty, found what appeared to be a proper place to leave his car, but to be doubly sure, asked an officer who happened along. "No," he said, "you can't park there, nor those two cars behind you," and he went over and "tagged" the other cars. We three had failed to see a small green sign partly hidden by the branches of an adjacent tree which prohibited parking between the sign and the corner.

While the time limit for parking runs from two hours to one-half an hour, there are often ways, known to the resident, of being able to extend the time. For example, having stopped in front of a small store, I asked the merchant how long one could park in that block. "Two hours," he answered, "but today you can stay as long as you like." "How's that?" was my natural query. "The checking officer makes this street every other day," said the observant salesman. "How will you manage tomorrow?" I asked, getting more interested. Here was inside information from one wise in the ways of his city. "Well, tomorrow I have to watch. When the officer comes along he makes a chalk mark on the front wheel up under the fender and makes a note of the time. Then I know I have to move within two hours."

No one should enter a large city without knowing the three driver's signals—the left turn, the right turn, and the stop signal. The accompanying illustration, which is from the Seattle traffic book of regulations, shows these standard signals which are used in all larger cities and towns. Many who know these signals fail to use them soon enough. The signal should be given at least 25 feet before the turn or stop. Too often the driver sticks out his or her hand quickly and as quickly draws it back. The arm signal should be continued until the movement is well executed.

No vehicle is allowed to make a turn in business streets except at the street in-



At a street intersection.

tersections. In many cities only the right turn is permitted at certain extremely busy corners during business hours, and in extreme cases, neither right nor left turn is allowed. A sign at the right near the corner gives the driver warning of such regulations. A right turn is usually not allowed unless the traffic officer is allowing that "line of traffic" to pass his corner. If a right turn is contemplated, the driver should work over nearer the curb and make the turn near the corner, watching out for pedestrians not facing the car.

The question as to who has the right of way at the corners perplexes some. Usually street cars have the right of way in any case. If you and another car are approaching an intersection simultaneously, the car on the right has the right of way. In the illustration, car No. 2 has the right of way over No. 1, but No. 1 has the right of way over No. 3.

Care must be exercised in backing away from the curb. The driver backing out must do so very slowly, for those coming on from behind have no warning of his intentions.

If you desire to drive slowly, keep well to the right.

Don't park near fire hydrants (15 to 20 feet), or near corners (usually 20 feet), or

Cattle Ranch To College

By Russell Doubleday Copyright by Doubleday & McClure Co

CHAPTER X.—Continued.

Most of the spectators followed the victor, but some remained behind, not to sympathize and condole, but to jeer at John's defeat and laugh at his discomfiture. It was gall and bitterness to the boy, and he was glad to get away out of earshot. Ben helped him put on his clothes and led him down to the creek to bathe his bruised face.

"What's the matter with your hand?" Ben said suddenly, as he noticed the blood trickling over the knuckles of his brother's right hand.

"He chewed it," John answered.

"What! bit you!" Ben exclaimed.

"My arm was around his neck and he grabbed my thumb in his mouth. He wouldn't have got me so easy but for that."

For a time neither boy said a word. How a man could do such "dirty work," as Ben said, was more than he could understand.

On the way back to the house several fellows stopped to call at John as he went by, for the news had spread. He realized that it would take a long time to live down this disgrace. His heart was sore; it seemed as if this was the culmination of all his hardships; he felt as if his life had been all work and no play, that his efforts to do his duty had not been appreciated, that though other boys might enjoy themselves much of the time (and he had seen them in this very camp) he must work, work, work; he felt, in short, very much abused and at swords' points with everybody—his brother excepted. One more blow of bad luck, he thought, would "cap the climax" and would result in he knew not what desperation.

Before the boys had reached the house the news of his defeat had been made known there, and Mr. Worth, thinking that John had become more or less a bully, determined that the lesson he had received should be a lasting one.

"Hello, John!" he said jovially, as the two boys came slowly in, "you met your match today, I hear. Whipped you well, didn't he?"

John hung his head and tried to hide the tears that would rush out over his swollen cheeks.

"Hold up here, let me see your face," said the father roughly. "Well, he did give it to you: eyes blacked, face scratched, mouth swollen—you're a sight. You'll be more careful next time, I guess," he added.

John turned on his heel and left the room.

"Ben," he said, on meeting his brother outside, "I'm going away."

"Going away?" Ben repeated in wonder. "Where are you going?"

"I don't know; I don't care. I'm not going to show my face in camp again; even father at home laughs and jeers at me. I'm going to leave tonight."

CHAPTER XI.

A Trying Journey.

"I'm glad I'm going, Ben, but I'm sorry to leave you; you'll go back and tell them I've gone—and be good to Baldy, won't you? I'll write to you when I get to Helena."

It was long past midnight, and Ben was starting his brother on his journey to the great city that neither had seen. It was his present objective point; how far beyond he would go he did not dream.

"How much money have you?" inquired Ben anxiously.

"Nearly ten dollars, with your three. That'll keep me going till I get a job."

"But say, John, wait a few days and we can sell a horse or a saddle." Ben hung on to his brother's arm and tried to pull him back; his small, freckled face was full of entreaty and trouble. "Regan will buy the 3-year-old after pay day. You'd better wait."

"Oh, I've thought of all that," said John. "I could ride the colt off, for that matter, but I'm not going to take away a thing—except enough money to last till I get work."

"Don't forget to write, John, will you? They'll blame me at home for not telling about this, so don't make it too hard for me." Ben's voice was not very steady, and the note of appeal in it affected John greatly. "Tell me if work is plenty, for I'm going myself before long—I'll be so lonesome."

They shook hands without a word, each turning his face away, ashamed of the tears that would come despite their efforts to suppress them.

"Goodby."

"Goodby."

Ben turned down the trail toward home and John continued on in the opposite direction. Day was just breaking; the stars still shone above, while the sun's mellow light brightened the east. Neither boy had any eyes for the beauties of the sunrise; it was hard for them to part and neither could think of anything else. They had been not only brothers, but "pardners." Never before had they been separated. Rocked in the same shoe-box cradle, playing with the same rude toys, sharing the same pleasures and the same fears, braving the same dangers, and dividing bread or blanket when need be, they had grown up so closely that they did not realize the bond till it was about to be broken.

Brothers still they would be, but "pardners" never again.

When out of sight, each, unknown to the other, dropped to the earth and cried bitterly. Ben's share of grief was the heavier. No change of scene for him; no excitement of anticipated adventure; no new sights, experiences, or friends; the world was not spread out before him to enter at will and to roam over; none of the delights of freedom were to fall to his lot. Only duty, weary, commonplace, devoid of companionship and boyish sympathy. He went sorrowfully home.

John, his cry over, felt better. The sun was now coming out in his full strength, the birds poured forth melody, the cool morning was refreshing. In spite of the parting wrench he could not help feeling exhilarated, and the thought that, no matter what might happen, he was free, made him almost joyous. He sprang up, dashed the tears from his eyes, and started along the trail, shouting aloud: "I don't care." He repeated it again and again, trying to convince himself that he really didn't care.

It was too late to turn back now, even if he wanted to; he knew his father's character, and he did not fear pursuit. He wished now that he had walked manfully up to him and told him. "But he laughed at me," he said aloud, arguing with himself. "I do not care," this between his teeth: and then he marched on, his head held high, defiantly.

It was 15 miles to the railroad, John knew; but how much further to Helena he had no idea — he had not thought of it before.

The trail he was following led him across the range down to the main road on Savage creek. The mountain walk was fine, the air cool and bracing, the sounds of bird and insect grateful. Before long he reached the creek and drank deeply of its clear waters, washing his bruised face and hands. This he did gingerly, for his wounds were still fresh and his bitten thumb, which no one at home had seen, pained him exceedingly. The danger from a wound by the human tooth is very great, but John realized nothing but the pain.

The slices of bread and meat which Ben had wrapped in an old newspaper for him were eaten with relish. Though he was somewhat tired, and his body still stiff from the hard usage of the day before, he could not bear to sit still and think. At intervals the tears welled up in spite of his efforts to keep them back. "I won't think," he said, and repeated his assertion, "I don't care," to keep his courage up.

A piece of bread still in his hand, munching as he walked, he struck off down the trail at a strong pace, resolved to reach the railroad and get to Helena quick.

After several miles of sharp walking along the Savage creek road he heard the heavy chug-chug and rattle of freight wagons ahead of him. He soon overtook them and hailed the driver.

"Hello, kid; where'd you come from?" called that worthy cheerily, from his perch on the near wheel mule, his leg thrown carelessly over the horn of the saddle, the picture of contentment.

"Up the road a way," answered John evasively. "How far is it to the railroad?"

"What d'ye want of the railroad?" asked the "mule skinner" sharply, bringing his foot down and sitting erect.

John knew that these freighters did not look with favor on the railroads or with any one or thing connected with them, for they declared bitterly that the railroads robbed them of their business.

"It's only a couple of miles to the railroad," the man continued. "But it's 18 miles to a station. A railroad's no good without a station; climb in this and take a ride."

John climbed up as the wagon moved slowly along. He was tired, and the cheerful "mule skinner" was a desirable companion, for the time at least. The man lifted his leg again and turned in his saddle, the better to talk to his passenger.

"I was comin' down the road last month," he began, "and the pesky train half a mile away scared my mules nigh out of their wits. Mules don't like trains; don't blame them, neither. It's thrown the critters out of work and is forcin' me clear out o' business—haw there, you Mag!" he interrupted himself to shout, as the dainty-footed mule swerved to avoid a mud-hole. "Notice that mule?" queried the teamster.

John nodded an assent.

"She's one of the finest near leaders in the country; watch her gee." A long jerk line ran from the driver's saddle to the bit of the near leader of the eight-mule team. He jerked the line gently and the leader swung promptly to the right. He pulled steadily and the intelligent animal swung back into the road.

"You met your match today, I hear."

"See that? Only a touch and she's awake. That mule's a dandy; been offered two hundred for her—she's little, too." John only nodded, but the teamster, glad enough to have a listener, rattled on about his grievances, the all-absorbing railroads and the men who ran them and spoiled his business.

The wagon did not travel fast enough for the impatient passenger, so before long he scrambled down again.

"Must you go?" inquired the teamster. "Well, you leave the wagon road at the third bridge ahead, and if you cut across to your left you'll come to the railroad." The boy thanked him and started off on a brisk walk down the road. "But it's 18 miles to a station, and a railroad's no good without a station," shouted the mule skinner, determined to have one more rap at the iron trail.

"So long," yelled the boy in return, and continued at a brisk pace, in his effort to drown gloomy feelings by rapid motion.

At the third bridge he left the road, struck across to the left, and came upon the railroad. It was a disappointment, though he found all that could be expected when a "station is 18 miles away." The shining rails stretched away, before and behind him, till they ran together in the distance. The journey was a weary one the track rough with boulders, the tie hard and unyielding to his heel, and jus too near together to allow of an eas stride. Momentarily the heat of the su increased, and the track seemed to reflec it back more intensely. There was n shade and the heavens were brazen. H stopped at every brook to drink and bath his blistering feet and cool his achin hand. Though he had eaten nothing sinc early morning he did not feel hunger, ex cept in its weakening effect. On and o he trudged, hour after hour, until swing ing his legs became mechanical and h ceased to feel even weariness. At lengt a cooling rain began to fall, wetting hi thoroughly and arousing him to fain gratitude for the relief it brought.

Just before nightfall an object loome up far down the track; it was the statio at last! The boy struggled on, limpin his mouth open and dry, his bitten han swollen to twice its usual size; and no reaching a water tank near the platform he dropped down by it, cruelly tired.

After a short rest, he raised his hea and looked around. Not another buildin was in sight but the station, and not morsel of food had he eaten since earl morning. "I'll tackle the station peop for something to eat," he said to himsel and, suiting the action to the word, pr sented himself at the door. A woman w there, but in the dusk she took him for tramp, slamming the door in his fa when he asked for food. His only hop now was to catch a train and reach son settlement. The station agent dashed h last hope by saying that the last trai for the night had gone; but noticing th boy's forlorn appearance he spoke to hi kindly, so John plucked up courage say: "Where can I buy something eat?" The man responded by bringi him food, and, while the boy was grat fully eating, told him that he would glad to let him rest on the waiting roo floor during the night, but since the rul of the road did not permit of this t best shelter he could offer was a vaca building across the track. John accept the suggestion gladly, for he was tired every fiber. "Good night; that supp was bully, thank you," he said to t agent.

"Looks like rain," said the other, fo lowing to the door. "Hello, there's a fi in that house already; must be some oth fellows there for the night. You'll ha company, but look out that they do rob you. Good night."

As John approached the outhouse saw through the half-open door a blazi fire and a half dozen tough-looking m seated around it, warming themselves a drying their tattered clothes.

A hesitating knock on the door frar received a chorus of "Come ins." The o door swung back on its leather hing with a jolt and John entered.

The ruddy firelight gleamed on the fa of a slovenly fellow who sat beyond t fire. It was a well-fed face, rounded, a not ill-looking in contour, but grimy a littered with little tufts of whisker; a gr flannel shirt, red neckerchief and greas collared tan canvas coat clothed the upp part of his body, and John cast his e about on four other specimens of the sa type, seated on ties about the blaze.

"Where from, kid?" asked one, as turned to observe the newcomer. All th saw was a weary, hesitating boy. "Co up to the fire," they said cordially, a moved to make room for him. "Whi way you goin'?"

"I'm going west," he answered, glance taking in the whole crowd.

"We're goin' west, too. Did you come on that last freight?" asked one.

John shook his head.

"No? Well, we all got put off here little while ago; the con and other brak got onto us and fired us. We wanted sleep, anyhow—been ridin' two da straight." (John wondered for a ti what "con" and "brakies" meant, but fin ly concluded that the words might translated into conductor and brakema

"I walked in," said the boy innocent

A look of pity showed plainly on e hobo's face as he echoed "Walked?" Th any one would walk, with a railroad ne was beyond the comprehension of th tramps, for tramps they were—the regu tion kind.

"You're green on the road, kid," s one, whose name was Jimmy, as John s learned. "You'll soon get sick of cou ing ties," he continued, gazing curiou at the boy, as did they all. "Why, h I've traveled this country from side to s and from top to bottom in the last years and I've yet to walk a step—exc off one side to get feed," he added in planation.

"But I hadn't money to ride," said Jo innocently.

"Money? Ho! ho! Why I haven't s the color of coin this summer. What d want of money? Beat 'em; we'll sh you." He spoke with a sort of professi al pride, and the expression was reflec on the faces of the other men.

John's bruised countenance had b noticed, but as he had evidently b whipped in some fistic argument it w etiquette not to question too openly, to approach the matter indirectly. degrees they learned that he had trouble and left home.

"I left home just at his age, boys," s

Big Larry, an American-born Irishman.

"That so?" said one encouragingly.

"Yep, 'twas like this. Back in the east——" And Larry launched forth on a recital of the circumstances which led him to "take to the road" and follow it ever since.

Two others had similar experiences. Jimmy, however, frankly admitted that he took to it from choice. "When I was 21," he began, "I was engaged to be married, and expected to settle down and be a family man." This statement seemed to amuse the hoboes, for they laughed uproariously. "My mother—she's a widow," Jimmy continued unmoved, "gave me $500 to set me up in the butcher business in our town in Ohio. Well, things went on fine till pretty near the happy day, when I began to see that the girl was getting offish and I told her so. She got hot and said something about another chap that I didn't like, and I quit her—quit her cold." A grunt of approval went round the circle.

"It cut me up some and I got to drinkin' a little, and soon I was drinkin' harder. The five hundred my mother gave me and the five hundred I had already saved up went in no time, for before long I was drinkin' like a fish all round the town. My mother wanted me to swear off, and said she'd give me another start, but I knew it wasn't no use and told her so and pulled out of the town on a freight train. Been at it ever since."

"Pretty tough on your mother," said Larry.

"You must 'a' had about a thousand, Jimmy," ventured a less t'oughtful one.

"Yes, it was pretty tough on the old lady, but I was no good for that place, and she'd spent enough money on me. Had about a thousand, an' it's more than I've had since all put together, an' more than I'll ever see again,' 'the tramp added, musingly. "I'll never leave the road now; I like it. A man doesn't have to worry about anything, he's better without money an' he gets enough to eat, always seein' new places, and findin' new friends."

Most of his speech was made for John's benefit, and he listened with interest.

"Now, boys, not one of us had seen the other 48 hours ago, and yet here we are round our fire talkin' sociable, spinnin' yarns and hearin' 'em told; and I'll bet we're happier than six millionaries in New York city."

"Yes, we are," they said emphatically, in chorus. John thought much and said nothing.

"People s'pose we don't have to work," said Shorty, another of the group, "but I'd like to see them dudes work from Chicago to 'Frisco on a freight train. Why, them fellers don't know a brake beam from drawhead, to say nothin' of ridin' rods, breakin' seals on box cars, foolin' brakies, and a hundred other of the little fine points of our trade."

"An' then," chimed in another, "if we don't work much, we don't get much, so what's anybody else got to kick about, s'long we're satisfied?"

Everybody agreed, and the group dropped into a cheerful silence.

John had listened, it must be confessed, rather admiringly; the freedom and apparent ease of the life fascinated him, and he had half a mind to become a hobo. He did not realize the degradation that went with it, the dishonest acts that were necessary to secure food without money, the hardship it entailed, and the constant uncertainty of it all.

The thing that bothered him was the food supply, and he finally ventured the question: "Where will you get your breakfast in the morning?"

"Breakfast? Well, we may not get it till dinner time, but we'll get it. There are a few houses at a gravel pit half a mile ahead, where we got supper last night, but they're hard to work and we'll have to get Helena before we chew," explained Larry cheerfully. "But you're all right with that hand of yours," broke in Jimmy. "You can work the sore-hand racket all right; just show that to a motherly-looking woman and she'll fill you up quick."

"I worked the sore-hand dodge myself for a beautiful hand-out last night down at the gravel pit," said Shorty.

John began to realize that it was a pretty precarious and mean way of living, to depend on people's generosity for sustenance.

As the evening passed the talk subsided, and when the suggestion to sleep was given there was not a dissenting voice—from John least of all. All lay down in a row, their feet toward the fire. The coats had been taken off and spread over the row so that each made a covering of two thicknesses.

Toward morning the boy was awakened by a hand that fumbled about his pocket—the one which contained his money. Fortunately he had taken the precaution before going to sleep to put his own hand in and grasp the money. His hand was being slowly withdrawn when he quickly turned over, and then, fearing to sleep again, he rose and sat down by the wall, his head against the rough boards.

At daybreak a freight train came rumbling into the station and stopped. In an instant the tramps were up, and, separating, ran for the train. John was left alone, wondering what to do, but only for a minute, for Jimmy came running back, and with a hurried "I'll help you," rushed him over to a pile of ties. When the trainmen had gone into the station Jimmy took the boy over to a car and pointing under it said: "Never rode a brake beam? Well, I'll show you. See that brake beam?" He pointed out the bar that held the brake shoes and crossed from wheel to wheel under the car. "And those rods running lengthwise from it? Well, you sit on the bar and hold on to the rods. See, like this," and he slipped under the car and sat down on the wooden bar, his legs dangling and his hands grasping the rods. "I see," said John, and in a second had taken Jimmy's place.

"Good, here's my board; I'll get along with my coat wrapped around if I need to," and he handed a board a foot long and eight inches wide, having a slot cut in one end. This John fitted over the rod, and it gave him a safer and more comfortable seat.

"Here they come; keep dark." Jimmy disappeared, and the conductor's lantern came swinging down toward the engine; his feet crunched the gravel as he passed, and John's heart was in his mouth.

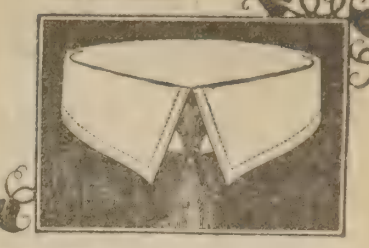
"Pull out at once," was the order, and the engine backed viciously for a start, nearly jerking John from his perch.

"Say, kid, I forgot to tell you" it was Jim alongside again—"look out and don't get pinched in the air-brake rods; they're bad. When the train's stopping, keep low and you'll be all right. I'm on the next car behind."

The train was now gathering headway, and John wondered how Jimmy would reach the wheel trucks between the now fast revolving wheels. A peculiar sensation came over the boy—half fear, half exhilaration. The whirring wheels clacked and thumped the rail joints, the ties flew underneath dizzily, the dust rose like a fog, and the wind of the train rattled the small stones of the roadbed together; the heavy car swayed above him dangerously near, and John, half choked and wholly terrified, wondered if he would come out of this irresistible whirlwind of a thing alive. All he could do was to grip the rods at his head and hang on.

(To be continued.)

"SPENCER"



This is the Fall type of collar that is so very comfortable and that is correct in style and appearance for any occasion.

A Good Time to Buy Tires

The whole story of Goodyear value is plainly shown in the above simple chart.

Over the last ten years, while prices of all commodities were soaring, Goodyear Tire prices have been kept consistently low.

Today, Goodyear prices are 37% below those of 1920, and 30% below those even of 1914.

This is remarkable in itself, but more remarkable is the fact that year after year Goodyear Tires have been steadily improved—in design, materials and construction.

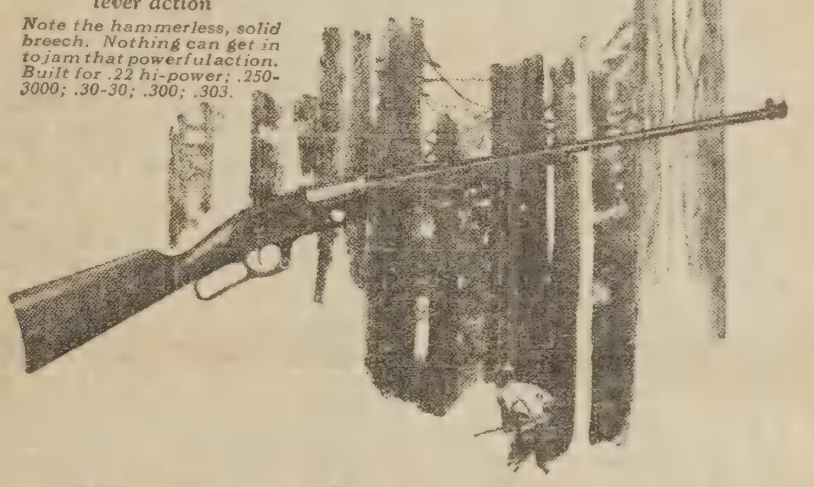
Now is a good time to buy Goodyear Tires. Prices are low, and the tires are the finest and most serviceable Goodyear has ever built.

Made in all sizes for Passenger Cars and Trucks

GOODYEAR

Savage Model 1899 lever action

Note the hammerless, solid breech. Nothing can get in to jam that powerful action. Built for .22 hi-power; .250-3000; .30-30; .300; .303.



That smooth powerful action never fails

When you reach for your Savage, you're *ready*. For your Savage is always ready—that smooth, powerful action never fails.

A Savage is light, too—not an extra ounce anywhere. But so perfect is the balance that a Savage holds steady as a rock.

And your soft-points are *never* dented. You can cram the magazine full without fear of battering a nose. For each cartridge is gripped at the base—recoil can't reach them.

A Savage for every kind of American game

.22 hi-power. The amazing Imp. Ideal for woodchuck, fox and wolf. Accurate at long and unknown ranges.

.30-30. The old reliable—choice of seasoned hunters for deer and medium size game at moderate ranges.

.303. A hard, knockdown hitter—has dropped deer, bear, and caribou for 20 years.

.250-3000. An all-around rifle. Terrific speed and accuracy make it *the* gun for mountain sheep, goats, and deer at extreme ranges.

.300. Delivers a crashing blow. Powerful enough for any American game.

Ask at your dealer's or write direct for our interesting catalog.

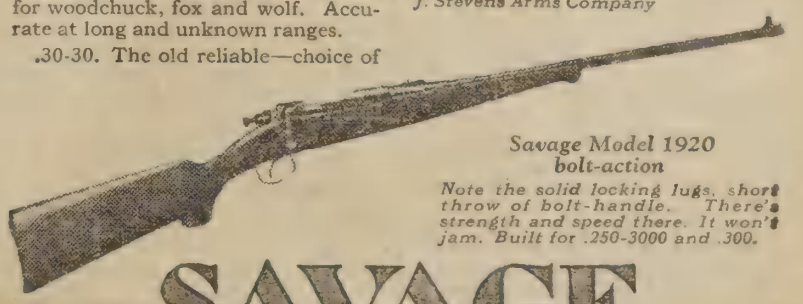
Owners and Operators of the J. Stevens Arms Company



Savage Model 1920 bolt-action

Note the solid locking lugs, short throw of bolt-handle. There's strength and speed there. It won't jam. Built for .250-3000 and .300.

SAVAGE

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

SHINE JUST WHERE YOU ARE.

Don't waste your time in longing
For bright, impossible things;
Don't sit supinely yearning
For the swiftness of angels' wings.

Don't yearn to be a rushlight
Because you are not a star;
But brighten some bit of darkness
By shining just where you are.

There is need of the tiniest candle
As well as the garish sun;
The humblest deed is ennobled
When it is worthily done.

You may never be called to brighten
The darkened regions afar;
So fill, for the day, your mission.
By shining just where you are.

Just where you are, my brother,
Just where God bids you stand.
Though down in the deepest shadow,
Instead of the sunlit land.

You may carry a brightness with you
That no gloom or darkness can mar.
For the light of a Christlike spirit
Will be shining wherever you are.
—Author unknown.

Experience Letters

Dear Mrs. Barland: I get a great deal of help from this paper and wouldn't be without it for a great deal. I enjoy the letters of the girls and boys. I had a pretty hard life as a girl, but I never attended dances or skating rinks and my mother's advice to me was this: "A girl's good name is all she has; keep it at any sacrifice."

I would like to ask if any of the readers know of a family or families by the name of Kidder, or of a place called "Kidder Ridge." I wish to find lost relatives who were last heard of 40 years ago and who came to Oregon and settled there.

MRS. CHARLEY COUSINS.
618 North Jersey Street, Portland, Ore.

My Dear Mrs. Barland: For some time I have thought of writing to the Circle to express my appreciation of the many good and helpful letters that I find there. When I read the letter from "A Grandmother," I felt I must write and say that she expressed my sentiments exactly.

I am thankful that I have always considered that my boys were just as accountable to God and man as my daughter is, and have always taught them to believe that they are. I feel as "Grandmother" does, that if all parents would teach their sons this fundamental principle very much suffering would be saved.

I was much interested in the article on testing linens and think it good, but believe it would be much better if there were laws so strict that no dealer would dare to sell cotton for linen.

I have received so many helpful suggestions that I will try to return the favor by sending in a few.

When washing windows use no soap, but try one-half a cup of vinegar in the water and note how clear the glass will be. It is also much easier to dry the panes.

When preparing peaches for canning drop them into a pail of cold water as fast as you peel them and they will not turn dark. When canning sausage, turn the jars bottom side up and the fat will settle on top and will keep the meat better.

When picking berries in the hot sun, fold a damp cloth and place it on top of your head and note the cool result.

MRS. N. S.

Family Circle Girls

Dear Mrs. Barland: I like to read the Family Circle, it is so interesting, but some of the letters make me just plain mad. E. A. B. wants to have fun running around with wild girls, but when he gets married he wants a nice, quiet girl. Mr. E. A. B., you ought to have a hard time finding a good girl for a wife if you run wild while you are single, because nice girls want good men when they marry.

I am a country girl of 17 and I believe that if one knows where he is going and behaves when he gets there, that dances are all right. One can make harm out of any pleasure if he has an evil mind.

SUBSCRIBER.

Dear Mrs. Barland: I think smoking is an expensive, filthy habit for either sex. Men and boys think women should be good and uphold the morals of our race, but do they do their part in the matter? Have they no responsibilities in keeping girls good?

Why should the girls be expected to do all the fighting and resisting? The way the boys write it seems that they think they have a perfect right to tempt and even urge and coax the girls to do what the boys consider so unladylike that if the girls yield to the coaxing, they are thereby unfitted to make good wives for them. This seems very inconsistent.

My mother is away from home and I am getting lots of experience in housework and cooking. I will be a junior in high school next year and when I am through I am going to college. I shall have to work myself through.

Some one asked what recreation others take who do not dance. I go to theaters, horse races, and I ride horseback, play basketball and hike. I think it is much more fun to ride horseback, hike, swim or play ball with a boy than it is to sit on the davenport of an evening and "spoon." I believe the boys enjoy themselves more with a girl as a good pal than with a "musher."

I enjoy the letters of the Circle very much.

A. B. R.

My Dear Mrs. Barland: May I join your interesting Circle? I am a young business woman of 20 and live in the suburbs of the northwest's metropolis—Seattle. This has enabled me to enjoy country life and city privileges, though I did walk two miles to school until recent years.

Of late the Circle has become very interesting, for the topics discussed are of vital importance to all of us. "A Grandmother" has my admiration—why should we girls be judged by a double standard? So many young men in Seattle are so demanding—too many seem to think they own us because we go to shows and dances with them—and, after all few of us are dependent upon them for good times in this age of the independent girl.

Young men will usually treat a girl as she expects to be treated, though it takes the exception to prove the rule, for I had to walk home three miles in a drizzling rain one evening, and I had known the offender since childhood, at that.

I believe a young man is very selfish to expect all a girl's time unless he is engaged to her, and, if he really wants all of it and loves her he should make it plain by asking her for it—with him always.

Let's be real women, girls, and be above the vices all too common in our communities.

L. H.

Family Circle Boys

Dear Mrs. Barland: Dad has taken THE FARMER for several years and I have always read the Family Circle. This is my first attempt at a letter, but I must "pop off." Lucille's letter in a recent issue rather gets under my skin for several reasons.

She says it is more unsual to meet a decent boy than for a boy to meet a decent girl. Perhaps this is true, but, if so, who has caused this state of things? It is the girls.

Speaking from my own experience and judging from what other boys have told me (and don't include the members of the bald-headed row in this), boys hesitate to make the second forward or improper move when the first one is met with discouragement. But when forwardness is encouraged, who can blame the boys?

Don't think that I mean that boys are always encouraged for that isn't so, but when no move to resent advances, well, is that encouragement or not?

Brown-eyed Bell says that the boys demand this sort of free conduct from the girls, but do they? I say they do not, but they don't hesitate to take what opportunity offers. I, for one, like to see a girl stick up for herself and one who doesn't take in petting parties.

I am no stay at home and I know that every time I "step" a girl I rather hope she will prove herself decent. Do the girls want the boys to beg them on bended knee to foreswear these things? It is natural for the boy to take where no resistance is put up. And then "Bell" winds up in a "let George do it" manner, in which I could retaliate; but there's the catch. Let the men and boys raise their morals and vice versa. The only way the morals will ever be raised is for both to stop whining and both get down to the business of raising them.

Perhaps I am prejudiced, but, if so, Bell is also.

Washington JUST ANOTHER BOY.

Dear Mrs. Barland: I have been reading the experience letters for some time and have enjoyed some letters and some I won't give my opinion on.

I have no more sympathy for an extremist than a federal officer has for a bootlegger, so I won't preach or force my opinion on any one.

I am a young man, as some would say. I have danced every time any one would dance with me and I believe there is no harm in going to properly supervised dances. But right here I want to say to you fathers and mothers who have young daughters, do not allow your girls to enter a dance hall till they have attained the age of responsibility and then have them properly chaperoned, for as sure as you do you will weep in sorrow for it.

If your young people must dance it is your duty, and should be a privilege, to provide a decent place, preferably a home, for them to meet and dance.

Dancing is said to make children graceful and easy in manners and my mother has danced from childhood and she says it never harmed her a bit. The danger comes from improper associates.

As to the smoking and drinking: These habits are the result often of the "gang" influence and are supposed (by the indulgers) to denote advance and superior mentality and experience. I couldn't be hired to acquire the tobacco habit, though I have a natural liking for it.

I believe the so-called "petting parties" are the outgrowth of "puppy love," but on this subject I'll admit I can not speak from experience, for I haven't yet fallen in love, but I form my conclusions from my observations.

I may be conceited, but as yet my ideal girl has not appeared. They say the older they are the harder they fall, so perhaps my time is coming.

I go to church occasionally, am president of one of the young people's organizations. I was president of my class last year. I take active, if not leading, part in all school activities, and work in athletics. I act in all the plays and occasionally keep company with a girl and I don't feel a bit wicked.

Lonesome Peggy wonders if boys have problems as well as girls. I think I speak for most of the sterner sex when I say that they do, but I don't believe the average boy likes to speak of them.

Keep to your resolution, Peggy; you have the right idea and I hope you master yourself, for it will have to be done some time.

I believe I understand your position fully and this world would be far better off right now if more young folk would follow suit.

My ideal of a man is one well balanced, who is neither tough nor hypocritically religious, but I would rather write personally on this matter, however.

Am I a hypocrite, a fool or just hard-shelled? I would like to hear from the Circle readers and especially Mrs. Barland.

Protect Young Teeth from Grit

THE teeth of every farm girl and boy deserve a fair show. Modern Dental science has shown that proper care of children's teeth builds eager active minds and sturdy bodies.*

Here Are Precautions Thoughtful Mothers Should Take:

1—Choose a safe dentifrice—one that contains no grit.

2—Avoid preparations containing harsh chemicals and strong drugs.

3—Teach children to brush their teeth after meals and at bedtime.

Colgate's Ribbon Dental Cream is safe, for it contains no grit or harmful ingredients. Because of its delicious taste, children use it regularly and willingly.

A tube for each member of the family is a sound investment in sound teeth.

COLGATE & CO.
Established 1806

Large tube—25c.

*Every county nurse and home demonstration agent will endorse this statement. Actual tests conducted in schools at Bridgeport, Conn., show that proper care of teeth reduced backwardness by 50%.

Truth in Advertising Implies Honesty in Manufacture

The Flower Garden

By RUTH GIPSON PLOWHEAD.

In my last article I wrote of starting perennials from seeds. If you wish to experiment a little, there is a great satisfaction in planting a package of mixed perennial seeds. Incidentally, one can get enough plants of different varieties to make a long row. You may not only discover new flowers, but some which are particularly adapted to your soil and locality. In my own garden there are at least a half dozen perennials which first became known to me in this manner.

Fall Planting of Perennials.

While spring is the logical time for transplanting and dividing perennials, there are a few flowers which are dormant in the late summer and fall, and seem better for being transplanted then, unless the spring planting can be done very early. Among these are perennial poppies, iris, peonies and lily of the valley.

Oriental Poppies.

There are few flowers which make such a vivid show of color as a large clump of oriental poppies. One bush a few years old will bear dozens of poppies as large as a saucer, and their flaming color can be seen a long distance. They are very hard to transplant on account of the long tap root. After blooming the plant dies down and becomes dormant in August, and this is the time to transplant, divide or order your new plants. They are most easily raised from seeds, but are several years in making large blooming plants.

Iris.

Each year the iris seems to be growing in popularity, and many new and lovely varieties have been added to the already large number of kinds. One great improvement is the longer season of bloom. That was one trouble with many varieties of iris; they bloomed several days and were gone until another year. Now by careful selection as to early and late varieties and location of planting, one can have iris in bloom a number of weeks. Iris is best planted in masses, such as clumps, rows edging walks or driveways, or near the border of a perennial bed. The plants are always more or less ornamental, as they do not die down and become brown and ragged as do many perennials. Another way of prolonging the season of bloom if you have but one or two varieties is by choosing different localities in your garden. Suppose you have one large clump which you wish to divide. Try placing some plants in a sheltered, sunny corner, others in the open garden, and a third in a cool, shady northern spot; your sunny clump will have bloomed and gone before the others have dreamed of unfolding.

One of my favorite varieties of iris is celeste, almost a sky blue, which is a mid-season bloomer, and has a very long season of bloom, sending up stalk after stalk. Later varieties of large flowered iris which are lovely are Palladia Dalmatia, Mary Garden, Parisana Speckled Aurea.

The Peony.

The peony is one of the most showy and largest blooming plants which we have for the perennial garden. September and October are good months in which to transplant and divide them. Peonies, however, should not be divided often. They seem to resent disturbance and are at their best a number of years after planting. The peony, like many other flowers, has undergone many changes. At a recent flower show in Boise the wonderful decorative possibilities of the peony were shown. The single flowered varieties, with centers filled with yellow stamens, made one think of a water lily, and were much admired. There are varieties as sweet scented as a rose, and the huge double peonies which would fill a five-pound pail. If you buy peony plants this fall do not be disappointed if they fail to bloom for a year or two, or if the blooms are not all that the catalog promised as to shape and color. Before a peony is established it often either fails to bloom or has blossoms which are not in true form and color. One large double cream variety in our yard bloomed with small single flowers the first two years.

When Driving in a City

(Continued from page eighteen.)

between a street car stop and the curb.

When overtaking and passing street cars the city rules vary. Some cities require the auto come to a full stop and wait until the street car has loaded or unloaded and has started again. In other cases, where the city has painted a clearly defined space for passengers to use when boarding or leaving a street car, it is sometimes ruled that the driver may proceed slowly between this space and the curb, but in such a case he should not interfere with the pedestrian's right to pass from the car loading space to the sidewalk. Except for this case, the pedestrian has no right on the street except at the clearly defined crossings at the corners. Don't be a "jay walker" in cities.

The main streets of a busy city are a poor place for a driver who doesn't know where he wants to go. It is well for a stranger to send for a map and become familiar with the main streets before entering large cities. If entering for the first time, the middle of the morning or afternoon are the easiest times, as traffic is less dense.

Be sure your horn, lights, clutch and brakes are in good condition and you will have little trouble driving in any large city. Remember that the traffic officers are there to assist your progress. Without their aid traffic movement in the rush hours would be nearly impossible.

Mail-o-Grams

By State College Specialists

A. B. Crane, Agricultural Engineering: See that all drainage outlets are free, so when the rains set in they will flow freely.

B. A. Slocum, Apiculture: Units weak or queenless colonies, a queenless with a queenright colony. They will not live through the winter unless they are normal colonies.

E. Belle Alger, Clothing: A wise shopper knows that she has only a certain sum to spend and never spends more.

Don G. Magruder, Dairy: Plan now to lay in a supply of feed for the winter. It is better to carry some over than chance running short.

Leonard Hegnauer, Farm Crops: In sections of low rainfall sow at least enough good rye to insure plenty of feed and moisture.

R. N. Miller, Farm Management: Don't let weeds grow in the orchard unless they are legumes. Grow clover, vetch, alfalfa or some legume instead of pig weeds, mustard, water grass and the like.

M. D. Armstrong, Horticulture: Now is the time to plow up the weevil infested strawberry patches for complete eradication.

C. M. Hubbard, Live Stock: The "farmer's hog" farrows a large litter—select your purebred herd boar from a prolific strain.

George L. Zundel, Plant Pathology: Potato storage houses should be thoroughly cleaned and disinfected by spraying bins and walls with a solution made by dissolving one pound of bluestone in 10 gallons of water or using a pint of formaldehyde in 10 gallons of water.

W. D. Buchanan, Poultry: The culling season will soon be over. Have you gotten ri dof your slacker hens?

Spokane Interstate Fair

(Continued from page Sixteen.)

Hubbard, Corvallis, Ore., shared honors fairly evenly. William Riddell & Sons, Monmouth, Ore., and William Riddell Jr. broke about even in the Lincolns, while in the Cotswolds, Riddell & Sons shared the money with D. J. Kirby, McMinnville, Ore. William Riddell Jr. was the only exhibitor of Romneys. Mr. Fox alone showed Dorsets and E. F. Hubbard made the entire Leicester show. Burlingame & Craig of Walla Walla, Bullard Brothers of California and the University of Idaho showed Rambouillets, with the awards well scattered. In a small fat sheep show the University of Idaho and Mr. Hastings competed, the university being principal winner.

The work of the boys and girls' clubs deserves a special story. Space limitations prevent doing it justice this week. Watch for it in a later issue.

Hay Growers Organize

Hay and grain growers of Skagit county have organized the Puget Sound Hay and Grain Growers' association for the purpose of marketing their produce and buying such seed or machinery as are needed in the production of their crops. The organization of the association is practically complete; only the final arrangements remain, such as submitting the contract and bylaws to the director of agriculture at Olympia. A membership campaign has been planned and the organization will in all probability be in running order in time to handle this year's crops, according to a report.

Cream for Shortening

If there is a wee bit of sour cream on hand use it for shortening the crust when baking pies. A half cup for each pie (no other shortening will be needed) will make a delicious crust.

ANNE G. DEMAREST.

PRUNE CROP SHORT.

It is reported that the world prune crop this year is 100,000,000 pounds short of last year's and 60,000,000 pounds below the actual consumption of last year. At the opening of the season last year there were about 460,000,000 pounds of prunes awaiting the world markets.

To Clean Tarnished Silver

"If your silver is tarnished and you would like to clean it with very little effort, put into a bright, clean aluminum pan one tablespoonful of soda and one of salt," says Mrs. Jane S. McKimmon, state agent in home demonstration work in North Carolina. "Pour on this a quart of boiling water and add your tarnished silver. Let the water cover the silver and it will be only a short while before it emerges bright and shining.

"When the tarnish is removed, wash in hot, soapy water and rub with a soft cloth. Silver is tarnished by the sulphur from gas and from burning coal, or more frequently by certain foods which contain sulphur, and is easily cleaned by this method.

"The aluminum pan method of cleaning does not injure the silver in any way," states Mrs. McKimmon, "and is easier by far than the old way of scrubbing. When the silver is put into the pan it rests on an aluminum base, which is to a certain extent like an electrode and action takes place between the metals and the chemicals used. When paste or powder is used for cleaning there is danger of scratching the silver, but it gives a satiny finish that is very beautiful, and frequently the housewife will use a soft cloth with a bit of paste to produce this effect after she removes the tarnish with the aluminum pan process."

Reforestation

By JULIA M. MARTIN.

Oh, beauteous mountain chalices there stand
And richly filled they wait the lips of need.
Make we not, then, the vandal's course our creed;
Be sanctuary true the wooded land.

Replenish we the bowls of rich content
And fill the cup that served our thirst so well.
Let not the plundered hills our story tell,
Nor loveliness that was be wanton spent.

20 MULE TEAM BORAX

PRESERVING POTS, PANS AND UTENSILS

To preserve absolute cleanliness in your preserving utensils is absolutely necessary for a perfect result—and that can be made doubly sure only by using 20 Mule Team Borax—the antiseptic cleanser. 20 Mule Team Borax dissolves out all forms of dirt and grease without any injury whatsoever to metal or glazed surfaces. It should be used with soap wherever soap is used.

20 Mule Team Borax has more than a hundred important farm uses and it is good for the hands. At *all* grocers and drug stores.

20 Mule Team Borax is in all clean farm kitchens—is it in yours?

NATURES GREATEST CLEANSER

High Points in News of the Week

Great as has been the disastetr which overtook Japan through earthquake, fire and flood two weeks ago, indications are at the present time that both the losses of life and the destruction of property has been overestimated. No definite figures as to either are available up to this writing. Loss of life still is estimated all the way from 100,000 to half a million, but there is reason to hope that final figures will not exceed the lower number. No accurate estimate of property losses can be made. Neither can any worth while estimate be made of the loss of life that will result through exposure and sickness following in the wake of the disaster.

The cities of Tokyo and Yokohama are the center of the devastated area. With the exception of Yokohama which is a leading sea port, the damage industrially is far less than originally reported. Secretary Hoover of the United States department of commerce points ou that industrial Japan is largely outside the devasted area and has been affected but little as far as actual damage is concerned. He says that labor, agriculture and factory organizations are practically intact, except in the two cities mentioned and in the territory immediately surrounding. The financial strength of Japan is fundamentally unimpaired, he says, and his opinion is substantiated by the fact that Japanese securities on the stock exchange following the disaster showed comparatively little depression.

As stated on the cover-page of this issue, the American Red Cross is conducting a campaign for the raising of $5,000,000 in this country for Japanese relief work. The amount is being readily subscribed. The city of New York with a quota of $100,000,000 of the total, oversubscribed to this amount within 24 hours.

Strenuous efforts are being made, by not only the Japanese but the peopies of other nations, to rush relief in the form of medical and surgical supplies, building materials, clothing and foodstuffs to meet the immediate needs. It is reported that 10 days after the earthquake there are still 130,000 persons in Tokyo entirely without shelter. A corresponding number of homeless is reported from Yokohama. Food is being rushed to the scene from outside sources and is being rationed under government supervision. A meeting of President Coolidge's cabinet was held last week for the discussion of this country's participation in the Japanese relief and construction work. It is estimated that at least $20,000,000 will be required for immediate work in the stricken area.

* * *

War between Italy and Greece, which, had it occurred, might have involved all Europe or the entire world in another war, has apparently been averted through the acceptance by both Italy and Greece of the recommendation of the council of ambassadors under the league of nations. This council in its recommendation approved practically all of the points in the ultimatum delivered by Italy to Greece. The latter country is to pay to Italy 50,000,000 lire (equal to a few million dollars) and is to have its navy make formal salute to the flags of the three allied nations—Italy, France and England. The controversy arose over the assassination of the Italian members of a boundary commission on the Albanian frontier while under the protection of Greece. The council of ambassadors holds Greece entirely responsible under the circumstances.

* * *

Settlement of the anthracite coal controversy appears to be about reached. Officials of the mine owners' and the workers' organizations have agreed to the four fundamental points set forth by Governor Gifford Pinchot of Pennsylvania, whom President Coolidge appointed as mediator. The agreement provides for a flat increase of 10 per cent in wages, the establishment of the eight-hour day, recognition of the union and recognition of the principles of collective bargaining. The agreement will be submitted September 17 for ratification by the miners themselves. If ratified, as expected, the mines will be reopened on September 19.

* * *

The internal revenue bureau last week issued a ruling that farmers' cooperative organizations were exempt from income taxes when such organizations hand back to the producers the proceeds of sales on a pro rate basis. The maintenance of a reasonable reserve fund of depreciation or possible losses or a reserve required by state law or a sinking fund or surplus to provide for the erection of buildings and facilities will not destroy the exemption, the bureau stated.

* * *

The International Brotherhood of Firemen and Enginemen at a meeting last week voted to ask a return to the 1921 rate of wages when their present contract expires January 1, 1924. This would mean an increase of over 12 per cent over the present wages paid.

* * *

A conference between United States and Canadian officials is soon to be held at Ottowa, Canada, to take up the question of controlling illicit traffic in intoxicating liquors across the international border.

* * *

Federal Prohibition Commissioner Haynes has requested a government appropriation of $10,000,000 for enforcement of prohibition during the coming year. This is a proposed increase of $1,000,000 over the present year's appropriation.

* * *

Ten thousand veterans of the Civil war, none of whom was under 70 years of age, paraded last week at the national encampment of the Grand Army of the Republic at Milwaukee. Gaylord M. Saltzgaber of Ohio, was elected national commander in chief.

Farm Business and Markets Outlook

(Continued from page five.)

factor last week as the prevailing sentiment was decidedly easier.

Foreign butter markets are a little high to be attractive, but some shipments of Danish purchased at lower levels arrived in New York last week.

Cheese prices retained the level reached a week ago, although trading was slow, as buyers were not interested beyond supplying immediate needs.

Fruits and Vegetables.

Potato prices declined last week under a substantial increase in the carlot movement, which has gained about 50 per cent in the last two weeks. Producing sections will probably ship in increasing volume from this time on up to the middle of October, which usually sees the peak of the carlot movement. Western Irish Cobblers are quoted at $1.65 to $2 per 100 pounds, sacked, in the Chicago market, with Idaho Rurals at $1.90@$2.

The carlot movement of apples is beginning to increase and a rapid gain in shipments can be expected during the next six or eight weeks. Fall varieties are quote at around 75 cents to $1.25 per bushel in city markets.

The peach market declined last week under a sharp increase in shipments from producing sections. Elbertas from the eastern states are quoted at $2 to $3 per bushel and from the central western states at $2.75 to $3.50 per bushel in consuming markets.

The late commercial onion crop is estimated at 12,643,000 bushels, which is 2 per cent less than in 1922, but 34 per cent larger than the crop of 1921. The forecast represents a loss of over 1,000,000 bushels compared with a month ago. Washington yellows are quoted at $3 to $3.25 per 100 pounds in consuming markets.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Ore., Sept. 8.—Cattle—Choice steers, $7.00@7.50; medium to good steers, $6.50@7.00; fair to medium steers, $5.50@6.50; common to fair steers, $4.50@5.50; choice cows, heifers, $4.50@5.00; choice cows and heifers, $4.00@4.50; medium to good cows, heifers, $4.00@4.50; fair to medium cows, heifers, $3.50@4.00; common cows, $2.50@3.50; canners, $1.50@2.50; bulls, $3.25@4.25; choice feeders, $5.00@5.25; fair to good feeders, $4.50@5.00; choice dairy calves, $9.00@10.00; prime light, $8.00@9.00; heavy calves, $5.00@8.00.

more power with less wear

THE extreme durability and economy of Case tractors is due to simplicity of design, and care taken to reduce friction. On all sizes, the drive is direct to *both* rear wheels. Simple spur gears throughout avoid friction and thrust. The heat treated steel gears resist wear. All shafts are unusually rigid to resist all strain. Teeth are cut to roll instead of rub on one another, and their surfaces are smooth and hard.

Gear shafts are made of unusually rigid material, to avoid springing. High grade roller bearings are used, firmly held in accurate alignment to prevent binding strains. Every gear and bearing is unfailingly lubricated.

The whole train of gears, from the crank shaft pinion to the master gears, is tightly enclosed to exclude dust and dirt. No detail that can possibly reduce friction is overlooked or neglected.

The result is a tractor that outworks and outlasts other machines, making a good investment for its owner. Write for an interesting booklet, "Better Farming with Better Tractors."

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Yesterday I started to write an article on uraemic poisoning, and landed right in the middle of hope. I wonder if I can do better today.

Dr. Copeland.

The kidneys carry away an enormous amount of the body waste. Their function must be uninterrupted or trouble results. You see, the waste products are very poisonous. If some of the chemicals which are generated within the body and expelled as waste were recovered and injected into the blood, death might occur at once.

Because these waste products are so poisonous and because there is room in the body to store up material which is supposed to be eliminated daily and hourly, there must be no interference with their escape.

Sometimes there is discovered a state of "renal insufficiency." This is merely the scientific term to describe the failure of the kidneys to operate fully and completely. They do not carry off the waste turned over to them for disposal. Then the poisons are absorbed into the blood and the body suffers.

At first there is a mild toxemia—this means there is just a little poisonous effect. Usually, the first symptom of kidney toxemia is headache. You should find out why you have a lot of headaches.

Needless to say, uraemic poisoning—as this condition is called—demands accurate and immediate treatment. The milder symptoms, due to partial retention of waste material, may pass away of themselves, but the severe cases require energetic attention.

In the country, hot bricks covered with wet towels may be packed around the patient, taking extreme care not to burn him. Hot packs made of field corn are excellent. Drop a dozen big ears of corn into a wash boiler of boiling water. Take them out, one at a time, and wrap each in a square of cloth. Pack these steaming rolls around the patient. He will break out in profuse perspiration very quickly. Be careful not to burn him. If he is unconscious he can't tell you he is being burned.

Give the patient quantities of hot drinks. When the doctor arrives he will tell you what more you can do to aid.

Just Folks

This morning I read of the accidental death of a promising son, one who recently graduated from college and who had already entered into business with his father. I know his father and I know his crushing grief, although I have not yet seen him since the blow struck.

There is something crushing in the grief of a father over the death of a promising son. James G. Blaine vied with Henry Clay as the idol of the nation. All the fame and prosperity and brilliancy of statesmanship could not bridge over the death of his favorite and promising son, Emmons Blaine. That was a crushing blow. He was never the same "plumed knight" afterwards.

One Sunday evening, years ago, I listened to a reputable preacher. While he was in nowise parading his sorrow, yet his every word was saturated with an overpowering grief. Not long before he also had lost a most promising son.

Only a few days ago I met a man who has left his mark upon the development of the Pacific northwest—a man of force, courage and accomplishment. He is bravely filling out the measure of his days, not in idleness, but in work, and yet there is an emptiness in the spirit of his work which can not evidently be overcome. He, too, has lost a son for whom he had dreamed a brilliant future.

These terrible facts of life come home to all fathers of sons and beget a more intimate comradeship which may not always exist between father and son.

E. A. S.

A DESIRABLE GOAL.

Every farm home should work with a view to having hot and cold water in the house.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4219. Misses' Dress. Cut in 3 sizes: 16, 18 and 20 years. A 18 year size requires 3 1-4 yards of 54-inch material. The width at the foot without gathered part of front is 2 1-4 yards. Price 10c.

4510-4512. Lady's Costume. Blouse 4510 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 4512 cut in 7 sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. To make the costume for a medium size will require 3 1-4 yards of 40-inch material. The width of the skirt at the foot is 2 yards. Two separate patterns, 10c for each pattern.

4217. Lady's Dress. Cut in 6 sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 3 7-8 yards of 54-inch material. The width at the foot is 3 1-8 yards (with plaits extended). Price 10c.

4293. Boy's Suit. Cut in 5 sizes: 6, 8, 10, 12 and 14 years. A 10 year size requires 2 7-8 yard for the blouse and 1 3-8 yard for the knickers, of 36-inch material. Price 10c.

4164. Lady's Apron. Cut in 3 sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2 yards of 36-inch material. Price 10c.

4315. Child's Play Dress. Cut in 4 sizes: 2, 4, 6 and 8 years. A 6 year size requires 2 yards of 32-inch material. Price 10c.

4117. Girl's Dress. Cut in 4 sizes: 6, 8, 10 and 12 years. A 10 year size requires 3 1-2 yards of 32-inch material. Price 10c.

4496. Girl's Dress. Cut in 4 sizes: 8, 10, 12 and 14 years. A 12 year size requires 3 1-2 yards of 36-inch material. Price 10c.

4490. Lady's Combination. Cut in 4 sizes: Small, 34-36; medium, 38-40; large, 42-44, and extra large, 46-48 inches bust measure. A medium size requires 2 1-2 yards of 36-inch material. For belt of elastic or webbing 5-8 yard 2 1-2 inches wide is required. Price 10c.

4485. A Stylish Morning Dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4 1-2 yards of 36-inch material. The width at the foot with plaits extended is 2 1-4 yards. Price 10c.

4509. Lady's Blouse. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 2 5-8 yards of 32-inch material. If made with short sleeves, 2 1-4 yards will be required. Price 10c.

"Here's what I'll weigh when I eat these KELLOGG'S CORN FLAKES"

Kellogg's Corn Flakes ring true with every member of the family because they are not only delicious in flavor and crispness, but because they satisfy hungry appetites.

It takes more than the annual crop of a 450-acre farm to supply the raw corn used in the "million packages a day" made in the Kellogg factories.

And another thing: Kellogg's Corn Flakes are ready to serve—no bothersome cooking and scraping afterwards!

Kellogg's are extra delicious with the family's favorite stewed fruit, and with bananas or other fresh fruits in season.

Kellogg's Corn Flakes are sold only in the RED and GREEN package that bears the signature of W. K. Kellogg, originator of Corn Flakes. None are genuine without it.

Kellogg's CORN FLAKES

Also makers of Kellogg's KRUMBLES and Kellogg's BRAN

Mabel Parnel, also a new cousin living in Lewis county, Wash., writes about their flock of 19 guineas, four cats and two dogs. She is glad to become a member of our Corner and we are just as glad to have her with us. Mabel will be 12 October 31. She has two brothers and three sisters.

We are pleased to receivev a nice letter from Jessie Mikkelson, aged 7 years, and her little brother, Martin who is 4. Jessie's birthday is December 5 and Martin's is November 16. They live with their grandmother in eastern Washington.

Ths is the first time we have heard from Bertie Rochester, Okanogan county, Wash. Bertie is 11. Her pets are a black kitten and a tabby-colored kitten. School commences October 4 and Bertie says she likes to go to school. December 28 is her birthday.

"May I join the Corner?" writes a little girl in eastern Washington. "I am 11 years old and in the sixth grade. My birthday is August 13. I have three brothers and one twin sister. I live on a farm. My name is Iva Ida Schrag." We shall be glad to get another letter from Iva Ida.

Birthday Greetings

THURSDAY, September 13—Berlin Hiser, 10 years old; Gerald Stover 9.

SATURDAY, September 15—Edna Huovinen, 10 years old; Pauline Klundt, 11; Mabel Medsker, 11; Wayne Reeder.

SUNDAY, September 16—Martha May Jenkins, [illegible] years old.

MONDAY, September 17—Bennie Greenwaldt, 11 years old; Bessie Huovinen, 11; Tyyne Salmela, 10.

WEDNESDAY, September 19—Floyd William Beardslee, [illegible] years old; Doris Nelson, 10.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Nelda Jackson, Ruth Johnson, Hilda Pietila, Alice Thomas, Marguerite Duffy, Dorothy Timm, Esther Boos, Martha Wurgler, Martha May Jenkins, Thordis Fjerlie, Alice Herndon, Freddy Billingsley, Lenea Rise, Herbert Raddtke, John Van Py, Marjorie Cuyle, Stella Newbold, Bertie Rochester, Mabel Parnel, Verna Wenneberg, Virginia Teague, Elsie Stark, Freeda Dittmar, Verna Stevens, Hannah Wells, Dorothy M. Bower, Dora Sherwood, Archie Moe, Jessie Mikkelson, Martin Mikkelson.

BEDTIME STORIES

By THORNTON W. BURGESS.

THE BIRDS HAVE A BUSY TIME.

"There's nothing," so the Quaddies say,
"Like helping others every day
To fill you with a pleasant pride
And make you feel so good inside."

To be sure, the help they were giving Farmer Brown's boy brought its own reward and naturally made them feel good inside because it filled their little stomachs, and you know and I know that a full stomach, if it isn't too full, is a very good feeling indeed. But that wasn't the kind of a good feeling that they meant.

Drummer the woodpecker went all over the tree trunks.

Oh, my, no! No indeed! It wouldn't be fair to those hard working little birds to even think so. What they did mean was that it gave them that tickled-all-over feeling which comes only with the knowledge of having done a good deed.

You see, just as soon as old Mr. Toad said that catching bugs and worms in the old orchard, the garden and the berry patch would be doing something for Farmer Brown's boy in return for all the nice things he had done for the little people of the green forest and the green meadows fussy little Jenny Wren had jumped up excitedly and announced that she was going to hurry around right away and tell all the other birds who ate bugs and worms and ask them to join her in trying to get every bug and worm in the old orchard. And she was just as good as her word. She hurried about among her neighbors and they agreed that they would help her.

So just as soon as jolly, round Mr. Sun began his daily climb up in the blue, blue sky the next morning the birds gathered in the old orchard and began work. There was Tommy Tit the chickadee, Jenny Wren, Welcome Robin, Winsome Bluebird, Drummer the woodpecker, Mr. Mocker the mockingbird, Kit the catbird, Brownie the thrush, Tiny the warbler, Chippy the chipping sparrow, Twitter the marten, Skimmer the swallow, Little Friend the song sparrow, Bubbling Bob the bobolink, Cresty the flycatcher, Goldie the oriole, and a lot more. Even Sammy Jay came over to help.

Skimmer the swallow and Twitter the marten sailed back and forth over the treetops, and in and out among the trees, catching the insects that flew. Drummer the woodpecker went all over the tree trunks and the big branches with his head cocked to listen for the sound of worms boring in the wood under the bark, and whenever he heard one he hammered with his stout bill and made the chips fly until he had reached it. Then he speared it with his barbed tongue and swallowed it. Tommy Tit searched the bark and all the little twigs for the tiny eggs hidden there by the insects. Tiny the warbler and Chippy the sparrow flitted here, there and everywhere, picking the green canker-worms from the leaves. Jenny Wren fussed about, her tongue going so fast that Welcome Robin wondered when she ever had time to catch bugs, but she did. In fact, no one was busier than she.

Little Friend the song sparrow likes bushes better than trees, and so he went over to the berry patch and there he was joined by Kit the catbird and Brownie the thrush, and they soon found all they could attend to in clearing the berry bushes of the worms. Over in the garden old Mr. Toad was just as busy as the birds and he did hope that they would come over to help him when they were through in the old orchard. Jimmy Skunk happened along, and when he found out what was going on he got busy and dug out worms and beetles which were hiding in the ground.

And all the time Farmer Brown's boy didn't once suspect what was going on. That was the best part of it. It was to be a great surprise for him.

COMPLETE DISPERSAL
WILLIAMS' JERSEYS
Sherwood, Oregon, Tuesday, September 18, 1923

Twenty-six head gold and silver medal cows, show prospects, young stock and the great herd bulls. Entire herd, including five daughters of Rosaire Olga Lad, four daughters of Captain Tristram and others close up to the world's heaviest producers. Among the cows are St. Mawes Boise Rosaire, gold medal cow, record 891.54 lbs. fat at 3 years 7 mo., she also has been a winner in the show ring and sold at auction in 1919 for $5100. Edithe Oxford Rosie, St. Mawes Boise Queen, etc. Be sure and be there. Catalogs now being prepared. All Kinds of Farmers
- Endorse Their -
State Farm Paper

THE WASHINGTON FARMER is strongly indorsed by stock breeders, dairymen, fruit growers, market gardeners, wheat farmers, in fact by every class of agriculturist.

It deals with all sides of farming, not in some distant field, but in the very state whose soil you are cultivating, and whose citizens you are associating with.

Special departments covering various branches of farming make this magazine valuable to the producers of stock, fruit, milk and poultry; while constant efforts for the upbuilding of agriculture have won the good will of all classes.

Furthermore, this paper's cooperative subscription plan is widely approved throughout the state. It aims at the elimination of the subscription agent. The reader sends in his renewal direct and gets the benefit of every penny which would ordinarily go to the traveling agent. Our readers are also asked to include some friend's or neighbor's order with their own. Please attend to this matter without putting us to the expense of sending you a notice. The subscription rate is only $1 for five years.

$1.00 for 5 Years
50 cents for three years. 25c for one year.
THE WASHINGTON FARMER 1923
Review Bldg., Spokane, Wash.
I desire to take advantage of your Cooperative plan in securing new and renewal subscriptions.
I enclose herewith $.... for a .....year subscription to THE WASHINGTON FARMER.

If your subscription is already paid in advance it will be extended from the rate to which it is paid. Sept. 13, 1923.

News for Breeders

Twenty-two head of registered Jerseys were sold at auction at the V. H. Berkey farm, near Delphi, in Thurston county. While there were a number of out-of-town buyers at the sale, there were only six of the 22 animals that were taken out of the county. The average for the 10 cows, seven heifers, two bulls and two calves was $134, which was considered a reasonable price.

The buyers included: Ernest Neat of Olympia, who acquired four cows and one bull; M. D. Coleman of Mayfield, Lewis county, four cows; L. G. and Joe Nelson of Little Rock, three cows; Guy R. Taylor of Olympia, two cows; Cloverfields farm, one cow and one bull; John R. Martin of Elma, one cow; Martin Steinberger of Olympia, one cow; Charles H. Young of Little Rock, one cow; R. Trenckman, Elma, one cow; C. E. Beckwith, Olympia, one cow, and I. Sherwin of Little Rock, one bull.

ANGUS HERD WINS CUP.

J. A. Scollard, best known as the head of the United Dairy Associations of Washington won the $50 silver loving cup donated to the owner of the Lewis county herd of cattle that should win the most first prizes at the Southwest Washington fair. Mr. Scollard, whose home is at Chehalis, is an owner and exhibitor of a very fine herd of Aberdeen Angus, as well as a dairyman. In competition with the Gongdon & Battle herd of Yakima, generally considered one of the strongest herds in the United States, Mr. Scollard's "doddies" won 13 blue ribbons, which was the largest number won by a Lewis county breeder. At that, he had only one more than N. C. Sears of Winlock won on his Jerseys, and Mr. Scollard had steer classes, besides his breeding herd, and won two blues therein. The cup was donated by Morris Burnett, an enterprising Chehalis jeweler.

MORRIS BUYS HERD BULL.

A new herd bull has been secured by William J. Morris, Guernsey breeder at Buckley, Wash. This youngster is Rose City Khedive, from the Rose City herd, owned by W. A. Goodin at Cornelius, Ore. The bull is a son of Langwater Khedive, whose 12 nearest dams average 710 pounds of fat. His dam, Yeksa Forgetmenot, has a double letter record of 484 pounds of fat in 10 months. A half brother to Rose City Khedive is owned by the Ben Ridgeway farm at Sequim, and won junior champion at the Pacific International last fall.

Beth's Linda of Few Acres, one of the cows in the Morris herd, recently made roll of honor for the state. She is out of a junior 4-year-old. In her first 16 days on test she made 37 pounds of fat.

BUYS SHORTHORN HERD.

J. E. Huntington of Kelso, Wash., recently purchased the entire herd of Shorthorns from T. M. Meikle of Castle Rock. Mr. Meikle had sold his farm, which is on the Cowlitz river, near Vader station. He was the pioneer breeder of the "red, white and roans" in western Washington, having bought foundation stock from Ladd & Reid and Alex. Chalmers 30 years ago. Age alone induced him to give up the business of farming and breeding his favorite cattle. Mr. Huntington purchased a ranch of 250 acres, near Olequa station, in June and decided to stock it with Shorthorns.

CHAMBERLAIN SELLS GUERNSEYS.

During the Southwest Washington fair R. N. Chamberlain decided to sell at auction the three Guernseys he had exhibited. Practically no preliminary advertising was done, except to post notices for one day. Under these circumstances the prices received were very satisfactory to Mr. Chamberlain and to the Guernsey fanciers. Pattie Jewel, first prize senior heifer calf, was sold to George L. Seifert of Winlock for $275. Mythop's Sequel Dorothy, grand champion cow, went to Mrs. Hart of Centralia for $370, and Mrs. Hart also bought the bull Prim's Emigrant to Noble Farm for $280.

HAS A 24-YEAR-OLD COW.

Miss Catherine Crawford of Mount Crawford ranch, Kelso, Wash., has a Red Polled cow 24 years old that is still giving milk and seven months ago had a healthy bull calf. The cow was purchased from L. K. Cogswell of Chehalis, Wash., when 2 years old and has been a steady breeder and milk producer ever since. She is pointed to by both Miss Crawford and Mr. Cogswell as just one more evidence of the longevity and general usefulness of the Red Polled breed.

In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

1923 PACIFIC INTERNATIONAL Livestock Exposition, Nov. 3-10, bigger than ever. $20,000 in premiums. Entries close Oct. 10. Write for Premium Lists. O. M. Plummer, General Manager, 211 N. W. Bank Bldg., Portland, Ore.

It's NATURAL for a hog to wallow

Provide a wallow and add

DR. HESS DIP and DISINFECTANT

then~

1. Your hogs will be free from lice.
2. They will have clean, healthy skins.
3. Disease germs will be destroyed.
4. Foul odors will be kept down.

If you do not have a wallow, use the sprinkling can freely. Sprinkle the animals — the sleeping quarters and pens.

Sprinkle the cow barns to keep them healthful and clean-smelling—

The poultry-house to kill the mites and lice.

Use it about the house—in the closets, sinks and drains. Excellent for the sickroom.

Standardized Guaranteed

DR. HESS & CLARK, Ashland, Ohio

SAV-A-CALF

(TRADE MARK REGISTERED)

Will Get Your Cows With Calf

If any cows in your herd fail to get with calf or come in heat you are losing money. If one cow has the disease it will soon spread to the whole herd. Start to make every one of your cows a producer. Begin by using SAV-A-CALF. Feed it to both dairy and range stock. You'll get a 100 per cent calf crop and your cows will produce big when milk and butterfat prices are high. It is easy to feed—just mix it with the salt or feed.

READ WHAT USERS SAY.

Gentlemen:

Have used your Sav-a-Calf and found it all you claimed it to be. Can conscientiously recommend it. Had I known of it before it would have saved me thousands of dollars.

ALEX CAMPBELL,
Portland, Oregon.

EVERY COW CAUGHT.

Dear Sir:

After feeding Sav-a-Calf to 9 cows that would not breed, all of them caught after the first treatment. I gave it in the feed and am now using the salt.

Experts Discuss Poultry Problems at County School--Page 6

Knew Nothing About Cows, But--

"No, neither of us ever had any training in farm management. Father was a railroad man for years back in the middle west and I graduated from just an ordinary university—not an agricultural college, I mean. I didn't know anything about cows when we came out here."

Miss Bee Morris of Buckley, Pierce county, Wash., invariably chuckles at the astonishment expressed by strangers over the fact that a father and daughter, both highly inexperienced in the business of running a farm and both advocates of the most dangerously reactionary theories of how it should be done, have brought anything but chaos and general ruin out of the experiment.

"Oh, no, we haven't any help, and we wouldn't think of using a milking machine on them. Why, of course, I help milk. Father's going it alone while I'm away (the interview took place at the A. B. Flint sale near Beaverton), but I have milked as many as eight or nine. We're figuring on cutting down some, though; we have too many, which may seem queer to some people who would say that 10 purebreds and 16 grades isn't much of a herd. We believe in quality rather than quantity—fewer cows and more milk from each of them. We were milking 11 in May, and the nine grades averaged 42 pounds each, one purebred on test making 60 pounds and another 76. They're bringing in $20 per head—$130 more than they did two years ago with the same number of cows."

It may be seen that Miss Morris knows very definitely why she thinks a dairy can be made to pay on a 46-acre farm, and she is equally definite on why she selected the two animals she bid in at the Flint sale. Pet of Midvalley, the 2-year-old for which she paid $320, and Queen of Midvalley, which cost her $250, are maternal sisters whose dam carries the May Rose breeding the Morrises seek. Furthermore, Pet of Midvalley is by a sire line bred from Golden Prince of Oregon, the bull

that did the best work for D. H. Looney, and there are already three half sisters carrying the blood of this bull in the Morris herd; while Queen of Midvalley is by a sire bred along the same lines as the herd bull, out of Yeksa Forget-Me-Not, which they recently purchased from W. A. Goodin of Cornelius.

"You can't talk line breeding to everybody, though," Miss Morris laughed. "We recently tried to sell one of our neighbors a bull that was by the same sire as one he was discarding, one that had better backing and would have made good in line breeding. When the man found out that the animals were related he wouldn't even consider a purchase."

The accompanying picture shows Miss Morris (center) with Mr. and Mrs. Goodin at the Flint sale. The latter were heaviest buyers at the dispersal, paying $820 for four head.

Irrigation Not Needed

While there were some berry growers in the Puyallup valley last year who have experimented with irrigation of their crops, there are practically none who are attempting it this year, due to abundant rainfall. David Hawes of Buckley claims that there is no season dry enough to warrant irrigation in western Washington, but that cultivation will conserve enough moisture to grow a good crop of berries. He had 2 1-2 acres of Cuthberts last year, which was an extremely dry season, and he kept them cultivated with an A harrow during the driest part of the season.

"I found that by using the harrow every day I could prevent a large part of evaporation which would otherwise have taken place," said Mr. Hawes. "I ran the harrow with the teeth sloped back slightly, which was just enough to make a surface mulch. I had no bad effects from drought at all in the fields which were cultivated in this manner, but on some rows which I left uncultivated there was a noticeable difference and the canes showed the lack of moisture. The berries also were much larger where the rows had been cultivated with the harrow.

"I have always practiced burning the brush on ground adjoining the berry fields in order to save what potash was in the canes. I noticed that oats grows much taller on this ground than anywhere else, which shows that there is a slight lack of this mineral in the soil. I usually raise oats for hay, since it grows very abundant and makes a fair quality of hay. I have tried millet for a short season crop, but find that it does not do as well in this climate as does oats or other hay crops."

Mr. Hawes keeps only one cow, but has 75 White Leghorn hens. At one time he had as many as 250 birds in his laying house and found that they were a good source of income. He said that he believed poultry made a good combination with berry farming, and it would also be a good plan to keep as many cows as the farm would allow in order to get a good supply of stable manure for the crops. A great danger, he said, is of a man getting more than he can handle himself, and trying to operate a farm which should really be handled by two men at least part of the year. A small farm properly handled would give one man plenty of work both summer and winter, and it should return sufficient income for the support of himself and family.

TURNIPS COME LATE.

Turnips planted as late as August usually do well.

SMUT In Wheat Can Be Prevented

by dusting 60 lbs. seed wheat with 2 ounces of our pure

Copper Carbonate

specially prepared as wheat fungicide. Much more effective than formaldehyde. Easy to apply. Saves seed. Write for particulars.

Mountain Copper Co., Ltd.

332 Pine St., San Francisco, Cal.

OFFICIAL TRAPPERS GUIDE

VALUABLE BOOK FREE

You cannot afford to be without this free book—tells you the best and easiest way to trap—then the correct way to skin and handle to bring most money and also teaches you how to correctly grade and value furs of all kinds.

We Pay More for FURS and sell Supplies for Less

TRAPPER'S SUPPLY BARGAINS

Don't buy or order any trappers' supplies until you have received your copy of our Supply Catalogue. It contains some real bargains that you cannot afford to miss. Guns, Rifles, Traps, Night and Camp Lamps, Clothing, Boots, Baits and Smoke Pumps—in fact, everything you need on the trap line. Write Today.

TRAIN to be an AUTOMOTIVE MECHANIC

We have high grade Automotive Mechanics for teachers. And we offer a Six Months' Complete Automotive Course that gives you all the knowledge of Automobiles and all the skill in handling and repairing parts that can be crowded into 26 weeks of hard study and earnest, intelligent effort. The equipment is ample for thorough training. The classes are small and the teachers give you plenty of individual attention. The course includes: 250 hours mastering facts and principles of automobile construction and operation; 120 hours taking apart and assembling automobile equipment; 120 hours working with Electrical Equipment; 180 hours actually repairing automobiles; 175 hours operating the machine tools used in the up-to-date repair shops.

We want you to have the fullest possible freedom in investigating this course, first, to determine whether it gives the training you require, and second, whether the opportunities for Y. M. C. A. graduates measure up to your expectations. Come and see the school for yourself. Take a few days' absolutely free trainnig if you wish. Talk first hand with the large employers of Automobile Mechanics in Seattle who give first preference to Y. M. C. A. graduates.

Avoid Motor Oils

containing paraffin, asphalt or any other non-lubricating substance. Aristo Oil is refined by the most advanced processes, designed to remove everything in the crude which has no lubricating value.

Fluffy Not Flint-Like "Carbon"

All motor oils deposit some carbonaceous residue called "carbon," as all makers of oils know.

But different oils deposit different kinds of "carbon."

A hard, gritty, flint-like "carbon"—hard enough to score your cylinders and scratch pistons, rings and bearings—causes these four motor troubles which you can eliminate.

Due to the abrasive action of this flint-like "carbon," cylinders and pistons are scratched and worn.

Parts of this hard "carbon" become incandescent and cause premature firing—pre-ignition results in "knocking."

Spark plugs become coated with the hard "carbon." Thus the spark plug is short-circuited and the motor misses.

The gritty accumulation around the valves prevents proper seating, so a loss of compression results.

You avoid such troubles by using an oil which leaves a soft, fluffy residue instead of the flint-like kind.

Fluffy, Light, Non-Clinging

Aristo Motor Oil leaves but a little—half to a third as much of this other kind of residue.

Soft and fluffy, most of it blows out with the exhaust. It has less tendency to cling than hard "carbon."

It is softer than cylinders, pistons, rings and valves, so can not score or wear them.

It doesn't become incandescent. Ends the missing.

No grit around the valves, so compression isn't lost.

Motors run thousands of miles farther and tractors months longer without cleaning. You save expense.

Made by the lubrication engineers and specialists of the Union Oil Company, equipped with every facility for the most exhaustive research, this oil is a pure, sure lubricant as fine as knowledge and experience can make.

Famous race drivers have tested it under conditions more severe than any that your car will ever know.

End "carbon" troubles with it. Have a smoother-running, longer-lasting car.

For sale at all first-class garages and service stations.

ARISTO Motor Oil

Copper Carbonate to Control Smut in Wheat

Summary of Experiments in Eastern Washington-Results in Less Smut and Better Stands

By GEORGE L. ZUNDEL

Extension Specialist in Plant Pathology, W. S. C.

Since the work with copper carbonate was started in the state, it has grown to very large proportions, as was indicated in a recent report issued by the extension service of the State College of Washington. The general conditions were all against copper carbonate in that no machines were available in some parts of the state and the farmers used various means of applying the powder to their grain. In order to get the best results it is absolutely necessary that a closed machine be used.

A summary of the work done in eastern Washington shows that when seed is treated with copper carbonate there is an average of 8.4 per cent smut, while bluestone gives an average of 13.6 per cent smut. Together with this, there is a possibility of saving seed by reducing the amount of seed sown per acre from one-fourth to one-half bushel.

Fewer Weeds Grow.

General observations have shown that there are better stands of wheat where copper carbonate was used. These better stands also are valuable in that fewer weeds grow. It is not an unusual thing to go into a field where part of the wheat is treated with bluestone and the other with copper carbonate and find the stand so thick in the copper carbonate part that few weeds were found, while there are weeds in the bluestone side.

From a practical standpoint everything is in favor of copper carbonate. It must be remembered that these results are taken in a year when there is an abnormal amount of smut in the wheat belt of eastern Washington.

While there have been a few complaints, it is astonishing to know that wherever these were investigated that it was in favor of copper carbonate. Just a mere observation of a field without actual counts is not enough. Since we have larger stands of wheat there would naturally be more smut heads per unit area. For instance, if in a certain unit area we had 1000 heads of wheat which had 8 per cent smut, that would then give 80 heads of smut per unit area. If now we had a 50 per cent better stand in that same area it would mean that we had 1500 heads of wheat. If this wheat had 8 per cent smut it would mean that 120 heads of smut were present in the copper carbonate treated area, while if we reduce that percentage to 6 per cent we would still have 90 heads per unit area, which would be 10 more than would be actually counted in the bluestone stand. If the farmers just went out and casually looked at their fields without making actual counts the decision would be against copper carbonate.

Three Ounces Better.

Based on field observation and experimentation at the state college we now recommend that three ounces of copper carbonate be used for each bushel of wheat planted in the smut area, this copper carbonate to be of standard strength or, in other words, must contain at least 50 per cent metallic copper; be fine enough so that at least 95 per cent will pass through a 200-mesh sieve, and be of such a quality that it will stick to the kernels of wheat.

In experiments carried on this year at the state college by Dr. Heald, two ounces of copper carbonate gave 19 per cent smut, while three ounces of copper carbonate per bushel gave 10 per cent smut. A complete statement of the experiments will be issued shortly.

The smut counts in Adams county were made in the eastern part, where six fields were visited, since very little smut is found in the western part of the county. It was the object of the people making the survey to get into as many copper carbonate treated fields as possible. Since formaldehyde and bluestone fields were not visited to any extent the averages are not comparable. At the Lind station, as will be noted, untreated smutty wheat gave 25.3 per cent smut, while that treated with bluestone, formaldehyde and copper carbonate gave about equal results.

In Franklin county 15 fields were visited. The highest percentage of smut was found in a bluestone field, where 16.6 per cent smut was present on Jones Fife wheat. The highest percentage found in copper carbonate treated fields was 8 per cent, where a man had used a low-grade product. In one field at Connell there was no smut in copper carbonate or formaldehyde fields, but in the copper carbonate field there was a 100 per cent stand, while there was but a 50 per cent stand where formaldehyde was used.

Forty-One Fields in Grant.

In Grant county 41 fields were visited. The work done in this county was very thorough and the averages are reliable. From the bluestone fields we find that there was an average of 7.5 per cent, while in the formaldehyde and copper carbonate fields the average was 0.

In Spokane county 10 fields were visited. No field was taken in this survey except it had both copper carbonate and bluestone treatments. It was found that the average of smut in the copper carbonate fields was 10.2 per cent, while in the bluestone it was 11.2 per cent.

In Walla Walla county 22 fields were visited. No formaldehyde treated grain was found in the area surveyed. In the copper carbonate fields it was found that there was an average of 7.7 per cent smut, while in the bluestone treated fields there was an average of 11.7 per cent smut.

In Whitman county 78 fields were visited, which give an average amount of smut in the copper carbonate treated fields of 14.5 per cent; in the formaldehyde treated fields, 14.7 per cent, and in the bluestone treated fields, 20.7 per cent smut.

The figures contained in this report supersede all other partial reports that have been issued this year.

At the state college experiment station at Lind, Adams county, it was found this year that Early Bart wheat seed, treated with copper carbonate, resulted in 1.2 per cent of smut; with formaldehyde, 1.4 per cent of smut; with bluestone, 1.0 per cent of smut, and untreated, 25.3 per cent.

E. A. Beikle of Connell, Franklin county, had 100 per cent stand of Early Bart wheat seed treated with copper carbonate, and only a 50 per cent stand when treated with formaldehyde.

F. E. Lloyd of Peone, Spokane county, had 11 per cent of smut in his Hybrid 128, when treated with copper carbonate, and 13 per cent when treated with bluestone; 8.7 per cent of smut in his Jones Fife with copper carbonate; 9 per cent when treated with bluestone; 19.6 per cent of smut in Hybrid 128 with copper carbonate, and 25.8 per cent with bluestone.

E. Pintier of Latah, Spokane county, had 30.4 per cent of smut in his Fortyfold wheat when treated with copper carbonate, and 22 per cent when treated with bluestone.

A. F. Schuntz of Spring Valley had 6.2 per cent of smut in his Fortyfold when treated with copper carbonate and 8.2 per cent of smut when treated with bluestone; 4.7 per cent of smut in his Triplett with copper carbonate and 5.7 per cent with bluestone.

At the Spokane county farm in Plaza, the copper carbonate treatment of Fortyfold resulted in 1.5 per cent of smut and the bluestone treatment in 5.9 per cent.

A. D. Johnson of Sunset, Spokane county, had .3 per cent of smut in his Fife when treated with copper carbonate, the same per cent when treated with bluestone and 2 per cent of smut with his untreated seed.

Thomas Copeland of Russell Creek, Walla Walla county, had 8.6 per cent of smut in his Jenkins Club treated with copper carbonate and 9.9 per cent treated with bluestone.

T. J. Gilkerson of Mill Creek, Walla Walla county, had 4.3 per cent of smut in his Jenkins Club, treated with copper carbonate, and 4.8 per cent treated with bluestone.

F. M. Benson of Prescott, Walla Walla county, had 5.6 per cent of smut in his Hybrid 128 when treated with copper carbonate, and 7.4 per cent treated with bluestone; in his Triplett wheat he had 10.6 per cent smut, but 100 per cent stand when treated with copper carbonate, and 8.8 per cent with 30 per cent stand when treated with bluestone.

Henry Copeland of Mill Creek, Walla Walla county, had 9 per cent smut in Jenkins Club treated with copper carbonate, and 16 per cent treated with bluestone.

C. N. Eaton, Waitsburg, Walla Walla county, had 17.1 per cent of smut in his Jenkins Club, treated with copper carbonate; 14.5 per cent treated with bluestone. M. C. Walker, also of Waitsburg, had 9.6 per cent in his Jenkins Club treated with copper carbonate, and 15.9 per cent, treated with bluestone.

M. E. Schreck of Lacrosse, Whitman county, had 5.7 per cent of smut in Hybrid 128 treated with copper carbonate; 8.1 treated with bluestone.

Peter Solem of Lacrosse, Whitman county, had 9.2 per cent of smut in his Hybrid 128 treated with copper carbonate; 13.4 per cent treated with bluestone.

Phil Howard of St. John, Whitman county, had 19.7 per cent of smut in his Triplett wheat treated with copper carbonate, and 53 per cent in his untreated seed.

Dan Lathrum of Oakesdale, Whitman county, had 5.1 per cent of smut in his Fortyfold treated with copper carbonate, and 17.1 per cent treated with bluestone.

R. V. Perringer, Belmont, Whitman county, had 9.3 per cent of smut in his Turkey Red treated with copper carbonate, and 15.4 per cent when treated with bluestone.

C. E. Chase of Tekoa, Whitman county, had 24 per cent in his Fortyfold treated with copper carbonate, and 20.8 treated with bluestone.

H. H. Clark of Tekoa had 52.2 per cent of smut in his Hybrid 128 with copper carbonate treatment, and 31.4 per cent with bluestone.

A. H. Clark, Tekoa, had 44.6 per cent of smut in his Fortyfold when treated with copper carbonate, and 44.4 per cent with bluestone.

Kittitas County Holds Successful Fair on Its New Grounds

A rodeo was the colorful feature of the Kittitas county fair at Ellensburg this year, and to advertise it scores of business men and departmental superintendents wore colored silk shirts and stockmen's hats during the week and it added much to the effectiveness of the event. The attendance was heavy during the three days and it was rumored that the indebtedness was cleared from the receipts of the first two days of the fair. This fair was held on the new grounds built in June through community cooperation.

Both the location and plan of the new fairgrounds were ideal. Only one exhibit building had been erected for this year's fair, but the sale of space in the first building is going for the payment of the second twin structure, which will be erected next year. The grandstand and track will be leased to the state normal and high school for athletic use during the year and the rest of the grounds will serve as a city park. The live stock buildings are temporary structures, but this part of the grounds will be built up later and there will probably be a need of additional ground at this corner for expansion.

The entertainment program was interesting and clean. The grandstand was full to overflowing the first day. Miss Anna May Carlat of Ellensburg was chosen queen of the rodeo by a ticket-selling contest and was crowned in front of the grandstand during the first day. The live stock parade was held on the grounds the last day and the downtown parade of roughriders and the band opened the fair.

Agricultural Show.

All of the agricultural exhibits were displayed in a large tent which was set up on the spot where the other main building is to be erected at some future time. At the main entrance was a pleasing display of seasonal fruits in trays and plates. While over half was made up of apples and pears, there was a varied collection of other fruits, all of which were high class.

A booth made up by the agricultural class of the Ellensburg high school showed a large variety of sheaf grains, vegetables, fruits and flowers grown or collected by the boys. A fertilizer trial was illustrated by a minature field which pointed out the advantage of using sulphate of potash over superphosphate or manure for the soils of Kittitas county.

There were six booths devoted to the schools of the county and they showed large collections of class work and drawings. Three of the high schools, Ellensburg, Kittitas and Cle Elum, put on a manual training exhibit that would have been hard to surpass. The workmanship on the cedar chests was excellent and the hardwood tables and chairs were as durable and neatly made as if made by experienced hands. The girls brought out cooking and sewing displays.

The woman's department was made up of several booths which showed different kinds of work. The clothing booth included exhibits from seven home economic clubs in the county and was a complete display of dresses, coats, hats and other articles. The display of quilts and rugs was unique and there were some quilts that were family relics, one being 93 years old. The fancywork was as fine a display as the one shown last year and included more novelty work, such as colored embroidery and other kinds that are more modern than have been shown heretofore. The baking and canning entries were not as well represented as in the past, but the quality of the entries was high.

Beauty and Utility.

The flowers made a very pleasing display and were largely asters and dahlias, while a large variety of other seasonal flowers and house plants added greatly to the collection. They were all from home gardens in Ellensburg and from farm homes about the county.

The art department filled an entire booth and was made up of oil and water color paintings and there was a neat display of china which had been hand-decorated.

Miss Maud Wilson of the state college extension service judged the sewing and cooking classes, while Mrs. E. Peterson of Tacoma judged the flowers.

The general vegetable exhibit was made up of practically all vegetables and there were some seeds, such as corn, beans and seed potatoes, that were entered for competition. George Michels of Ellensburg fitted an interesting booth showing the value of using certified seed for planting and the difference of the resulting crop. Models of a potato storage cellar and a ventilated pit were demonstrated as a part of this display.

The hay exhibit was made up of both alfalfa and timothy, which was displayed in bales. F. P. Hutchinson took first on alfalfa and G. B. Harvey second, both of Thorp. Lawrence Mellergaard won first on timothy and R. W. Waite second, both of Thorp. Mellergaard won the special timothy prize and first on mixed hay, with William McGrath second in the latter class.

The judges of these departments were Theodore Alberts, state horticultural inspector, of Chehalis, and F. H. Zentner county agent, of Douglas county.

The Horse Show.

Kittitas county is noted for its farm horses and there have always been heavy turnouts in all of the classes. This year, however, the classes were not so well filled, but the number of registered horses was greater than it has been at any previous show. The champion stallion was a Shire, Prince Rockwell, a 2-year-old, owned by Lou J. Richards of Ellensburg. The horse was a sorrel of splendid type and was sired by Rockwell Forester, at one time in the herd of George M. Wilson at Wilbur. The champion mare was also by the same sire and owned in the same herd. She was a wonderfully fine brood mare, out of Colonel Activity, one of the Wilson prizes. There was a good showing of Belgians, but only two Percherons and three grade mares came out.

George M. Wilson of Wilbur judged the classes.

Beef Cattle.

All of the showings in this department were made by the boys of the two baby beef clubs, but many of them entered the open class of fat steers. In this Erling Hanson of Ellensburg won first and third, while Thomas Newton took second and Roger Pays fourth. The two latter came from Cle Elum and were members of the Aberdeen Angus club.

For the Shorthorn Breeders' special prize Erling Hanson won first and second; Philmore Wilson third and fifth; Carol Robinson, fourth and sixth; Eugene Wilson, seventh and eighth, and Walter White, ninth and 10th.

Those winning in the Aberdeen Angus special were: First and fourth, Thomas Newton; second, Roger Pays; third and fifth, Harry Newton; sixth, Alva Pays.

Duncan Dunn of Wapato judged all of the beef classes.

The Swine.

The Berkshires made a fine showing and were shown by the hog breeders and by club members who entered the open classes. Those who showed their animals were John Tjossen, Harold Wilson, Helen Wilson, J. Alva Bull, Erwin Billiter, George Mills, Erwin Mills and Gilbert Mills, all of Ellensburg. The champion boar was Sunset Demonstrator and the champion sow Grapewild Bernice, both owned by J. Alva Bull. C. M. Talmadge of Sacramento, Cal., who judged the classes, said that both champions were exceptionally good examples of the new type Berkshires and worthy of the placings.

The Chester Whites had a fine turnout and included two contestants for the tonlitter contest, Florence Robinson and Steve Woodhouse, while Gilbert Mills made the third with Berkshires.

The breed made a show that was a credit to the community and the large number of the entries was partly due to the club members who came out and many of them entered for the open classes. The junior and grand champion boar was Beaverwood Sensation, an under 6 months boar, and a strong individual with splendid quality, owned by Steve Woodhouse. The senior and grand champion sow, Yakima Queen, was from the same herd. She is a western bred animal and has farrowed some fine pigs in the three years she has been in the herd. Florence Robinson won first with her sow and litter and also with the fat barrow.

The Poland Chinas were not so well represented in numbers, but the grand champion sow was another young animal, a senior yearling owned by Howard Mason.

This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Room for More Sheep

"It is the opinion of almost every one that we need more sheep in Whitman county," says Secretary Burford of the Whitman county farm bureau. He calls attention to the fact that the amount of lamb and mutton produced in 1922 in this country was 21 per cent less than the 15-year average. "Since the bulk of city population has increased more rapidly than that of the country and since the bulk of slaughtered sheep and lamb is consumed by the cities, the production of lamb has been below normal," says Mr. Burford.

There is always a question as to the advisability of a general increase in the production of any live stock or field crop. However, there can be little doubt of the advisability of the farmers of a grain-growing country like the Palouse section having hogs, sheep and other live stock as side lines to consume the waste products of the farms. Undoubtedly, as Mr. Burford suggests, there is room for more sheep on the grain-growing farms of his county and the neighboring counties.

"Purebred, but Not Registered"

A lesson actually startling in its significance in reference to the use of good bulls is given in the experience of a Thurston county dairyman. He keeps well bred grade Jerseys. Some years ago he secured a bull closely related to the great bull, Chief Engineer, sire of the still better known Golden Glow's Chief. All the daughters of this bull proved to be better producers than their mothers. One of them, 14 years old, produced 329.4 pounds of fat in 11 months, authenticated by the Thurston County Cow Testing association. Another, at seven years old, had 493.9 pounds to her credit. Others did nearly as well, and the highest record is 518.2 pounds of fat in 12 months, made by an eight-year-old cow.

This bull was followed by a son of the gold medal cow, Golden Massypolo 4th, that has a record of nearly 900 pounds of fat. The daughters of this bull, in turn, proved to be better than their dams. Three of them, at three years old, produced 401.7, 435.3 and 341.3 pounds of fat in 11, 10 and 12 months, respectively. One five-year-old cow produced 510.5 pounds of fat and another of the same age, 495.2.

But now comes the sad part of the story. The next bull this good dairyman bought was "a purebred, but not registered." The result promises to be very disappointing, if not disastrous. Heifers are now on test as two-year-olds. One of them, a daughter of one of the best cows, has been on test seven months and has credited to her only 152.9 pounds of fat. As she was just going into the season of dry pasture when that report was made, it can hardly be hoped that she will produce much more than another 100 pounds of fat. Or, to put it another way, she is not near as good a cow as her mother was at the same age and can not be expected to develop into as good a one. Another daughter of this bull without papers, "but just as good," has 103.3 pounds of fat for four months. The period is not quite long enough to make as certain an estimate as of the other, but only about 250 pounds of fat are indicated for her year.

One case is not positive proof, but here certainly is evidence that one should make sure of the breeding of his dairy sires. And registration papers are the best evidence obtainable.

Beginning to Get Results

A New York commercial paper, in a news item, says: "Announcement is made at the New York offices of the Dairymen's League Cooperative Association, Inc., that the price of class one or fluid milk for September will be $2.98, an increase of 25 cents."

The most interesting feature of this announcement is not the price quoted. It is the fact that the announcement was made by the offices of the cooperative organization. That is not where the prices of milk used to be fixed. Not long ago it was the custom for the dairyman to take his product to the creamery or the distributor and accept what the latter offered. Cooperation, however, is beginning to make the dairyman able to assist in placing a price on his own product.

The New York instance is but one of a large number that indicate the growing power of agricultural cooperation. These instances should give courage to farmers, who are now going through a trying period of price depression. Cooperation offers more in the way of improved conditions for the future of farming than any other thing or combination of things in which the farmer might play a part.

Combating Wild Morning Glory

The wild morning glory is an especially difficult weed to eradicate because of the root system, which enables it to start a new growth even though the top and most of the root itself be destroyed. A piece of the root, covered up in soil with any perceptible amount of moisture, will start a new plant. Therefore, in cultivating a patch of this pest with a view to eradicating it, one should be extremely careful that no pieces of root cling to the plow or cultivating implements to be carried and dropped in other parts of the field. In localities where this weed is known to exist farmers should watch carefully for it, so that in case stray plants have appeared or small patches exist it will not be spread by means of the plow or weeder. Absolutely clean cultivation is probably the best method of combating this pest. This cultivation must take place so frequently that the plant is allowed no growth whatever above the ground. Any foliage above the ground serves to replenish the food material in the roots, and this food material enables the root to live longer, thus increasing the difficulty of eradication.

The Straw Ballot

The question of straw ballots on prohibition was taken up at a meeting of the masters of the state granges at Syracuse, N. Y., some time ago.

At least a dozen of the delegates said they had made an investigation in their own states and had found almost no farmers who had taken part in a straw ballot on prohibition. It was the opinion of all present that votes of this character do not represent the true opinion of the voting public.

Seed Wheat

Picking out the best wheat in your field for seed is well and good, but Leonard Hegnauer of the state college says something more is needed to get the best seed, which is to thresh it separately after the machine has been thoroughly cleaned.

The immigration figures for the last fiscal year show a remarkably large number of Mexicans coming into this country, 62,709, only exceeded by the Germans, 65,543. English immigrants for the year numbered 60,524.

Washington State Gleanings

WALLA WALLA TO SHIP ONIONS.

Walla Walla county this year will ship over 900 cars of onions.

TO STORE PEARS AT YAKIMA.

One thousand cars of pears are scheduled to go into cold storage in the Yakima valley.

BEE AND HONEY LOSS BY FIRE.

Twenty-six bee stands and 1000 pounds of honey belonging to William Highlands were destroyed a few days ago in a prairie fire at South Union, near Elma.

FARM BUREAU HEADS TO QUIT.

H. L. Hull and N. H. Massie, president and secretary of the Yakima County Farm bureau, have announced that they will not be candidates for reelection, but will devote their time to cooperative marketing.

WILL CAN PRUNES AT YAKIMA.

Libby, McNeill & Libby are attempting a new venture in the cannery at Yakima. They will can prunes instead of drying them, according to Harry Mathison, manager of the green fruit purchasing department. Packed prunes are bringing about 50 cents a box, which is about 2 cents a pound, and the cannery is offering to take tree ripened prunes at $25 a ton.

INSPECT CERTIFIED SEED WHEAT.

Farmers of the Walla Walla valley went to Pendleton a few days ago to inspect Umatilla county certified seed wheat. A. W. Kaston, county agent, who arranged the trip, says there are 13,720 acres of certified seed wheat there. In Walla Walla county there is a sufficient quantity in only one variety, Turkey Red.

SHIP SHEEP FROM FORESTS.

Sheep are being shipped from the Chelan national forest to market, the forest office at Okanogan reports. Two bands of lambs were shipped from Pateros and others will be shipped until October 15.

The ranges held out exceptionally well this year. There have been 42,000 sheep on the forest this year, with 120 per cent lambs, a slight decrease from last year.

TO INSPECT PROJECTS.

E. F. Benson of the Northern Pacific railway reports that during state fair week D. W. Davis, reclamation commissioner; F. E. Weymouth, chief engineer, and Miles Cannon, field engineer, will spend three days inspecting the Tieton and Sunnyside projects and proposed Yakima-Benton highline, for one unit of which Mr. Davis has included an appropriation in next year's budget.

PACKING APPLES AT WALLA WALLA.

Apple packing in the Baker Langdon orchard, the largest commercial orchard in the Walla Walla valley, began September 10. H. P. Moreland of Upland, Cal., will supervise packing of 300,000 boxes of apples. Moreland had charge two and three years ago. Twenty-five experienced California packers have arrived to form the nucleus of the packing crew which has been enlisted.

WALLA WALLA FRUIT CROP.

Walla Walla fruit growers expect to ship a total of 2400 cars during the present year. In 1922, a record year, 2112 cars were handled. Prunes are contributing a big portion of this total. Up to August 30 896 cars were sent out, according to a statement issued by the Walla Walla Valley Prune Growers' association. About 300 more loads are expected to conclude prune shipments from the district.

BERRY PLANTS MUST BE INSPECTED.

All berry plants shipped into the state of Washington must be accompanied by a certificate of inspection showing them to be free of cane gall or strawberry weevil, under an order recently promulgated by E. L. French, director of agriculture. The former quarantine, which was revoked, required inspection certificates only on shipments within the state. Under the new order plants from slightly infected fields may be sold if properly fumigated under the direction of an inspector.

GRAPE DEMONSTRATION AT PASCO.

The third annual grape demonstration was held September 7 on the farm of J. W. Shoemaker of Pasco and 70 grape growers attended. The methods of training and trellising grapes were discussed and demonstration of the erection of a trellis was a feature. Cooperative marketing was discussed. The instruction was carried on by County Agent Harold Simonds and W. S. Kirk, an experienced grape grower.

HAY GROWERS ORGANIZE.

Reports coming into the office of the Northwest Hay association at Yakima give encouraging accounts of 19 district meetings held in Kittitas, Yakima, Benton and Walla Walla counties, in a whirlwind campaign to sign up 75 per cent of the hay tonnage of these four counties in this cooperative organization of hay growers. Delegates were selected in a majority of the meetings for the general meeting to form the signers into a legal corporation as soon as the campaign is closed.

PRUNE GROWERS SIGN UP.

Seven hundred and fifty acres have been signed in Clarke county by the California Packing corporation, which is offering two-year cost-plus contracts to prune growers, according to I. E. Allen, manager of the prune office of the corporation at Vancouver. This constitutes more than 12 per cent of the prune acreage in Clarke county. The contracts allow an advance of 2 1-2 cents a pound on all deliveries of dried prunes to the corporation's packing plant, providing the prunes are 60s or larger.

TO DREDGE RIVER CHANNEL.

An increase in port of Vancouver expenditures from $16,500 in 1922 to $66,992 in 1924 was indicated by the budget filed with the Clarke county auditor at Vancouver. The port proposes to dredge the Columbia river channel from the mouth of the Willamette to the interstate bridge to a depth of 25 feet at low water, and will contribute $15,000 toward this next year. The federal government is expected to aid in the project. Ten thousand dollars will be spent in tearing out the ways of the old Standifer shipyard site to make way for the new industries. Ten thousand dollars in bonds issued in 1917 for the purchase of the port property in West Vancouver will be redeemed and interest payments will amount to $8787.

Three Billion Dollars!

That Is the Price of a Year's Supply of Dairy Products

There are now more than 30,000,000 dairy cattle in the United States, distributed on about 4,500,000 farms, or approximately 70 per cent of all the farms in this country. The big importance of the dairy industry in the United States is more fully grasped when the fact is considered that the consumers pay more than $3,000,000,000 a year for dairy products, or about $30 per person.

Here is an industry that looms large from every consideration—the health of the people, the very lives of the children, and the welfare of millions of our citizens engaged in the industry.

It is worth guarding; it needs constant attention and study. Our senators and representatives, the members of the state legislatures, the administration at Washington, the newspapers of the country, should give it constant and friendly consideration.

The dairy industry, moreover, must be considered in its relation to world conditions. The World war changed the dairy map. Old dairy countries, such as Holland, Sweden, France and Switzerland, are finding themselves face to face with new competitors. As one observer puts it, the southern hemisphere is engaged in a struggle with the northern hemisphere for the control of the international dairy market. Argentina, in South America, New Zealand and Australia are being supplemented in the struggle by South Africa. All these countries have great herds of cattle and small human population, and have turned to dairying for the purpose of producing for export. It is said that these countries of the southern hemisphere, through producing tremendous amounts of dairy products, already are only in the infancy of their productivity.

Some idea of the curious economic features of the international dairy situation, says a New York market report, may be gained from the fact that in 1922 South Africa, the newest dairy country, shipped 50,000 pounds of butter to Holland, for years one of the foremost butter producers and exporters of the old world, and that "the few hundred thousand pounds of butter shipped to this country by Denmark last year kept our producers of 1,780,000,000 pounds of butter constantly worrying about prices."

Eastern market reports record the arrivals of foreign butter in New York in one week of more than 2000 casks from Denmark, 200 boxes from Ireland and 200 casks from Holland. A car of Canadian butter was imported and sold so well that others are expected. The report of the purchase of 500 boxes of French butter, to be shipped from England, added a new name to the list of importing countries. The present tariff law lays an import tax of 8 cents a pound on imported butter. The foreign product is coming in and paying that tax, a fact which confirms the declarations of representatives of the dairy associations, when the tariff bill was under consideration, that 8 cents a pound was not sufficient protection.

When this industry is considered in all its aspects the conviction comes strong that cooperation is essential to its life. Cooperation through the Dairymen's League Cooperative association in New York state and adjacent territory has saved the industry there. This association has just taken the initiative in increased difference in price on carload and less than carload lots of evaporated milk. An authority on the dairy trade, writing in a New York market report, says the trade is agreed that this step should have been taken long ago for the good of the industry. What the country most needs is a decrease in the cost of distribution. The small difference in the price of carload and less than carload lots of evaporated milk has made it cheaper for the wholesalers to buy in small lots than to buy in carload lots and store. All this increased the freight and handling and warehouse costs, resulting in a higher price without the attendant profit.

The same authority reports that the evaporated milk business has long been on a basis where nobody made a profit. High costs of production made it a costly commodity to the producers and the selling price made it without profit to the wholesaler and retailer. It is predicted that this reform step by the Dairymen's League Cooperative association will be cheerfully accepted by the trade and that it will work as a fine tonic for the dairy industry.

Dairying is indeed a big and vital industry. It is estimated by the United States department of agriculture that 98,862,276,000 pounds of milk were produced in 1921 and that about 46 per cent was used for household purposes, chiefly for direct consumption as milk; 47 per cent used in the manufacture of products, a little more than 4 per cent was fed to calves and the balance of about 3 per cent was either lost, wasted or included in unspecified uses. In the manufactured products a little more than 36 per cent was used for the making of butter; nearly 4 per cent for condensed and evaporated milk; more than 3 1-2 per cent for cheese and about 3 1-3 per cent for ice cream.

WOULD AID SAN JOAQUIN FARMERS.

Congressman H. E. Barbour of California writes to W. D. Mitchell, president of the Valley bank of Fresno, that there is a likelihood that raisins, dried peaches and dried figs will be included in the schedule of farm products on which loans can be made under the national rural credits act. Hundreds of thousands of dollars of government bank funds would thereby be made available in the form of loans for San Joaquin valley farmers.

Spirit That Quickeneth

Persuasion a Spiritual Weapon to Be Used or Perverted

It is the spirit that quickeneth.—John vi:63.

Take the words courage, pluck, mettle, prowess, daring, backbone, exploit, heroic, chivalrous, dauntless, lionhearted, fearless, adventurous, valorous, doughty, unterrified—the spirit giveth light to every one of these words. No amount of mere knowledge or preparation, or prolonged work, or opportunity, or privilege, or any circumstance of birth or environment can give life to these words. Having the spirit of these words born in you, all these other things may come into play.

"The spirit of man is the candle of the Lord."

"Uphold me with thy free spirit."

"Renew a right spirit within me."

But the power of the spirit can be used to deceive as well as to enlighten.

"Beloved, believe not every spirit, but try the spirits whether they are of God; because many false prophets have gone out into the world."

Societies galore, religious and secular, are built up on the power of the spirit of man to do and to dare. Persuasion is a spiritual weapon to be used or perverted.

Hence, it is wise to beware.

"All the ways of a man are clean in his own eyes; but the Lord weigheth the spirit."

"Create in me a clean heart, O God, and renew a right spirit within me."

ON THE DEATH OF LINCOLN.

Henry Ward Beecher: Have not thousands of soldiers fallen on the field of battle by the bullets of the enemy? Is being killed in battle counted to be a dreadful mode of dying? It was as if he had died in battle. Do not all soldiers that must fall ask to depart in the hour of battle and of victory? He went in the hour of victory. There has not been a poor drummer boy in all this war that has fallen for whom the great heart of Lincoln would not have bled; there has not been one private soldier, without note or name, slain among thousands and hid in the pit among hundreds, without even the memorial of a separate burial, for whom the president would not have wept. He was a man from the common people that never forgot his kind. And now that he who might not bear the march, and the toil, and the battle with these humble citizens has been called to die by the bullet, as they were, do you not feel that there was a peculiar fitness to his nature and life that he should in death be joined with them in a final common experience to whom he had been joined in all his sympathies?

FARM BUSINESS AND MARKETS OUTLOOK

PROSPECTIVE yields and volume of sales of the principal farm products in the present crop year indicate a moderately larger net farm income than last year. The American Farm Bureau federation has issued a tentative forecast of cash returns, which compares with the estimate for the last year as follows:

	1922-1923.	1923-1924.
	(In millions of dollars.)	
Crops	5523	4725
Live stock	2256	2225
Animal products	1700	1760
Total	8479	8710

The wheat market has been showing some stability. Rye is beginning to come out of the doldrums and corn has held at a high level for two months. From present appearances the capacious maw of feeding demand this fall and winter will not be easily filled, which should justify good prices for all surplus coarse grains and hay.

Much better prices than last year promise to offset the smaller potato crop and the recent upturn in cotton has been a great deal larger than the reduction in forecasts of yield.

Beef, pork and lamb are disappearing at a tremendous rate at better prices, on the whole, than in 1922. Hogs may not bring quite as much return as last year, but in view of the wide outlets recently discovered, there is less apprehension on this score than three months ago. Wool prices show no sign of crumbling.

Butter, cheese and whole milk all are selling on a higher level than last year, with a reasonably smooth sea ahead. Eggs and poultry have kept off the bargain counter in spite of heavy production.

The general business outlook on which hinges the prospect of continued employment and of large consumption of foods and extensive use of such raw materials from the farm as cotton, wool and hides is hopeful. Financial sentiment has grown more confident in the last month, orders for goods are reaching the principal industries in larger volume, commodity prices have begun to stiffen, and fall trade promises to be well above average. Such adverse influences as the Greco-Italian imbroglio, the anthracite strike and the disaster in Japan have not caused more than a temporary chill.

Barometric readings of those conditions which usually terminate periods of urban prosperity do not indicate an approaching storm. Bank credit is not overextended, stocks of goods are not excessive and business men have not made large commitments for the distant future. The business structure appears to be fairly well braced for the time being to such strains as are brought by disparities in prices of different products, by the inequalities in income of different classes, by the impoverishment abroad by high taxes and transportation costs.

Cattle Markets Resume Advance.

Prices upon all grades of steers retreated early last week, even long-feds losing some ground and the decline in intermediate grades, which arrived in largest volume, was about 75 cents. But strength has returned and prices at Chicago are higher than a week ago, although western markets still show some loss.

Hogs Again at High Level.

Hog prices became top-heavy on the recent advance and declined sharply, but receipts have shrunk slightly and values are again near the year's high mark. The advance in the last six weeks was remarkable in view of the large volume of receipts and heavy storage stocks of hog products, so that spells of weaknes are not surprising. Spring pigs are arriving in increasing numbers at all markets. Prices may have another spurt before September is over, but readjustment to the new pig crop basis is scheduled for the next 60 days.

Upturn in Lamb Markets.

Although receipts of lambs last week were the largest in nearly a year prices advanced, reaching the $14 level at Chicago once more. Weak spells may recur in the next month, but thereafter a definite upward trend should be established. Feeders are good buyers, taking many lambs already fit to kill at prices 25 cents above packer bids, but the total movement to the country is only about the same as last year.

Wool Market Remains Dull.

The wool auction at London remains firm, heightening confidence in our markets, but the volume of business is small, as mills are not receiving orders for cloth in the volume needed to keep up the present rate of operations. Mills are gradually using up their stock of raw wool, however, the flood of imports has ceased, prices in this country are 5 to 6 cents under an importing basis and goods accumulated in distributive channels are gradually being worked off. More activity is expected in the wool market in the next 30 days. Some of the spring clip in Texas is still to be moved and the fall clip will come off soon.

Canada Has Record Wheat Crop.

In spite of unfavorable conditions in the later stages of growth of the Canadian wheat crop, estimates of yield have been more optimistic recently and the Canadian government has put on the cap sheaf by its September estimate of 471,000,000 bushels, which is 71,000,000 bushels above the record crop of last year and perilously close to the 500,000,000-bushel yield forecast, over which so much ink has been spilled.

This estimate for Canada with the September estimate of 789,000,000 bushels for the United States, a loss of 4,000,000 bushels from the August forecast, gives a total of 1,260,000,000 bushels for North America, which is only 2,000,000 bushels less than in 1922. Since the carryover in both countries is moderately larger than a year ago, the exportable surplus should be up to last year, when it reached 475,000,000 bushels, except as it may be cut down by feeding of low grades.

With the Canadian estimate 100,000,000 bushels in excess of expectancy, the wheat market outlook darkens once more. Prices seemed to have become adjusted to the situation as it existed before, but it is an open question whether the supply now in sight can be distributed at this level.

The movement of spring wheat is enlarging, so that total primary receipts are holding up well and the Canadian movement is getting under way. Part of the Canadian accumulations will be hedged in our markets, so that, whatever the ultimate course of wheat values, no rapid advance seems likely to take place.

Corn Nearing Safety Zone.

More and more of the corn crop is maturing ahead of frost, although some damage has been done in the northwestern states and there is still a rather large acreage which will not be safe before October 1.

The government's September forecast was 3,076,000,000 bushels, or practically 200,000,000 bushels above last year.

Oats prices have discounted the effect of the new crop movement. Primary receipts are holding up and the visible supply is gaining. The percentage of low grades is rather high, due to recent rains.

The range of cash grain prices for the week ending September 12 was as follows:

CHICAGO—Wheat—No. 2 hard, $1.05@1.13; No. 3, $1.03 1-2@1.10; No. 4, $1.00 3-4@1.05; No. 2 red, $1.04 3-4@1.07 1-4; No. 3, $1.03 1-4@1.05 3-4; No. 4, $1.00 1-2@1.04 1-4. Corn—No. 2 mixed, 88 1-2@90c; No. 2 yellow, 89@90 1-2c; No. 2 white, 88 1-2@90c. Oats—No. 2 white, 39@43c; No. 3, 37 1-4@40 1-2c; No. 4, 36 1-2@39 1-2c. Rye—71@74 1-2c. Barley—52@72c.

Seed and Feed.

The official estimate on the clover seed crop is 1,292,000 bushels, compared with 1,875,000 bushels harvested last year and 1,411,000 bushels in 1921. The advance of 15 to 25 per cent in prices which has already taken place has discounted much of the loss in yield.

The feed market continues fairly firm, although buying is of small volume. Wheat feeds have advanced again to a new high for the season, as mill offerings are small.

Hay Markets Strong.

Hay markets are reported firm, with prices practically unchanged to 50 cents higher. The movement from surplus sections has fallen off once more. The southern demand is active. Rains have freshened pastures, thus reducing fall hay requirements.

Egg Market Prospects Look Brighter.

Shortage of fine fresh eggs again was responsible for unchanged price levels last week and toward the close, trading continued good, many dealers predicted further upturns.

Butter and Cheese.

Butter prices scored new advances last week, as supplies of fine butter continued light, consumptive demand was good, production reports indicated that the make was only holding steady rather than showing the increase anticipated by many dealers, and foreign markets were too high to be attractive.

Trading in the cheese market last week was in small lots only, as it was impossible to interest buyers beyond filling immediate needs.

Fruits and Vegetables.

Potato prices declined last week under the increasing weight of the late crop movement, which will be relatively heavy for the next six weeks. In some sections producers are withholding shipments for a better market, as prices offered are unattractive. Idaho Rurals are

Poultry Questions Are Asked and Answered

By RALPH ERSKINE

The poultrymen of Snohomish county, in common with those elsewhere, realize that their success lies not entirely in hard work about the plant, but in a knowledge of the problems of production and marketing that confront them. Proof of this is found in the attendance at the Snohomish county poultry school, held at Everett September 3 and 4, and in the fact that every one showed a live interest in all subjects taken up. The attendance was never below 45 and reached a total of 90 during the second afternoon. The program was arranged and carried out by Arnold Z. Smith, the county agent, and every one was much interested to listen to such speakers as W. D. Buchanan, poultry specialist of the state college, and Dr. W. T. Johnson of the western Washington experiment station, who discussed many vital problems.

The greater part of the forenoon of the first day was taken up with a discussion of the accredited hatchery rules as drawn up at the Seattle meeting in June. Mr. Buchanan gave a short explanation of what the plan would mean for the poultrymen of the state. Many questions were asked and answered and many of the breeders expressed themselves as being in favor of some such plan, inasmuch as it would assure the production of a first-class grade of chicks that could be depended on.

There was some difference of opinion as to the best plan to adopt in the county, as there were some that favored the central hatchery, while others favored the hatching of chicks by a number of plants located at different points throughout the county. All were agreed, however, on the point that such a plan, if taken up, would be one of the greatest benefits that could come to the small flock owner who could not afford to produce his own hatching eggs.

Many Take Part.

The needs of the poultrymen were discussed in a few 10-minute talks by some of the leading breeders of the county in which nearly all present took part.

The value of advertising the western Washington egg was emphasized by M. T. Hokenstad of Snohomish, who pointed out the increased business that any industrial institution could realize by an extensive advertising campaign and suggested that the poultrymen take up some such a campaign through the present egg association and employ the necessary specialists to carry the work over.

The need of a first-class chick was emphasized by T. Blake of Sultan, who pointed out that if the western Washington people could produce the best eggs on the New York market and get a premium on every case shipped, there was no reason why the same people could not produce the best chick on the market. This, he said, could be accomplished by the present accredited hatchery plan. He said that it rested in the hands of the poultrymen to perfect the movement that has already been well started.

C. E. Westlund of Getchell spoke of the need of educational work among the poultrymen, either through the cooperative association or by increasing the present capacity of the extension service.

A number of others expressed their opinion that the greatest need of the egg producers was to be assured of getting dependable chicks in their own territory and they admitted that this could be accomplished by the accredited hatchery.

How to Get It.

Mr. Buchanan was given the task of telling how the people could get what they wanted and he immediately told them that such results could be accomplished by a stronger and more unified type of organization of the poultry business. This, he said, had already been started, but when it came to real possibilities in cooperative organization, the people of the west were merely taking their first steps. "Greater and better results can and will be realized if the present pace is kept up, provided the movement gets the aid of a greater percentage of the producers," he said. We have tried to work together on one line or another, but we never got anywhere until we organized into a strong cooperative association that could work for the benefit of all its members. The rest is all clear sailing and the members can accomplish almost anything they undertake to do that is within reason."

The Disease Problem.

One of the most interesting talks given during the two days' school was by Dr. W. T. Johnson of the western Washington experiment station at Puyallup. He mentioned three diseases as being most important to the mature birds—chicken pox, tuberculosis and contagious white diarrhoea.

"While there is some trouble with white diarrhoea in western Washington, there is very little tuberculosis, with the exception of cases in farm flocks where they are allowed to run at large about the farm. Chicken pox, however, is a more vital question to the western Washington commercial poultrymen," said Dr. Johnson, "but it is nothing to be alarmed over. It is easy to secure chicken pox vaccine that will relieve the trouble and keep it from spreading to the entire flock. There are a few drugs on the market that are sold to prevent chicken pox and other troubles as well, but since none of these have been tried at the experiment station, we are not recommending them.

"The symptoms of chicken pox are blisters or scars on the combs or wattles. It is best to remove such fowls from the flock as soon as they are detected, and the scabs may be treated with tincture of iodine. If not separated from the main flock, the disease will spread to healthy fowls, and the entire flock becomes affected in time."

As to contagious white diarrhoea, Dr. Johnson said that the best means of handling it was to prevent it by eliminating any birds that have it, and thus prevent its spread to the flock. This is especially true in the breeding flock, since it is then possible to secure eggs from healthy hens only, and thus secure chicks that are free from the disease. This is a disease that is spread from soil contamination. Giving the fowls clean runways will help to avoid the trouble.

"Tuberculosis is found oftener in the smaller farm flocks where the birds are allowed the range of the entire farm," he said. "There is more apt to be unsanitary conditions for such birds on the general farm. The development of tuberculosis can be avoided by use of concrete or wood floors in the henhouse, which can be covered with clean straw at all times and weeding out the infected birds. By keeping them under healthy conditions and eliminating any fowls that have a sickly appearance the disease may be greatly curtailed.

"Leg weakness in small chicks is not due to infection, as is sometimes thought," he went on, "but rather to a lack of the proper nutrition, together with a lack of sufficient exercise. By giving the birds plenty of runway and proper feeds for maximum growth there should be no trouble of this kind. The fact that this trouble is more common with early chicks than with late hatches proves that exercise is an important factor in keeping it out. Cod liver oil added to the ration has been found to be a help in preventing the disease, but it will not entirely make up for the lack of the right kind of nutrients.

At Moulting Time.

"When we consider the feed and care of a flock of hens during the moulting period we must first find out what birds we are going to feed," said Mr. Buchanan in a second address. "We must remember that out of every 1000 chicks 120, on an average, will die; 200 will be culls which will lay 120 eggs or less in a year; 380 will be medium layers, producing from 120 to 150 eggs yearly. The remaining 300 are usually good layers, producing 150 eggs and up, each. When we consider the cost of keeping hens through the winter we realize that we can only afford to carry the 300 good ones over.

"The next question that arises is what are we going to do with the remaining 580 birds. There is no question about the culls. Every one has agreed that they should go to market as soon as they can be weeded out from the flock, or as soon as they start to moult. Careful analysis has proven to us that 95 per cent of the culls will moult early, while 5 per cent will moult late. Here is where our culling system catches the 5 per cent of the late moulting culls.

"Among the medium layers there will be 35 per cent early moulters, and 65 per cent late moulters. This gives us something to go on, and we find that by feeding a good egg producing ration during the fall months we are able to get the maximum eggs from them. As soon as any one of them begins to moult we assume that her usefulness has passed and that she should go to market as soon as possible. This will mean that we must market a few hens every week, and not keep any one over that has started to moult during the early part of the season.

"Since we are after eggs only, we feel justified in pushing these medium layers

(Continued on page ten.)

Kittitas County's Successful Fair

(Continued from page three.)

of Thorp. Elmer Smith of Thorp had the senior and grand champion boar. The other entries were made by Glenn Mason and six club members.

The Jerseys.

Although the turnout was not a large one, it was a very creditable showing and the quality of the different classes was unusual for a county fair. Charles M. Talmadge, who judged the classes, said that it was a better show than he had seen anywhere for the size of the show. There were six exhibitors: Nichols and Plunket of Ellensburg, who brought out 12 head and won the senior and grand championship ribbon on Majesty's Cowslip Noble, a 5-year-old bull, with excellent quality and type. The senior and grand champion female was also in this herd. She was Brown Lad's Cowslip, a half sister to the grand champion bull. She, like her half brother, shows the characteristics of Cowslips Oxford, their sire, who was once owned by Bert Pease, a veteran Jersey breeder of the county.

Joseph Tornay of Ellensburg won the junior champion ribbon on an unnamed calf sired by Pansy's Colonel Jack. The other exhibitors were Roy Brunson, who showed a senior yearling heifer; Joe Tornay Jr., who showed two heifers; Verna Woods, with a bull calf and a mature cow, and Marie Tornay, with a senior yearling heifer.

There were three head of Guernseys owned by Fred C. Drake of Ellensburg, who showed an aged bull, an aged cow and a senior heifer calf. The heifer was made junior and grand champion, since she was so much more outstanding than the older female. The heifer was unnamed, but is sired by Chicona Lover Bold, the H. E. Angel herd bull, at Mabton.

The Holsteins were shown by two exhibitors, A. B. Goodwin and R. L. Rutter, both of Ellensburg. The latter won senior and grand champion bull with Sir Cascade Blossom Fayne, while the junior and grand champion female was a senior calf sired by the champion bull.

Two Breeds of Sheep.

Although there are few sheep in the Kittitas valley that are not either purebred or grade Hampshires, but this year there was an entry of Shropshires entered by Clarence Wipple of Ellensburg. He brought out seven head which nearly filled the classes and won all awards.

Paul Wipple entered six head of Hampshires and won the champion ram honor and was also first place in the club awards. The champion ewe was in the S. P. Wipple & Sons herd, who entered all their seven head in the open classes only. They also won first on breeder's flock. Ernest Wilson entered eight head of his Hampshires.

Prof. O. M. Nelson of Oregon Agricultural college judged the sheep classes.

Poultry Show.

The poultry show was housed in a permanent building in the live stock section of the grounds. A few changes may be made in the building later, but at present it is large enough for all comers and there were more entries than came out last year. The greater part of the show was made up of the heavy breeds, namely the White Wyandottes, the Rhode Island Reds and the Barred Plymouth Rocks. The Leghorn classes showed for both show and utility and, in fact, all judging was done on that basis.

The Cove-Damman Poultry club came out with a good display of poultry, ducks, geese and turkeys. The champion cock of the show was a yearling owned by F. W. Munz of Ellensburg, who also won champion hen and the best hen in the show. The champion cockerel was one of Roy Castor's entries and the champion pullet owned by Paul Birr of Ellensburg.

Harry Collier of Tacoma judged the poultry.

Two banquets were held during the three days of the fair. One was a breeders' banquet where C. C. Churchill, Mayor of Ellensburg, presided as toastmaster. A number of the outside breeders and live stock judges were called upon for their opinion as to throwing open the show to breeders from out of the county as well as the local people. The sentiment was unanimously in favor of such an improvement, which they said would help to enlarge the fair each year.

The club banquet on the second night was for the members of the county clubs who could attend. Howard Barns, the county club leader, acted as toastmaster and called on many of the members for an expression of their views on the year's work and Charles M. Talmadge added some interesting pointers for the young stock breeders to consider. Feeding, he said, is only half of the game, and it is equally important to look to getting the proper animal in the beginning and feeding at regular intervals. The breeder must also learn to carry with him a mental picture of a good animal so as to make comparisons when necessary.

Woman Manages 26-Acre Farm

Twenty-six acres of general farm crops and a house lot filled with gorgeous colored flowers of many kinds, all managed by a woman, is what a representative of THE FARMER found at Keyport, Kitsap county, the home of Miss M. Richardson. While cows and hogs might be called her main line, Miss Richardson also receives a portion of her income from her flowers, fruit and chickens. The many kinds of crops keep her time well divided, since she hires no help except during the haying season.

"In fact, my time is too well divided," said Miss Richardson, "and I have planned on renting the farm or working it on the share basis in order that I may put more time on the flowers. The whole farm is too much for one person, even for a man. There are so many phases of the garden game that could be developed and I think there is an excellent opportunity to raise flowers on a larger scale.

"I have some new varieties of primroses that promise to do exceptionally well and there seems to be a good demand for the roots on the general market. One of these is the 'Sunshine,' an orange-colored bloom, with a very fragrant scent. I have been getting $1 a root for all I could supply.

"The gladioli grow well here and I have some odd varieties that add to the collection. There is one from England. I have never planned on selling any of the cut flowers, since we are a little too far from the markets, and then it is better to have the flowers to show what we have for sale. People come here in the summer and order the roots and bulbs for fall delivery.

Flowers in the Shade.

In the case of most garden flowers it is better that they have some shade," continued Miss Richardson. "I have all my flower beds in the orchard and it makes about the right amount of shelter. I have found it a good plan to plant three kinds of bulbs in the same bed in separate rows. In this way the blooms will come at different times and there will be no bare spots in the garden at any time.

"I am starting a rock garden," Miss Richardson went on. "Seed plantings are becoming more popular every year and there is a strong demand for plants that will grow in such places. I have made a large collection and find that many of our native plants will thrive in such a garden. Some of the points in favor of such a garden are that cultivation is unnecessary and the weeds cause very little trouble. Rock gardens are used largely for steep terraces and mounds that can not be cultivated without excessive erosion of the soil."

Miss Richardson has also started a collection of nursery shrubs and plants which she keeps growing about the house. As the time affords she will propagate new stock from these plants and go into the game on a larger scale. There is a large bunch of Pampas grass that has become so thick that it will have to be blasted out in order to get it separated in sizes suitable for marketing.

In another garden Miss Richardson has a large number of ferns growing. Many of the plants are odd varieties that are difficult to obtain from the average florist and others come from the wilds of the Puget sound district. Ferns are a desirable plant for the house garden and also for window boxes and Miss Richardson finds a ready sale for them.

"I don't believe in putting all my eggs in one basket," remarked Miss Richardson. "I have always kept a few cows, some hogs and a pen of chickens. At one time I had over 25 cows and did most of the work myself, but it was too much with the flowers and the rest of the farm, so I had to sell off all but seven. It pays to keep a few cows to keep a cream check coming in every month, and then the skimmed milk is a valuable feed for the chickens.

"The hogs are Chester Whites. I plan to keep about five brood sows and as many feeders as can be kept with what garbage can be had from the United States torpedo station. I have had good results with this plan and have not had to buy any grain except for the brood sows. At present there are 16 feeders and I will butcher them and send them to market as soon as they are ready."

Miss Richardson started in with some Barred Plymouth Rock hens and gradually increased her flock until it numbered over 100. At this point she decided to secure some new blood and purchased stock from Minnesota and Indiana. With these additions the flock now contains some good layers. There are between 250 and 300 birds in the flock. They are allowed to run over the entire farm after the crops have been taken off, but during the summer they are kept up.

The crops raised on the farm include many kinds, such as hay, corn, vegetables, berry and fruit crops. One Royal Ann cherry tree produced nearly a ton of cherries. It was an old tree and well loaded. All the soil on the Richardson farm is lowland and very productive. It is near the salt water inlet, but high enough to miss the extreme high tides.

America's Most Startling Bargains

"Buy Fall Apparel Now" Says Sharood

SEND NO MONEY—PAY ON ARRIVAL

Don't wait another day to do your Fall buying. Here is a whole page of the most startling bargains in America. Save money by ordering everything direct from Sharood. You don't risk a penny. Everything is guaranteed. Everything is sent on approval at our risk—not yours. Send in your order today while you can have first pick of these matchless bargains.

Don't send one cent. Just letter or postcard brings anything. Merely give Name and Number of Each Article You want. Also State Size and Write Your Name and Address Plainly. Pay nothing till goods arrive—then only the amazing bargain price and postage. If not delighted with your bargain, simply return goods and your money will be cheerfully refunded.

ORDER NOW.

Popular Model Embroidered Gabardine for Stouts

$3.98

For Stout Women

Sharood heartily recommends this attractive frock of good quality cotton gabardine. It is designed along slenderizing lines for stout women. The skirt is finished with two wide loose panels attached at waist and bottom. The edges are bound in black and embroidered in contrasting color. Collar is in the new long roll shawl effect, embroidered to match panels on skirt, as are also the vestee and tabs on the bell-shaped sleeves. Dress is gathered at waistline at back and finished with tie sash. Sizes 44 to 54 bust measure. State length desired. **Order navy by No. 52-E7610; brown, No. 52E7612. Send no money. Pay $3.98 and postage on arrival. State size and length.**

Richly Embroidered All-Wool Serge

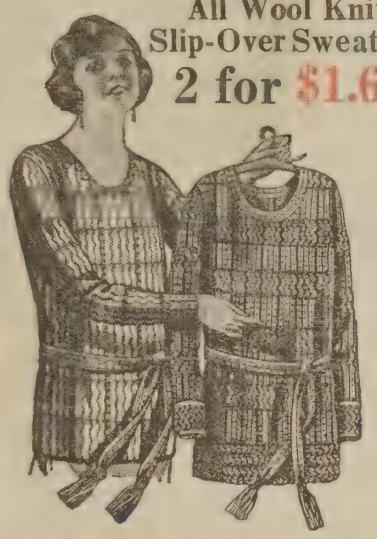
$5.98

For women and misses of refined taste, this charming dress will have a strong appeal. The material is an unusually fine quality all wool storm serge. Model has neck and sleeves bound with red silk braid. Hand embroidered in beautiful contrasting colors of pure silk floss around neck, down front and on sleeves. Metal girdle with celluloid and metal ornaments encircling waist. Deep hem and all seams reinforced and serged. Women's sizes 34 to 44 bust; misses, 32 to 38 bust. State bust measure and skirt length when ordering. Navy blue only. **Order by No. 52E7550. Send no money. Pay $5.98 and postage on arrival.**

Money back if not satisfied.

All Wool Knit Slip-Over Sweaters

2 for $1.69



Yes, two lovely, stylish slip-over sweaters actually for the price of one. A marvelous bargain for women and misses. Splendid all-wool worsted in fancy chain stitch. Separate belt finished with tassels. Very stylish and often worn in place of separate blouse. Come in blue, brown, orchid, jade or buff. Women's sizes 36 to 42 inch bust; misses, 32 to 38. State size. **Order by No. 52G8450. Send no money. Pay $1.69 and postage on arrival for 2 sweaters. Two different colors with every order. State preference.**

Popular One-Strap One-Buckle Pump, Black Patent or Brown Calf Finish

$1.98

Always Mention Size When Ordering

A leading style in all the big cities for fall wear. One-strap one-buckle pump of rich black patent or brown calf finished leather. Is well made with perforated sewed tip and medallion toe. Fancy perforation on vamp, strap and quarter. One-piece medium extension oak sole; low flapper walking heel with rubber top lift. Sizes 2½ to 8; wide widths. **Black patent No. 52A20. Brown calf finish No. 52A21. Send no money. Pay $1.98 and postage on arrival for either leather. State size.**

Men's Work Shoe

$1.98

Brown or black work shoe of durable leather. Solid leather inner soles. Heavy double soles. Green chrome outsole. Leather heel. Sizes 6 to 12. Wide widths only. **Order brown by No. 52A758. Order black by No. 52A760. Send no money. Pay $1.98 and postage on arrival.**

Child's Middy Dress Attractive Two-Tone Combination

$1.98

One of the most novel and attractive children's garments ever produced, and sure to be a big favorite for fall and winter. A charming two-piece middy dress, including snappy Balkan middy of all red flannel cotton warp with round collar and cuffs. The front, collar, cuffs and Balkan bottom are embroidered in exquisite contrasting colors. Rope girdle with tassels at waist. Skirt of navy blue serge in clustered plaited style hangs from a white muslin under-waist. Furnished in red blouse and blue skirt combination only. Sizes 7 to 14 years. **Order No. 52E8326. Send no money. Pay $1.98 and postage on arrival. Be sure to state size.**

Rich Black Satin Pump for Women

$1.98

Women's black satin dress pump, one-strap, one-button style, with fancy rosette and ornament on strap. Plain vamp with medium toe and close edge trim sole with low rubber heels. Genuine oak soles. A dressy, stylish new fall fashion that will be all the rage among the best dressed women. Sizes 2½ to 8; wide widths. **Order by No. 52A252. Send no money. Pay only $1.98 and postage on arrival. State size.**

Men's Vici, Cushion SoleShoes

$2.98

Plain or Tip Toe Models.

$2.98

An absolutely rock-bottom price on men's black comfort dress shoes. Have cushion soles and rubber heels. Sizes 6 to 12. **Order plain toe model by No. 52A618. Order blucher cut with tip toe by No. 52A617. Send no money. Pay $2.98 and postage for either style. State size.**

Women's Classy Stitchdown Oxfords

$1.98 Up

Classy stitchdown Oxford for women. Wonderfully comfortable and stylish. Uppers of brown or patent leather. Smooth leather insoles. Flexible stitched down oak outsoles. Low rubber heels. Sizes 2½ to 8. Wide widths.

Order brown by No. 52A273. Send no money. Pay only $1.98 and postage on arrival. Order patent leather by No. 52A274. Pay only $2.48 and postage on arrival.

Bulgarian Effect Gabardine Frock For Women and Misses

$2.98

An exceptionally attractive fine quality cotton gabardine dress for women and misses. Long roll collar in shawl effect, sleeves and belt piped in red. Entire front of blouse enhanced with exquisite allover embroidered design in Bulgarian effect with rich harmonious colors. Two streamers at both sides and front. Wide belt embroidered to match blouse. Sizes for women, 34 to 44 bust; for misses, 32 to 38 bust. State length desired. Colors, navy or brown. **Order navy by No. 52E7500. Brown by No. 52E7502. Send no money. Pay $2.98 and postage on arrival for either color. State size.**

Novelty Cross-Strap Model in Rich Black Patent Leather

$2.98

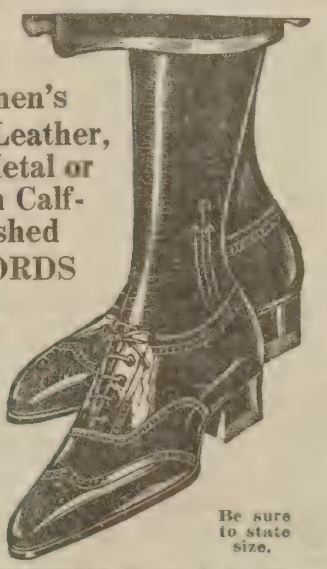
State Size

Every one will admire this early fall style cross-strap pump. The vamp and quarter are of selected black patent leather with rich black suede four-bar effect cross straps. Medium pointed dress toe has imitation perforated tip. Vamp and quarter neatly perforated. Straps fasten on each side with buttons. One-piece leather sole with Baby Louis leather heel and metal plate. Sizes 2½ to 8; wide widths. **No. 52A12. Send no money. Pay $2.98 and postage on arrival.**

Women's Patent Leather, Gun Metal or Brown Calf-Finished OXFORDS

$1.98

Choice of Three leathers



Made with imitation shield tip and medallion perforated vamp, perforated lace stay and circular foxing. Has medium rubber heel and medium pointed toe. Sizes 2½ to 8. Wide widths. **Order patent by No. 52J121. Order gunmetal by No. 52J122. Order brown by No. 52J123. Send no money. Pay $1.98 and postage on arrival.**

Be sure to state size.

Men's DRESS SHOES

$2.98

Give Size.

Men's French-toe dress shoes or oxfords, in brown mahogany calf-finished leather. Have medium toes, oak soles and rubber heels. Perforated on vamp, toe and eyelet stay. Sensational values. Sizes 6 to 11, wide widths. **Order Oxfords by No. 52A658. Order Shoe by No. 52A660. Send no money. Pay $2.98 and postage on arrival for either style. State size.**

LIVESTOCK AND DAIRY

Major Honors

Fall to Oregon and Washington

To the two northwest states of Oregon and Washington fall the major honors in the cow-testing association report for July, covering 11 western states. Oregon had the highest average of pounds of fat per cow, 38.36 pounds for 3530 cows, and by far the largest percentage of 40-pound cows, over 40 per cent. Washington had the second highest average, 33.90 pounds for 4239 cows, and the second highest percentage of 40-pounders, about 25 per cent. Moreover, a Tillamook herd, one of grade Jerseys owned by Durrer & Sons, led the entire territory for average production by herds of 15 or more cows, reporting 54.9 pounds each from 29; and a Thurston county (Washington) herd, one of Jerseys owned by L. B. Nelson of Olympia, led the entire territory for average production by herds under 15 cows, reporting 58.4 pounds each from eight. Gus Peterson of Tillamook had his herd in fifth place among large herds, and J. S. Mantle of Sequim and H. S. Allen & Co. of Duvall, both Washington dairymen, were among the first 10. Homer Mason's Tillamook Guernseys were second and W. P. Walker's Tillamook Holsteins third among small herds; and Ray Dillinger of Jerome, Idaho, J. O. Conville of Westport, Ore., and Aloys Schuler of New Plymouth, Idaho, were among the first 10 in this column.

The list of leading cows for the district included one in the Durrer herd which was third, one in the Allen herd which was fifth, and one in the Dillinger herd which was sixth, all producing 90 pounds or more of fat for the month.

Root Crop for Sheep

"There are a number of root crops that might well be grown exclusively for sheep in the Yakima valley," according to George Prior of Yakima. "Roots are one of the best feeds for lambs, especially when fed with a little grain.

"There are many farms that have small plots of ground that are best fitted for some kind of a row crop, and it seems to me that more of these, as well as fence corners might be utilized by growing roots. In that way very valuable succulent feed might be produced.

"Mangels are the best, although turnips might be grown. Carrots are too expensive to handle. Mangels may be grown successfully here and large yields may be realized. Roots are very generally grown in England for feeding to stock. I remember that my father used to haul out mangels and scatter them on the grass meadows and the ewes would scoop them out and later the sows would be turned in to finish them.

"We also grew kohl rabi there and used hurdle fences to confine the lambs to a small patch at a time. They would eat the entire plant.

"Roots would help out a great deal in lamb feeding here, for as much water is needed where roots are fed. Suitable locations for lamb feeding are not very common on account of lack of water in winter, but with roots available the water problem would not be so pressing."

Dairy Cattle Congress

Cattle, horses, poultry and industrial exhibits are to be more numerous than ever before at the 14th annual Dairy Cattle Congress and Industrial Exposition which opens in Waterloo, Iowa, September 24 and continues through the final day of the month. Word has already been received at Waterloo from as far west as Spokane, Wash.; as far south as Falfurrias, Texas; as far east as Patterson, N. J., and as far north as Ottawa, Canada, that the finest dairy cattle in those districts will be their representatives at the Waterloo show.

Grain and Hay Show

For this year at least the Northwest Grain and Hay show, which has been an annual event at Pendleton, will be transferred to Portland and will be held in connection with the Pacific International Live Stock exposition. Announcement to the effect that tentative arrangements for a lease covering the one year had been agreed to by officials of the two organizations was made here today by Fred Bennion, secretary of the Grain and Hay Show association, who will manage the show in in Portland.

Premiums aggregating $4000 will be offered, Bennion said, by the Portland Merchants' association.

VETERINARY

By DR. S. B. NELSON.

Stiff Legs—I would like to know what is the matter with my horses. They get stiff in their front legs and when they walk they act like they always want to lie down.
Douglas, Wash. A. K.

Probably your statement in the diagnosis of the trouble with your horses, "When they walk they act like they always wanted to lie down," means that they bend their knees. That is an indication of sore tendons at the back of the fetlock. What should make a group of horses sore like that, I do not know. Suppose you try trimming the toes, which will leave the heels high, and see if that will help.

Warts.—I have a cow that was fresh in May and the left hind quarter of her udder swelled and she does not give very much milk from that quarter. Another cow has her teats full of seed warts.
Bellingham, Wash. J. P. T.

Apply the following liniment to the udder after milking: Tincture of iodine, 6 ounces; soap liniment, 10 ounces. Continue applying it for some time.

For the second cow: If the seed warts on the teats have a small neck, cut them off with a dull pair of scissors. Apply tannic acid to the raw stump.

If, however, they are flat, I would suggest that you apply the following, morning and evening: You can use a small brush to apply it with: Chloral hydrate, 1 1-2 drachms; acetic acid, 1-2 drachm; salicylic acid, 1 drachm; spirits of ether, 1 drachm; collodion, 4 drachms.

Sweeney—I have a mare with a colt that was in good condition and is in fairly good condition yet. About two weeks ago I noticed her left hip sunk in. She is not lame. If this is sweeney, can anything be done for it? J. R. R.
Creston, Wash.

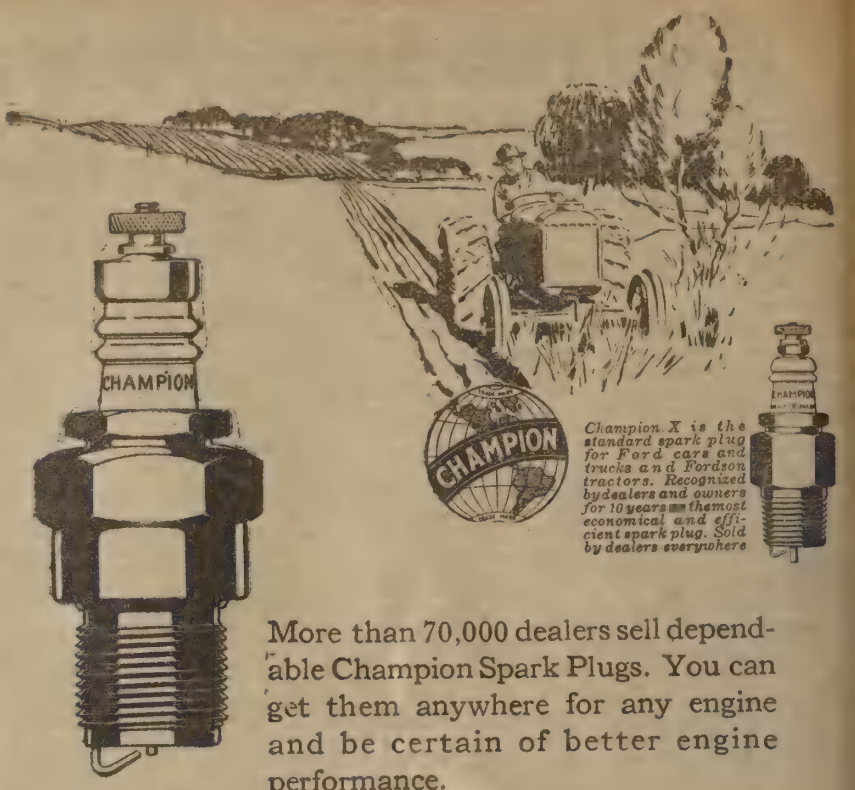
It is rather astonishing that your animal is sweenied and isn't lame. It must be that there has been some injury to the muscles of the hip. I would suggest a light blister composed of one part of red iodide of mercury, one part powdered cantharides, 10 parts of lard, one part of beeswax. Rub the preparation on the sweenied part with a little friction, and try to keep the animal in such a position that she can not rub the blister either with her mouth or up against a fence or partition. This treatment can be repeated in three weeks if necessary.

Feeding a Pup—Will you tell me how to feed a 2-months-old pup no longer with its mother? I have been feeding cow's milk, but he seems constipated. He will not eat bread. He has sore eyes which gather pus. The lids are swollen. Washing with boric acid seems to give relief for a time. M. G.
Mt. Vernon, Wash.

Add a little lime water to the milk—a teaspoonful to each meal. Feed him three times daily for the present; later feed him twice daily, and then later feed him once daily at night. That should be done when he gets to be eight or nine months old.

A pup two months old could have chicken bones to chew on at least once a week, also a beef bone for the same purpose. He could have a little raw meat once or twice a week, and if he gets exercise he should have some bread. Maybe he will eat the bread if it is put with the milk with just a little bit of salt in it.

Try dropping a few drops of a 2 per cent solution of argyrol in water into the eyes morning and evening and see if that will give you a little better results than boric acid.



More than 70,000 dealers sell dependable Champion Spark Plugs. You can get them anywhere for any engine and be certain of better engine performance.

Dependable Champions are better because of the wonderful Champion insulator of sillimanite. This core is practically immune to breakage and never loses its insulating properties.

Because 65 per cent of all spark plugs made are Champions, the price of the Champion Blue Box Line is but 75 cents and Champion X 60 cents.

At dealers everywhere. A type and size for every engine. The genuine has the Double-Ribbed core

Hard Red Spring Wheats

Twenty-Four Distinct Varieties Are Grown

SECOND ARTICLE.

The following is the second and concluding article on Hard Red Spring wheats:

Ruby.

Ruby is about five days and sometimes a week earlier than Marquis. It also can be distinguished from Marquis by the purple straw at maturity. The grain of the two varieties can scarcely be distinguished. Ruby was originated by Dr. C. E. Saunders, Dominion cerealist, at the Central experiment farm, Ottawa, Canada. It is the result of a cross between Red Fife and a hybrid wheat known as Downy Riga. It was first distributed in 1917. Ruby was grown to a slight extent in North Dakota in 1921 from seed imported from Canada. As a rule it has produced low yields and is distinctly inferior to Marquis in this respect. The agricultural department experts say that unless future trials with this variety show it to be more promising than past results have indicated, it should not be distributed further in the United States.

Kinney.

Kinney (known also as Noah Island, Odessa and Surprise) is classed as a hard spring wheat, although it differs widely from the varieties so far discussed. It is a late wheat, having square heads and rather a soft, wide kernel. The stems and leaves of this variety have a distinct bloom or white, waxy covering, such as occurs on sorghums, plums, etc., just before ripening. Kinney was introduced into the Willamette valley of Oregon from France during the late '60s or early '70s by Albert Kinney, who at that time was associated with his father in the milling business. It was distributed by Mr. Kinney to farmers in the vicinity of the mill. Kinney, as far as known, is grown only in six counties in the Willamette valley of Oregon, where it is sown in both spring and fall. It is not grown in the northern hard spring wheat region, and because of its late maturity it is not adapted there. Kinney is one of the leading varieties of wheat in the district where it is grown, but experiments have shown its yields to be less than those of several other varieties. Outside of this humidhumid section section of Oregon, Kinney is not adapted.

Huston.

Huston (known also as Bulgarian, Early Wonder, Grass, Little Red, Ninety-Day, Red spring and Swamp) differs from most other varieties mentioned in having small heads and rather soft kernels. The straws show a faint tinge of purple at maturity. The kernels show a characteristic pit or opening in the crease. Huston was obtained by a Mr. Belshaw in 1876 from the Centennial exposition, Philadelphia, where it was on exhibition as Bulgarian Red spring. It was introduced into the vicinity of Eugene, Ore. After increasing the seed the crop was given to a Mr. Huston, who grew and distributed the variety. Huston is now grown only in seven counties in western Oregon and apparently it has not been successful or not tried elsewhere. None of it is grown in the northern hard spring wheat region. This variety succeeded well on the foothill lands in the Willamette valley of Oregon and has been one of the best spring wheats for that district. It is doubtful, however, say the department specialists, whether it is equal to Marquis for this and other sections.

Bluestem Group.

The Bluestem group of hard red winter wheat are identical in appearance and very similar in yield and quality. They are greatly different from the varieties called Bluestem in eastern, southern and western parts of the United States. The kernels of these Bluestem wheats are slightly longer, have longer hairs on the tips than the Fife varieties, and have rounded rather than sharp edges. The grain is hard and red, although not quite as hard as some of the wheats included in those given above. The varieties are from three to 10 days later in maturity than Marquis and very susceptible to stem rust. These varieties originated from a wheat which is reported to have been grown in the eastern United States as a winter wheat as early as 1855. This so-called Bluestem became a leading variety in the northern spring wheat region by 1890, but much of it was replaced later by selected strains. The name Haynes Bluestem is now applied to the original Bluestem as well as to the selected strain known as Haynes Bluestem. Other names applied to the variety are Bolton Bluestem, Marvel Bluestem, Minnesota No. 169, and Velvet Bluestem. Haynes Bluestem was selected from the bulk Bluestem variety in 1883 by L. H. Haynes of Fargo, North Dakota. This wheat was first distributed about 1892 and soon became widely grown in Minnesota and the Dakotas. Haynes Bluestem under one or another of its names is grown to a considerable extent throughout the northern spring wheat region. About 1,500,000 acres of this variety were grown in 1919. The bulletin declares that if the Haynes Bluestem were entirely replaced by Marquis, the production of hard red spring wheat would be considerably increased.

Dakota Bluestem.

Dakota, or Dakota Bluestem (known also as Select Bluestem and North Dakota No. 316) is identical in appearance with Haynes Bluestem, from which it was selected about 1898 at the North Dakota agricultural experiment station. Here again, the advice is given that, under present conditions, its production should be entirely discontinued.

Another division of the hard red spring wheat includes several distinct and probably unrelated varieties. They are mostly early or mid-season in maturity. The kernels vary but in general are rather plump, heavy in weight per bushel, of dull red color and of less angular appearance than the wheats described in the beginning of this article. In texture they vary from almost soft to very hard and in size from small or short to very large or long.

Preston.

Preston (Velvet Chaff, known also as Bearded Fife, Blue Ribbon, Climax, Golden Drop, Johnson, Johnson's Early Fife, Minnesota No. 188 and Red Fife) has bearded, tapering heads about three and one-half to four inches long and midsized hard red kernels. The kernel can be distinguished from that of the wheats of the Fife and Bluestem groups by the dull red color and the rather narrow V-shaped crease. The exact origin of the spring wheat commonly called "Velvet Chaff" in this country is somewhat uncertain, although it is identical with the Preston wheat of Canada. Velvet Chaff is grown throughout almost the entire northern spring-wheat region. The sections of heaviest production are the Red River and Minnesota River valleys. It is estimated that 2,245,200 acres were grown in 1919. In most of the northern spring wheat region Preston or Velvet Chaff has given lower average yields than Marquis.

Java.

Java (Early Java, known also as Black Tea, China Tea, Early Iowa, Siberian, Swedish and Tea Leaf) is a mixture of several kinds. Java is probably one of the oldest spring varieties grown in the

(Continued on page twelve.)

GENERAL ADVERTISING.

WHITE LIGHT FROM OIL LAMP NOW

Government Tests Prove New Light Beats Electric—Sensational Invention.

A new lamp has recently been invented which burns common kerosene oil and produces a soft, white light said to be even better than electric or gas. Tests by the government and leading universities prove this new light is superior to ten ordinary oil lamps. It burns without odor, smoke or noise, is simple and economical, requires no pumping up and has been approved by the underwriters for insurance.

The inventor, W. T. Johnson, 161 Union ave., Portland, Ore., is offering to send one of these new lamps on ten days' free trial, or even give one to the first user in each locality who will help him introduce it. Write him today for particulars. Also ask him to explain his agency proposition.—Adv.

Why the Royal Cord man is the busiest tire dealer in town

ROYAL CORDS came out this year with three new advantages.

These are the three new U.S. Rubber discoveries:

Flat Band Process — ensuring the positive length, angle and strength of each cord.

Web Cord—the first successful method of impregnating cords with pure rubber by direct soaking in the latex.

Sprayed Rubber — the first absolutely pure rubber.

These discoveries have been put to the test by thousands of car owners.

They are showing a practical money's worth that no one can question—and everybody is talking about it.

So there are many new customers coming in to the Royal Cord dealer—and his old friendships are stronger than ever.

United States Tires are Good Tires

NOTE TO LIGHT CAR OWNERS—*The three U. S. Discoveries apply to Royal Cords in all sizes from 30 x 3½ inch up.*

POULTRY AND RABBITS

Chickenpox

Affected Birds Should Be Isolated

Chicken pox, tuberculosis and white diarrhea were mentioned by Dr. W. T. Johnson of the West Washington experiment station as three of the most important diseases of mature flocks. Of the three, however, chicken pox was emphasized as effecting many of the common flocks of western Washington.

"It is not as serious a disease as it might be," he said, "since it can easily be controlled by vaccination. When such treatments are applied to a flock the trouble soon clears up and there should be no serious danger from it if the flock is carefully watched. There are some drugs on the market that are claimed to have a satisfactory effect when used in a diseased flock, but the experiment station is not recommending them because we have not tried them out, and feel that they are only in the experimental stage as yet.

"The birds that have contracted chicken pox will soon have blisters and later scabs showing upon the combs or wattles. These birds can be treated by separating from the rest of the flock and the scabs treated with tincture of iodine. The other birds in the flock may take the infection from these sick birds and it is for this reason that they should be watched carefully to keep such trouble from getting a start.

"It is a mistake to kill off the hens that show up with chicken pox, since they can be successfully treated and put back with the laying flock. There are commercial vaccines on the market and at times the experiment station has attempted to put this out, but the call has been so great that we have not been able to supply the demand.

"It should be remembered, however, that the vaccine put out at the station is made for chicken pox only and is not for the prevention of other troubles as well, as is the case with some of the others that are being put out."

Poultry Questions Asked

(Continued from page six.)

for all they are worth and therefore put lights on them to work them as much as 14 hours a day. They must be kept working and not allowed to loaf at any time or there is danger of their moulting too soon. A hen will do one of three things: She will lay eggs, moult or get fat. We must, therefore, keep her laying as long as she will hold out, and then send her to market. Give her plenty of litter to keep her scratching and also supply an abundance of green feed early in the day. A light breakfast in a deep litter is best. It is also important not to crowd them in the laying house, as they will lay better if they have plenty of room.

"We must now consider the good hens, or the remaining 300, which we intend to carry through the winter, and hold for our next year's flock. Three per cent of these will moult early, according to our best experience. I prefer to put these birds with the culls, because they are almost sure to have less vitality and will therefore not be able to stand up as well as the rest of the good layers. This leaves only the birds that are known to be good producers, and will have a tendency to moult late in the season.

"It is therefore up to the poultrymen to see to it that they moult at a certain time, preferably late during the winter months. This can be done in several ways, but it is usually accomplished by changing feed. If they have been feeding on hard wheat, they can be changed onto a ration of softer wheat. Even a change from a light breakfast to a heavy breakfast will usually throw a flock into a moult. There are other ways of doing it, as most poultrymen know, but some of them are detrimental to the birds.

"After the moult has been well started, the next problem is to get the birds back onto the job again. Since they are all good layers, they will have a tendency to get back on the job before the end of the 90 days, and will lay some eggs during this time. Keep them scratching in a light fluffy litter, which will give them sufficient exercise to keep them in good health and not allow them to become lazy. This will also prevent them from becoming fat.

"It is a good plan to leave an opening at one corner of the house so they can have outside range at any time they desire during the moult. The poultrymen should not try to decide which is the best day to put them out, but give them an opportunity to go outside at any time, even if there is a heavy snow. It may be necessary to go out and bring some of them in on an extremely bad day, but this will be worth while and will even do them good if they don't stay out too long.

"An abundance of green feed should be supplied during the moult, but at least 50 per cent of their feed should be grain, and 60 per cent is even better. Keep the ration low enough in protein that they will not come back in laying too soon after starting to moult. They should have at least 90 days of partial rest for their moult, and should not come back into a heavy lay until this time is up. Good layers usually moult quicker than poor layers, and often shed as many as four wing feathers at a time, while the body feathers are discarded almost as rapidly. For this reason they need good feed to supply the rapid growth of feathers, and we must not forget that this takes almost as much nourishment as it does for the production of eggs. We should not, however, make it too easy for them, but keep them exercising enough to properly digest their grain, and not induce them to lay until ready."

Keep Pullets From Laying

In accordance with the plan to enlarge all branches of farming at the Irrigation branch experiment station at Prosser, they two have a flock of White Leghorn pullets. The birds were placed in a new house and fed in such a way as to curtail egg production until they were mature.

"But even with best of care they will often lay before reaching maturity," said R. B. Bean, superintendent of the station. "For something more than 10 days there have been from 15 to 20 eggs gathered daily. The pullets are from a hatch which came off the latter part of February. The feeds which are designed to promote laying had been withheld from the pullets, but they are bound to start laying in spite of it.

"The straw loft is a valuable feature of the laying house," continued Mr. Bean. "It keeps the house cooler than is the case with houses built in the customary manner. The floor of the loft is made up of narrow boards spaced three inches apart.

On this is spread four inches of straw, which is just enough to allow some circulation of air and act as a medium of insulation. By this means the temperature of the house is kept down several degrees lower than in a house constructed in the usual manner."

Mr. Bean already has a small dairy herd and expects to get enough milk to furnish cream to the families who live at the station farm and what skimmed milk is left over will be more than enough to feed to the laying hens. The combination is about the right kind for the ordinary irrigated wheat or fruit farm, and is being carried on to show what can be done in the way of keeping live stock in this section of the state.

A HOME-MADE COOLER.

ORCHARD AND GARDEN

Pruning Berries

By C. L. VINCENT,
Department of Horticulture, State College of Washington.

In previous articles Prof. Vincent has discussed the pruning of raspberries and blackberries.

CURRANTS AND GOOSEBERRIES.

Of all the small fruits, the currant and the gooseberry are the ones most likely to have their pruning neglected. These fruits must be treated in an entirely different manner from that described for the brambles. The fruit bearing habits for the currant and that of the gooseberry are essentially the same, and are therefore pruned practically in the same manner. Hence they will be treated together.

In the case of the currant, the fruit is borne on three types of wood. First, new canes or suckers, which are of light gray color, having long nodes, come up near the crown of the plant and bear the finest fruit at the base of this wood the following year. Next, a large portion of the fruit is borne on short spurs. These are found on two types of wood; the very old canes, from four to five years and older, which is indicated by the rough, black back, produces a small amount of fruit on spurs; however, the larger portion of the fruit is borne from short spurs on two and three-year-old wood, which are strong, vigorous side shoots, that grew the previous season from older wood. Currant canes have passed their best fruiting after the third crop.

The gooseberry fruits the same as above, only the plant tends to send up fewer suckers, the bush branches more freely, hence is denser, and the old canes bear well for a longer length of time.

Systematic annual pruning from time of planting should be followed. If the root system of the currant and gooseberry is extensive it may be reduced somewhat at planting time to make the planting operation easier, but is not necessary. All weak canes should be removed and the strong ones cut back to two or three buds. After the first year of growth the chief item in pruning is to remove canes which have passed their best fruiting and to replace them with new canes. Whether this is done in the fall or spring makes very little difference. It is important to keep in mind the fact that both these fruits start growth very early in the spring and all pruning should be over by the time growth starts.

In commercial patches it is a good plan to remove a certain number of old canes each year and leave a like number of new canes to replace them. It is customary to leave from eight to 10 canes to a bush and remove all the rest. J. G. Moore of the University of Wisconsin has worked out the following interesting and practical plan for pruning these fruits. He says a three-year pruning plan, leaving six or nine canes to a plant, can be operated as follows: "At the beginning of the second season leave six strong canes. At the beginning of the third season remove two of the canes from the previous season and leave five strong new canes. At the beginning of the fourth season, remove one two-year cane, two one-year canes and leave three new canes. Thereafter the three oldest canes, those in their fourth year, should be removed and three new canes left to take their place. This will give a plant composed of three one-year, three two-year and three three-year old canes." If the canes left are too tall they should be cut back from 1-4 to 1-3 of their new growth. Also in removing the extra canes, take out close to the crown all small, weak and low growing canes. The fruit on the low growing canes becomes dirty by rains and is therefore unsalable. Dense, upright, growing plants can be opened up some by removing the new canes at the center.

Apples, Pears and Peaches

"I have found that extra fancy pears stand up better in long shipments when packed in half boxes," explained Peter Erickson of Vashon, King county, who has seven acres of Anjou and Comice pears on his farm near town. "If the fruit is packed so as to make a neat looking box and handled carefully so that there is no bruising, there is a better chance that the shipment bring a good price on the London markets.

"This, of course, does not apply to the second class fruit, as that is all sold here on the home markets and I always use the full-sized boxes, which weigh around 50 pounds. The only reason that I have attempted to ship to the London market is because I can supply a quantity of fruit that is all of a uniform quality and they have brought fair returns so far."

Mr. Erickson explained that he would have a still larger crop of pears this year, since the orchard is now 10 years old and will have a greater crop than last year. In fact, the yield is nearly doubled each year and the only thing that could bring down the production would be a failure of the fruit to make the right size.

"Peaches also do well here on my place," continued Mr. Erickson, "and I lay it to the fact that the orchard is on a ridge where there is very little danger from frosts or heavy fogs. I have never failed to get a crop of peaches and even when other orchards have failed, my trees have had a good crop on them.

"I plan to have the earliest varieties, as they will bring better prices on the local markets. The ones that do best are the Greensboro, the Wixon and the Dewey. The first two always come on when the prices are good, but the latter will often come when the market is filled with peaches, either from outside or from other growers in this district.

"The later varieties, such as the Carmons and the Maimie Ross are excellent peaches, but they come too late to catch the early prices and they are therefore not a paying variety here. The Belle of Georgia is another good peach for this climate and is a good producer, but it comes at a time when it has to compete with the Elbertas from eastern Washington and it is for that reason a hard one to sell."

Mr. Erickson told of the possibilities of competing with the peaches from other sections of the state, and explained how the growers here can put their peaches on the market in a ripe condition and they will hold a better flavor for canning than those that are shipped here after being packed partly green. The reputation, however, has much to do with the selling of the fruit that is now sold for canning purposes and that would have to be overcome.

As for apples to be grown in this part of the state, Mr. Erickson recommended the Winter Banana as being a good yielder and also an apple that will sell well on the markets. They are often hard to get colored right, but with the sunshine that there is on Vashon island, there has been little difficulty in getting red cheeked apples. The two trees that are growing on this place have yielded better crops than have some of the Gravensteins, which are said to be shy bearers.

In addition to pears and peaches, Mr. Erickson has one acre of blackcap raspberries which has just been set out this season. He felt that there was a good demand for the fruit and that it would justify a trial of this size. It was necessary for him to send to one of the nurseries in the middle west in order to get plants.

Hard Pan in Orchard

By O. M. MORRIS.

Is hard pan from 12 to 18 inches below the surface an absolute bar to orchard? Is it a bar to berries? How old should orchard be before seeding to clover for cover crop? Can you tell me where I can obtain seeds of maple, catalpa, elm, oak or similar trees so I can raise my own trees? A. M. F.

Hard pan 12 to 18 inches below the surface of the soil is not an absolute bar to an orchard growth. It is a great handicap, however. If this hard pan is in a thin stratum of earth, subsoiling or blasting and immediately filling the land with a crop like alfalfa, clover, or vetch will obliterate it. If, however, the hard pan is one or two feet thick, it will be a very difficult task to overcome it and to grow a successful orchard on the soil. The same is true in regard to berries.

If you have water for irrigation or an annual rainfall of 30 inches well distributed through the summer, you can grow a clover cover in your orchard and plant it as soon as the orchard is planted, but leave cultivated strips of land along each tree row. If you do not have an abundant rainfall or water for irrigation, it will be necessary for you to use some form of cover crop that can be planted in late summer or early fall and be plowed under in early spring.

Apples Cost Less

According to estimates prepared by several competent authorities, the average cost of producing a box of apples in the Wenatchee district will be a little less than $1.30 per box for the present season, compared with $1.35 last year. This includes all possible expenses, such as labor, supervision, depreciation of plant, taxes, supplies, materials, etc.

Labor, supplies and materials are all higher than last, but the crop will average 25 per cent more per acre, which cuts the total cost per box, according to such authorities as Earl Barnhill of the American Fruit Growers, F. C. Nielson, district horticulturist; O. B. Shay, orchardist, and others who keep in touch with the situation. Boxes cost 5 cents, or 25 per cent more, spray materials 50 per cent more, and paper about the same.

Paints and also Disinfects Dries White

CARBOLA

The Disinfecting White Paint

Best for Dairy and Poultry!

Carbola is a white paint and powerful disinfectant combined in powder form. It has been used for years by more than 100,000 dairy and poultry farmers and by agricultural colleges and experiment stations. We have a big file of letters from farmers and storekeepers praising it.

So Easy to Use — Won't Peel or Flake

Simply stir the powder in a pail of water and it is ready for brush or sprayer—no waiting or straining. *Does not clog sprayer. Won't peel or flake.* The powerful disinfectant does not evaporate but keeps its strength on the walls. Carbola will not spoil even in water and may be kept standing in pail to be used as wanted. One pound covers about 100 square feet.

Carbola is neither poisonous nor caustic—harmless to the smallest chick or stock that licks a painted surface. It gives walls and ceilings a smooth, white finish, increases the light, improves the appearance, and helps make buildings clean, sweet-smelling and free from mites and contagious disease germs. There is nothing better than Carbola for dairies, poultry houses, cellars, dog kennels, rabbit hutches, garages, tree trunks, etc. Give it a trail—you will never regret it.

AS A LOUSE POWDER for use on cattle, poultry, horses, hogs, dogs, etc., the dry powder will be found most satisfactory. The dry powder is applied like any other louse powder, and is very effective—a first-class louse powder at 10c a pound.

Your hardware, feed, seed, poultry supply or drug dealer has Carbola or can get it. If not, order direct—prompt shipment by parcel post or express.

Hog Raisers' Prospects

By GILBERT GUSLER

HOG PRODUCTION A GOOD BUSINESS.

While the prospect for the hog grower is not very rosy for the next year, the condition is a temporary one because of the overdoing which follows undue prosperity in the business. But the business is still a good one. Always there are low cost producers who can weather such periods of low prices as the present without much loss. Barring severe economic changes which would affect other branches of agriculture and industry as well, hog production will get back on a profit-making basis again and if the usual cycle is followed, a mild hog shortage may develop in about two years. At any rate, the movement in the northwest for a brood sow on every farm to produce at least the pork and bacon needed for home use and some for market is one that should be carried out. Just how deeply to go into the hog business, however, may be a matter of question.

In broad outlines the present hog market situation involves record production and record domestic consumption, large exports, a low ratio between prices of corn and hogs, and hog growers about to cut production. At the moment, the market is going through the season when supply invariably is the lightest of the year, but when hog meats and lard stored earlier in the season partly fill the gap in current receipts. Prices have had a welcome upturn to the highest point since the end of last October.

Somebody is producing too many hogs. Such was the conclusion of the committee of economists called by Secretary Wallace of the department of agriculture to report on the agricultural outlook. Their statement of the case was that "Neither the corn situation, the prospective European demand, nor the domestic industrial outlook warrants the maintenance of the very heavy hog production of the last year."

Convert Corn Into Pork.

The present excess of hogs goes straight back to the so-called corn surplus which started with the crop of 1920 and shows how, in the long run, extremely low feed prices fail to be of much advantage to the live stock producer. In the last dozen years the average farm price of 100 pounds of live hogs has been about equal to the average farm price of 11 bushels of corn. Late in 1920 this ratio changed so that corn could be sold for considerably more in the form of pork than it would bring at the elevator. As the relationship continued, producers began to breed more sows. By the time the early increase reached the marketing stage demand for pork had expanded enough to absorb the supply at higher prices. Corn was still depressed, however, and the corn-hog price ratio rose to around 18 bushels toward the end of 1921 and early 1922. After that time the ratio began to go against the hog producer and by the summer of 1923 only eight bushels of corn were required to equal the farm price of 100 pounds of hog.

Producers, speaking of them in the mass, do not live up to the saying that "it is the first of all things to see events in their beginnings and to perceive tendencies beforehand." They continued to expand production after the handwriting appeared on the wall. About 1 per cent more pigs were raised in the six months ended June 1, 1923, than in the corresponding period a year previous and on that date the number of sows bred or intended to be bred for fall litters was 28.3 per cent more than farrowed last fall.

Supply and Demand.

The accompanying chart shows the chief elements in the hog market situation by calendar years since 1907, when the federal government first began to inspect the slaughter of meats in packing houses whose products entered interstate commerce. Pork slaughtered under federal inspection is practically equivalent to the commercial supply. Domestic consumption and exports represent the demand side of the market.

In 1922 more hog product was slaughtered under federal inspection than ever before. For the first six months of 1923 the output was 27 per cent greater than in the same period in 1922. The same proportionate gain is unlikely during the last half of the year, but it is reasonable to expect that for 1923, as a whole, the poundage of inspected hog products will be about 20 per cent greater than last year. This is a remarkable gain to take place from one year to the next, especially since last year itself was a record breaker.

During the hog year, which in trade circles is counted as starting on November 1, domestic consumption and exports together must practically equal production. A look at the chart will show that domestic consumption of federally inspected meats and lard has been hanging up new records each year, beginning with 1920. In the first six months of 1923 the American public consumed 24 per cent more hog product than in the same period of 1922. For the year as a whole an increase of not far from 20 per cent is probable.

Since federally-inspected meats are consumed primarily in the cities and towns, the present era of urban prosperity has made it possible to market this enormous increase in the supply of pork without as large a decline in prices as would otherwise have taken place. Whatever the attitude of the city consumer may be toward long hours and high production in his own field, when it comes to consuming he is a wonder. Employment and wage conditions have made it possible for all the porkchop eaters to gratify their tastes.

The cotton belt provides a market for some of the federally-inspected hog products and the prevailing high level of cotton prices has broadened that outlet measurably. At the same time, two short cotton crops in succession have reduced the supply of cottonseed oil for the manufacture of lard substitutes.

Exports of hog products and lard, as shown on the chart, are much less uniform from year to year than domestic consumption. Outside of war periods, they represent the surplus of hog production over domestic demand at current prices. From 1920 to 1922 exports were about 50 per cent above the pre-war level. In the first six months of 1923 they were 43.6 per cent larger than in the same period of 1922. They have tapered off since, but the total for the calendar year will probably exceed 1,800,000,000 pounds, which is 80 per cent above the pre-war level.

What of the Future?

Looking ahead from this point we are justified in expecting that the number of hogs reaching the market in the next 12 months will be larger than in the last 12. The corn belt alone, which furnishes most of the commercial supply of hogs, raised nearly 6 per cent more spring pigs this year than last, according to the government's findings. The western states, as a group, reported an increase of 18 per cent, but the east and the cotton belt reported a smaller pig crop. Moreover, every state in the Union reported an intention to breed a larger number of sows for fall litters than farrowed in the fall of 1922. For the corn belt states the increase was 25.5 per cent. Again the western states led the field with an increase of 51 per cent.

These intentions were expressed on June 1. Prices since that date may have caused many farmers to change their minds. An epidemic of cholera might play havoc with both spring and fall pig crops. As things now stand, however, we had best count upon at least a moderate increase in numbers. Then there are the extra brood sows which must come on the market when the country starts to prune down production.

While the corn crop is larger than last year, there is bound to be a smaller carryover. The crops of sorghum grains, of barley and oats also are larger and there is a lot of low grade wheat which will be fed. But, taking the increases in hogs and dairy and beef cattle production into consideration, it is hard to escape the conclusion that feed costs will be higher than last year and that the corn-hog ratio will continue unfavorable well into 1924. Hog prices may remain about high enough to pay cost of production for the corn, however, even though they may not pay the full market price for it in all cases.

With higher feed costs, the tendency will be to sell at lighter weights. This is already noticeable. The decrease in weight may offset most of the increase in numbers during the coming year so that the actual supply of pork may show but little gain.

Eventually, as this unfavorable feeding ratio continues, some one will breed fewer hogs. The in-and-outer, who is always a factor in such a situation, will get out, those whose production costs are high will take to their storm cellars and the regulars who have been raising more pigs than usual will raise fewer for a while and sell more corn.

On the demand side, the most important

(Continued on page sixteen.)

Hard Red Spring Wheat

(Continued from page nine.)

United States. Siberian (a variety identical with Java) was reported grown as early as 1837. Java is grown in Illinois, Iowa, Nebraska, New York and Wisconsin.

Kota.

Kota is resistant to the forms of black stem rust that predominate in the northern spring wheat region. It is, however, susceptible to the less damaging orange leaf rust. The Kota has a slightly weaker straw and is more easily lodged than Preston, and the kernels are longer, harder and more angular. It is fairly successful under conditions of severe drought. The early experiments indicate, however, that it is best adapted to eastern and southern North Dakota.

Converse.

Converse (Red Russian) differs from Preston in being taller and earlier and in having longer beaks and somewhat softer kernels, which are more angular than those of Preston. Converse is now grown to a small extent in western Nebraska and eastern Wyoming.

Champlain.

Champlain (known also as Pringle's Champlain or Pringle's Champion) has short, wide, semi-hard, red kernels which are distinct in having a collar or rim around the border of the tuft of hairs, or brush, at the upper end of the grain. The lower leaves of Champlain are also distinct in being quite hairy. It is now grown chiefly under irrigation in Yellowstone county, Mont., and Park county, Wyo. In these localities, however, it is of less importance than Marquis.

Dixon.

Dixon (known also as Smooth Humpback and Humpback II.) is taller and later and has larger heads and kernels than Preston. The kernels are softer, have a longer brush and have a shape commonly described as "Humpbacked." This wheat is grown in Wisconsin to a limited extent under the name of Dixon, but a variety previously known as Smooth Humpback, or Humpback II., which is practically identical with Dixon and has been given that name, is considerably grown in Minnesota and Nebraska. The prices received for this wheat on the market usually are much less than for other hard red spring wheats.

Fretes.

Fretes differs from Preston in having larger heads and larger pale-red, rather soft kernels. Fretes was introduced into the United States from Algeria in 1901 by the United States department of agriculture. This variety was distributed in California and, as far as known, is now grown in the United States only in Los Angeles county, Cal.

Chul.

Chul (known also as Aulieata, Idaho Hard and Yantagbay) is distinct from other varieties already discussed in having very open heads and very large and very hard kernels. Chul was introduced into the United States in 1902 from Russian Turkestan by the United States department of agriculture. It is grown there on the steppes without irrigation and is both fall and spring sown. Chul was distributed in the dry sections of California, and the variety is now grown to a slight extent in northern California and in one county in Nevada.

The last section of hard red spring wheat described in the bulletin are mid-early in ripening, maturing about the same time as or somewhat earlier than Preston. Ladoga (known also as Spring Turkey and Bastard) is mostly of the type above mentioned. It was introduced into Canada about 1888 from Russia, and it is grown on both dry and irrigated lands in Colorado, Kansas, Montana, Nebraska and Wyoming. It is not an important variety in any of these states.

Other Hard Red Wheats.

Among other hard red spring wheats is Prelude (Wisconsin Wonder) which is an extremely early variety, maturing from seven to 10 days earlier than Marquis and has short stems, heads and kernels. Prelude is quite well adapted to the northern wheat sections of Canada, but in the United States it is too early to produce maximum yields. In a few dry seasons in the Great Plains section of Colorado and Nebraska, Prelude has outyielded all other hard red spring wheat varieties.

Humpback (known also as Bearded Bluestem and World Beater) has bearded, velvety, white-chaffed heads like Prelude, but the heads are long, wide and open and the plant is late in maturing. Humpback is grown sparingly in Illinois, Minnesota, Nebraska, North Dakota and Wisconsin. It is not grown as extensively now as it was a few years ago.

CHAPTER XII.

A Change of Scene.

For a time John could do nothing but hang on like grim death. He was half unconscious; the noise was so great, the dust so thick, and the motion so altogether terrifying that he was nearly stupefied. After a while, however, he noticed that the dreadful racket did not increase, that the clicking of the wheels over the rail joints had become regular, and that all the sounds had a sort of humming rhythm. His nerves quieted down somewhat, and he realized that he was still alive. His grasp on the braking rods overhead relaxed slightly, and he began to look around him—as much as the dust would allow. The train was moving at good speed. The ties below seemed first to rush at the boy threateningly, and then in a twinkling disappeared behind; the telegraph poles along the track had the same menacing attitude and seemed bent on his destruction; objects further off went by more leisurely. It looked as if the whole earth, and everything on it, was trying to run away from the standing train.

John soon found that it made him dizzy to watch the earth slip away from under him, so he turned his eyes to his surroundings. The wheels moved so swiftly that they would have seemed to be standing still were it not for the side motion, alternately checked by the flanges; a spot of mud on the rapidly turning axle looked like a white ring. Though this mode of traveling was dangerous, dirty and unpleasant in many ways, John decided, in the recollection of his fatigue the day before, it was at least better than walking.

In half an hour the wheels thudded heavily over a switch joint, the speed of the train slackened, and the cylinder of the air brake under the center of the car groaned a warning. John remembered his instructions and bent low to avoid the big iron lever. He watched it swing slowly toward him—nearer, nearer; the rod attached to it tightened until its vibrations sung in his ear. The train slowed up and then stopped with a jolt. "Phew! that was close," he murmured to himself. He did not dare to get out of his cramped position for fear he would be run over. His eyes, nose and mouth were filled with dust, his back ached from his stooping posture, and the smell of grease and foul air escaping from the released brake was overpowering.

"Come out, kid, it's all right." It was Jimmy who spoke. John crawled out, glad of a change. A short stop was made at the station, during which the boy and the tramp lay in hiding in a ditch.

The engine tooted, and they rushed up the embankment, but before either man or boy could reach his perch the train had begun to move. John managed by following Jimmy's directions to scramble under and onto his brake-beam seat, but by the time he was safely stowed away the car was going at a good speed. The boy feared for his friend's safety. Jimmy, however, seemed entirely unconcerned; he ran alongside and caught one of the side rods that run under every freight car and look like the truss of a bridge; putting his foot on the end of the brake beam, he swung himself under and was soon sitting in state opposite John, but half a car's length from him. This was in reality a very difficult feat, though it seems simple. If, in jumping from the ground to the bar, his foot should slip, it might easily get caught in the revolving wheels, or it would be easy for him to lose his hold when swinging under—sure death would follow in either case. John only breathed comfortably when he saw his companion seated in comparative safety on the other braking gear.

Before Helena was reached several such stops were made and John learned to swing himself under to his perilous perch, when the car was in motion, with comparative ease.

It was a long and most tiresome trip for the boy. Although he got accustomed to this mode of traveling before long, the dirt and smells, the constrained position, and the necessity for caution and concealment were all very disagreeable to him. He was overjoyed when he heard one brakeman call to another: "Well, Dick, you'll see your old woman in three hours now."

The train came to a halt before entering the railroad yards of Helena, and Jimmy (who seemed to consider it his duty to look after John) was alongside in a minute. "We'll leave here, kid," he said. "There's p'leecemen in Helena, so I hear, and they nab a man climbing from under a car."

A collection of wooden houses huddled round the station and "yard" was all they saw at first, and John at least was disappointed, for he had heard much of the magnificence of the place. He learned soon that this was but the extreme suburb and that the town itself was some two miles away.

Jimmy was for separating there and then, each to forage for food on his own hook, but John, mindful of his many kindnesses, insisted that they should share the meal which he procured. The supply of ham and eggs and steak that they put away testified not so much to the excellence of the fare as to the keenness of their appetities.

This important business finished, they inquired about the town itself and learned that it was reached by a trolley car. Here was a brand new experience right away. John had heard of electric cars, but had never seen one, and he thought it a wonderful machine; but even more wonderful was the fact that for a ride of two miles a fare of only 5 cents was charged. He wished that he had a hundred eyes and almost as many ears, so that he might take in all the strange

"Whatcher laughin' at?"

sights that greeted him at every turn. Jimmy, with transcontinental experience, explained many things in language interlarded with strange hobo slang. When the yellow trolley car finally reached the town, the boy opened his eyes in wonder—here was the real city.

The companions walked along the busy street, which to John's amazement was paved with stone blocks, the sidewalks being covered with bricks and flags. As he saw the crowds of people he thought there must be some sort of a celebration going on. In front of a saloon a number of men were gathered, and among them Jimmy recognized some friends. John, however, was not content to stand and listen to long discussions as to the best routes to travel, the most likely places where "hand-outs" might be had, and all the rest of the talk that tramps indulge in; so he started off on his own hook on a tour of discovery. "Don't get lost, kid," Jimmy shouted, as the boy went off.

All his life he had been accustomed to almost unlimited space, to nearly perfect quiet, except the noise of the elements, the voices of wild things and of the few human beings. All at once he was thrown into the midst of a bustling western city, packed solid with business buildings and dwellings, the surface of the earth shod with iron and stone, the very sky stained with smoke, and the air filled with the roar of traffic, the whistle of locomotives, the clang of the electric car bells, and the shouts of street hucksters. He was almost stupified with wonder. Then natural boyish curiosity took possession of him, and he began to notice things separately and in detail. He walked along with eyes, ears and mouth wide open; his head turning constantly as some strange object caught his gaze. The frequent big "saloon" sign did not surprise him, nor did the "Licensed Gambling House" placard cause him to wonder; he knew them of yore, they were all a matter of course to a western boy. But when he came to a building six or seven stories high he stopped short in the human tide, like a spile in a rushing stream, and stood with mouth agape in amazement. The plate glass windows and the gay display behind them, the brilliant signs and elaborate decorations delighted him.

He was walking along slowly, when he caught sight of the most wonderful "outfit" he had ever seen and stood still in his tracks to take it in. It was a closed carriage with a fine big pair of horses whose trappings were decorated in bright silver. His fresh young eyes took these details in at once, but what caused him to stare was the big man on the box. Perfectly motionless, a stony stare on his smoothly shaven face, John wondered if he was made of wood. His whip, held at just the proper angle in heavy tan gloves, white trousers painfully tight, high top boots and green coat shining with brass buttons, the whole getup topped by a big, shining silk hat. For several minutes he watched him, but not a sign of life did he betray. Then a woman, richly dressed, came out of a near-by store and entered the carriage, saying as she did so, "Drive home, James." The dummy made a motion with his hand toward his hat, flicked the whip over the horses' flanks, and the carriage moved off.

John's awesome gaze gave way to a laugh: "Why, he isn't an English lord," he said to himself, "he's only a teamster," and he laughed again.

A boy with a package stopped to look at him. "Whatcher laughin' at?" said he.

"Didn't you see that outfit?" said the other, between chuckles.

Mean the kerrige?" John nodded. "That's Fleischman's rig. Never seen one before?"

"I've seen 'em in pictures, but I never thought they were true," and John laughed again. "I suppose people do go down to dinner at 6 o'clock as I've read they do," he said at last, a puzzle that had long baffled him clearing away.

"Sure. Whatjer think they did, go up to dinner?" returned the other boy scornfully.

"Why, I didn't see how they could go down 'less they ate in a cellar," said John in explanation. "Who ever heard of people eating dinner at night, anyway?"

From this talk and the big white felt hat that he wore, the boy with the parcel gathered that the other was a stranger to the town and town ways. He felt quite superior and determined to make the most of it. "Come on down the street with me," he said, and John followed, elbowing his way among the people as he saw the other boy do. They went along together, Charley Braton (John soon learned his name) pointing out the principal buildings, grandiloquently. Charley, who was an errand boy in a dry goods store, reached his destination and invited his new-found friend to come up, so both stepped into the hallway and then through an iron doorway into a sort of cage, where several other people were already standing. John wondered what it was all about, and was just framing a question when a man slammed the gate and grasped a wire rope that ran through floor and ceiling of the cage. Of a sudden the floor began to rise, not smoothly, but with a jerk that drove the boy's heels into the floor. John's breath caught and he clutched Charley's arm. "Seven," called out the latter, and the car stopped with a jar.

"Elevator?" inquired John.

"Yep. 'Fraid?" questioned the other with a grin.

"Nah. Little bit surprised, though; never rode on one before."

"Lots of people get scared, though," said Charley, and began a long account of how an old ranchman and Indian fighter lost his nerve completely during his first elevator ride, and finally pulled his pistol on the elevator man to make him "stop the thing."

Charley's errand done, they entered the elevator again, which descended so suddenly that John felt as if the bottom had dropped out of his stomach. Both stairs and elevators were new to our country boy, and he concluded that he did not care for either, but he was far too proud to show any trepidation before his new acquaintance.

The boys separated, Charley returning to the store and John to the group of tramps at the saloon. It was not an attractive circle round the beer keg that the boy joined, and even he realized that they were more dirty and shiftless than any men he had known. But one at least of them had been kind to him, and he was grateful.

"Well, kid, wha'd'ye see?" shouted Jimmy as he drew near.

John told the story with gusto of all the wonders he had seen, and especially his view of the "carriage teamster."

"That's nothin'," said one man. "You see them on every corner in N'York." Immediately there arose an animated discussion as to the possessions of this or that millionaire, and there was not one of the tramps who did not know some one in the household of a plutocrat. The talk grew apace, and each narrator put forth all his available knowledge of the traits and habits of millionaires. All referred familiarly to individuals of seven figure fame as "Tom" or "Joe" or "George."

John and Jimmy meanwhile withdrew unnoticed, and the latter evidently had some definite destination in view, for he started off at a brisk pace along the street, commanding the boy to come on. John did so without question, and soon they reached an office building, which Jimmy entered. They finally stopped before a door bearing the sign "Dr. Hamilton," and at this the tramp knocked. A boy opened the door and ushered in the two rough-looking specimens. "Doctor in?" asked Jimmy, hat in hand. The doctor, a mild old gentleman, approached, and John's protector spoke up: "Doctor, beg yer pardin for comin' in, but this here kid has a pretty bad hand," and he held up the boy's swollen member. "There ain't nobody to look after it and it needs a good washin' at least."

"Let me see it," and the doctor unwound the dirty rags, handling the wounded hand ever so tenderly. It was treatment to which the boy was entirely unaccustomed, and he did not know just what to make of it. Jimmy warned the physician that neither had any money, but nevertheless he proceeded to attend to the sore hand, washing it first, then dressing it and bandaging the whole in clean, white linen. John was ordered to come next day. And so, with a kindly smile on his benevolent face, he bade them good day.

The grateful patient tried hard to thank the doctor and harder to thank Jimmy, but he did not succeed very well with either.

"Now, kid, you've got to sleep in a bed till that hand heals up," said the latter, when John tried to voice his gratitude. "I've got a stable full of hay that I'm goin' to sleep in; but you hunt up a lodgin' house and save your money all you can."

John followed the advice at once and found a place where he could sleep in a bed for 25 cents a night.

A week passed, Jimmy had taken to the road again, and the boy was left alone for the first time in a great town. He had been lonely before, but it was as nothing compared to the feeling that now possessed him. To be surrounded with people, all of whom were strangers, seemed to him more depressing than to be absolutely alone with rugged nature.

By this time John's hand had nearly healed, but his money had about given out, and he was looking for work. It wasn't hard for a man in those booming days to find work, but the boy was in the awkward stage of growth when he was too small for a man's work and too big for a boy's—though he had a full-grown appetite and clothes to pay for.

He hunted diligently for a job; day after day he tramped the streets in search of one; he looked into thousands of faces for

(Continued on page Seventeen.)

Bits of Fun for Everyone

Already Done.

The blushing bride elect was rehearsing the ceremony that was about to take place.

"I shall expect you to give me away, dad," she said to her fond parent.

The latter looked up nervously from his paper. "I'm afraid," he murmured, "I've done it already. I told Herbert this morning that you had a disposition like your mother's!"—Exchange.

Ouch!

Demure maiden (lately returned from college): "——and father, Terry, has lots of money, a big car and a fine old southern family behind him."

Forceful father: "Well, I hope he's nice to boot."—Awgwan.

The Night Message.

It was evening and several visitors were chatting in the parlor when a patter of little feet was heard at the head of the stairs. Mrs. Smith begged her friends to listen.

"Hush, a moment, please," she said, "the children are going to deliver their night message to mother. It always gives me a feeling of reverence to hear them. They are so much nearer their God than we are, and they speak the love that is in their little hearts never so fully as when the dark has come. Listen!"

There was a moment of tense silence Then—

"Mamma," came the message in a shrill whisper. "Willie didn't wash his feet."—Anon.

Horrors!

An Irishman coming out of ether in the ward after an operation exclaimed audibly:

"Thank God that's over!"

"Don't be too sure," said the man in the next bed. "They left a sponge in me and had to cut me open again." And the patient on the other side said: "Why, they had to open me, too, to find one of their instuments."

Just then the surgeon who had operated on the Irishman stuck his head in the door and yelled, "Has anybody seen my hat?"

Pat fainted.—Exchange.

Oh You, Bertie!

Mrs. Youngbride (just back from honeymoon)—Poor Bertie was so embarrassed when he went to the hotel, what do you suppose he said to the clerk? He said, "I'd like a room with a wife for myself and bath."—Selected.

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

Little by little, sure and slow.
We are shaping our future of bliss or woe
As the present passes away.
Our feet are climbing the stairway bright,
Or gliding downward in the night,
Little by little, and day by day.—Selected.

Experience Letters

Dear Mrs. Barland: I am sending a bit of a message to the girl who said she had made such a mess of her high school days. I would say to her, don't worry over the past which you can't help now.

It is no worse for a girl to go wrong than a boy. Men who have lived a wild, bad life want good girls for wives and the wife and sometimes the children have to pay the price of that wild life. I know, because I married such a man.

We all thought him good, but I am childless today because of the sins of that father. I saw my babies suffer and die because I didn't know enough to marry a good man.

Young and old can go wrong anywhere, but the manner of dress at the present time at parties and dances, with the extreme of style in short sleeves and short dresses, both skirts and waists, helps girls on the downward way.

Parents are to blame, too, and have much to answer for in the indifferent way they have of allowing young girls to go about. Susie goes to Mary's house to spend the night—so she tells her mother—they meet some boys with a car on the street corner and all go out for what they term a "good time" at some place where they spend most of the night, a place where they have no business to be at all. The parents of any of them pay no attention and do not make inquiry into the way they have spent the night. Perhaps a friend or neighbor knows all about the matter, but dares not tell the parents because they will not believe it and the only result will be enmity between them.

I have heard parents say, "I can trust my children anywhere," but if they were to see the sort of "good times" those same children indulge in it would be a great eye opener to them I am sure. The parents should begin early to go to places of entertainment with their children; they should also provide entertainment for them, as young people like noise and excitement and so do I, though I am looking my 40th birthday in the face.

Children are brought into the world without being consulted and parents have a duty to perform in their behalf that should have first place in their attention. Children have the right to a healthy body and a well-balanced mind. They should be taught early to care for their bodies that their minds may be properly developed and they should be taught to use their will power and warned regarding matters pertaining to sex.

MRS. P. M., Cal.

Family Circle Girls

Girls, you needn't go to all sorts of places just because a boy asks you and you needn't listen to rough talk or to vulgar stories or songs. Just tell them right out that you don't want to hear anything of the kind and they will stop at once. If a boy should continue, just leave him at once. Many times it is as much the fault of the girls as the boys when they do these unbecoming things. I have a brother and there are always a lot of boys around here who come to see him and I know quite a good deal about boys.

Girls, don't talk nonsense to the boys when they come to your house, but encourage them to talk of neighborhood news and things of general interest. This will take the place of foolish talk.

Now I will tell you what I do. There are five children in our family, four girls and a boy. I am the oldest and the baby is 2 years old. My brother is 16 and the others are 13 and 5 years old.

Daddy and brother Ed are away putting up hay and we get up at 4 o'clock and milk 30 cows. Mamma and I milk 11 each and my sister milks eight. Then we separate the milk and feed 22 calves, milk and grain and water both cows and calves and feed seven pigs.

By the time this is done it is 8 or 9 o'clock and we eat breakfast and by the time everything is washed and the house cleaned up it is 12 or 1 o'clock. At 4 oclock we have to start at the chores again and get to bed at 10 or 12 o'clock. We have a large garden to care for and i don't have much time after all is done. I love to go to Sunday school and always go when I can get through in time.

I am in the eighth grade, as I have not been where I could go to school until these last few years.

If you would like to know what this "preacher" looks like I will say that I am 5 feet 10 inches tall, weigh 145 pounds and have brown hair and brown eyes. I am as black as I can be with tan, as I go without a hat so much. I don't use powder and other beauty fixings and, though I like to look neat, I don't lose any sleep over my complexion.

I am not writing this for print, Mrs. Barland, but that you may know that there are girls who care about their behavior and have self-respect. R. R. P.

Washington.

(I want to say that this girl's letter in every way compares very well with those of the many girls who write who have finished high school.—Editor.)

Dear Mrs. Barland: I've just finished reading the Family Circle in the last issue of THE FARMER, and after reading L. B.'s letter I felt that I must write. I admire the "few girls who are too proud to join her gang." Gang seems to be the most fitting name that could be applied to such a group.

No doubt the boys of today have as much responsibility in becoming the men of the future as the girls do in becoming the women of tomorrow. Does that in any way lessen the responsibility of the girls? If the boys choose to weaken themselves physically and morally, that is all the more reason why the girls should stand pat for everything right.

I am sure that the boys of L. B.'s "gang" do not respect her and the others of the group as much as they do those who hold aloof from them.

I don't smoke at all and dance but very little and have never been to a public dance, but have attended several class parties in school. I can't and shall never learn to dance the modern dances. I think they are most disgraceful and there isn't the least thing artistic or graceful about them. To see a couple going through all sorts of physical contortions (and mental, too, most likely) is silly and vulgar.

I am a member of the church, a Sunday school superintendent, president of the Epworth league and I sing in the choir. Because I do all these things doesn't mean that I am a "goody-goody" kind of girl, I am not; no one loves a good time better than I do, and I believe no one has any better time, but I have learned by bitter experience that it pays to be particular about choosing the sort of times that are called "good times." I think L. B. will soon be sorry for the way she is taking to find pleasure.

I have bobbed hair and powder a little, but use no rouge, lipstick or eyebrow pencil. I know when I am well off.

Lonesome Peggy, as far as boys are concerned, my experience has been quite similar to yours, but like you I have seen my mistakes and have tried and am still trying to rectify them. M. C. G., Wash.

Family Circle Boys

Dear Mrs. Barland: I have just finished reading the letters and take a special interest in the one signed "A Willing Helper," as he mentions the subject of whether a girl should go with more than one boy at a time and says he doesn't believe in it.

I don't see any reason why they shouldn't unless they are serious. I see no reason why girls and boys, of the age most of them are who write to the Circle, can not be good friends and just good pals and have good times together without feeling that a certain boy or girl should give all his attention to one.

I have always found the girl who is the jolliest, friendliest, the best educated and the easiest to get acquainted with to be the most decent, and the stiff kind, who won't speak without an introduction to be the most unmoral.

A Willing Helper speaks of girls who think it an insult for a boy to light a cigarette without offering her one; why not insist upon the boy being a gentleman and not smoking when in company with a girl? If a boy objects to a girl smoking in his presence why should it be worse for the boy to smoke in the presence of the girl? I neither smoke, chew nor use intoxicating liquor. EDDIE.

Washington.

Dear Mrs. Barland: I don't often have anything to say on a subject unless I am interested or am asked and know what I am talking about.

Some time ago you asked that the subjest of dancing and kissing be dropped and that the young people tell something about what they want to be or do.

I have given that subject serious thought for a long time, as I suppose most young men are apt to do. When I had to quit high school after completing my second year I determined to become a mechanic. After three years of waiting and working on the farm with my father I got enough money ahead and permission to go to southern California to a large auto and tractor school and there I completed the course and worked at the trade for a short time. But I got a longing to be back on the farm, so in the spring of '21 I came back.

I never knew how much I would miss the country until after I left it, but now I would rather farm than be foreman in any garage in a city, because I can get more satisfaction in raising a crop of grain or hay or a flock of chickens than I can in overhauling a dozen limousines, and satisfaction is what a man wants, according to my way of thinking.

The only real use money has is to secure satisfaction and enjoyment and if you can get these with a little money what is the use in doing work that you do not like just to get more money.

I don't mean to say that there is no satisfaction in getting money, but that I would rather work at something and enjoy myself and make a little money at it rather than do something that to me is drudgery and make twice that much money.

At present I have a hay and grain ranch rented next to the ranch my parents are on. At harvest time we help each other and in that way we each get more done than we can by depending upon hired help. I am looking forward to owning about 80 acres in a good dairy country and keeping enough cows, pigs and hens to eat all I raise and I think in another year I shall be able to make a payment down on such a piece of land. I am particularly interested in that kind of farming and gardening.

I would like to hear from both boys and girls who are interested in this kind of work. I am 23 years old, so I have lots of time to get what I am after, which is not very much, so far as money is concerned.

Idaho. R. R.

Just Folks

You remember by trying to forget.

Intimacy is not necessarily cooperation.

Daring gives blood to courage.

Perfection of detail makes a machine, and also makes a machine of a man.

You can keep your eyes on your feet or you can be a habitual star gazer—neither occupation will get you far.

Change is life.

Make contrivance your servant; not your master.

Easy opportunities do not amount to much.

There is more adventure in authority than in freedom. Authority has the means at hand for prosecuting adventure, while freedom is generally confined to talking about and initiating adventure.

High Points in News of the Week

Among the most important news of the last week is the report from foreign sources that officials of Germany are coming to a realization that their program of "passive resistance" to the French occupation of the Ruhr district must cease if any progress is to be made toward the settlement of controversy between the two countries. While German officials have let it be known in an unofficial way that they are contemplating an early ending of the passive resistance, France is taking the report with a grain of salt, refusing to commit herself as to terms which she might grant in return for such capitulation.

It is reported that the prospective termination of the German program has been the result of efforts on the part of Great Britain following the failure of that country's attempt to induce France to give up her program of occupation. It is generally acknowledged that an indefinite continuation of the occupation of the Ruhr district, with the idleness in that district brought about by the cessation of industrial activities on the part of the German people, would result in nothing but a chaotic collapse which would leave Germany even more incapable of paying her war reparations. Since the occupation took place last January there has been no evidence of any weakening on the part of France either as to her determination or as to her ability to make the occupation effective in bringing Germany to time. Thus the present apparent capitulation of Germany has increased hope throughout the world that the controversy may be ended and that Europe and the world at large will sooner or later be on a practical reconstruction basis.

Former Chancellor Cuno of Germany, who recently resigned the position, is a visitor in the United States. He declares that his visit is strictly a personal affair with him and that he is not here on any political or business mission.

* * *

Six destroyers of the Pacific fleet of the United States navy went ashore on a rocky point of southern California last week and were beaten to pieces on the rocks. The accident occurred during a heavy fog and storm, but as yet the responsibility for the catastrophe has not been placed. Mistaken orders are believed to be responsible.

* * *

D. W. Davis, former governor of Idaho and now United States commissioner of reclamation, is making a tour of inspection of reclamation projects in the Pacific northwest. His object is not only to inspect projects, but to discuss problems with those interested in irrigation in these states. He is accompanied by other members of the reclamation staff.

As a result of the uprising of the military element in Spain in protest against the way in which the recent disturbance in Morocco was handled, the Spanish cabinet under King Alphonso has resigned. The military authorities are reported to have taken over control of Spanish affairs, but are understood to be favorable toward the king.

* * *

General John J. Pershing celebrated his 63d birthday anniversary on September 13. One year from that date, at the age of 64 years, he will be automatically retired as an officer in the American army.

* * *

Reports from Japan indicate that about 112,000 persons lost their lives in the recent earthquake, fire and flood catastrophe and that 120,000 additional are unaccounted for at the present time. It is estimated that more than 1,000,000 persons have left the stricken area for safety.

Japanese financiers have estimated that it will take about $5,000,000,000 to reconstruct the devastated area. It is reported that considerably more than 100,000 houses and buildings have been almost totally destroyed.

Over $6,000,000 has been subscribed in the United States for the use of the Red Cross in extending relief to the Japanese.

* * *

It is reported that a complete agreement has been entered into by which the Italian army is to evacuate the Greek island of Corfu, which it occupied as a means of enforcing its ultimatum upon Greece three weeks ago. Thus it is believed that the Italian-Greek controversy has been eliminated as a possible source of another war in Europe.

* * *

During the 41 months since the prohibition enforcement law was enacted more than 90,000 cases have been tried in federal court and 72,489 convictions recorded. Fines aggregating over $12,460,000 have been inflicted and jail sentences totaling more than 3000 years passed upon violators of prohibition laws. These facts were contained in a report made by Attorney General Daugherty to President Coolidge last week.

* * *

The United States exported in the month of August $313,000,000 worth of goods and imported $275,000,000 worth. For the eight months of the year ending with August, exports totalled $2,561,000,000, as against $2,650,000,000 imports.

* * *

Six hundred buildings were destroyed and damage of $10,000,000 in the conflagration which wiped out 35 entire blocks in Berkeley, Cal., Monday. It is estimated 2400 persons lost their homes. No lives are known to be lost, but 10 injured were taken to the hospital, suffering from minor injuries.

* * *

Widely scattered areas in northern, central and southwestern California were swept by forest, brush and grass fires Monday. Seventy square miles have been burned over in the Santa Ynez muntain range in Santa Barbara county.

Farm Business and Markets Outlook

(Continued from page five.)

quoted at $2.10 to $2.25 per 100-pound sack in the Chicago market, with round whites at $1.90 to $2.25.

The carlot movement of apples has practically doubled in the last two weeks and in addition rather large supplies of home-grown stock reached consuming markets. Prices last week were steady to firm, however. Fall varieties are quoted at 75 cents to $1.25 per bushel in the Chicago market.

Middlewestern peaches were quoted slightly lower last week. Carlot shipments were heavy, although slightly smaller than in the preceding week. Colorado Elbertas are quoted at $1.25 to $1.35 per bushel f. o. b. shipping points.

Carlot shipments of onions have increased in the last two weeks, but prices of midwestern varieties have advanced sharply. Washington yellows are quoted at $2.75 to $3 per 100 pounds sacked at Chicago.

The Hog Raisers Prospects

(Continued from page twelve.)

question is whether business depression is likely to occur before the adjustment of hog production to smaller volume is complete. Opinions of supposedly competent authorities are strangely divided as to when such a depression will occur, but relatively high purchasing power is likely to prevail in the cities well into 1924, at least. On the other hand, domestic consumption has probably about reached its upper limit except as it is stimulated by low prices at retail.

With low prices prevailing, Europe will take a lot of pork and lard, but if prices should rise to a point that would be substantially profitable to the grower the volume of exports undoubtedly would decline.

Foreign buying power remains extremely low and Germany, our chief lard customer, is in a sorry plight, with over 1,000,000 paper marks required to buy a pound of lard in our markets, to say nothing of the transportation and distributing cost. In short, we are able to supply with pork about 20,000,000 more people than are in the United States, but that number of good customers is not to be found abroad.

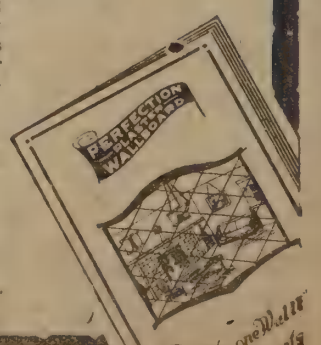
The short range view of prices is dominated by seasonal conditions of supply. Receipts always are lightest from the middle of August to the end of September and prices usually reach the year's high point at that time. Furthermore, this is the season when the demand for lard and cured meats picks up and packers are credited with being willing to see an advance in hog prices in order to help the sale of the products stored away earlier in the year.

Spring pigs usually begin to troop to market early in October when prices can be expected to drop down to a lower level. Judging from the market's recent performance, that level should not be a great deal lower than last year for a number of months, at least.

Get a Sample and Make This Test!

You will find that "Perfection" Plaster Wallboard is really **FIREPROOF**, and further tests will prove that it is also thoroughly **WATERPROOF**. After thoroughly soaking in water you will find that it will not expand, shrink, warp or even weaken. Then test the bond between the waterproof paper and the plaster by breaking the sample.

"Perfection" is the only wallboard that will stand these tests. These and other points of superiority make it the ideal modern material for walls and ceilings. THIS BOOKLET TELLS THE WHOLE STORY. Tells you how to apply "Perfection" and suggests its many uses. Ask for it at your dealers, or write to the manufacturers,



WESTERN WALLBOARD COMPANY

Cattle Ranch to College

(Continued from page fourteen.)

one he knew. He asked continually for work, and at last, after a particularly trying day, heard of a restaurant where a dishwasher was wanted. He went there at once, but was told that the boss would not be there till evening; later he called again and was told that it was still too early. The restaurant was set back of a saloon, which also bore the legend, "Licensed Gambling House." Instead of going away to return again, John determined to wait. He loitered around the barroom, sick at heart. It was not a pleasant place to wait in; it had no attractions for the boy, accustomed as he was to open-air life. Several tables were scattered about, and at these sat the gamblers, their faces stony and expressionless, perfectly calm, no matter how luck turned the result of long and severe discipline. It seemed as if "the boss" would never come, and John was about to give up when he chanced to look at a table in a far corner and saw, he thought, a familiar face. He was all alertness in an instant, and went over to make sure. Yes, it was Tom Malloy, John's instructor in "the noble art of self-defense." How glad he was to see him! Yet he must not interrupt, for Tom was playing cards for a considerable stake. He must wait and watch his chance to speak. Tom won steadily, and soon the boy became so absorbed in the game that he forgot all about the dishwashing; a friend was involved, so he "took sides," at once. One by one Malloy's opponents dropped out, remarking that it was "Malloy's night," till he alone remained at the table. Raking the chips into his hat he went over to the bar to turn them into the money they represented; John followed, and when the currency was being counted out he approached:

"Hello, Tom," he said.

"Why, hello, kid," answered the man carelessly.

"Don't you know me?" said John, rather hurt at this reception. "I'm John Worth; you worked for my father down in Dakota."

"The deuce you say! You little John Worth? Not so little, either," said Tom in a breath. "Where'dyer come from! What you doin' round a gamblin' house! It's no place for you."

John remembered his mission and explained.

"Job? Well, I'm just the man to get you one," said Tom cordially. He went back to the restaurant door and called a waiter to him. "Tell Albert I want to see him," he ordered. Albert, the restaurant keeper, soon appeared. "I hear you want a man," Malloy began. "Here's a boy who's as good as any man and an old friend of mine; if you've got a good job, give it to him."

Malloy was a leading character among the gamblers of the town; he won freely and spent freely, and was, therefore, to be propitiated. Albert graciously admitted that he had a job and that John might have it; he even went so far as to say that "sure he would make a place for a friend of Mr. Malloy's." So it was arranged that the boy was to begin work the next day.

The two passed out together, and Tom noticed the condition of the boys' clothes; they were dusty, torn in many places, and generally disreputable looking.

"Those all the clothes you have?"

John nodded.

"Well, I'll see if I can't get you fixed up tomorrow."

True to his word, John's friend in need took him to a clothing store and saw to it that he was supplied with a complete outfit.

John was fagged out as he had never been before in all his life; he looked at himself in the glass, feeling awkward and clumsy and wishing his face wasn't so big and red under the small derby hat. He couldn't get used to that hat, so he slyly rolled up his big, old felt one and tucked it under his arm when the left the store. Before Malloy parted from him he made him promise that he would call on him if he had any trouble or did not get along with Albert.

John began work at once. He yanked off his new coat, rolled up his shirt sleeves and started in washing dishes as if his life depended on it. It was a way he had when anything had to be accomplished.

For several months the boy stuck to his job, working steadily and well. The town, or at least the meaner part of it, became very familiar to him. Schools, churches, concerts and society events abounded, but they might have been in another planet so far as John was concerned. The saloon, the "Licensed Gambling House," the cheap theater and the back streets were his haunts. The rough teamsters, miners and gamblers were his associates. Tom Malloy was his hero; the man's generosity and kindly spirit won the boy's heart, but the former kept a strict watch over him for all that, and it is doubtful if John could have got into very bad habits if he had desired. The boy soon learned to know all the celebrities of the underworld in which he lived: Peter Aston, or Porker Pete, "handy with his gun"; Charley, or Snoozer, Johnson, also known as "Gain," who played a "close, hard game"; Tom Malloy, with the widespread reputation of being a man "hard to lick."

The class John associated with was a restless lot, seldom staying long in one place, and soon the same spirit infected him. He longed for the open air and open country; the interminable walls of the city oppressed him. It was with great interest, therefore, that he listened to a chance acquaintance who told of a new job on railroad construction he had secured. John asked several questions and learned that many men were needed, and that there might be a chance for him.

"Where's the contractor?" he asked suddenly, his mind made up. "I'm goin' to ask him for a job."

"I met him half an hour ago at the 'Bucket of Blood,'" answered his new friend. "I'll go along with you; perhaps we'll find him there."

They soon reached the saloon with the sanguinary name, and luckily found the contractor. John stated his errand and stood while the man looked him over. "Perhaps you might work in the cookhouse," he said at length. "You're too light to drive a scraper."

"Yes, I could do that, but I don't want to. I want out-of-door work. Have you got a horse-wrangler yet?"

As luck would have it, the job John wanted was not given out, and, after telling of his experience, he was appointed night horse-wrangler.

To get a saddle and riding outfit was the next thing necessary, and this Tom Mallory lent him from the store of such things he had won at cards.

John found that to part from the man who had befriended him in his need was the only really trying thing in connection with leaving Helena. Squalid as were most of his associations with the place, he was really sorry to go away from Tom Malloy. The thought of being once more in the saddle, however, delighted him, and it was with a preponderance of joy rather than sorrow, therefore, that he clambered early one morning into the rough wagon that was to convey his party to the scene of operations and saw the city disappear in the distance.

Soon he would be astride of a horse, out in the open. No walls to encompass him, no roofs to shut out the sky what a glorious and inspiring thought it was!

Teacher—Willie, define puncture. Willie—A puncture is a hole in a tire, usually found a great distance from a garage or a repair shop. Herman Lehmkule, who lives in Island county, Wash., sends in the above joke. Herman had a good time on the Fourth of July. His home town won in the relay race, but lost in the ball game. He lives half a mile from the school he attends and walks to and from school with his brother, Fred Wheeler, and Fred's sister. (You are a Corner graduate when you are 12 years old, Herman. We shall be glad to receive your story.)

Annie Anderson's pet dog ate her pet rabbit, but she still has a kitten named Frolic and a hen with six chickens. Annie says it was hot this summer in Okanogan county. Lois Henderson is her friend. What key is the hardest key to turn? A don-key.

Edna Garrison, who used to live in Idaho, is now living in Washington. She is in the seventh grade at school this fall and enjoys her school work very much. She hasn't any pets.

Esther Boos, Adams county, Wash., says her baby brother, who is 8 months old, has four teeth and is creeping. Baby's name is Calvin Roscoe. Esther is learning to cook. She has made three jars of dill pickles. She sews, too, and has made two towels. She will be in the sixth grade when school commences.

Birthday Greetings

THURSDAY, September 20—Keith Jones, 11 years old; Eldora Lenhart, 8; Theodore Schaefer, 10; Freeda Dittmar, 10.

FRIDAY, September 21—Milda Holmes, 9 years old.

SATURDAY, September 22—Kay Leander.

SUNDAY, September 23—Raymond Lerbeck, 11 years old; Greta Martzen, 10; Myrtle Myers, 11.

MONDAY, September 24—Elizabeth Flechlin, 11 years old; Nadine L. Hutchens, 11; Alice Pauline, 11; Ellen Wagner, 10.

TUESDAY, September 25—William Goetzenberger, 11 years old.

WEDNESDAY, September 26—Ruth Campbell, 11 years old; Louis Chabre, 11; Florence Frye, 11; Irene Small, 9; Sadie Wirkkala, 9.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Ellen Nelson, Magdalene Lindh, Don Burbank, Alice Herndon, Esther Strunk, Julia Emma Rainbolt, Alma Tarter, Mildred Hedlund, Mildred Watson, Inez Watson, Edna Amend, Bertha Eagle, Helen Larson, Lucy Krebs, Delbert L. Rucker, Patricia M. Stuhr, Edith Johnson.

BEDTIME STORIES

By THORNTON W. BURGESS.

PETER WISHES HE COULD HELP.

Peter Rabbit couldn't sit still. He was so uneasy that little Mrs. Peter, who was little Miss Fuzzytail before she became Mrs. Peter, quite lost patience.

"Goodness gracious! What ever is the matter with you, Peter?" she demanded.

"Nothing," replied Peter.

"Then why don't you sit still?" She looked at Peter straight in the eyes until he felt that he just had to say something.

"I'd like to know what he's done for us," declared Mrs. Peter.

"I—I——" he stammered. Then abruptly he asked a question himself. "Say, Fuzzy, what can we do for Farmer Brown's boy?"

Mrs. Peter stared at Peter. "Why should we do anything for him?" she asked.

"Because he has done so much for us," replied Peter.

"I'd like to know what he's done for us?" declared Mrs. Peter.

"Why, lots of things," replied Peter.

"Don't you remember the nice cabbage leaves he left for us when food was scarce last winter? He doesn't hunt or try to trap us any more, nor let any one else. All the birds, at least a lot of them (Peter was trying to be strictly truthful) are up in the old orchard and Farmer Brown's berry patch and garden this very minute helping Farmer Brown's boy and—and—I want to help, too."

"What are they doing?" asked Mrs. Peter, looking interested.

"Catching all the bugs and worms that eat the leaves of the trees and spoil the fruit and the things that grow in the garden. I wish I liked bugs, but I don't. Bah!" Peter made a wry face and Mrs. Peter laughed.

"I'm glad you don't," said she. "Ugh! It makes me crawl all over just to think of eating those wriggly, crawly things! But I guess it's a good thing that some people like them or they would eat up all the nice, tender, green things we like so well."

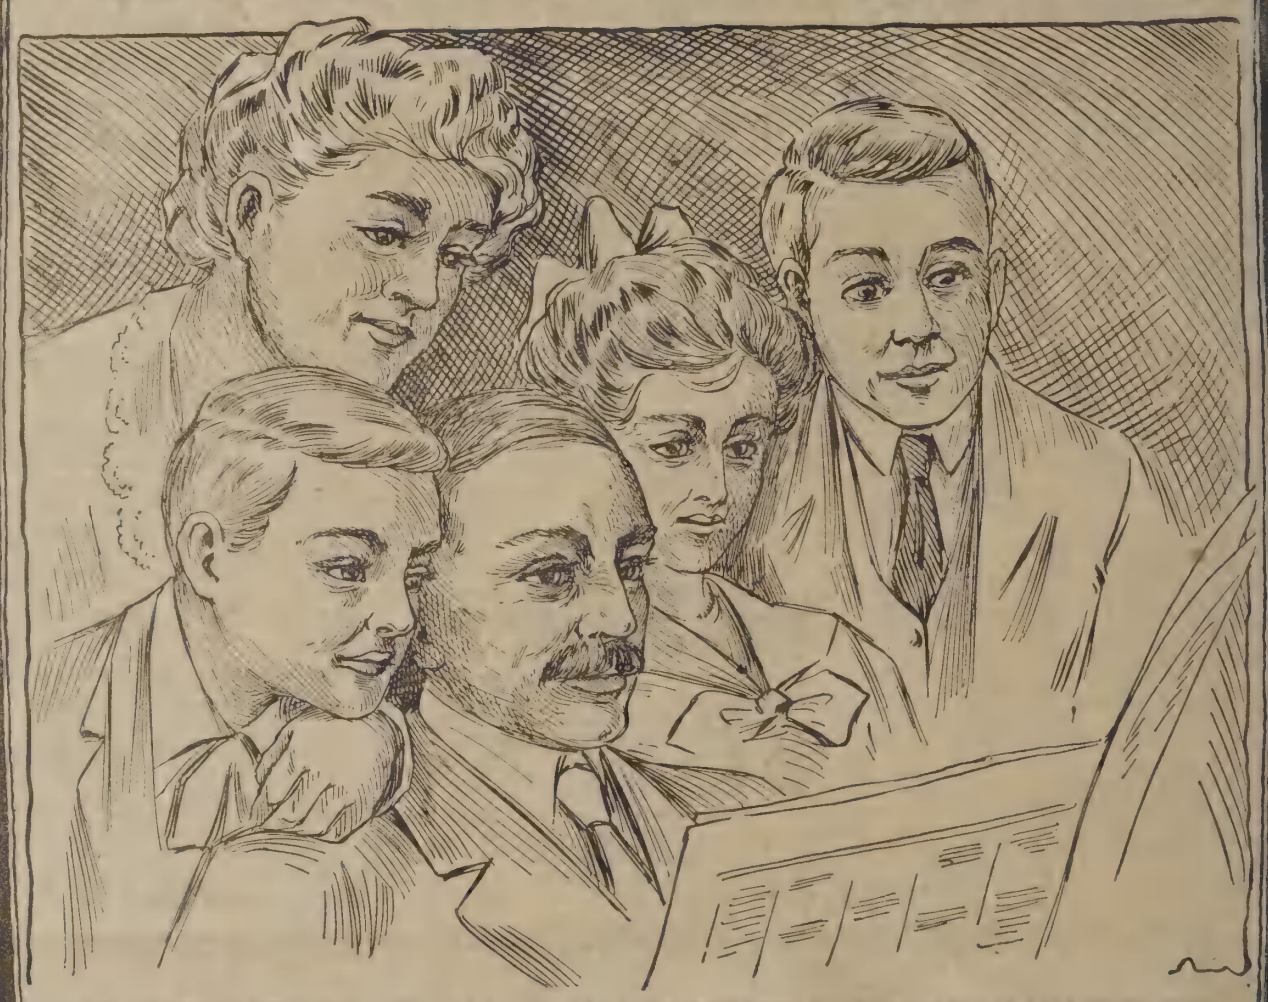
"Yes," replied Peter. 'I guess if it wasn't for the birds there wouldn't be any green things at all and without any green things we couldn't live. Why——" Peter paused and stared very hard out over the green meadows for a new and very surprising thought had popped into his head. "Why, I do believe, Fuzzytail, that the birds are doing something for us every day, and we just haven't known it! I never have supposed that the birds had anything to do with us. Of course, I've always liked to see them flying around and to hear them sing, but if you had asked me before this I would have said that we could get along very well without them. But now it has just come over me that without them we soon wouldn't be able to live at all unless we ate bugs ourselves. Ugh!" Peter shuddered and made another wry face so that Mrs. Peter laughed right out.

"This is a funny old world," continued Peter, "and I learn something every day. Just listen to the racket going on over in the old orchard! We can hear them way over here. They're having a great time, and they're doing it for Farmer Brown's boy. I wish I could do something for him." Peter's face clouded.

Just then he noticed a dark speck up in the air over toward the green forest. He knew what it was. It was Redtail the hawk. A sudden thought popped into his head. Those workers in the old orchard might be so busy that they would forget to watch out, and so Redtail might catch one of them.

"Goodby!" shouted Peter, and before Mrs. Peter could open her mouth to ask where he was going he was off for the old orchard, lipperty-lipperty-lip, as fast as he could go.—(Copyright.)

ENTIRE FAMILY ENJOYS THE WASHINGTON FARMER



The Washington Farmer is welcomed by the wives and daughters, the young men and boys on the farm just as it is by the farmer himself.

It keeps the entire circle of readers informed about the farm life of our own state, acquaints them with outstanding personalities, and keeps them posted on the problems and events the world over. The interests of the boys and girls are given plenty of space. The "family circle" with its constant interchange of experiences, ideas, opinions and methods makes a strong appeal to the housewife. The stories, illustrations and special features appeal to all.

It follows that the expenditure of $1 for a five-year subscription is an investment in entertainment and instruction for the entire family.

The subscription price is low on account of our cooperative subscription plan. Instead of employing agents to go from farm to farm to solicit orders, we ask our readers to send in their own orders at least 30 days in advance of the expiration date on the wrapper of your paper, and to include the orders of friends and neighbors with your own.

You get the benefit of the money saved by this economical plan. In an effort to make 1923 even more successful for cooperation than the past years have been, we kindly ask that each and all of you do your part.

Subscription Rates of The Washington Farmer:

$1.00 for Five Years

50 Cents for 3 Years.
25 Cents for 1 Year.
In Canada add 1 cent a copy for extra postage.

Sept. 20, 1923.

Makes Record Under Handicap

Giving over 75 pounds of milk out of only two teats, and those all she ever did give milk from, Steilacoom Fayne Cascade, a Holstein cow owned by the state hospital at Steilacoom, has made an unusual and unique record. Cascade was bred by the hospital and when she came to maturity her front teats were small and they never gave any milk. But she is well bred, being a daughter of Sir Fayne DeKol Inka, sire of Steilacoom Inka Posch, with a record of 26.610 pounds of milk and 1133 pounds of butter as a junior 4-year-old, while her dam, Cascade Jennie, has a seven-day record of 28 pounds of butter as a 4-year-old. So V. W. Richards, superintendent of the live stock and farm at the institution, decided to give her an official record. And Cascade produced 497.7 pounds of milk and 21.98 pounds of butter, or 17.584 pounds of butterfat, in seven days as a junior 4-year-old. Now she is on a year's semi-official test and promises to produce close to 20.000 pounds of mil kand 800 pounds of butter. Six of the registered herd are on full year test. Countess Beauty Korndyke, 12 years old, on since March 15, has already about 9000 pounds of milk to her credit and is a show cow. She is granddam of the heifer that stood second in the strong junior calf class last year at the Pacific international Stock show, and is dam of a 23-pound 3-year-old that is a show cow.

A new "open air" test barn that is greatly needed, and will be a beauty as well as most conveniently arranged, is being built. It is the hope of Mr. Richards and Mr. Stewart, as well as all others connected with the institution, that the next legislature will appropriate money for the building of a modern new dairy barn, for the old one, while looking well from the outside, has to be propped up now to keep it from falling down.

Blood Tests Disclose the Germs

"There have been a number of cases of abortion in Washington and there are times when it is hard to tell whether it is the result of contagious abortion or from some injury that the cow receives from other animals in the herd," according to Dr. J. W. Kalkus of the school of veterinary science at the State College of Washington at Pullman. Dr. Kalkus has recently been transferred to Puyallup, where he will be in the field to do investigation work among the dairy herds of western Washington in the hopes of finding more definite data regarding this disease.

"There is a general opinion that the time of aborting has something to do with whether or not the disease is of the contagious type or otherwise, but from our experience the time that the calf is dropped has nothing to do with the case. There may be times when the disease is present and the calf will be carried the full time and be born a healthy calf, when on the other hand there are cases where the cow will abort in a short time after pregnancy.

"There are some herds that have had no trouble of the kind, but when the blood test is made the germ will be found in many of the animals. In such herds there are usually a few cases of retained afterbirth, which is enough to cause suspicion that there is contagious abortion in the herd. If there are repeated cases of retained afterbirth, it is time that some steps were taken to find out if there is any such disease present."

ON HOLSTEIN HONOR ROLL.

Fourth from the top on the list of breeders of cows on the Holstein-Friesian honor roll for 1922-3 is Hollywood farm of Hollywood, Wash., with 206 points computed on the basis of milk and butterfat production by cows which were actually bred on the farm. The breeder highest on the list, A. C. Hardy of Brockville, Ont., has a total of 255 points, and the others ahead of Hollywood are both eastern breeders. A. E. Smith of Sumas, Wash., ranks 14th in the compilation, and others in the list are University of Idaho, William Bishop of Chimacum, Wash.; the late E. B. Marks og Yakima, Wash.; William McKeown of Gresham, Ore.; George W. Leighton of Boise, Idaho; Piet Bergsma of Ferndale, Wash.; H. C. Davis of Granger, Wash.; the late David Munroe of Spokane, Wash., and R. H. Tuttle of Walla Walla, Wash.

BARN COSTS $10,000.

What will be undoubtedly the finest dairy barn in southwest Washington is nearing completion on the farm of Albion L. Gile at Chinook. With stanchion room for 68 head of cattle, and with a test and calf barn and a completely equipped milk handling room adjoining, the new quarters for Chicona Guernseys will give Superintendent Floyd Reith new incentive to record making. The barn proper is 36x140 feet in size, with a Gothic roof which gives unobstructed loft space for 200 tons of hay. Floors and sides are of concrete; the stable is sealed throughout, and James equipment is used. The test barn will be 20x60 feet in size, with eight box stalls and room for 35 or 40 calves. The structure looms in plain sight of passersby on the new Ocean Beach highway. Its cost will exceed $10,000.

The Perfection Milker

—milks the cows with less vacuum, which means safety for the cow. The squeeze is from the udder down, which is nature's way, the calves' way and the correct way. The suction and squeeze can be regulated by the pulsator, absolutely necessary for best results at different times of lactation period.

We now have a good hand-power milker. It's fine for a few cows. **Why Milk by Hand?** Let us mail you a catalog.

This New Fall and Winter Catalogue —Is Yours Free

The new, complete Fall and Winter Catalogue is now ready and will be sent you free. You need merely fill in the coupon below.

You may just as well profit by the saving this big book offers you.

In your home, this book will be a price guide and a shopping pleasure. You, too, may as well know the right price to pay, and you may as well save money on nearly everything you buy.

This Book Offers You a Saving of $50 this Season

Over *forty million dollars'* worth of goods have been bought at the lowest prices especially for this book—a part of our work to *hold prices down* and to make possible this saving for *you*.

So if you write for this book, if you use this book, and if your family uses this book, there will be a saving of over $50 in cash for you this season.

But this book offers you more than a saving—more than low prices. It offers you the satisfaction and the economy of always getting *dependable and serviceable goods*.

Ward Quality and Right Prices

For over fifty years Montgomery Ward & Co. has tried, first of all, to sell only *serviceable* goods that stand inspection and use.

We take great pride in Ward Quality. We always quote the lowest possible price. But we try always to have *our quality a little higher*.

So to write for this book, to use this book every week, not only means a saving in cash, but satisfaction with everything you buy and the saving that long service always brings.

Everything for the Home, the Farm and the Family

FOR WOMEN: Shoes, underwear, hosiery, sweaters, gloves, things for the woman's personal use. It is the woman who saves money and to any woman this book will be the best means of saving.

FOR THE HOME: Carpets, furniture, bedding, electrical devices, everything new for home use, everything used in decoration and to make the home modern and complete. And the prices always mean a saving.

FOR THE MEN AND THE FARM: Everything a man uses or wears, from tools and hardware and famous Riverside Tires, to virgin wool suits —often one-third less than prices you are paying.

The coupon below brings this new, complete Fall and Winter Catalogue to you and your family—entirely free.

You, too, may as well profit by its saving. You need simply fill in this coupon and all the saving and satisfaction and pleasure this book brings will come into your home for you and your family.

48 Hour Service from Portland, Oregon

Our big Portland House is ready to serve you quickly. It was built for the convenience of our friends in the Pacific Coast States.

Our new system of filling orders enables our Portland House to ship your orders within 48 hours.

48 hour service is our promise to you. But we do better than our promise — because most of our orders are actually shipped within 24 hours.

So you can order from Montgomery Ward & Co. and feel sure that nearly every time your order will be shipped in less than 48 hours, and frequently within 24 hours.

Fair Week Is a Better Homes Week

Mother, Baby and the Girls Receive More Than Usual Attention on the 1923 Circuit

"Here Is Where You Check Your Babies."

This sign, in letters large enough that any mother who wanted to visit the Washington state fair at Yakima last week unhampered could not fail to see it, meant exactly what it said and in a way indicated a feature not entirely new to the state fair, but much more thoroughly developed this year than previously. The day nursery, over which the sign appeared, was a place where babies were properly cared for at 15 cents an hour by competent nurses and Camp Fire girls under the supervision of the women's club of Yakima. From the standpoint both of the babies and the mothers, it certainly beat trailing or toting the tots around in the dust and dirt and noise that necessarily prevailed in the various divisions of the fair.

Frow now on, fairs must reckon with the baby.

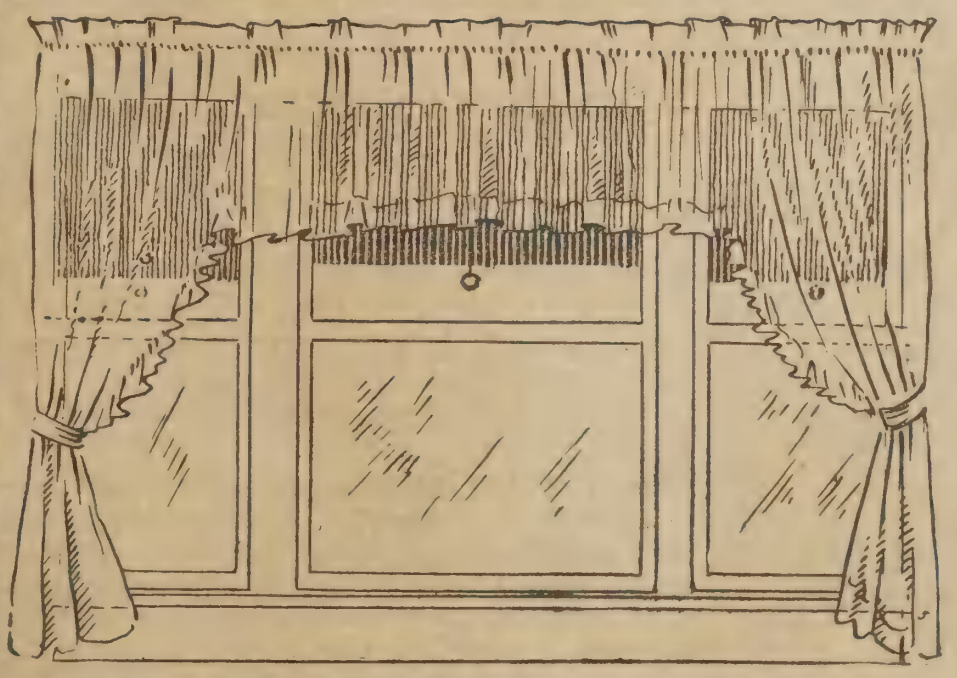
As one rushed back and forth between the baby clinic and the hog judging rings, stopping en route to find out which club team won the bread-baking contest, or what kinds of material had been used to make the draperies in the better homes booth of the state college extension service, the feeling could hardly be suppressed that maybe, after all, boys and girls and kitchens and living rooms were almost as important as pigs and calves and modernly equipped barns. The crowds at the fair actually seemed as keenly interested in them as in the live stock parade.

In addition to the day nursery above mentioned there were two other baby headquarters on the grounds, one a clinic under the supervision of Miss Mary Sutherland, extension nutrition specialist of the state college, and one a child hygiene booth prepared and presided over by Miss Florence B. Struthers, supervising nurse of the division of child hygiene of the state department of health. Almost anything that a mother (or even a daddy) might want to know about babies in general or a particular specimen could be learned in one or the other of these places, and not half as many questions were asked in all the live stock division of the fair as were propounded to those in charge of these two small departments. Every day was children's day at these places, and father and mother attended regularly.

But babies grow up and become men and women.

One evening of fair week a representative of The Washington Farmer was standing, pencil and note book in hand, looking into a little display room over which was the sign, "Making Better Homes."

"Is there anything I may explain to you about this exhibit?" a pleasant voice inquired. Upon assurance that there was, Miss Maude Wilson, of the state college extension service, proceeded to explain that it was a booth representing one of the advanced steps in girls' club work in which girls from 15 to 20 years old are given practical training in making the rooms of their homes serviceable and attractive at a minimum cost. The work consisted in refinishing old, but serviceable furniture, refinishing floors, working out appropriate color schemes and materials for walls, curtains and bedspreads and so on.



This sketch is suggestive of the simple, attractive way in which a window may be decorated as described in the accompanying article.

"You know," said Miss Wilson, "a girl often has more money to spend the

Continued on page two.

Pacific Coast Figgs Go to New York Through the Panama Canal—Page 5

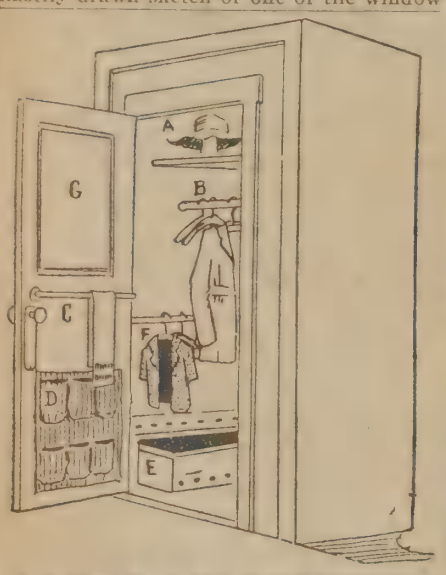
Fair Week a Better Homes Week

(Continued from page one.)

first year after she is married than later, and yet she knows less about how to spend it efficiently than she does after a few years' experience in housekeeping. One object of this phase of our work is to train girls so that they may get the most out of what they have on hand or can get easily with which to make their homes, either before or after they are married, convenient and attractive."

From there Miss Wilson led the way down the line past the booth where samples of club sewing, canning and gardening were on display to Miss Minerva Lawrence's curtain and draperies display. The purpose of this booth, too, was to suggest definite ways and means of improving the appearance and serviceability of the inside of the farm house—the place where the farm woman spends 90 per cent of her life. Miss Lawrence and her fellow-workers believe that dismal or unattractive surroundings are likely to result in dismal or unattractive lives, and that touches of brightness and beauty tend to inject brightness and beauty into the lives of the housewife and her family. Hence, there were on display in that booth a large number of simple bits of drapery and window trimming that should have inspired hundreds of women during fair week to undertake practical steps in home improvement. And the best of it is that the booth was primarily an announcement to the 55,000 fair visitors that the extension service is offering instruction along these lines to as many farm women as it is able to reach as it goes out into the multitude of communities of the state.

At the bottom of the cover page is a hastily drawn sketch of one of the window exhibits in the booth. The woodwork was painted a soft, restful color—one tending to brighten the room and yet not make too much display of the dust that it inevitably collects. The window shades (just common, dark green shades) were painted on the inside a color to match, or at least harmonize with, the woodwork. The outside was left the original green color. And then the curtain or drapery—just a simple, softly-colored piece of organdie, the color being in keeping with those of the wood and the blinds. The decoration of the window had cost little, yet its simple beauty was adequate to turn a housewife's day of discouragement to one of victory and cheer.



A, a place for a hat; B, mother's clothes rack; C, the towel rack; D, pockets for slippers, hosiery, etc.; E, ventilated drawer for shoes; F, kiddie's clothes rack; G, the mirror.

In the same booth were others as simple, inexpensive and attractive. One pair of curtains for a single window were made of crash, stenciled with a pretty, colored, waterproof design. Any woman could make it. Another illustrated what could be done with unbleached muslin with applique decoration. (For the benefit of some mere man who may be reading this, an applique decoration is one sewed onto or embroidered onto the goods.) And then there were cretonne curtains with sateen lining, and so on far beyond this writer's ability to narrate or describe. And the whole idea was to stimulate farm women and girls who do not have these simple and beautiful and serviceable things to want them, learn how to make them and then have them.

Then the scribe went next door and met Miss E. Belle Alger, clothing specialist and inventor of the women's work table—just as if women do not have enough work to do as it is. But this table was designed to lighten and make her work more efficient. The only one of them ever made was on display in Miss Alger's booth, having been made up by the Tacoma Sash and Door company as a special favor to her for demonstration on the fair circuit. One of these days The Washington Farmer is going to print a sketch and explanation of it. For now it is enough to say that it is a roomy table, especially intended for cutting and sewing, but equipped for a number of household uses.

Herewith we are reproducing a drawing of a clothes cabinet that was a prominent feature in Miss Alger's display. Note the higher bar on which father and mother (or at least mother) may hang their clothes. And then take a look lower down where kiddies' little coats and dresses may be properly put away. And still lower, observe the drawer for shoes with the rows of round holes for ventilation. On the shelf at the top are a number of things, the one showing being a pasteboard, cone-shaped device with a cushion of tissue paper on the top. It is better to put a woman's hat away on some such thing than to hang it up to draw out of shape or lay it down on a shelf to flatten and get dirty. And then on the inside of the door there are several things worth looking at. The pockets below are for slippers, hosiery, brushes and the like. The towel rack is for what towel racks are usually for; likewise the mirror on the upper part of the door. This cabinet is about three or three and one-half feet square and six feet feet high, is simple in construction and fits into any unoccupied corner.

We might go on indefinitely describing various features of home improvement education being offered by the extension service, but space limitations forbid. Possibly enough has been suggested to indicate that a fair can not get along very well from now on without making room for this last division that should have been among the first, the home betterment department.

Oakesdale Fair Next Week

Next week, October 5 and 6, Oakesdale will hold its annual produce and live stock fair. Prizes are offered for all classes of farm produce, including fruits ,vegetables, grains, poultry and live stock. A culinary and fine arts department is maintained for women and girls.

A. G. Woodward, secretary and manager, is providing evening programs, at which lectures on various form and rural problems will be given by authoritative speakers. The programs will include entertainment features also.

EXHIBIT CHESTER WHITES.

Frank von der Heyden of Wapato, Wash., wishes to correct a statement in a recent issue of The Washington Farmer, to the effect that he showed two O. I. C. hogs at the Southwest Washington fair. Mr. Von der Heyden says his exhibits were Chester Whites.

GENERAL ADVERTISING.

NEW LAMP BURNS 94 PER CENT AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 95% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 161 Union Ave., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

GREAT NORTHERN EXPLAINS ITS OWNERSHIP

There are outstanding 2,494,730 shares of Great Northern stock, of the par value of $100.00 each. Each share represents an equal ownership in the property of the Great Northern Railway and each share has an equal voice in all shareholders' meetings, including those for the election of directors.

On December 31, 1922, these shares were owned by 44,314 men and women in all walks of life, and by organizations and institutions, as follows:

Number of men	24,416
Number of women	18,113
Insurance companies and miscellaneous corporations	1,616
Hospitals, charitable bodies, religious and educational institutions	169

The wide distribution of these holdings is shown in the following table:

28,449 held from 1 to 50 shares each.
12,579 held from 50 to 100 shares each.
Only 3286 held over 100 shares each.
The average holding is only 56.2 shares.

Dividends have been paid on this stock since 1891. From 1900 to 1921 the dividend rate was 7 per cent per annum. In 1922 this was reduced to 5 1-4 per cent and in 1923 to 5 per cent.

Many people in the territory traversed by the Great Northern are among its largest shareholders, and are therefore directly affected by its ability to pay a return on capital invested.

Most of the large life insurance companies have money invested in Great Northern securities. Therefore, nearly every one who holds a life insurance policy, and many depositors in savings banks, are partners in the operation and development of this railway, and their livelihood is partly or wholly dependent on its ability to pay. Many of you belong to this class.

LOUIS W. HILL,
Chairman of the Board.

Talk No. 7.

Yakima Fair Shows Breadth of State's Industry

Entertainment and Education Are Provided for Those Who Seek Either or Both

Everything that grows in the temperate zone was on display at the Washington State fair last week at Yakima—nearly everything. If there is a state in the Union in which a wider variety of staple crops and live stock thrive than in ours, we want to be commissioned to report its fair next year. From corn to cassabas; wheat to watermelons; apples to artichokes, the field and garden crops were there. Animals ranging in weight from five pounds to 2500, the small just as high class as the large, gave the judges in the live stock rings something to worry about. Cooking and canning displays by club members and grown-ups proved that the housekeepers know what to do with the meats, milk, vegetables, fruits and cereals that are produced in abundance and high quality in the state of Washington.

Aside from those special features that had to do directly with the problems of the housekeeper in her efforts to improve the home life of her family, which features are more fully referred to on the cover page of this issue, the displays in the agricultural and horticultural building were the most noteworthy of the fair. The live stock show was good, but, let it be admitted at the outset, not as good as a year ago. In most sections the quality of the animals was perhaps up to last year's standards; in some perhaps a little higher; in some lower. Last year there was not a stall or a pen vacant; this year there was room for more entries in every barn. And yet the live stock show was reasonably representative of the great industry of the state. Few of the prominent breeds were absent, the most notable being the Belgian horse. The Percheron was represented by only two head.

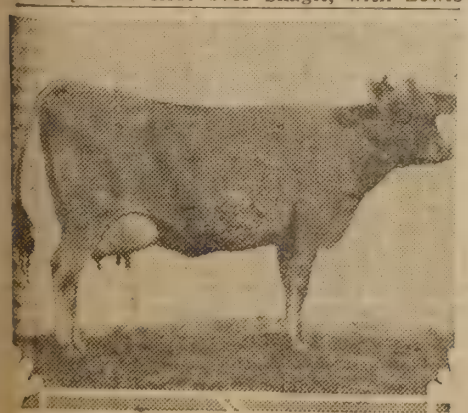
In the poultry department about 25 breeds crowed and cackled, and not a bird there but was sure he or she was sweepstakes winner. The show was high class and the coops were full. The Plymouth Rocks, the Wyandottes and the White Leghorns were perhaps strongest. A good display of geese attracted many, and the Thanksgiving birds filled several coops. Near by Mrs. George Shoup of the West Washington experiment station answered hundreds of questions for visitors in the model poultry house. No other educational feature of the fair but the baby clinic and the home demonstration booths attracted the attention that this practical poultry school did. Poultrymen and farm folk generally profited also by the two poultry booths of the state college extension service, the one showing how many hundred thousand dollars the producers of Washington would benefit were they to increase the production of their hens five eggs per year, and the other showing how the profit in egg production increases with the increase in the number of eggs laid per hen (the hen laying 120 eggs or less leaving no profit, the one laying 180 leaving a fair profit and the hen of 200 production and up making real money for the owner).

In this connection, there were interesting extension service booths in addition to these and the home demonstration booths mentioned in the cover page article. For instance, there was an informative drainage display prepared by Drainage Specialist A. B. Crane. Bee Specialist B. A. Slocum taught beekeepers and would-be beekeepers through an attractive display of honey, bees, bee equipment, flowers and so on, and George L. Zundel had his potato booth on display, urging in terms stronger than words the desirability of disease eradication and the use of better seed. Among other valuable displays of educational type were those of the state department of agriculture, showing diseases and pests of fruits; the U. S. department of agriculture; the state pure foods department and so on.

The Agricultural Show.

Two Yakima valley localities topped the contest in general displays of farm products, Naches Heights winning first and Wapato second. Grandview took third and Pomona fourth. Zillah, Broadway and Priest Rapids valley also exhibited good collections of products.

In the county competition Spokane county won first over Skagit, with Lewis third. The Spokane county display, prepared under the supervision of Horticultural Inspector John B. Wiley, was unusually complete and attractively arranged. It scored 94 to Skagit's 92, the latter county falling down principally on its fruit exhibit. Other counties in the competition scored as follows: Lewis, 81; Pierce, 79, and Assotin, 73, with Benton, Clallam, Jefferson and Kitsap completing the competition in the order given. Of the nine counties with displays, three were East Side and six West Side.



Brighter Dawn, Midfields Farm's senior and grand champion Jersey cow at the Washington State fair.

Individual Winners.

The following were individual winners in the various classes of produce, as indicated:

Wheats—Sheaf winter wheat—J. M. Armstrong, Manette, Wash.; J. N. Gould, Burlington, Wash. Sheaf spring wheat—A. M. Kearns, Selah, Wash.; J. F. Butler, Burlington, Wash. Hard winter wheat—J. M. Armstrong; Forest Fisher, Mount Vernon, Wash. Soft winter wheat, Turkey red—H. C. Doepke, Fairfield, Wash.; Ed Hunter, Burlington, Wash. Any other soft winter wheat—J. N. Gould, Ed Hunter. Early Bart—J. N. Gould. Wheat special—Bluestem—H. C. Doepke. Macaroni wheat—J. M. Armstrong, J. F. Butler.

Corn—White Dent—Mrs. W. H. Passmore, Yakima, Wash. Yellow Dent—Ora F. Gregg, Mabton, Wash.; James Baxter, Granger, Wash.

Oats—Best sheaf oats—J. F. Butler, J. M. Armstrong. Swedish select oats—J. F. Butler. Any variety oats—J. F. Butler.

Barley—Best sheaf barley—J. M. Armstrong, J. F. Butler. Six row barley—J. M. Armstrong, J. F. Butler.

Rye—Best sheaf rye—J. M. Armstrong. J. F. Butler.

Timothy—Sheaf timothy—J. F. Butler.

Clover and alfalfa—Sheaf alfalfa—J. F. Butler, J. M. Armstrong. Sheaf mammoth clover—J. M. Armstrong, J. F. Butler. Sheaf Alsike clover—J. F. Butler.

Sunflowers—Largest head stalk—M. W. Luckenbach, Yakima, Wash.; Mrs. R. N. Harrison, Yakima, Wash.

Best display Washington grown seed—J. F. Butler.

Many Show Vegetables.

Vegetables—Kale—W. H. Heimsoth, Pomona, Wash. Mangelwurzels—Conrad Peck, Yakima, Wash. Pumpkins—W. M. Johnson, Harwood, Wash.; Dana Alexander, Yakima, Wash.; Conrad Peck. Beans—O. J. Oder, Yakima, Wash.; Orvin Young, Yakima, Wash.; J. O. Jeffrey, Johnson, Wash.; F. W. Bidwell, Yakima, Wash.; A. M. Kerns, Selah. Beets—W. H. Heimsoth; Deccio Bros., Yakima. Carrots—Deccio Bros.; Christ Bayer. Cabbages—W. H. Heimsoth. Cantaloupes—George Kehuchi, Wapato, Wash.; Conrad Peck, Deccio Bro. Celery—Spokane Vegetable Growers, Spokane, Wash. Cucumbers—W. H. Heimsoth; M. C. Starcher, Fruitvale, Wash.; Deccio Bros., A. M. Kerns. Egg plant—Deccio Bros., M. C. Starcher. Horseradish—Jacob Stelling, Puyallup, Wash.; G. Stelling, Sumner, Wash. Kohlrabi—W. M. Heimsoth, M. C. Starcher. Lettuce—M. C. Starcher, Deccio Bros. Onions—W. J. Lee, Yakima, Wash.; Deccio Bros.; J. F. Perry, Kennewick, Wash.; Spokane Gardeners; W. M. Heimsoth; S. J. Marshall, Granger, Wash.; M. C. Starcher. Peppers—Hilda Meystre, Naches, Wash.; Deccio Bros. Popcorn—Alfred Hicks, Yakima, Wash.; M. C. Starcher. Radishes—Deccio Bros.; W. H. Heimsoth. Rhubarb—Mrs. R. N. Harrison, Yakima, Wash.; Mrs. H. B. Doust, Yakima, Wash. Salsify—M. C. Starcher. Squash—W. H. Heimsoth; Deccio Bros.; M. C. Starcher; Mrs. Fred Nelson, Yakima, Wash.; Conrad Peck; S. J. Marshall. Sunflower head—S. J. Marshall, Christ Bayer. Sweet corn—W. M. Heimsoth, M. C. Starcher. Swiss chard—Hilda Meystre, W. M. Heimsoth. Tomatoes—Deccio Bros., F. W. Bidwell. Watermelons—Christ Bayer, George Kehuchi. Largest and best display of vegetables—Louis Deccio.

Potatoes—Netted Gem—D. A. Forest, Grandview; Spokane Gardeners. Best 12 Netted Gems—George Stanton, Marysville, Wash.; Spokane Gardeners. Best, any variety—George Stanton; Helmold Bros., Sumner, Wash. Collection, six varieties—W. M. Helmold, Sumner. Best bushel seed potatoes—D. A. Forest; Barnes & Ongram, Dayton, Wash. Best 12 Beauty of Hebron—W. M. Helmold. Best 12 Ohio—Spokane Gardeners. Best 12, six weeks—Spokane Gardeners. Best 12 Burbanks—W. M. Helmold.

The Apple Show.

Apples—Arkansas Black—H. O. Aiken, Wapato, Wash.; J. L. Lease, Zillah, Wash. Delicious—Paul Besser, Yakima, Wash.; H. O. Aiken. Golden Delicious—R. C. Knight, Yakima, Wash.; A. Clanssing, Zillah, Wash. Jonathan—W. E. Kitner, Wapato, Wash.; W. H. Mahara, Yakima, Wash. King David—Charles Snider, Selah, Wash.; O. G. Gardener, Yakima, Wash. Rome Beauty—C. Mihn, Spokane; O. G. Gardener. Red Rome Beauty—M. C. Starcher; A. A. Boggers, Yakima, Wash. Spitzenburg—Charles Snider, Christ Bayer. Stayman Winesap—J. Houser, Selah, Wash.; E. E. Zirkle, Harrah, Wash. Winesap—C. J. Staus, Wapato, Wash.; W. E. Kitner. White Winter Permain—G. A. Rutherford, Selah; M. C. Starcher. Winter Banana—A. N. Banks, Manson, Wash.; C. Mihn. Wealthy—C. Mihn. Wagener—E. A. Fisk, Yakima, Wash.; Charles Snider. Yellow Newtowns—W. L. Wright, Yakima, Wash.; Charles Snider. Crabapples—J. H. Gould, Buckley, Wash.

Other fruits—Peaches—A. N. Banks, Orvin Young, Yakima, Wash.; C. P. Cahoon, Yakima, Wash.; Oson Harrill, Yakima, Wash.; D. Wohler, Yakima, Wash.; J. E. Jones, Zillah, Wash.; A. L. Henson, Benton City, Wash.; W. R. McGalliard, Yakima, Wash.; A. Van Klinken, Zillah, Wash.; E. A. Fisk, Yakima, Wash.; Slappy, Yakima, Wash. Pears—A. N. Banks, Mrs. Robert Morris, Yakima, Wash.; W. H. Young, Yakima, Wash.; Christ Bayer; C. C. Wiher, Yakima, Wash.; J. Hansen, Selah, Wash.; E. A. Fisk; W. R. Krause, M. C. Starcher, C. Mihn; W. G. Simon, Yakima; Hilda Meystre. Grapes—O. C. Patch, Sunnyside, Wash.; Mrs. R. N. Harrison, Yakima, Wash.; W. J. Lee; Mrs. W. H. Passmore, Yakima, Wash.; W. M. Lee; E. E. Nostrant, Grandview, Wash.; V. L. May, Okanogan, Wash.; M. C. Starcher; E. V. Wyant, Grandview, Wash.; Orvin Young; Mrs. George Frim, Prosser, Wash.; E. A. Fisk; R. R. Wardall, Grandview, Wash.; E. J. Appel, Prosser, Wash.

Plums and prunes—A. N. Banks; Orvin Young; O. J. Oder, Yakima, Wash.; E. Remy, Yakima; W. L. Wright; M. C. Starcher; Albert Simpson, Selah, Wash.; W. M. Knight, Naches, Wash. Quinces—W. R. McGalliard; Mrs. True, Yakima, Wash.

Nuts—Almonds—C. P. Cahoon, Yakima, Wash.

Berries—Blueberries — Hilda Meystre, Naches, Wash.; F. W. Bidwell. Currants—M. C. Starcher. Strawberries—Hilda Meystre, A. M. Kerns.

The Poultry Show.

The following were winners in the poultry show in the breeds indicated, as selected by Judge William Coats:

Dark Barred Plymouth Rocks—Carl Carpenter, Machias, Wash.; A. E. Oliver, Buena, Wash.; Jacobson's poultry yards, Tacoma, Wash.; J. E. Horton, Spokane, Wash.

Light Barred Plymouth Rocks—Trututype Farms, Tacoma, Wash.; Boone Avenue poultry yards, Spokane, Wash.; Ray Leftwick, Tacoma, Wash.; A. E. Oliver; J. E. Horton, Carl Carpenter.

White Plymouth Rocks—Axel Wold, Seattle, Wash.

Columbian Plymouth Rocks—Jennie W. Gillard, Wapato, Wash.

S. C. Black Leghorns—C. I. Doll, Hillyard, Wash.

White Wyandottes—Frank Thompson, Spokane, Wash.; Bickert's poultry yards, Yakima, Wash.; William Bischoff, Lind, Wash.; James H. Nichols, Tacoma, Wash.

Buff Wyandotte—Fred A. Johnson, Tacoma, Wash.

Partridge Wyandotte—Fred A. Johnson.

Silver Wyandotte—Fred A. Johnson.

Rhode Island Reds—King Poultry Co., Seattle, Wash.; Manuel L. Matson, Buena, Wash.; Sam R. Robinson, Wenatchee, Wash.; J. E. Hartson, Spokane, Wash.; Mrs. M. C. Amsden, Spokane, Wash.; John Bakker, Yakima, Wash.; Mrs. G. H. Coney, Yakima.

R. C. Rhode Island Reds—Mrs. Stenna O. Bach, Olympia, Wash.; A. Melrose, Spokane, Wash.

Rhode Island Whites—McLean & Son, Sunnyside, Wash.

Light Brahma—Harold Bonds, Yakima, Wash.; H. L. Wilder, Yakima, Wash.

Partridge Cochin—V. J. Hemmert, Seattle, Wash.

S. C. White Leghorns—Fred A. Johnson; A. Greener, Spokane, Wash.; Mrs. Ed Johnson, Selah, Wash.

R. C. White Leghorn—J. G. Wilder, Everett, Wash.

Buff Leghorn—J. G. Wilder.

S. C. Light Brown Leghorns—Fred A. Johnson.

Silver Leghorns—Fred A. Johnson.

Silver Gray Dorkings—C. Dracup, Tacoma, Wash.

Red Cuban Games—Melvin Porter, Hillyard, Wash.

S. C. Buff Orpingtons—J. C. McGinnitie, Mount Vernon, Wash.; Mrs. J. N. Critzer, Spokane, Wash.; Lucy R. Scudder, Yakima, Wash.; L. M. Varney, Spokane, Wash.

S. C. White Orpingtons—John Sim, Red Lodge, Mont.

White Faced Black Spanish—Canyon Road poultry farm, Beaverton, Ore.; Robert Leibig, Sunnyside, Wash.

Silver Spangled Hamburgs—E. E. Enos, Spokane, Wash.; Fred A. Johnson; W. R. Krause, Yakima, Wash.

Turken—E. C. Vase, Selah, Wash.

Buttercups—R. Manning Palmer, Seattle, Wash.

Silver Campines—Mrs. J. N. Sheppard, Selah, Wash.; F. W. Hoffman, Spokane, Wash.; Jennie W. Gillard.

Blue Andalusians—Rudolph Knaack, Yakima.

Jersey Black Giants—R. Manning Palmer.

Capons—Carl Carpenter; T. J. Hartley, Richland, Wash.

Salmon Favorelle—J. H. Hennessey, Cle Elum, Wash.

Silver Seabright Bantams—A. E. Oliver, Fred A. Johnson.

Black Cochin Bantam—Fred A. Johnson.

Light Cochin Bantams—Fred A. Johnson.

Buff Cochin Bantams—Fred A. Johnson.

Japanese Bantams—Mrs. W. C. Kohlmeister, Seattle, Wash.

Brown Bantams—W. R. Krause.

Homer pigeons—Avery Fuller, Yakima, Wash.

Fancy pigeons—Avery Fuller.

White Indian Runner Oucks—J. G. Wilder.

White Indian Runner Ducks—Christ Bayer, Yakima, Wash.

Crested Ducks—Dolly Heidbreder, Yakima, Wash.

Moscovy Ducks—Alphonse Benjamin, Yakima, Wash.

White Pekin Ducks—W. R. Krause, Christ Bayer.

Toulouse Geese—John Bakker; Mrs. A. J. Rasinbaum, Tieton, Wash.; Christ Bayer; W. R. Krause.

African Gray Geese—I. J. Oder, Yakima, Wash.

Bourbon Red Turkeys—Mrs. W. E. Cole, Yakima, Wash.; Mrs. Seward, Yakima, Wash.

White Holland Turkeys—Mrs. U. P. King, Yakima, Wash.

Bronze Turkeys—T. J. Hartley, Richland, Wash.; Lucy R. Scudder.

Specials.

Best bird, Mediterranean class—A. Greener, Spokane, Wash., first on White Leghorn cockerel. Fred A. Johnson, second on White Leghorn hen.

Best bird, Asiatic class—H. L. Wilder, first on Light Brahma cockerel; second on Light Brahma pullet.

Best bird, American class—William Bischoff, Lind, Wash., first on White Wyandotte cockerel. A. Melrose, Spokane, second on R. C. R. I. cockerel.

Best bird, English class—Mrs. J. N. Critzer, Spokane, first on S. C. Buff Orpington hen. J. C. McGinnitie, second on S. C. Buff Orpington cock.

The Club Work.

The club department at the state fair this year created its usual interest, with scores of boys and girls from various parts of the state participating. The contests were under the general supervision of Miss Elmina White, specialist in club work. Winners in the various contests were as follows:

Dairy—First, Norman Refling, Snohomish; second, Crissie Jeuster, Milan; third, Peter Hendrickson, Forest.

Hogs—First, Clarence Swinthe, Chehalis; second, Edwin Pease, Usk; third, George King, Mabton.

Sheep—First, Walter Tornquist, Elma.

Beef—First, Harold Varnum, Mabton; second, Erling Hanson, Ellensburg.

Poultry—First, Clarence Glen, Elma; second, Pearl Caudill, Spokane; third, Fred Milliron, Tieton.

Garden—First, Frank Kinezek, Dryad; second, Lewis Cox, Tieton; third, Alfred Pease, Usk.

Potato—First, Gordon Brown, Spokane; second, Albert Hoagge, Olympia.

Bee—Robert Adair.

Canning—Leona McGuire and Hazel Schuffert, Olympia; second, Adrienne VanderGriend and Maurine VanderGriend of Lynden and Nancy Colyar and Josephine Moore, Cheney, tied.

Cooking—First, Gladys Smith, Montesano; second, Edna Jacot, Kennewick; third, Lores Sweaney, Curtis.

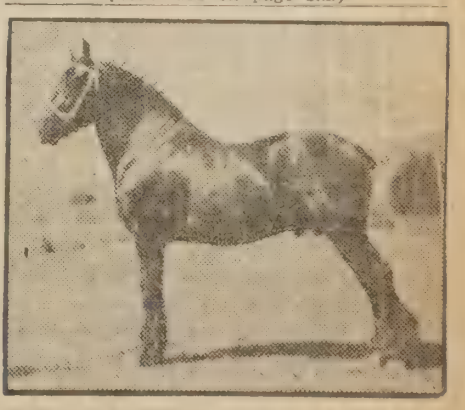
Sewing—First, Elvira Lethinen, Aberdeen; second, Helen Welch, Sunnyside; third, Elsie Bucklen, Arlington.

Grant county, which has only recently organized its club work, was represented by sewing and canning teams, which put on high-scoring demonstrations in the district contests. They were unable to meet all club requirements and so were not eligible for placing in the contests above reported.

Club Members Win.

One of the especially interesting features of the dairy show was the competition among club boys and girls for three dairy calves, one Holstein, one Jersey and one Guernsey. Governor Hart awarded a

(Continued on page six.)



Forest Prince, H. W. Merritt's senior and grand champion Shire stallion at the Washington State fair.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

New Wrinkle in Poultry Keeping

W. D. Buchanan, state college specialist in poultry, has a new wrinkle for poultry producers. He says: "Make the laying house bright, airy and attractive for the young pullet. If you don't, she may get the blues and refuse to lay."

Value of Certified Seed

An interesting demonstration of the value of certified seed potatoes was shown at the Kittitas county fair by George Michels of Ellensburg. He showed the product of 10 hills that had been planted with local seed which had been taken field run. They weighed only 16 pounds as compared with 74 pounds for the same variety of potatoes planted with certified seed. The size of the latter was better and the tubers were even and attractive for selling on the market.

A further improvement was made by grading the tubers for fancy table stock and another grade for select seed, both of which had been produced from certified seed. This pointed out how he was able to get a better price for all of his potato crop by grading the tubers before putting them on the market for sale.

Producing Wheat at a Loss

The fact might as well be faced by city dwellers that American farmers are not going on with the production of wheat at a loss. They may do it for a year or two, but in the long run farmers will not produce wheat or any other product at a loss, any more than manufacturers will make shoes, farm machinery, automobiles or any other article at a loss.

For the last two years agriculture has been out of gear with other industries, and we regret to say that the evil is not righting itself as we had hoped it would. Irving Fisher, professor of economics at Yale university, a leading authority, makes weekly reports on the purchasing power of the dollar. These reports show that the dollar is slipping down the scale again. Its present purchasing power is less than 60 cents, as compared with 100 cents just before the war. That same dollar, which will now buy for the farmer only about 59 per cent of what it would buy just before the war, will buy nearly as much agricultural produce as it bought before the war.

If that unfair condition applied to the products of factories, the owners of the factories would close their plants. But the farmers can not adjust themselves that quickly. They are of necessity bound to the soil. But they can do this: they can cut down their production; they can discharge the hired man, allow a part of their soil to lie fallow and run the old farm with their own labor.

The Educational Opportunity

Happy opportunity exists for many boys and girls in this state who are beginning their college courses.

Opportunity also remains for the many boys and girls who can not go to college. These opportunities call for harder work, longer look ahead, more self-discipline and have in them the making as a rule more vigorous men and women than usually come out of the colleges. This is not deprecating the value of a college education. It is simply saying that many of those who go to college do not apply themselves sufficiently to get the largest rewards of a college education.

If Abraham Lincoln could become one of the best educated men of his day with the meager opportunities which he had, then surely there is no boy in the state of Washington today who can not become educated in books if he so desires. Books are about the cheapest product left in these days. The state traveling library is willing to help any boy or girl and there is hardly a man or woman in any town but who will be glad to aid any boy or girl who shows real earnestness of purpose in becoming a well-read person.

But, then, books are not the sole source of education. A trained mind is one who has had to think out things for himself, he has had obstacles to meet, he has been obliged to endure hardship.

Any boy or girl who wishes to become educated in the best sense of the word has an opportunity if he or she has a mind to go after it.

Roosevelt Memorial Association

Here are the things that the Roosevelt Memorial association is doing:

Erecting a monumental memorial in Washington.

Establishing a memorial park in Oyster Bay. Maintaining a caretaker at Colonel Roosevelt's grave.

Erecting a memorial to the colonel of the Rough Riders on San Juan hill, Santiago de Cuba. Unveiling winter, 1924.

Assembling a great memorial library of manuscripts, books, pamphlets, magazine articles, newspaper clippings, photographs and cartoons relating to Roosevelt.

Establishing a Roosevelt museum at his birthlace for the exhibition of memorabilia.

Gathering biographical data on Roosevelt's life.

Arranging and calendaring Roosevelt's correspondence in the Library of Congress.

Issuing publications about Roosevelt. Compiling selections from his writings for use in schools.

Compiling a cyclopedia of Roosevelt quotations, similar to the "Jeffersonia Cyclopedia."

Compiling a Roosevelt day-book, similar to the Washington day-book, showing as far as possible where Roosevelt was each day of his life.

Preparing an exhaustive Roosevelt bibliography.

Editing Roosevelt's complete works for the standard collected edition.

Preparing text and slides for lectures on Roosevelt's life. Collecting moving picture films of Roosevelt.

Conducting an information bureau on Roosevelt for historians, lecturers, students and the general public.

The headquarters of the association is at 1 Madison avenue, New York city. Those interested in the work being done and desirous of assisting in financing it may send voluntary subscriptions to that address. The association will send its report on request to any one.

The Cooperative Movement

Farm and Ranch: Cooperatives are entering into a crucial year. Their accomplishments in 1923-24 will, in a large measure, spell success or failure for the present organizations. The plans of many of these organizations have received the unqualified endorsement of all those who have made a study of the economic situation our producers are facing. It is now up to the members of these associations to play fair with their officers and leaders. It is equally important that those in charge of the business of the associations should give their full confidence to every member and to conduct their affairs economically and efficiently. Members should be furnished a report of operations of their organizations in detail. Mistakes should be discussed in the open. In turn, members should condone these mistakes and give credit where it is due. Leaders should welcome constructive criticism. Much of it may appear to them to be unjustified and not constructive, but upon close analysis they probably will find something worthy of their consideration. Certainly they must not expect to be above criticism, for just as soon as any official gets into that frame of mind, he ceases to be of value to his organization. As a matter of fact, he becomes a positive menace.

Government Price-Fixing

St. Paul Farmer: The idea of government price-fixing is most alluring, and the debt to the wheat grower because of harmful price-fixing during the war has been generally recognized. The seriousness of the situation in which the wheat grower now finds himself has won over many advocates to the idea of emergency legislation which will take care of this year's crop. Except in the mind of the desperate wheat grower who faces ruin, price-fixing is believed to be a most dangerous expedient, full of peril even to the wheat grower.

Washington State Gleanings

Five thousand dollars has been appropriated in the tentative budget for Clarke county for 1924 to be used for the purpose of reviving the county fair, which has not been held in this county since 1914.

SEED GROWING IN SKAGIT.

More than 1000 acres surrounding Mount Turner, Skagit county, have been set aside for seed growing. It is stated that nearly three-quarters of the world supply of cabbage seed comes from this section.

WEST WASHINGTON FRUIT CROP GOOD.

Western Washington fruit and agricultural crops generally have had almost as good a season as eastern Washington, according to State Horticulturist Robinson. General garden and farm truck have also had a good year.

WHEAT AVERAGES 45 BUSHELS.

The wheat yield in the Molson district will average 45 bushels an acre, according to G. B. Avery, president of the Molson state bank. More than 50,000 bushels have been threshed. George Schleif had an average of 50 bushels an acre from 65 acres.

FARM FIRE; LOSS $5000.

The barn, granary and tool shed owned by Vernie Despaine of Edwall, with the season's crop of hay and an outside stack of hay, were burned the other day. The fire was caused by his small son playing with matches. The loss is about $5000, partly covered by insurance.

THRESHING MACHINE BURNS.

S. H. Evans' threshing machine, which was being operated in the Evaline neighborhood, near Winlock, burned the other night. A job of threshing had just been completed for S. E. Peterson of La Camas. The fire is thought to have caught near the feeder.

WALLA WALLA FRUIT SHIPMENTS.

About 1275 cars of soft fruit went to market from the Walla Walla valley last week, 382 being pears, with a value of $936,800. To date 4545 cars, valued at $3,272,400, have been shipped. Peaches totaled 1114 cars, out of an estimated crop of 1200. Totals on all fruits exceed earlier estimates.

WHETSTONE FARM BURNS.

Fire, supposed to have been of spontaneous origin destroyed the house, barn, windmill and shed on the J. E. Whetstone farm, just east of Montesano on the old Olympic highway, a few days ago, with a loss estimated to be between $5000 and $6000, none of which was covered by insurance.

HOP PICKING UNDER WAY.

Hop picking is well under way at the 135-acre yard of the Klaber Investment company at Klaber, 16 miles southwest of Chehalis, according to Gus Anderson, superintendent. The yield is turning out very well. Three hundred pickers are employed and are getting the crop in good shape.

DELEGATES TO DAIRY CONGRESS.

Governor Hart has named the following as delegates for the state of Washington to the world dairy congress, which opens at Washington, D. C., October 2, continues at Philadelphia October 4, and winds up at Syracuse, N. Y., October 5-10: John L. Smith, Spokane; J. B. Scollard, Chehalis; O. R. McKinney, Tacoma; Dr. A. Macrae Smith, Bellingham; N. C. Sears ,Todelo; A. L. Giles, Chinook; R. Christoferson, Seattle, and Ralph Tuttle, Walla Walla.

FILBERTS FOR COMMERCIAL USE.

That the culture of filberts for commercial uses in the vicinity of Chehalis is possible, is the belief of N. E. Britt, a Newberg, Ore., grower. Mr. Britt spent several days in Chehalis and vicinity recently, looking over the district. He has trees that were planted 15 years ago that are producing 2350 pounds of nuts an acre, and says that a ton to the acre from trees 12 to 15 years of age is reasonably certain.

FIGHT WHITE PINE BLISTER.

The forestry service is assisting in the statewide campaign against the white pine blister rust, which has reached Canada and is progressing toward the Idaho forests, according to A. H. Sylvester, supervisor of the Wenatchee forest. "The disease has not made any headway in this region and we are taking all precautions against it," said Mr. Sylvester. Posters with pictures showing the symptoms are being placed in prominent places and any one noticing these symptoms is requested to notify the forest service.

TO RAISE SHEEP IN ALASKA.

The state of Washington must do her part in developing the live stock interests of Alaska. At least Peter Jensen, stockman of the Toppenish district, in the Yakima valley, is to do his part. He will leave soon for Alaska, where he will engage in the sheep business. He has entered into an agreement with a live stock company to participate in a sheep raising project on the island of Unalaska. He will take 3000 sheep with him on the steamer when leaving Seattle for the northern land. He has signed up for a five-year stay in Alaska.

TOURISTS FROM EVERY STATE.

E. R. Patterson, caretaker of the Lewis and Clark state park, 12 miles from Chehalis, on the state highway, was at the Southwest Washington fair for a part of a day, taking that much time from his duties at the park. The park, of 520 acres, is maintained by the state and has such conveniences for campers as stoves, tables, free wood and water, etc. Mr. Patterson has a large number of trails already cut, as well as good driveways. He reported 2000 visitors for the month of August and says they came from almost every state in the Union and one from New Zealand.

PLAN BIG POWER PLANT.

Plans for a $2,000,000 power plant near a dam which it is proposed to construct in the canyon of the Wynooche river, 20 miles north of Aberdeen, were favorably commented on and are being considered by the water, power and light and finance committees of the Aberdeen city council following their submission at a meeting of the council September 12. J. L. Stannard, chief engineer of the Lake Cushman project for Tacoma, submitted a comprehensive report estimating that 27,000 horsepower could be developed at a cost not to exceed $75 per horsepower. Mayor H. E. Bailey said that he had assurance from firms for handling the necessary bond issue.

The Constitution

Widespread Outpouring of Belief in the Historic Document

Never since the constitution of the United States went into effect 134 years ago has there been such a widespread outpouring of belief in and veneration for that historic document as has taken place during the last week. Constitution day and Constitution week have called forth the profoundest sentiments of loyalty to our beloved country.

"We, the people of the United States, in order to
"Form a more perfect Union,
"Establish justice,
"Insure domestic tranquility,
"Provide for the common defense,
"Promote the general welfare, and
"Secure the blessings of liberty to ourselves and our posterity, do ordain and establish this constitution of the United States of America."

In order to form a more perfect Union.

Not to speak of the paramount need of union in government, every one of our readers will agree with us that farm troubles would be rapidly solved if farmers themselves could form a "a more perfect union."

To establish justice.

Justice between man and man—that is the age-long problem. It needs to be solved over and over again. Its solution demands the clearest brains and the whitest hearts. Governments stake their endurance on establishing justice.

To insure domestic tranquility.

Quarreling and fighting families do not get anywhere. Quarreling and fighting towns and cities do not get anywhere. Quarreling and fighting states soon come to an end. Quarreling and fighting is death to any organization among men whether it be in a political party or in a religious sect. Domestic tranquility gives every one an opportunity.

The preamble of the constitution of the United States has furnished texts for our ablest thinkers and the points brought out in it have by no means exhausted the subject.

History records that the Constitution was "done in convention by the unanimous consent of the states present the 17th day of September in the year of our Lord 1787 and of the independence of the United States of America the 12th."

The Constitution was declared in effect on the first Wednesday in March, 1789.

Pacific Coast Eggs by Panama

According to estimates of the Port of New York Authority the annual consumption of eggs in the port of New York district is 156,791,869 dozen.

The important place which eggs hold in the diet of that city may be realized from the figures of the average daily consumption of 429,567 dozen, or 5,154,804 eggs. In the metropolitan district there are almost 200 wholesale dealers in eggs.

New York is known as a "white egg market," although large quantities of brown eggs are consumed there. That market places a distinct premium on the white egg, ordinarily giving a preferential price of from 5 cents to 20 cents a dozen, averaging about 10 cents throughout the year.

The middle west is the great producing center for New York's eggs, but most of the white eggs sold in that city come from the Pacific coast. It is on the Pacific coast where soil and climate are ideally suited for egg production that the egg industry has been placed on the same scientific plane occupied by the other great staple food crops of the nation. The center of egg production is at Petaluma, Cal., which is to the egg industry what Detroit is to the automobile or Akron to tires. The flocks are of enormous size, many containing 10,000 to 20,000 hens and one having 40,000. Those raisers who produce eggs for the market do not hatch any chickens themselves; they buy chicks from the big commercial hatcheries to replenish their flocks. These are the first eggs to be produced scientifically on the factory plan and many egg producers in this part of the country have organized in cooperative societies to market their eggs.

Pacific coast eggs reach New York in splendid condition, due to the care with which they are packed and the improved methods of loading and handling cars by the railroads. They are shipped in refrigerator cars, insulated in winter to prevent freezing and iced in summer to remove the danger of spoilage. Breakage and other losses formerly ran as high as $1000 a car, but today it is unusual to have more than a nominal loss.

A complete list of the egg shipments to New York by states for 1922 is contained in the following table:

State.	No. of Cases	State.	No. of Cases
Alabama	7,938	New Jersey	134,279
Arkansas	8,825	New York	490,801
California	354,068	North Carolina	4,141
Connecticut	4,429	Ohio	514,248
Delaware	51,506	Oklahoma	15,430
Dis. Columbia	9,422	Oregon	14,911
Georgia	2,391	Pennsylvania	265,014
Illinois	1,378,846	Rhode Island	2,648
Indiana	726,323	South Dakota	30,066
Iowa	921,046	Tennessee	251,241
Kansas	221,829	Texas	65,036
Kentucky	143,380	Virginia	64,604
Maryland	83,611	Washington	143,175
Massachusetts	8,574	West Virginia	6,842
Michigan	99,713	Wisconsin	53,681
Minnesota	217,004	Parcel Post	25,786
Mississippi	3,713	Canada	12,829
Missouri	437,529	Miscellaneous	8,683
Nebraska	37,517		
Total			6,821,079

Manager Dixon of the Pacific Poultry Cooperative association has received a wire from New York announcing the safe arrival there of 10 carloads of eggs via the Panama canal from Portland. Not only were the eggs received in good condition, but they struck a very good market. Mr. Dixon says the new plan is a success.

How the Mighty Fall

Yet the Divine Spirit Stirring Man to Better Himself Survives

"How are the mighty fallen!"—II. Sam., i:25.

That biblical text came to mind as the writer reflected upon the distress in European countries as described in a series of articles by John F. Sinclair. Mr. Sinclair, who is an economist of note and has been an investment banker as well as a college professor, has returned from a study tour of Europe that carried him into 16 countries. He reports "an appalling condition, a visible sinking of the living of the people," and reaches the alarming conclusion that "modern civilization is afflicted with disease which may mean decay and death; not one country is affected, but scores of them."

How are the mighty fallen! Thrones have gone down in the wreckage of the World war; dynasties that had ruled great countries for hundreds of years are ended, and the members of former royal families are scattered over the face of the globe and reduced to poverty.

But that is not the real calamity. The world can well lose the thrones and crowns of monarchs. The real tragedy is the setting back of civilization, the dreadful lowering of the standards of living of millions upon millions of people the pinch of hunger where once there was plenty, the fact that hundreds of millions of men, women and children must shiver in winter and go insufficiently clad and nourished throughout the year.

Contemplating all that misery and poverty, one would be driven to a hopeless view if not for the fact that history abounds in instance after instance of the recovery of peoples from the destruction of war and the devastation of oppressive governments. Macauley, the famous English historian, emphasizes this reassuring fact in his discussion of the state of England in 1685. In chapter 3 of volume 1 of his celebrated history Macaulcy says:

"No ordinary misfortune, no ordinary misgovernment, will do so much to make a nation wretched as the constant progress of physical knowledge and the constant effort of every man to better himself will do to make a nation prosperous. It has often been found that profuse expenditure, heavy taxation, absurd commercial restrictions, conflagrations, inundations, have not been able to destroy capital so fast as the exertions of private citizens have been able to create it."

It remains eternally true that the recovery of civilization, the progress of nations, the salvation of the world from the wreckage of war, depend upon "the constant effort of every man to better himself." We are in the enjoyment now as never before of "the constant progress of physical knowledge."

If the divine spirit that through the long ages of history stirred "every man to better himself" has survived the horrors, the depressions and the discouragements of the great war, as we confidently believe it has, the nations of Europe will recover from the disease that now afflicts them, civilization will survive and mankind will continue to climb to the heights of progress and better things.

FARM BUSINESS AND MARKETS OUTLOOK

CATTLE prices have traveled an up and down course in the last few weeks, but have lost little ground in spite of the sharp increase in receipts since the range and pasture cattle movement started. Just now a sinking spell affecting the lower grades is in progress, following several days of advancing prices. Choice steers have held their recent gains with mature beeves against at $13 at Chicago and yearlings at $12.75.

Compared with a year ago most of the medium and all of the better grades of steers and she stock are higher, but the rest of the list is on about the same level except those on the cutter and canner order which are lower than in 1922. Veal calves are fluctuating wildly at present, with a downward trend probable in the next 30 days.

Cattle feeders are buying more freely right along. The movement to the country in August was about the same as last year, but in the week ended September 7 the 12 leading markets sent out 134,422 head against 115,547 head last year, 55,422 two years ago and 76,690 three years ago. With two profitable winters behind them, fat cattle now at a high level, thin steers but little higher than last year, a big corn crop maturing, and good fall pastures, feeders may overdo the game this year. It is doubtful if larger operations than last year are justified, as feed costs promise to be higher and no evidence of a broader demand for beef can be detected. Texas is believed to have only about 73 per cent as many heavy calves for fall delivery as a year ago.

Large Hog Receipts Due Soon.

The trend of hog prices in the next two weeks is uncertain, as receipts may shrink moderately or they may expand. Prices have been fluctuating rather widely of late and are now moderately lower than a week ago. After September a rapid increase in the run and some decline in values will be due.

Demand for hog products remains commendable. Clearances for export in the last three weeks totaled 67,000,000 pounds of lard and 66,000,000 pounds of hog meats, the largest since May. Stocks of hog products in storage are disappearing satisfactorily.

Lambs Higher on Big Run.

Combined receipts of lambs at seven leading markets have been mounting steadily for the last five weeks and last week were over one-fourth larger than a year ago. Prices reached the highest point since July, but are weakening at present, as the run continues to expand. In the last few years the peak of the fall movement has been reached almost invariably around the end of September.

Boston reported a noticeable spurt in wool buying last week. Mills are not receiving orders for goods in large volume, and are slow to accumulate stocks of raw material, but holdings of some spinners are small and they are obliged to buy. The London auction is firm at the opening advance, which is 5 to 6 cents above a basis at which wools could be imported here, so that confidence that our prices will be maintained is becoming general.

The Boston market is quoted as follows:

Wisconsin, Missouri and average New England one-half blood, 51@52c; three-eighths blood, 50@51c; one-fourth blood, 45c.

Scoured basis:

Texas-Fine, 12 months, $1.20@1.25; fine eight months, $1.10@1.15.

Oregon—Eastern No. 1 staple, $1.32@1.33; fine and fine medium combing, $1.25@1.30; eastern clothing, $1.15; valley No. 1, $1.15@1.18.

Territory—Fine staple choice, $1.30@1.35; one-half blood combing, $1.15@1.20; three-eighths blood combing, $1@1.05; one-fourth blood combing, 80@82c.

Canadian Wheat Depresses Prices.

Canadian wheat has been chiefly responsible for the decline in prices within the last 10 days, during which about half of the gain from the low point of the season was erased. The Canadian crop estimate of 470,000,000 bushels, or 88,000,000 bushels more than a month previous, made a decided change in the world's wheat situation and unsettled both domestic and export buyers as well as the speculative following which at the time was predominantly committed to the bull side.

While the Canadian estimate means an adequate supply of wheat in the next 12 months unless a calamity occurs in one or more of the southern hemisphere countries, a distinct tendency to exaggerate the size of the exportable surplus in North America is noticeable.

The new crops and carryover in North America are only 9,000,000 bushels larger than last year. Assuming the same rate of home consumption as last year in both countries and allowing for a normal carryover on July 1 next year, the surplus would be only about 35,000,000 bushels more than in 1922-1923, when net North American exports were 477,000,000 bushels.

If farm feeding of wheat is as extensive as now expected, exports of 450,000,000 to 475,000,000 bushels may be sufficient to clean up the supply. Estimates that a surplus of 550,000,000 to 650,000,000 bushels is available in North America are totally unjustified.

The United States alone can export about 160,000,000 bushels, based on present indications, plus an amount equivalent to any imports from Canada. In the first two and one-half months of the crop year our exports have amounted to about 48,000,000 bushels, which means that excellent progress has been made toward working off the surplus in this country.

Frost Catches Corn Crop.

Frosts early last week caught a great deal of immature corn over the northern part of the corn belt. The extent of damage is uncertain, but reports have been rather uniformly doleful, as many replanted fields needed another two weeks of ripening weather.

While primary receipts of oats thus far in the crop year have been larger than a year ago, they are below the 10-year average. In spite of substantial additions to the visible supply, it is considerably below normal. Oats are cheap compared with other feed grains and producers are disposed to hold back for farm use.

The range of cash grain prices for the week ended September 19 was as follows:

CHICAGO—Wheat—No. 2 red, $1.02@1.04; No. 3 red, $1.00 1-2@1.03; No. 2 hard, $1.03@1.09 1-2; No. 3 hard, 99c @$1.03; No. 4 hard, 97 3-4c@1.01. Corn—No. 2 mixed, 85 3-4@89c; No. 2 yellow, 86 3-4@89 1-2c; No. 3 yellow, 86 3-4@89c; No. 2 white, 86@89c. Oats—No. 2 white, 40@44 1-2c; No. 3 white, 38 1-2@41c; No. 4 white, 37@40 3-4c. Rye—65@72 1-2c. Barley—55@73c.

Seed and Feed.

The recent advance of about 20 per cent in clover seed prices seems to have discounted for the present the size of the crop, which is the smallest with one exception since 1915 and the market has declined slightly.

Small Gain in Hay Crop.

The September forecast of the hay crop was 88,000,000 tons, which represents a small gain over a month ago. It compares with 112,800,000 tons in 1922, however. Prices at most of the leading hay markets are firm, with a fair demand and light receipts. Alfalfa hay is scarce and higher at most markets. The south is said to be a less urgent buyer than a week or two ago, although stocks in southern markets remain small.

Fresh egg prices found still higher levels last week as the supply of fine graded stock became more limited.

Butter production is failing to show the increase so confidently expected by dealers earlier in the season and the market is firm, with advancing prices, as the supply is barely sufficient to satisfy the demand.

Trading in small lots was active in the cheese market last week at unchanged prices, but dealers were uninterested in large amounts.

Fruits and Vegetables.

The September forecast of the white potato crop was

Fair at Yakima Shows State's Industry

(Continued from page three.)

purebred Holstein bull calf, that had won first in his class in the Holstein show, to Homer Mounser of Elma, who won the Holstein club judging contest. The calf was from the state herd at the Western State hospital at Steilacoom. Margaret Campbell of Spokane was awarded a purebred Jersey calf from the herd at Waikiki farm near Spokane as a prize for winning the Jersey club judging contest. A Guernsey calf given by A. L. Gile of Chicona farm, Chinook, was won by Chester Schlein of Mabton, who proved to be the best club judge of Guernseys. Twenty-eight boys and girls competed in the three contests, 14 in Holsteins, eight in Jerseys and six in Guernseys.

The Live Stock Show.

As stated previously, this year's showing of live stock was not as inspiring as was the great show and keen competition of a year ago, but it was a show worthy the prominence of that phase of the agricultural industry of the state.

Judges of the live stock show were: Beef cattle and milking Shorthorns—Frank Brown, Carlton, Ore. Holsteins and Ayrshires—Axel Hanson, Minneapolis. Guernseys and Jerseys—P. M. Brandt, Oregon Agricultural college. Horses—George M. Wilson, Rocklyn, Wash. Hogs—Ray J. Fox, Silverton, Ore. Sheep—Howard Hackedorn, State College of Washington.

Every class of live stock was reasonably well represented. Not the most showy from the viewpoint of the casual observer, but perhaps the most noteworthy of the entire show were the entries in the hog department. The six breeds of hogs common in the northwest were represented by first-class herds and individual animals. The Poland Chinas and Duroc Jerseys probably led in numbers, but, while their general quality was high, it did not exceed that of the Chester Whites, Hampshires, Berkshires or Tamworths. There were strong shows of each breed, as indicated in the awards in the swine department, which were as follows:

The Poland Chinas.

Boars: Aged boar—1, B. F. Kammerzell & Sons., Colfax, Wash., on Headliner; 2, Harold Van Wechel, Yakima, Wash., on Buster Clansman; 3, Kenneth E. Cain, Yakima, Wash., on Big Tim's Jap. Senior yearling—1, I. J. Oder, Yakima, Wash., on King Midas; 2, Kammerzell on K Big Bob. Junior yearling—1 and 2, Baker & Paddison, Yakima, Wash., on Columbia's Chief 2d (senior and grand champion) and Designer C; 3, Kammerzell, on Fashion Archdale; 4, Oder, on King of Mastodons; 5, B. B. & Ivan B. Fenton, Sunnyside, Wash., on Hillcrest Prince. Senior pig—1 and 3, Kammerzell, on Designer's Model 2d and Royal Pilot; 2, Oder, on Prospect King. Junior pig—1 and 2, Baker & Paddison on Washington Lad (junior champion) and Washington Prospect; 3, on Prior's Big Bob.

Sows: Aged sow—1, Kammerzell, on Clansman's Kind: 2 and 3, Oder on Cedal Lady and Lady Mastodon; 4, Archie Prior, Yakima, Wash., on My Pet. Senior yearling—1, Longknecht, on Moxien; 2, Oder, on Naches Queen; 3, Kammerzell on Miss Buster; 4, Prior, on Dorothy 1st. Junior yearling—1 and 2, Kammerzell on Archdale's Best (senior and grand champion and Archdale's Queen; 3, Longknecht, on Helen A. Wonder; 4, Fenton, on Hillcrest Lil; 5, Oder, on Miss Mastodon M. Senior pig—7, Oder, on Prospect Lass (junior champion); 2, Washington State college, on Cedar 3d; 3 and 4, Kammerzell, on Washington Queen 3d and Washington Beauty; 5, Longknecht, on Blanch. Junior pig—1 and 2, Baker & Paddison, on Washington Cedar and Washington Lady; 3, Kammerzell, on Arch Back Lady; 4 and 5, Charles Lampkin.

Herds and groups: Aged herd—1 and 3, Kammerzell; 2, Oder. Young herd—1, Baker & Paddison; 2 and 4, Kammerzell; 3, Oder; 5, Cain. Breeder's young herd—1, Baker & Paddison; 2, Kammerzell; 3, Oder. Get of sire—1, Kammerzell; 2, Baker & Paddison; 3, Oder. Produce of sow—1 and 2, Kammerzell; 3, Baker & Paddison.

The Poland China Futurity.

Junior yearling boars—1, Baker & Paddison, Yakima, Wash., on Columbia's Chief 2d; 2, I. J. Oder, Yakima, Wash., on King of Mastodons; 3, B. F. Kammerzell & Sons, Colfax, Wash., on Fashion Archdale; 4, B. B. & Ivan B. Fenton, Sunnyside, Wash., on Hillcrest Prince; 5, Archie Prior, Yakima, Wash., on Prior's Missouri Wonder 483039.

Junior yearling sows—1 and 2, Kammerzell & Sons on Archdale's Queen 1194172 and Archdale's Best 1194170; 3, George Longknecht, Yakima, Wash., on Helen A. Wonder 1197458; 4, Fenton on Hillcrest Lil 1184092; 5, Oder, on Miss Mastodon M 1206926.

Senior boar pigs—1, Kammerzell & Sons, on Designer's Model 2d 519877; 2, Oder, on Prolific King.

Senior sow pigs—1 and 5, Oder, on Prospect Lass and Miss Prospect; 2 and 3, Kammerzell, on Designer's Queen 1284608 and Washington Queen 3d 1255604; 4, Longknecht on Blanch 1285526.

Junior boar pigs—1 and 2, Baker & Paddison on Washington Lad 517909 and Washington Prospect 517907; 3 and 6, Longknecht, on Prior's Wonder 520133 and Bob Big 520137; 4 and 7, Kammerzell & Sons on Peter's Great Archdale 519881 and Fashion Clansman 519879; 5, Prior, on Prior's Pride 518475; 8, Oder, on Convincer.

Junior sow pigs—1 and 2, Baker & Paddison, on Washington Cedar 1278766 and Washington Lady 1278778; 3 and 4, Kammerzell & Sons, on Archdale King 1284602 and Checkers Girl 1284604; 5 and 6, Harold Van Wechel, Yakima, Wash., on Lady Mastodon 1282480 and Pollie Mastodon 1282486; 7 and 8, Longknecht on Georgia Top 1285528 and Orphan Girl 1285530.

Senior pig litters—1, Kammerzell & Sons on litter of Washington Queen 1131262; 2, Oder, on litter of Lady Mastodon 1049210.

Junior pig litters—1, Baker & Paddison, on litter of Cascade Cedar 1195330; 2 and 4, Kammerzell & Sons on litters of Peter's Grand Lady 1183614 and Clansman's Best 1259222; 3, Longknecht, on litter of Willey's Top 877912; 5, Van Wechel on Mastodon Maid 1156158; 6, Washington State college, on litter of Giant Price 1178408; 7, Prior, on litter of My Pet 1108594; 8, Oder, on litter of Lady Mastodon 1049210.

The Duroc Jerseys.

Boars: Aged boar—1, Sam Erwin, Yakima, Wash., on Yakima Pathfinder 2d; 2, Pease & Hartley, Usk, Wash., on Orion Critic. Senior yearling—1, B. W. Powers & Sons, Palouse, Wash., on Joe's Sensation (senior and grand champion). Junior yearling—1, Garfield Stock Farm, Garfield, Wash., on Comet Sensation; 2, Mayview Stock Farm, Johnson, Wash., on Mayview Giant I Am; 3, J. K. Couzins, Yakima, Wash., on Cherry Red Pathfinder; 4, S. E. Chaffee, Sunnyside, Wash., on Glencliff Chief; 5, Pease & Hartley, on Proud Orion Joe. Senior pig—1, Mayview Farm, on Lookout Sensation (junior champion); 2 and 3, Pease & Hartley, on Prince of Pathfinders 3d and Mammoth Sensation 2d; 4 and 5, Chaffee on Glencliff Pathfinder and Glencliff Billy. Junior pig—1 and 2, Chaffee on Glencliff's Best and Glencliff Leader; 3, Mayview Farm, on Mayview's Double Orion; 4 and 5, Philip Hitchcock, Sunnyside, Wash., on Gano's Traveler and Gano's Pathfinder.

Sows: Aged sow—1, I. J. Oder, Yakima, Wash., on Golden Best Yet; 2, Mayview Farm, on Mayview Joe Orioness; 3, Chaffee, on Miss Hazel 2d; 4, Couzins, on Pathfinder Belle; 5, Pease Hartley, on Wonder Lady Orion. Senior yearling—1, Mayview Farm on Mayview's Orioness I Am. Junior yearling—1 and 2, Mayview Farm, on Mayview Queen I am (senior and grand champion) and Mayview Queen I Am 2d; 3, Couzins, on Queen Orion Pathfinder; 4 and 5, Hartley & Pease, on Proud Princess and Josie Orion. Senior pig—1 and 5, Mayview Farm, on Mayview Orion Queen (junior champion) and Mayview Orion Queen 2d; 2 and 4, Pease & Hartley, on unnamed pigs. Junior pig—1 and 4, Mayview Farm, on Mayview Double Orioness 2d and Mayview Orioness 3d; 2, H. W. Turner, Sunnyside, Wash., on I Am Lady Orion Jr.; 3, Chaffee, on Glencliff's Prize; 5, Pease & Hartley, on Queen Orion.

Herds and groups: Aged herd—1, Pease & Hartley. Young herd—1, Mayview Farm; 2, Chaffee; 3 and 5, Pease & Hartley; 4, Turner. Breeder's herd—1, Mayview Farm; 2, Chaffee; 3 and 4, Pease & Hartley; 5, Turner. Get of sire—1, Mayview Farm; 2, Chaffee; 3, Powers & Sons; 4, Pease & Hartley; 5, Turner. Produce of sow—1, Mayview Farm; 2, Chaffee; 3, Powers & Sons; 4, Pease & Hartley; 5, Turner.

The Duroc Jersey Futurity.

Junior boar pigs—1, 2 and 3, S. E. Chaffee, Sunnyside, Wash., on Glencliff's Best, Glencliff's Leader and Glencliff's Commander; 4, Mayview Stock Farm, Johnson, Wash., on Mayview Double Orion; 5 and 6, Phillip Hitchcock, Sunnyside, Wash., on Gano's Traveler and Gano's Pathfinder; 7, F. E. Pease & Sons, Usk, Wash., on Wonder Orion; 8, H. W. Turner, Sunnyside, Wash., on Lady Orion's Boy.

Junior sow pigs—1 and 4, Mayview Stock Farm, on Mayview Double Orioness 2d and Mayview Double Orioness 3d; 2, Turner on I Am Lady Orion Jr.; 3, Chaffee, on Glencliff's Pride; 5, Pease & Sons, on Queen Orion; 6, 7 and 8, B. W. Powers & Sons, Palouse, Wash., on Red Giantess, Red Giantess 1st and Red Giantess 3d.

Litters of four—1, Chaffee, on litter of Miss Hazel 2d; 2, Mayview Stock Farm, on litter of Mayview Queen Orioness; 3, Powers & Sons, on litter of Sensation's Giantess; 4 and 8, Turner, 1st; 5, Pease & Sons, on litter of Wonder Lady on litters of I Am Lady Orion and Orion Lady Orion; 6, Chaffee; 7, Mrs. Tena Martin, on litter of Glencliff's Tena; 9, Chaffee.

The Chester Whites.

Boars: Aged boar—1, Frank Von der Hayden, Wapato, Wash., on Oak Prince. Senior yearling—1, C. M. Meenach, Sharon, Wash., on Sharon Buster (senior and grand champion); 2, Von der Hayden on Oak Prince 2d. Junior yearling—1, Von der Hayden on Tacoma Boy. Senior pig—1, Von der Hayden on Wapato Boy; 2, Meenach on Hank. Junior pig—1, S. L. Woodhouse, Ellensburg, Wash., on junior champion; 2, C. M. Meenach on Whirlwind; 3 and 5, Leonard Newman, Thorp, Wash., on unnamed pigs; 4, C. T. Meenach, Sharon, Wash., on Buster's Choice.

Sows: Aged sow—1 and 2, C. M. Meenach on Pet Benton and Marjorie; 3 and 4, Von der Hayden on Ruth and Silver Lady. Senior yearling—1, C. M. Meenach on May Belle; 2, C. T. Meenach on Lucile. Junior yearling—1, C. M. Meenach on C. M's. Choice (senior and grand champion); 2, Von der Hayden on Diamond 2d. Senior pig—1 and 2, C. M. Meenach on Margie (junior champion) and Pearl; 3, 4 and 5, Von der Hayden on Elm 1st, Elm 2d and Elm 3d. Junior pig—1 and 4, C. T. Meenach on Daisy and Pinkey; 2 and 3, C. M. Meenach on Min and Jaqueline; 5, Leonard Newman on unnamed pig.

Herds and groups: Aged herd—1, C. M. Meenach; 2, Von der Hayden. Young herd—1 and 2, C. M. Meenach; 3, Von der Hayden. Herd bred by exhibitor, get of sire and produce of sow—1 and 2, C. M. Meenach; 3, Von der Hayden, in each lot.

The Berkshires.

Boars: Aged boar—1, J. A. Simonson, Buena, Wash., on Crestland Bob (senior and grand champion). Senior yearling—1, Simonson on Buena Long Fellow. Junior yearling—1, Simonson on Monarch Sentinel; 2, J. Alva Bull, Ellensburg, Wash., on Emblem's Prince 7th. Senior pig—1 and 2, Fred H. Sinnes, Prosser, Wash., on Longview Rival (junior champion) and Longview Rival 2d; 3, Simonson on Buena King. Junior pig—1 and 2, Sinnes on Longview Rival 3d and Longview Rival 4th; 3, Simonson on Buena 3d; 4 and 5, Bull, on Sunset Demonstrator and Sunset Demonstrator 2d.

Sows: Senior yearling—1 and 3, Bull, on Grapewild Bernice 20th (senior and grand champion), and Escalon Artful Belle 34th; 2, Sinnes on Dominator's Royal Fashion 2d. Junior yearling—1, Sinnes on Monarch's Lady Laurel 3d. Senior pig—1 and 3, Sinnes on Longview Lady 2d (junior champion) and Longview Lady 3d; 2, Simonson on Buena Rose. Junior pig—1 and 2, Simonson on Silver Brand Beauty 4th and Silver Brand Beauty 5th; 3, Sinnes on Longview Lady 4th.

Herds and groups: Young herd—1 and 2, Sinnes; 3, Simonson. Breeder's young herd—1 and 2, Sinnes; 3, Simonson. Get of sire—1 and 3, Sinnes; 2, Simonson. Produce of sow—1 and 3, Sinnes; 2, Simonson.

The Tamworths.

The Tamworth show was made up largely by the herd of I. J. Oder, Yakima. Except for 1 and 2 in junior sow pigs, 1 in get of sire, 1 in produce of sow and junior champion sow, which were won by D. R. Canfield, Yakima, Wash., Mr. Oder won all awards as follows:

Boars: Aged boar—1 on Round Knoll Colonel 2d. Senior yearling—1, on Inauguration 2d (senior and grand champion). Junior yearling—1, on Colonel Columbus. Senior pig—1, on Prospector. Junior pig—1 and 2, on Prospect King (junior champion) and Prospect Lad.

Sows: Aged sow—1 and 2, on Sunnyside Belle (senior and grand champion) and Columbia Girl. Senior yearling—1 and 2, on Beauty and Julia. Junior yearling—1 and 2, on Miss Prospect and Prospect Lass. Senior pig—1 and 2, on Miss Bacon and Miss Bacon 2d. Junior pig—3, on Beauty's Choice.

Herds and groups—1 and 2, on aged herd; 1 and 2 on young herd; 1 and 2 on breeder's herd; 2 and 3 on get of sire, and 2 and 3 on produce of sow.

The Hampshires.

Boars—Aged boar—1 and 3, Hayes & Harter, Grants Pass, Ore., on Model's Designer and Nehawka Masterpiece; 2, J. M. Fruitts, Cambridge, Idaho, on Silver King. Junior yearling—1, S. E. Chaffee, Sunnyside, Wash., on Cherokee Monarch (senior and grand champion); 2, Fruitts on Tipton's Chief. Senior pig—1 and 4, Fruitts on Quargo Tipton Master (junior champion) and Rambling Kid 2d; 2 and 3, Hayes & Harter on Cherokee Premier and Cherokee Prince. Junior pig—1, Fruitts on Sourdough Jim; 2 and 3, Hayes & Harter on Nehawka Monarch and Nehawka Broadway.

Sows—Aged sow—1 and 3, Fruitts on Fruitts' Model (senior and grand champion) and Alabama; 2, Hayes & Harter on Bell Flower. Senior yearling—1, Hayes & Harter on Cherokee Belledora; 2 and 3, Fruitts on Goodenough and Midnight. Junior yearling—1 and 3, Fruitts on Silverbell and Silver Moon; 2, Hayes & Harter on Lady Princess Maid. Senior pig—1 and 4, Fruitts on Snake River Nellie (junior champion) and Spark Plug; 2 and 3, Hayes & Harter on Cherokee Cornflower and Cherokee Baska. Junior pig—1 and 2, Fruitts on Idaho You'll Do and Fruitts' Pippin.

Herds and groups—Aged herd—1, Hayes & Harter; 2 and 3, Fruitts. Young herd—1 and 3, Fruitts; 2, Hayes & Harter. Breeder's young herd—1 and 3, Fruitts; 2, Hayes & Harter. Get of sire—1, Fruitts; 2, Hayes & Harter; 3, Chaffee. Produce of sow—1 and 2, Fruitts; 3, Hayes & Harter.

WITTE ENGINES

THROTTLING-GOVERNOR

THE standard in cheap, dependable power—an all-purpose engine—yet simple and trouble-proof a boy can operate it. Over 100,000 in all over the world.

Runs KEROSENE, GASOLINE, DISTILLATE or GAS.

Delivers big surplus of power on any fuel—even speed on any load.

WICO Magneto Equipped This famous magneto assures easy starting in any temperature—sure performance in rain, snow or sleet. The most perfect system of high tension ignition known.

All Sizes, 2 to 25 Horse-Power.

For $1 You Employ Scores of Workers for 5 Years

Rock Bottom Subscription Price Due to Cooperation

When you subscribe to The Washington Farmer you employ the services of a big, hardworking organization devoted to your interests alone.

These people get accurate, up-to-date market quotations from the principal centers, prepare careful crop and weather reports, or glean the news and views expressed at conventions, shows and farm gatherings.

Others in the organization conduct the departments, comb the state for farm facts, and answer your questions. They find out and report the experiences of hundreds of practical farmers whose problems are not those of some distant field, but of the same state in which you live. Then there are those whose pleasant task it is to find the stories which will give you the greatest enjoyment to collect the household hints and helps which will prove most worth while, or to discuss for our great circle of thoughtful readers the many topics and issues of current interest.

For the expenditure of a dollar you secure the services of this great organization for five full years. This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

$1.00 for 5 Years

50 cents for 3 years, 25c for one year.

Opportunity Calls from CANADA

Pay a visit to Canada—see for yourself the opportunities which Canada offers to both labor and capital—rich, fertile, virgin prairie land, near railways and towns, at $15 to $30 an acre—long terms if desired. Wheat crops last year the biggest in history; dairying and hogs pay well; mixed farming rapidly increasing.

Homeseekers' Rates on Canadian Railroads

If you wish to look over the country with a view to taking up land get an order from the nearest Canadian Government Agent for special rates on Canadian railroads. Make this your summer outing—Canada welcomes tourists—no passports required—have a great trip and see with your own eyes the opportunities that await you.

Just Folks

Sooner or later fate befalls all of us.

Right and wrong never lose their punch.

Saying may be as much of an action as doing.

Nothing is more shabby than assumed aristocracy.

Our civilization demands mechanical giving in charitable work. This reaches its height in the community chest. You give your dollar and a so-called impartial committee sitting in an office of a city business building portions out the lump sum of dollars given by all according to certain rules of arithmetic to the score of different agencies which are engaged in welfare work.

You are cautioned against feeding the tramps at your door, for you are told this advertises your home as a tramp feeding station, and many impositions will be made upon your good will. Just tell the wayfarer at your door that No. 410 Community Chest block will aid him if he can prove that he is not an impostor.

The successful church demands that you give your tithes to the business committee that apportions the amount to the salary of the minister, to the painting of the meeting house, the purchase of new hymn books and the payment of the interest on the debt.

Having donated to the community chest, the church treasury and the relief fund in your fraternal organization, the personal calls for aid which come to you are met with a grudging spirit, as your conscience is quieted by your regular mathematical donations.

And yet this mathematical and mechanical charity builds hospitals, supports homes for orphans and other wide-reaching needs of humanity, which would largely lapse if left to the individual attention of a people fed up on hurried work and hurried pleasures.

Now and then a visit to the hospital to which you have contributed might take the metallic taste out of your mouth. Even your taxes might for the moment be condoned if you found the old folks having quite comfortable days at the county farm.

Some years ago I visited one of these county farms and one of the happiest pictures in my memory was the sewing, knitting and fancy work "bee" participated in by several of the older inmates.

This is a mighty interesting contest that is waged between individuality and the collectism of the 20th century civilization. E A S

Bits of Fun for Everyone

Tough Luck.

"Just my luck," said the prisoner, as he threw the magazine across the cell in disgust. "Nothing but continued stories, and my execution's fixed for next Friday."—Key of the House.

That's the Place.

Teacher—Who can tell me the meaning of the word "leisure?"

Little boy—Please, miss, it's a place where married people repent.

No Bacon.

The young couple's cook was pretty as a picture, but her cooking was terrible, and one morning the bacon was wholly inedible.

"Dear," said the wife, "I'm afraid the cook has burned the bacon. You'll have to be satisfied with a kiss for breakfast this morning.

"All right," responded the husband gruffly. "Call her in."—American Legion Weekly.

Chicken Had Flown.

A popular Oklahoma city salesman recently married and was accompanied by his wife as he enterd the dining room of a Texas hotel famed for its excellent cuisine. His order was promptly served, but the fried chicken he had been telling his wife so much about was not in evidence.

"Where is my chicken?" he asked, somewhat irritably.

The dusky waiter, leaning over and bringing his mouth in close proximity to the salesman's ear, replied:

"Ef youse mean de li'l gal with blue eyes an' fluffy hair, she doan' work heah no mo'."

Knows Nothing at All.

Topsy—Do you know, daddy, I don't think mummy understands anything about children, really!

Daddy—What do you mean, Topsy?

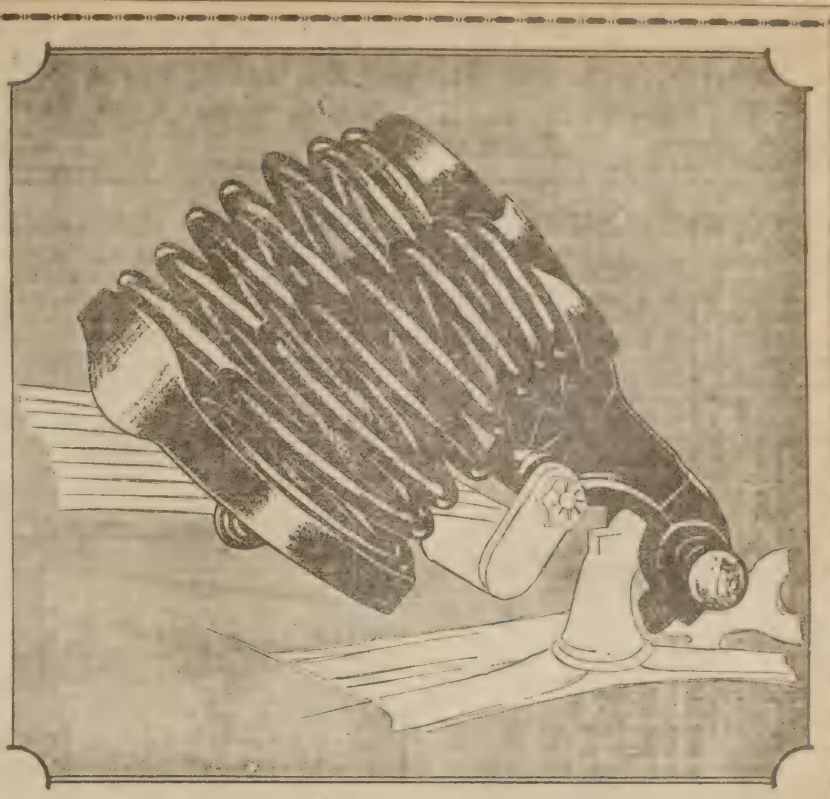
Topsy—Well, you see, she wants me to go to bed when I am wide awake and to get up when I'm awfully sleepy.—London Mail.

How Did He Know.

Freddie—Ma, what is the baby's name?

Ma—The baby hasn't any name yet.

Freddie—Then how did he know he belonged to us?—Edinburgh Scotsman.



Insure the Life of Fine Machinery

Write for "An Auto Biography." This new Hassler booklet, sent free on request, will grip you with its human interest, no matter what car you drive

Why is it that the farmer, with Hasslers on his Ford, is usually well-to-do?

Follow him to his farm and you will very likely find his place *kept up*—clean barn yard—fences in repair—machinery under cover—accounts properly kept—money in the bank—everything insured.

There is just one answer:

It is good business to protect and insure the life of fine machinery.

—and your Ford is the finest piece of machinery on your farm.

Think it over.

There is the proper type Hassler for every Ford model and there is a Hassler dealer in your nearest town.

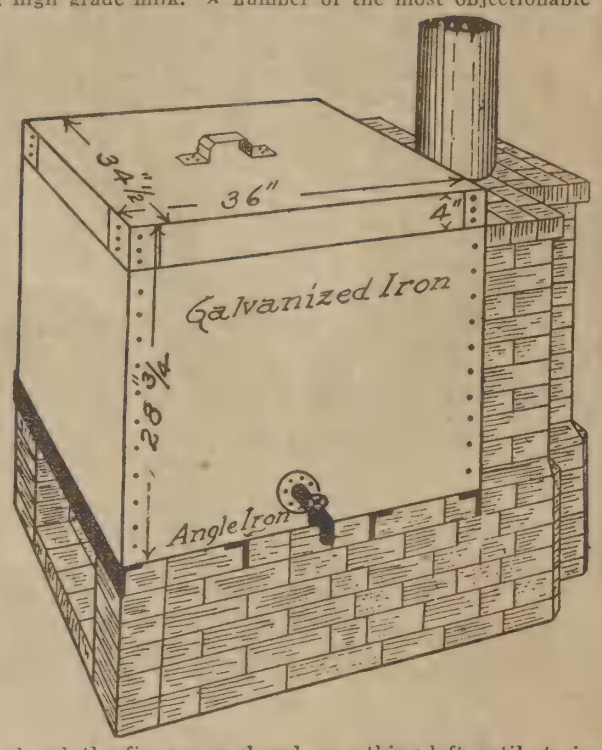
LIVESTOCK AND DAIRY

Properly Sterilizing Utensils of the Dairy

The washing and sterilizing pails, cans, milkcoolers, strainer clothes, bottles, etc., is very important in the control of the bacteria of the dairy, says H. C. McNatt, dairyman of the Western Washington experiment station at Puyallup, in his July bulletin. The article continues that properly handling this part of the dairy work will go very far toward producing a high grade milk. A number of the most objectionable kinds of bacteria, notably those causing slimy milk, bitter milk, sweet curdling and souring are propagated from milking to milking, and from day to day by the undestroyed germs remaining in improperly washed and sterilized utensils. The word "utensils" is used in its broad sense and includes the cream separator, cooler, wash vats, strainer cloths, cans, etc., as well as the milk pails.



A practical type of sterilizer especially adapted to small dairies is that devised by the dairy department of the University of California. The usual routine involved in using this type of sterilizer is to fill it with water just before milking begins, and supply with sufficient fuel to warm the water well by the time milking is finished. When ready to wash the utensils this water is drawn off into a washing and rinsing vat as needed. The outlet faucet of the sterilizer is placed above the bottom at such a distance as to cause an inch or so of water to automatically remain. This water produces the steam for sterilization of the utensils. When the utensils are washed and rinsed, they are stacked in the sterilizer, the lid closed, the fire renewed and everything left until sterilization is complete. After being sterilized the utensils should be placed on a draining rack to dry.

The following is the description, illustration and specifications of the California station device. It is stated that this sterilizer can be constructed at any first-class tin shop.

"For small dairies producing market milk, or for large dairies shipping cream, in case a steam boiler is not available, very satisfactory sterilization can be accomplished by placing all dairy utensils into a covered galvanized iron tank, such as shown in the illustration, and boiling them for 20 minutes.

"The sterilizer tank may be made of galvanized iron of any weight or quality, but unless it is constructed of heavy, high purity galvanized iron it will soon burn out. Those made from the best material of No. 16 or No. 14 gauge will be the cheapest in the end on account of the increased durability, if they are properly cared for. If the tank is made of No. 16 gauge iron the top may be only No. 20 gauge, which will be less expensive and just as durable since the cover is subjected to less wear than the tank.

"Wood is the fuel most commonly used in heating these sterilizers, but in case an oil burner is used an extra sheet of iron should be placed directly above the flame; otherwise the extreme heat from the oil burner will injure the bottom of the sterilizer and decrease its durability.

"Since the galvanized iron usually carried by plumbers does not exceed 36 inches in width, the size of sterilizer can not exceed that shown in the figure if it is to be economically constructed. A false bottom should be provided in the bottom of the tank to hold the utensils above the boiling water. The heat from the steam accomplishes the sterilization and by keeping the utensils above the water in the tank, they are less likely to rust when kept in the tank after sterilization.

"The false bottom may be constructed from 1-4x1 inch galvanized bar iron, as follows:

"Seven parallel pieces five inches apart to be riveted to 1-4x1 inch end bars. The end bars are turned downward at right angles three inches from each end to form supports and raise the false bottom three inches from the bottom of the tank. The metal frame is given greater strength by riveting a 1-8x1 inch angle iron through the center and parallel to the end bars. The ends of this also should be turned at right angles to rest against the bottom of the tank. This size tank is sufficient for the sterilization of the cans and other dairy utensils on dairies of the size previously stated.

The sterilizing tank may be filled twice with utensils in case it is not sufficiently large to allow for sterilizing all utensils at one time.

Made Profit on Wheat

In these days when one hears on every hand the statement that there is no money in farming and that wheat is being sold for less than cost of production, it is encouraging to hear a statement like that made by Bert Hanna, a member of the firm of Hanna Brothers, farmers, near Plaza, in southern Spokane county.

Hanna Brothers threshed 8000 bushels of wheat this season and sold it as soon as threshed, for 84 cents a bushel, or on a basis of 84 cents for No. 1 wheat. But there was much smut in their wheat and after deducting the dockage for smut their wheat brought them 77 cents a bushel, net, at the warehouse. The grain was bought by the Farmers' Union Warehouse company at Plaza and shipped direct to Portland. It filled eight cars. Speaking of the crop, Bert Hanna said:

"This crop brought us the greatest net returns we have ever had from our land since we began farming it and after deducting all expenses we have a good profit from the crop. There is money in raising good crops of wheat, even at what now seems low prices."

accurate control governor

The control governor of "Caterpillar" Tractors is especially designed to operate with utmost accuracy and smoothness—a feature that you will appreciate. The catalog tells more—send for it.

THE PROFITABLE WAY TO HAUL

"Goodyear Cord Truck Tires speed up my farm work, save shrinkage in loads of live stock, and enable me to do hauling for other farmers at a profit. Goodyear Service helps me to get all the miles that are built into them."

—WILLIAM WOESSNER, Sterling, Ill.

HAULING on Goodyear Cord Truck Tires is more profitable because Goodyears give you more mileage at low tire cost. Their famous All-Weather Tread is powerfully tractive in any going. Their stronger sidewalls resist rut, curb and road wear. Their great activity enables you to make more trouble-free, on-time, full-load trips between your farm and your market.

The new beveled All-Weather Tread Cord Tire is made in all sizes for trucks and passenger cars

750 lb. Separator For $5.89 Down

Balance On New Cream Check Payment Plan

The biggest reason for not using a worn-out cream separator—wasting cream and good, hard-earned money—is this special offer made by William Galloway, of Waterloo, Iowa, to farmers in every part of the country.

Every farmer knows the reputation for highest quality of Galloway merchandise. Now, William Galloway, implement manufacturer, has worked out a plan to save farmers money these times. The special terms and low prices on genuine Galloway Sanitary Cream Separators is an example of how far Wm. Galloway will go to help farmers save and make money.

Wm. Galloway, President Wm. Galloway Co.

Any farmer who is now making an old, worn-out separator do cannot afford to pass up the special opportunity to have a new, up-to-date, close-skimming Galloway Sanitary Cream Separator on his place. Under the Galloway cream check payment plan the new separator pays for itself through the additional cream saved and the elimination of repair costs. It is like adding several good milch cows to your herd without buying more cows.

The reputation of the Galloway Sanitary Cream Separator speaks for itself—thousands of letters pour in telling of increased income from closer skimming, easier operation and unequalled durability.

To allow every farmer to convince himself of the superiority and value of the Galloway Separator Mr. Galloway has arranged to put one of his separators on your farm for a 90-day trial before you decide it is the best money can buy.

Wm. Galloway says: "Just try my New Sanitary Cream Separator. If you like it, keep it—let it pay for itself. If you don't like it, send it back. It will sell itself to you by the way it runs and skims or no sale."

Write Wm. Galloway, president of Wm. Galloway Company, Dept. 2457, Waterloo, Iowa, today for low prices and terms on separators; engines, spreaders and other farm necessities.

Treating Seed Wheat

During the last year a demonstration at the western Washington experiment station has been completed, which had as its object a comparison of several methods of seed treatment for controlling bunt or stinking smut of winter wheat. A statement of the results has been prepared as follows by M. E. McCollam, agronomist, and Arthur Frank, plant pathologist:

The seed used was of the hybrid 128 variety, very heavily infected with smut. The seed was divided into six portions and treated variously, as follows:

Treatment 1—Seed soaked for 10 minutes in a solution of copper sulphate (one pound to eight gallons water). Then spread out to dry.

Treatment 2—Seed untreated.

Treatment 3—Seed soaked for 10 minutes in a solution of formalin (one pound to 30 gallons water). Then covered for five hours with sacks soaked in solution and spread to dry.

Treatment 4—Seed dusted with copper carbonate (two ounces to one bushel wheat). Grain and copper carbonate thoroughly agitated to cover all grains with the chemical.

Treatment 5—Seed soaked in copper sulphate solution as above. Then dipped in lime solution (one pound quicklime to 10 gallons water). Spread out to dry.

Treatment 6—Seed soaked in formalin solution as above. Then dipped in lime solution (one pound quicklime to 10 gallons water.) Covered for five hours and spread to dry.

Seed of each lot was then planted in quarter-acre plats. The yield and percentage of smut under each of the six treaments follows:

Treatment No.	Yield per acre in pounds.	Per cent smutted heads.
1	1965.56	0.56 per cent
2	1491.05	73.59 per cent
3	2593.39	2.37 per cent
4	2696.33	4.54 per cent
5	2535.22	4.67 per cent
6	2365.08	7.59 per cent

This plainly shows the relation of seed treatment to yield. The crop on the untreated plat showed over 73 per cent smut and yielded least grain. The seed treated with copper carbonate and that treated with formalin yielded most grain and there was a low percentage of smut in the crop. The treatment with copper carbonate, aside from producing the greatest yield of grain, proved to be a more convenient and time-saving method than the soaking and drying methods.

Clallam County Fair

The third Clallam county fair covers more space this year than ever before and the racing program shows a decided improvement over last year.

The fairgrounds are leased by the county fair association from the city commissioners and occupy an important position in the city park of 160 acres. The board of county commissioners has appropriated money for the construction of six permanent buildings for the housing of exhibits. Besides the permanent buildings it was necessary to erect five large tents to shelter cattle, sheep, running horses, automobile exhibits and flower show.

The keenest spirit of competition was shown among the various communities for the loving cup which in 1917 was offered to the community winning it three times in succession. Since that time it has been won by four different communities and this year came nearly being permanently won by the Eden Valley grange, which had won it two preceding years. Eden Valley grange was given second place by the margin of one point. Six communities, Fairview, Eden Valley, Dry Creek, Sequim, Inugeness and Carlsborg, entered the contest. Nearly the whole of Clallam county was represented in the county fair by community exhibits.

The boys' and girls' club exhibits received favorable comments and grown folks expressed surprise at the quality and amount of work done by the young folks in the sewing, canning, cooking, garden and dairy clubs. The dairy club exhibits and contests were a new phase of the club work shown at the fair. There were contests in testing milk, judging dairy cattle and the showing of their own animals in the show ring. Harvey Eacrett of Port Angeles made the highest total score and won a silver loving cup.

The live stock was featured in the main by the work done by the Guernsey club in getting out a good show and transporting the animals to the fairgrounds. There was also some showing made by the Jersey breeders and by the Aryshire breeders. The quality of the dairy stock shown was the best that has yet been made, although the number was about the same as usual.

The poultry exhibit was improved by the addition of new wire coops.

Other departments of the fair, including the schools, merchants, industrial, etc., deserve special mention.

J. L. Keeler of Sequim was the general superintendent and manager and working under the supervision and hearty support of the board of directors of the fair association deserves credit for the success of the fair.

Hold Fair at Hunters

After a lapse of two years live stock men and business men of Hunters this year revived the Southwestern Stevens County fair and put on a good little event at Hunters. In the live stock department Shorthorn cattle predominated, John Fox, Worthley Brothers and Urquhart & Campbell being the principal exhibitors. Fox had the champion bull in Violet Star, a good roan senior yearling. Worthley Brothers won the female championship on a promising red senior calf, Jerome Beauty 5th. The awards follow:

Aged bull—First, Urquhart & Campbell on Golden Stamp; second, Worthley Brothers on Hercules Crown. Senior yearling bull—First and championship, Fox on Violet Star. Junior yearling bull—First, Urquhart & Campbell on Golden Star 5th. Senior bull calf—First, Worthley Brothers on Roan Lad; second, Fox on Duke; third, Urquhart & Campell on Morning Star. Junior bull calf—First, Fox on Kid; second, Worthley Brothers on Golden Crown. Aged cow—First, Fox on Valley Queen; second, Worthley Brothers on Green Mountain Bell. Two-year-old heifer—First, second and third, Fox on College Girl, Roan Lady and Red Wing. Senior yearling heifer—First, Fox on Sweetheart. Junior yearling heifer—First, Fox on Red Mandy; second, Worthley Brothers on Jerome Beauty 4th; third, Urquhart & Campbell on Violet Stamp. Senior heifer calf—First and championship, Worthley Brothers on Jerome Beauty 5th; second, Urquhart & Campbell on Golden Lass. Junior calf—First, Fox on unnamed calf.

Six Percheron horses of good quality for a small show were exhibited by Mr. Reynolds of Hunters.

BEST TRACTORS

"Work Land at the Proper Time"

ONE farmer who owns three Best Tractors says that he has been able to make more money with them "by being able to work land at the proper time—by working day and night, which is an impossibility with horses; and by deeper cultivation due to sufficient draw bar pull."

He continues, "I might state further that I have personally driven fifteen different makes of tractors, and *I have concluded that it is economy to use only the Best.*"

The owner of a Best Tractor can do his plowing and seeding when it *should be done.* Their readiness to work and "keep going" assure this.

"Subbing the Soil" is proving profitable on many farms. Our booklet called "Subbing The Soil," which explains the subject in full will gladly be sent on request. Write also for a list of Best Tractor owners in your neighborhood and investigate the performance of their machines.

POULTRY AND RABBITS

When Eggs Are High

By PREN MOORE.

The season when eggs are high in price is at hand. The hens should lay heavily through this period. The pullets should have been in their winter quarters by September 1 and be in full production by October 1.

Success or failure with hens depends upon the farmer's ability to make them lay uniformly high throughout the year. High production throughout the spring and early summer months is not sufficient for real profit from hens. Spring and early summer is the season of cheap eggs. It is important that hens lay well, even when eggs are cheap, but if hens are to be satisfactorily profitable they must be made to lay as many eggs during fall and winter as they do in spring and early summer.

Many farmers fail with poultry for the reason that they do not pay proper attention to the necessary details leading up to the fall and winter season. Pullets must be hatched early, and kept growing steadily from the time they are hatched until they are full grown. In order that this may be done, the chicks must be properly brooded, and the range condition and food supply must be correct throughout the growing season.

The growing season for pullets is a very busy time on most farms. Farmers are usually very busy around the first of September. September 1 is the time when pullets should be fully mature and gotten into the laying house. It is quite easy to neglect the work that appears the least pressing, especially when there seems to be more work than can be done. The pullets take care of themselves, after a fashion. However, if they are neglected to the extent that they are not gotten into production at the proper time there will be sustained a loss just in proportion to the neglect. The momentary loss is a minor consideration compared with the future loss resulting from temporary neglect.

If pullets do not get started off right, early in the fall, they seldom produce satisfactorily during any season of the year; even if they should produce abnormally high later in the season, there has been a price loss which can never be made up. The egg market runs in cycles. The egg market is high during the fall and early winter and is low in spring and summer. Ordinarily, the egg market becomes very nervous about Christmas, gradually weakening during January, with a short decline in February, reaching the bottom in March or April. Seasonal influences on prices for eggs vary some, but not much. In July the market usually becomes firm, with slight raises in August and September. The rise is usually very rapid during October. The egg market often reaches the peak in October and continues firm up to about Christmas. One dozen of eggs may sell for as much in October or November as three dozen would bring in April.

When Prices Are High.

Production should be high when prices are high. It costs but little, if any, more to produce eggs in October than it does to produce them in April. In any event, the stock is consuming feed in October whether they lay few, many or no eggs. It is much to the farmer's advantage, therefore, to keep conditions right so that his hens will produce as many eggs during October as they do in May.

Pullets should be full grown by the last of August; not fat nor producing to any extent. They should be well developed machines, plenty of bone, muscle and capacity. On September 1 they should be gotten into the laying house and put into laying condition. By laying condition is meant a little over fat—when pullets come into production they should be carrying a little surplus fat. Plump bodies and firm flesh is good laying conditions.

In Winter Quarters.

When pullets are taken off the range and placed in confinement, or winter quarters, they should not be placed on full feed at once. Stockmen know what will happen to any type of live stock when they are taken off the range or pasture, placed in confinement and put on full feed at once. Stockmen say that they must exercise care in feeding so that the stock will not get off feed. When stock is once off feed they do not thrive, and often much time is lost getting the animals on to feed again. They lose weight and may become ill. Fowls are no different in this respect from other animals.

The first day they are shut up, feed light. Keep them a little hungry. The second day feed a little more, and gradually increase the feed until they are on full ration. If the pullets have been properly developed they should be in good laying condition after about 10 days to two weeks feeding in confinement. The feed up to this point should be largely grain; a liberal supply of green feed is also necessary. The condition can be determined by the plumpness of the bodies. If the bodies are round and plump, the breasts fleshed even with the breast bone and the flesh firm, the pullets have reached laying condition.

To bring the pullets into production gradually reduce the grain or coarse feed. Reducing the coarse feed will cause the pullets to consume more mash or ground feed. The change should not be made abruptly. It is never wise to make abrupt changes of any kind with laying hens. The reduction in coarse feed should continue until the pullets are consuming not to exceed eight quarts or 15 pounds of scratch feed per 100 hens per day. A less amount may be better. Vary the amount of scratch feed in proportion to the flesh condition of the pullets. Never lose sight of the fact that hens poor in flesh never lay many eggs.

Hens poor in flesh may lay quite well during mild weather, but drop off very sharp in production with unfavorable changes of the weather. For a man to be a good poultry man he must be a good feeder. Have no fear of overfeeding hens when the feed formula is correct. There are more hens underfed than there are that are overfed. Hens properly bred

UNION CARBIDE

WORLD'S BEST QUALITY—HIGHEST GAS YIELD

—a wonderful cooking convenience

—hot water for washing, bathing, and all purposes

Keeping the sun up after dark!

Artificial sunlight, the dream of the ages, is in our time a reality. Artificial sunlight owes its existence to the discovery of Union Carbide—a discovery made over 31 years ago. The wonder-working gas is today favorably affecting the welfare of millions of people, bringing comfort and happiness with economy and satisfaction.

Already more than 398,000 farms enjoy its blessings without interruption day after day, year in and year out. And every year the number of farms equipped with Union Carbide Gas lighting and cooking plants increases over the number added in any preceding year.

And it is all so simple and economical!

A little Union Carbide, fed into common water automatically by a simple apparatus, makes Union Carbide Gas. Small iron pipe, concealed without disfiguring floor, wall, or ceiling, carries the gas wherever needed—to every room for shedding its glorious light; to the kitchen, for cooking, ironing, and water heating; to the barn, for lighting the way wherever you work; to the henhouses, where the sunlike qualities of Union Carbide Gaslight unquestionably lead to much greater egg production during the winter months at trifling cost.

We supply Union Carbide in generator sizes direct to consumer at factory prices through 150 Union Carbide Warehouses. There is one near you.

UNION CARBIDE keeps indefinitely if protected from air and moisture. Its blue-and-gray drum is recognized the world over as a symbol denoting best grade carbide, highest gas value, most uniform dependable quality, and purest gas.

ORCHARD AND GARDEN

Dry Rot

A Serious Trouble of Tomatoes

By A. G. B. BOUQUET, O. A. C.

The rotting of the underside of tomatoes in the field is a common and well-known occurrence. The trouble is perhaps more frequently seen in home and farm gardens rather than in commercial fields, for in the home garden oftentimes the soil and moisture conditions may not be so well fitted for tomato production as they would be in a commercial field. On the other hand, there is a greater possibility for the home gardener to prevent this rotting inasmuch as there is usually available for the home garden a supply of water which would be an important factor in preventing the tomatoes from becoming rotted.

There has been and still is a considerable difference of opinion as to the cause of the disease. The writer is calling it a "disease" in this case, although it has not yet been proven that any fungus is actually responsible for it.

In the home and farm garden dry rot, or point rot, or blossom end rot—all three names being synonymous—is usually associated with dry weather, soil and moisture conditions having a great deal to do with the prevalence of the rot. The supposition by those who have grown tomatoes under many varying conditions is that the cells at the blossom end of the fruit collapse due to lack of sufficient moisture supplied them. Our own experience in growing field tomatoes for many years confirms the belief that in the dry seasons, when the plants are grown in soil that lacks moisture in the summer, dry rot is at its worst. On subirrigated ground, where there is ample moisture for the plant's needs during the dry part of the year and through ripening time, the rot is conspicuous by its absence.

The dry rot may also be caused by withholding irrigations after the plants have once begun to be watered in the summer. I have seen irrigated areas of tomatoes that had a large number of rotted tomatoes because the plants after once being irrigated or so had water temporarily withheld for some reason or other. This means that if you start in to irrigate tomatoes you must see that the plants receive a consistent amount of water and not be alternately wet and dry.

Causes Premature Ripening.

On garden soils that dry up badly during the summer months blossom end rot is often very bad. The rotting causes premature ripeness of the fruit before the tomatoes have become large enough for commercial use. One can often detect a rotted tomato without turning it over, for it will have a flattened appearance where the fruit did not develop at the blossom end and also there will be a deep red color when the fruit is quite small. Green tomatoes also become rotted, but the fruit usually begins to get diseased when it is ready to change from a green to a pink color.

Some varieties seem to be more susceptible to the rot than others.

Hill land and heavy upland are liable to have considerably more dry rot than the bottom soils, which are often subwatered by the capillary action of the soil.

The disease starts at the point or blossom end of the fruit and causes large, black, hard and rough spots, which finally result in a collapse of the cells and a complete soft area. The rotting is not contagious, but plants that show rotted fruits early in the season are liable to have a still greater number of these later on. However, it is ordinarily the case that the first fruits on the plant are the ones to have the rot, this being partly accounted for by the fact that the plants during the early part of the season are growing rapidly and are taking a great deal of moisture for the needs of the plant which, therefore, the fruit is deprived of. Later in the season the plant stops its growth and the fruit has a better chance to get a uniform amount of water. The later fruits are not nearly as badly rotted, according to our observations in many gardens besides our own.

When Rot Is Absent.

One experiment station in the United States in particular has quite closely investigated the dry rot under many different kinds of conditions, dry, moist, cool, hot, etc., and the general conclusions arrived at were that the rot was always worst in the driest seasons, on driest soils, but where the plants had all the moisture they needed for themselves and the bearing of ripe fruit the rot was conspicuously absent.

Our own experiences bear out these findings. For a number of years back it was necessary for the writer to grow his tomato crop on some inferior soil which dried out badly during the summer; there was also no possibility for irrigation. The result was that each summer there were almost bushels of dry rotted tomatoes to be thrown away. During the last three years the vegetable gardening operations of the college have been changed in location, so that the tomatoes are now grown on fine bottom land that to a certain extent subirrigates. To date there has been little waste in the tomato area due to dry rot, and crops have been raised under varying conditions. One seldom sees rot during cool and moist summers.

It will thus be seen that the disease is well named "dry" rot, for the soil dryness is in a great measure responsible for the trouble. Good cultivation and irrigation are undoubtedly preventive factors, but once the watering begins it must be kept up consistently, so that the plants do not become alternately wet and dry.

In some cases, almost green fruits can be picked before the rot has begun to develop to any degree, the tomato later changing to a good red color if put away for a short time in a cool place.

Pruned Two Ways

An important point in cherry culture has been brought out at the W. A. Glendenning farm, near Sequim, Wash. The Montmorenci trees in his two-acre young orchard have been pruned in two different methods. Most of them were topped back, while young trees, while the others have only been thinned out. The latter trees produced by far the most fruit and are better shaped. This goes to indicate the correctness of what horticulturists have contended, that sour cherries should not be topped back heavily, but merely pruned to the main lateral branches and then thinned as needed in later years.

In addition to cherries, Mr. Glendenning has one acre of raspberries, one-fourth acre of Himalaya blackberries, three acres of loganberries and an acre of apples. Between the cherries are 300 Oregon Champion gooseberry plants that bore their first crop last spring. The logans are trained with the two-wire system, with slats to support the vines.

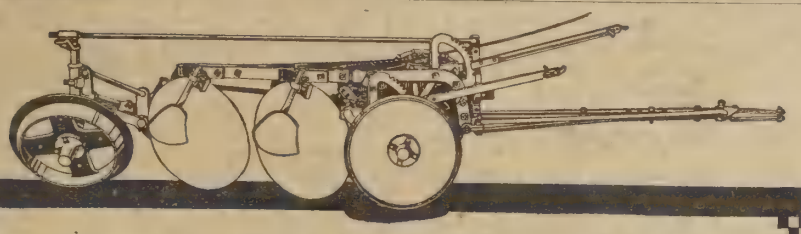
Mr. Glendenning uses the grape hoe in cultivating his berry rows. This is an implement with a shovel set on the extreme right, while the handle at the left governs a disc which steers the cultivtaor to or from the rows.

Small Acreage

So Berries May Get Proper Care

"It takes only a small acreage of raspberries to keep one man busy giving them the proper care, especially if he has a few other crops to attend to," asserts A. H. Bernes of Sumner, who has a farm near town. "I have only 2 1-2 acres of raspberries, one-half acre of strawberries, and about the same acreage of rhubarb. I also want to plant a few acres of Evergreen blackberries on some of the lower land along the river bottom.

"I have not been able to do as much heavy work as I should, and I therefore have been forced to rent part of my place each year. I believe, however, that for a man who understands the game he should have a variety of fruits which can be harvested from early spring until late summer. This will spread his harvest season throughout the entire summer and there will be less danger of any crop failure. It is important, however, to set out only as much ground as can be properly handled. Too many berry growers have attempted too much, and can not give the right attention to what they have. I have never planted any sour cherries, but believe they are a good crop since they never have a crop failure and the picking season can be spread out over a longer period without much damage to the fruit. I have had good returns from twelve Gravenstein trees, and find that they are one of the best apples to grow in this district, since they always are in demand on the local market and they ripen early in the season. There is, however, a disadvantage in that the trees do not always yield a heavy crop."

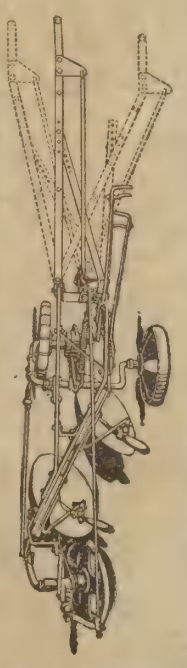


Only 26 inches high —37 inches wide

Only 26 inches high over all when plowing six inches and only 37 inches wide over all—you can get under the low limbs up close to the row when you use the

John Deere No. 26

THE DISC PLOW WITH THE STIFF, ADJUSTABLE HITCH



Stiff, adjustable hitch permits setting plow out to right or left of tractor. Being stiff, the hitch tends to hold the plow in the furrow when offset; also aids in controlling rear wheel for short turns at the ends. This stiff hitch is an exclusive feature; every orchard disc plow needs it—only the John Deere No. 26 has it.

Floating rear end—another great feature. Leaving set-screw collar on rear axle loose, permits plow to rise over roots without carrying weight of rear wheels—a big advantage in preventing damage to large roots.

Great clearance—frame is over discs—not at the side. High-quality, long-lived, smooth-running disc bearings. Simple, strong and positive power lift. Subsoiling and ridging attachments can be furnished, making this a three-in-one plow.

Real service. Adequate stocks of plows and repairs maintained at San Francisco, Los Angeles, Portland, Seattle, Spokane and Boise. And there is a John Deere dealer with plows and repairs near you.

Mill Men and Manufacturers Since 1874.

When Eggs Are High

(Continued from page ten.)

can not be overfed on correct feed formulas unless they are given more than they can eat. It is never a good practice to keep scratch feed before hens constantly. They should be anxious for the scratch feed every feeding time. Mash or ground feed should be in self-feeding hoppers so that the hens can eat of it at will. The mash hopper should never be empty, even for a minute. The mash hopper should be large so that there will be ample feeding room. It should never be necessary for hens to crowd around the mash hopper in order to get their food.

Factors for Production.

If all the necessary factors involved are properly developed, it is possible to make pullets produce 70 per cent on the average during October. The factors involved are: Good breeding, proper care of breeding stock, early hatching, successful brooding, sanitary and ample range, comfortable summer roosting quarters, plenty of succulent green food, ample and proper feed supply at all times, early housing of pullets, proper laying conditions, artificial lighting, sanitation and good management at all times.

Winter molting of early hatched pullets is an annoying problem with many farmers. Winter molting of early hatched pullets result when they have slowed up or discontinued production entirely at a time when there is a rapid change to inclement weather early in the season. However, the winter molt can happen only in the event pullets have reached a fairly high state of production early in the fall. If all conditions are correct, the pullets will continue production and there will be no molt. Pullets that have not started laying will not winter molt. The problem with pullets that start laying early is to keep them laying. There will be no winter molting if the pullets continue production.

The purpose of this article is to call to the farmer's attention the necessity for having fall and winter egg production, and to impress upon his mind the essential features involved. There must be as little change in environment and food supply as possible. To avoid change in environment after the pullets have come into production is the reason. Pullets may start laying on the range and be doing well. After a time there is a change in the weather, probably snow, and it becomes necessary to shut the pullets up in order to keep them comfortable. The change of environment, together with the change in weather conditions, are too great and the pullets stop laying. In a few days the neck becomes rough, which is the first signs of winter molting. Had the pullets been used to being confined, the change in weather would not likely have affected them at all or but slightly at most. Of course, there are always exceptions to all rules. It sometimes happens that weather changes are severe and very rapid. Even so, if pullets are used to being confined, the weather change will not be so noticeable and the effect upon egg production will be less and there is but small likelihood of molt. Keep the pullets laying and there will be no winter molt.

Get the pullets into the laying house in early fall and keep them there until summer. Do not turn them out on nice days during winter. Keep them housed from September until June. Laying hens need but small range during summer. What they have should be shaded. If they can not be made more comfortable out of doors than in, even in summer, do not turn them out.

(Continued on following page.)

anti-friction bearings

Extensive use is made in this Two-ton "Caterpillar" Tractor of anti-friction bearings—ball and roller. This is another time and money saving feature. Let us tell you the whole story.

THE HOLT MFG. CO.
Stockton, Calif. Peoria, Ill.

did you ever hear of Sally Lunn?

Sally Lunn, a famous English pastry cook of the 18th century, made tea cakes and breakfast breads that won her world-wide fame. But Sally, expert cook though she was, worked under a great handicap: she didn't have Sperry Drifted Snow Flour. Today, in your own kitchen, you can make a Sally Lunn breakfast bread that will outmatch, in texture and deliciousness, even the products of this famous cook. For you will use Sperry Drifted Snow Flour—smooth, uniform, sure-to-work-out! You'll find it easy to make—an ordinary muffin mixture baked in a shallow pan and cut in squares for serving. And your tablefolk will find it easy to eat—with jelly, jam, maple syrup, honey! Here's how:

2 cups Sperry Drifted Snow Flour	¼ cup sugar
4 teaspoons baking powder	1 cup milk
½ teaspoon salt	2 well-beaten eggs
	2 tablespoons melted shortening

[*Note:* All measurements are level and flour is sifted once before measuring. One-half pint measuring cup is used.] Mix and sift dry ingredients; beat eggs; add dry materials and milk gradually, beating to a smooth batter, adding melted shortening last. Pour into a greased shallow pan and bake in a hot oven. Cut in squares to serve.

Send for Sperry Cook Book—free! It will show you how to make many new-fashioned, as well as old-fashioned, dishes. And it's free—use the coupon!

SPERRY DRIFTED SNOW FLOUR

CHAPTER XIII.

Herding Horses and Panning Gold.

"Seems to me," said John to his new partner, Frank Bridges, "that this is a pretty tough gang. Half of 'em drunk, and the rest of 'em ready to take your head off if you speak to 'em."

"Oh, well," answered the other, "some of them got out of money quicker than others and so got out of liquor quicker. It's kinder hard to go back to work in the wilds after loafing round the town a good while. You'll find that they're not such a bad lot when they're sober and get to workin'."

The two were sitting on one of the scrapers that trundled behind the wagons—a vehicle which, though not exactly comfortable, was exclusive—they had it entirely to themselves. All day long they had traveled thus, except at dinner time, when a short halt was made. John said he would almost as lief ride a brake beam as a "break-back," for so he had christened this jolting equipage.

Long after dark they saw the white tents of the camp loom up, and in a minute after their arrival it was the scene of bustling activity. Orders were bawled, greetings were shouted, the teamsters yelled and swore at their horses. But above the din rose the voice of Old Murphy, the contractor: "Here, boys, rustle round and get these horses out of the harness. Worth, saddle up and take these horses to the other bunch and watch 'em all till morning." Then, turning to his foreman: "Ricks, get this fellow a saddle horse."

"The others are tied up yet, Mr. Murphy," the man ventured.

"What! Not out yet?" roared the boss. A regular tirade followed, and John realized that he must do his work well to escape a tongue-lashing. He was rather staggered at the order to saddle up and get out at 10 o'clock at night, with a lot of strange horses, in a country he did not know.

"Say, Frank," he said to his friend, who was busy unloading the rolled-up "beds" or bedding, "this is no joke; I don't want to lose a lot of horses and maybe kill myself in the bargain—it's going it blind with a vengeance."

"You'd better make a stab at it, anyhow," he was advised. "The old man's raging, and you might lose your job if you showed the white feather."

"You ready yet, Worth?" It was Murphy's voice, and John jumped at the sound of it.

"Give me a hand, Frank, will you? Bring the blasted old cayuse over here while I get the saddle ready. I'll do it or bust," and John suited the action to the word.

"You want to watch those horses like thunder, Worth," called out Murphy, who seemed to be everywhere at once. "They're strangers to each other, and they'll split up and scatter to the four winds if you don't watch 'em. Some's from Oregon and some's from Utah, and if they get separated it'll cost mor'n they're worth to get 'em again. You've got 56 head—keep counting 'em." The "old man" apparcently did not want him to get beyond the sound of his voice, but kept following and shouting instructions. Perhaps he realized that he was giving the boy a trying, and possibly dangerous task.

"All right," shouted John cheerfully, but at heart he was not so confident.

It was long after 10 and quite dark; the horses in front were mere shadows and could only be distinctly made out by the tramp of their hoofs. To count them exactly was almost impossible, for it was hard to tell where one horse began and another ended. The old beast John was riding, however, knew his business, and it was well he did, for it was necessary to trust almost entirely to his acuteness and keen sense of smell. Horses and herder splashed across the creek and pushed their way through the brush and up the hill opposite.

The boy realized that his work was cut out for him, and he determined he would see the thing through. The hills and gulches round about were new to him. There might be precipices, quicksand bottoms, bogs, and, worst of all, the night-rider's menace, old prospect holes. These were short, narrow, and often deep ditches dug by miners in their search for the precious metal. Besides all this, he was on a horse he had never thrown a leg over before and of whose disposition and capabilities he knew nothing.

"If I only had Baldy!" he thought as the cayuse he was riding plunged into the brush after the retreating bunch.

Immediately his trouble began. The old horses, old companions, jealous of the new-comers, tried to elude them, and the latter were none too anxious for their company. John could only gallop forward and back and all around, restraining this scattering tendency as best he could, and depending on his mount's sagacity to avoid holes and obstructions. A merry dance his charges led him—merry in the lively sense only—up and down, in and out, over what kind of country he could only guess. All he could see of his troublesome charges was a shadowy back now and then, or a high-thrown head silhouetted against a lighter patch of sky or a bank of sand.

He judged himself to be two miles from camp before the animals seemed to think of stopping to feed. Even then they were determined to separate, and it taxed John's vigilance to the utmost to keep them together. His horse began to tire, it was many hours before daylight, and something had to be done—at once. An old gray mare carried a bell on her neck and John noticed that the rest of the

"Oh, that? That's some sand and gravel I picked out down the creek."

bunch followed her blindly. If he could catch and tie her up the others might be more inclined to stay in one spot. How to do this was the question. She was too wily to be caught by hand, and if in throwing the rope the loop missed, she would scatter the entire herd in a minute. For a while he gave up the plan, but it grew more and more difficult for his weary horse to keep up the continued darting to and fro.

At last he decided to make the trial—it was the last resort and the cast must be successful. He made ready his lariat, holding a coil in his left hand and the wide loop in his right, and waited an instant for a good opportunity. The gray mare stood out more distinctly than the other horses and made a better mark, but at best it would be a difficult throw. For several seconds John sat still in his saddle, the noose circling slowly round his head, his arm still, only the supple wrist bending. The old mare was watching him. The rope now began to whistle as its speed increased. Suddenly the belled mare snorted and started off on a run; John shut his teeth hard, threw at what looked like a neck, took a couple of turns round the horn of the saddle with the slack rope, then waited.

Almost at once the line tightened. A gentle pressure was put on the bridle rein, and the pony's weight checked the mare in her flight. The throw was a good one, and the mare was caught. The shock was great, and John's pony was green at this sort of business and the tightening cinches made him jump in lively fashion. The mare, too, had not learned that it is useless to "run against a rope," and for a while kept John and his mount busy; but the increasing tightness of the slip noose round her neck soon quieted her and enabled the boy to tie her up short to a tree.

The remedy proved to be effective; soon all the horses were feeding quietly round the tied leader.

John congratulated himself on his success and prepared to take a much-needed rest, but was interrupted by the sound of another bell far up the gulch. Evidently there were other horses feeding near, and it was essential to keep them separated; so he trotted to a point between the herd and the place from which the ringing came. Again he dismounted from his sweating pony and sat down to rest, when, chancing to glance over his shoulder, he saw a small fire blazing a quarter of a mile away. "No rest for the weary," he grunted resignedly, mounted once more and started out to investigate. As he rode slowly nearer he made out a man sitting cross-legged by the fire, his face in strong relief, his back almost lost in shadow. Behind stood a saddled horse, barely showing in the gloom.

John rode up, slapping his chaps with his quirt to let the stranger know that he was a horseman also and giving fair warning of his approach. Otherwise he might be taken for a horse thief and shot on sight.

The stranger rose quickly and retreated into the shadow. John did not like this. "Hullo, pardner!" he called, drawing nearer.

"Hullo, stranger," replied the other. "Are you lost?"

"No. I'm Murphy's night herder. Pretty dark night, isn't it?"

The man returned to the circle of firelight, his suspicions allayed, thus evidencing his own honesty. John dismounted and came up to him, glad to have some one to talk and listen to.

"You night herdin', too? I heard a bell ringing up the gulch and I guessed there was another bunch of horses up there."

"Yep. I've got Brady's horses up there," and he nodded in the direction of a dimly visible lot. John described the difficulties he had experienced and asked if there were many prospect holes about.

"Yes, lots of 'em," answered the Brady man. "An' they're deep, too. I was ridin' along with my bunch last spring, spurrin' my horse to get ahead of the critters, when he went plump into a blamed hole—and he's there yet. I only got away by the skin of my teeth."

"I guess I'm in great luck to get through this safe," said John. "I was never on this range till after dark tonight."

"Horses all there?" inquired the other, nodding toward John's charges.

"Sure. But I guess I'd better count 'em."

"My horses are like a lot of sheep. I'll go along with you."

The two rounded the animals together again and counted them as well as the darkness would allow. They agreed that they numbered 56 and John breathed easier.

And so the first night passed, the two herders chatting pleasantly till dawn, when they parted, agreeing to meet some other night.

A little before daybreak John rounded up his bunch and began driving them in the direction of the camp. When daylight came he counted them again and to his satisfaction found them all there. In spite of the tiresome trip of the day before, the hard riding of the preceding evening, and the long night's vigil, he felt as gay as the lark that soared overhead pouring out a song entirely out of proportion in volume to its size. He hummed blithely an Indian war chant, made over for the occasion, and breathed in the early morning fragrance with a feeling of exhilaration that made him forget for the time that he had gone to work the night before supperless and had not put his teeth into anything edible since.

The sight of the cook preparing breakfast speedily reminded him that he had an "aching void," which seemed to extend to his very heels.

The boss's query, "Got 'em all, Worth?" was answered, with pardonable pride, in the affirmative. For John felt that he had done good work.

The breakfast was soon over, and what a breakfast! Baked beans, bacon, bread and coffee, a feast fit for the gods, John thought, as he rolled into the bed that Frank had previously showed him. He was sound asleep in a minute and entirely unconscious of the hustle and noise about him. Murphy was giving orders in stentorian tones that could be heard half a mile away; the unwilling horses were being harnessed to the big scoop-like scrapers and to the wagons containing tools; the men were divided into gangs, the new arrivals, cross, surly and suffering from aching heads, starting with irritating slowness. Soon all hands were hard at work, "moving hills to fill up hollows," making a level trail for the iron horse.

At this point there was much digging and scraping to be done, a deep cut and a long "fill" on the other side. At noon the men trooped back to dinner—silent until their hunger was satisfied, then noisy and boisterous—but John slept peacefully through it all.

About 4 o'clock he woke up and gazed about him wonderingly. He was lying in a tent, through the open flap of which the sunlight streamed.

A dip in the stream that ran close by refreshed him greatly and dispelled the sleepy, heavy feeling that had possessed him. The creek was clear and cool, and John lingered on its banks half clothed, digging in the sand and mud with his bare feet and hands. As he was dabbling in the moist earth, he came across some sand that had black streaks in it. His curiosity was aroused, for he had not seen the like before, and he gathered some in his hat, intending to ask what it was.

The cook was busy washing beans for supper, so John sat down on a log near by and watched him idly. His thoughts wandered back to the coal camps, and he wondered about Ben and Baldy; he longed for both, and for the moment was tempted to go home and see them; then he realized that he had chosen the path he was now traveling for himself and felt that he must follow it out to the end. He thought of the journey to Helena, of Jimmy the hobo, and of the life he had just left. His brown study was interrupted with a jolt. "What's that you've got in your hat?" It was the cook, speaking rather excitedly.

"Oh, that? That's some sand and gravel I picked out down the creek brought it up to ask what it is."

"Well, it looks to me like gold." Thi impressively.

"But it's black," objected John.

"Yes, the black is magnetic iron an often holds gold—maybe there's enough t pay. Do you know how to work th pan?" Cook was evidently interested.

The boy professed his ignorance, an the other volunteered to show him.

The pan, a flat, round, shallow tin affai was taken down to the spot indicated b John and the lesson began. A little grave which included some of the black san was scooped up. Then the pan was take to the creek, dipped under, and the wate was allowed to run out slowly. This wa repeated over and over, and each time little sand and gravel was washed ov the edge. At last only the black sand, b ing heavier, remained. This the coo showed triumphantly.

"Only a little black sand! Where's th gold? inquired John.

"It's in the sand, and has to be se arated from it by quicksilver, which a sorbs the gold; then you can throw awa the sand," explained cook, who had p away the residue carefully in a bottle a was dipping up more gravel.

"But how do you take the gold out the quicksilver?" The boy was determin to get to the bottom of this thing.

"Why, you can put it in the sun a let it evaporate, leaving the gold, or y can send it to town to be separated a run the risk of losing both quicksilver a some of your gold."

John tried panning, but he found needed a much more practiced hand th his; he spilled out water, gravel, and a or else he didn't accomplish anythin Cook's teaching was careful, however, a before long his pupil was able to gath enough sand, after sleeping and before ginning his night's work, to realize 50 60 cents' worth of gold when separated.

EDITORIAL CONTRIBUTOR

SHEPHERD'S-PURSE.
By Blanche Elizabeth Wade.

You know the common little weed
That grows along the country ways,
And shows its tiny clusters white,
Then small triangle purse displays.
At first it does not spend at all,
But hoards with care till seed-purse fills,
And then the miser suddenly
Repents, and out the whole wealth spills.

Now there are critics who would say
A man would be but silly dunce
To save so carefully while young,
And then to spend the whole at once.
But yet there is wide difference
Regarding who or what disburses.
The wise weed casts away its wealth,
That there may be more shepherd's-purses!

Experience Letters

Dear Mrs. Barland: As I have a son nd daughter nearly of age and both have fine name in the community I feel that have a valuable experience that may help ther mothers.

I always felt when my babies were lit-le that I wanted them to be as happy as could make them, happy in the right way. When they were still tiny tots I entered nto all their plans and listened to their ishes and desires and gained their con-idence. They sometimes repeated con-ersations of playmates to me which were ot good for them to hear, but I never ppeared shocked at anything they told me or ridiculed anything they said lest they ithdraw their confidence in me. I was o glad of this when one day my 8-year-ld daughter repeated some vulgar infor-ation she had heard from a girl only 7 ears old. This gave me an opportunity o tell my girl the story of love and life n a beautiful way.

My daughter still confides in me and hows me her love letters, but I never ead the letters of either of my children nless they tell me to do so.

I have parties for my daughter and go ith her to shows when at times every bone in my body aches. But as I am not very strong I would quite likely never go if I waited till I felt well. I feel rested afterward. When a boy becomes interested in my daughter he is invited to the house and treated as nicely as we know how. They have the parlor to themselves and can talk all they wish. If she goes to dances I accompany her unless they are in private homes and I shall do this until she is engaged. She has taffy pulls and "wienie" roast parties.

I have taught her to sew and she makes all her own clothes, including dresses, very nicely on very little money.

We are people of small means and it has meant much sacrifice many times to do these things for the children. We have a second-hand auto, bought also at a great sacrifice of other things, but we can all go to places together and can take along the friends of both the children, and husband and I figure that we won't have them with us much longer and we are happy in their happiness. After they are away for themselves we can get some of the things we are going without now.

As our children didn't have a chance to choose their parents I feel that they are entitled to a happy home and the best bringing up we can give them and really, dear folks, the things most worth while have nothing to do with money. Tender love, sympathy and kind deeds are among those things.

To me there is no greater honor on earth than to be the mother of good children whom I can present as jewels to God, who gave them into my keeping for a while.

MRS. A. E.
Washington.

Family Circle Girls

Dear Mrs. Barland: I have been a silent but interested reader of the Circle for some time, but never seemed to get up courage to write.

I think your letters of advice are splendid and I think if we younger folk would take heed to what our elders tell us we would be better off.

I think "A Grandmother's" letter was quite true, and I do hope the boys will read and re-read it, for it will not hurt them to do so. I think we girls have taken all the blame quite long enough.

I don't smoke, but I don't believe the boys have any moral right to do so either. I think there is much sense in the shorter skirts and the increased energy in the field of sports. Wouldn't you hate to see girls and women go back to an 18-inch waist, leg-o'mutton sleeves and hair twisted into hard knots and her face a picture of agony on account of uncomfortable dress?

What's wrong with bobbed hair I would like to know? It is far more comfortable and sanitary than long hair. Mine isn't bobbed, but it would have been long ago if I could get the consent of my mother.

I do dislike to hear men criticizing the styles of the present time. They wouldn't want the boys to wear yellow pants and plug hats as they did years ago, so why should we girls have to copy the heart sickening styles that our mothers wore.

Example and education will put right the faults of our country, but too much "thou shalt not" will get us nowhere.

A. M. K., Ore.

Family Circle Boys

Dear Mrs. Barland: A few weeks ago I read a letter in the Family Circle pertaining to the question as to who should go to high school and who should not.

I believe every one should continue in school, unless prevented by illness, until he has passed the eighth grade at least. All who have high ambitions should go to high school and after that most students will have a pretty fair idea what occupation they wish to follow and can act accordingly. They can go on to college or do as many girls do, find a home.

Some boys and girls go to school because they have high ideals and because they realize that an education is necessary if they are to make something of themselves, and they are usually at the head of things in school and are being trained in self government to take their places in our country and our government. People must be able to govern themselves before they can be trusted to govern others. That is one thing that school is for.

Some go to school because they want to have a "good time" or to avoid working. Such are backward in their lessons, causing trouble for the teachers and wasting the public money which is appropriated for education of the youth of our country.

This kind of students usually attend dances frequently, staying out late when they should be sleeping, smoking cigarettes and quite often are anything but saving of their kisses for the one man or the one woman.

Another question asked was "Who derive the most benefit from school?" The pupils who study because they wish to learn and not because they are compelled to, derive the most benefit and they are the ones who should always be allowed to go if possible. No person, no matter how poor a student, can go to school without deriving some benefit. I would say in regard to the case mentioned where the girl wished to go to high school but thought she shouldn't because her father would be so lonely if left alone. He no doubt realizes that the sacrifice you would make by giving up your education in high school would be greater than he would make to live alone and let you go.

He no doubt knows the value of an education and appreciates your need of it if you are to keep pace with the advancement of the present time. Is four years of "batching" for your father too great a price to pay for an education that will last you a life time?

USE A STIFF BRUSH.

A small, stiff brush is best for cleaning vegetables.

"Granny wishes she'd had such CORN FLAKES when she was little"

Never was such a delicious cereal as Kellogg's Corn Flakes to eat a lot of for breakfast or lunch or as late-evening snacks! Always wonderful in flavor, always crispy and crunchy, Kellogg's are simply the last word in a delightful, wholesome, satisfying food!

Do you realize that through the enormous demand for Kellogg's Corn Flakes, that Kellogg's are one of America's largest buyers of farmer's corn?

Each day more than a million packages of Kellogg's are made and sold. This means more raw corn for one day's use than a 450-acre corn farm can produce in one season!

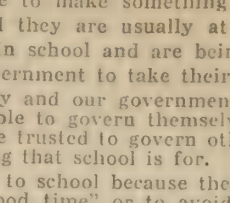
Kellogg's Corn Flakes are delicious with your favorite stewed fruit, or with bananas or other fresh fruit.

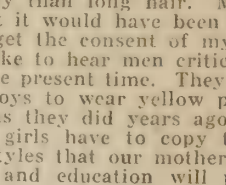
Kellogg's Corn Flakes are sold only in the RED and GREEN package that bears the signature of W. K. Kellogg, originator of Corn Flakes. None are genuine without it.

Kellogg's
CORN FLAKES

Also makers of Kellogg's KRUMBLES and Kellogg's BRAN

drink to your own health with Ghirardelli's





Ghirardelli's Ground Chocolate does a lot *for* you but not a thing *to* you. It is the cup of no regrets! No indigestion. No "jumpy nerves." Healthful. Easy to digest. Why? Because Ghirardelli's is a wonder-blend of fine cocoa and pure sugar. Only Ghirardelli knows the secret of this blend.

And only housewives who use Ghirardelli's every morning know what a quick breakfast-maker it is. Simply mix to a paste, add hot milk, stir, bring to a boil—and there's your breakfast-drink piping hot, fragrant, flavory, fine-for-all-the-family!

High Points in News of the Week

Whether Germany is to yield to the French in the controversy now being waged in the Ruhr district occupied by the French troops is being decided this week. The new German chancellor is holding conferences with his coalition cabinet and other government officials and is expected to announce his decision before the end of this week. The point at stake is whether or not he shall declare the so-called "passive resistance" of the German citizens in the Ruhr district at an end, or whether he shall urge in his official capacity that they continue to hamper the French in the administration of the district. It is apparent that negotiations of a definite nature between France and Germany for the settlement of the entire controversy are impossible until Germany has undertaken to cooperate with the French in the delivery of coal and other material reparations, to secure which the French entered the Ruhr district last January. While Great Britain is known to be strongly opposed to the French policy of occupying and administering the Ruhr territory, it is generally understood that she has recognized the determination and ability of France to carry out its policy, and in order to permit the resumption of the negotiations, has influenced German officials to yield to the demands of the French.

Several cities in Oklahoma are under martial law under orders of Governor J. C. Walton. His action was taken because of alleged acts of violence on the part of the Ku Klux Klan organization. A special session of the Oklahoma legislature has been called to act upon the situation but the governor has declared that the legislature will not be permitted to convene. It is reported that 68 members of the lower house of the legislature, or a majority, are members of the klan. Governor Walton announced that he would require the national guard authorities to place members of the legislature who undertook to meet under arrest.

* * *

It is reported that President Coolidge expects to call into conference the governors of the various states of the Union about the middle of October for the purpose of considering the problem of law enforcement, especially with reference to the prohibition amendment and enforcement laws. The governors hold their regular annual meeting in Indiana, October 15, and the president's conference will probably convene immediately after.

A movement is on foot looking toward a stricter medical examination of aliens before they are permitted to enter the United States.

Farm Business and Markets Outlook

(Continued from page five.)

390,000,000 bushels, or 10,000,000 bushels more than a month ago. but 61,000,000 bushels less than in 1922. Wisconsin shows the greatest decline. The carlot movement has not increased as much as expected in the last two weeks, but prices have been easy on the leading markets with the exception of Chicago. Western round whites are quoted at $1.85 to $2.25 per 100 pounds in Chicago and Kansas City.

The commercial apple crop was estimated at 33,320,000 barrels, based on the September returns, compared with 30,955,000 barrels in 1922. The principal increase is in Washington, which has 1,900,000 barrels more than last year. New York is the second state in total production, with 5,212,000 barrels, against 6,000,000 barrels in 1922. Apple prices have been steady to firm under a steadily increasing carlot movement from producing sections. Midwestern fall varieties are quoted at $1.25 to $1.50 per bushel in consuming markes.

The peach crop is now estimated at 45,400,000 bushels, which is about 2,000,000 bushels less than a month ago and 20 per cent less than last year. Peach prices have been firm in the last few days, as the carlot movement from producing sections is falling off rapidly.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Ore., Sept. 22.—Cattle — Choice steers, $7.25@7.75; medium to good steers, $6.75@7.25; fair to medium steers, $5.75@6.75; common to fair steers, $4.75@5.75; choice heifers, $5@5.25; choice cows and heifers, $4.50@5; medium to good cows, heifers, $4@4.50; fair to medium cows, heifers, $3.50@4; common cows, $2.50@3.50; canners, $1.50@2.50; bulls, $3.25@4.25; choice feeders, $4.50@5; fair to good feeders, $3.75@4.50; choice dairy calves, $9.50@10.50; prime light, $8.50@9.50; heavy calves, $6.50@8.50; stags subject to dockage, $2.50@5.

Hogs—Prime light, $9.25@9.75; smooth heavy 230-300 lbs., $8.25@9.25; do 300 lbs and up, $7.25@8.25; rough heavy, $6@7.25; fat pigs, $8.25@9; feeder pigs, $8.25@8.75.

Sheep—East of mountain lambs, $10@10.75; choice valley lambs, $10@10.50; medium valley lambs, $9.50@10; common valley lambs, $8.50@9.50; cull lambs, $7@8.50; light yearlings, $8.50@9; heavy yearlings, $6@7.50; light wethers, $6@7.50; heavy wethers, $5@6; ewes, $1.50@5.50.

SPOKANE, Sept. 22.—Cattle—Prime steers, $6.75@7.25; good to choice steers, $6:25@6.75; medium to good steers, $5.50@6.25; fair to medium steers, $5@5.50; common to fair steers, $4.25@5; choice cows and heifers, $5@5.50; good to choice cows, heifers, $4.50@5; medium to good cows, heifers, $4@4.50; fair to medium cows, heifers, $3@4; canners, $2@2.50; bulls, $3.25@4; light veal calves, $8@9; heavy veal calves, $6.50@8; stockers and feeders, $4@5.25.

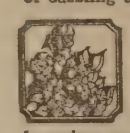
Six trees and shrubs every home should have

Hundreds of people see the exterior, where only a few see the interior, of your home. Why not have consistency in the matter of outlay? A fifty dollar investment in shrubbery planted about your home this year will increase your property value two hundred dollars in two years. We especially recommend the following trees and shrubs:

Hydrangea Arborescens
This new American Hydrangea is one of the most beautiful hardy flowering shrubs. It blooms from early June till toward autumn. The shrub grows four to five feet and bears large, semi-circular trusses of beautifully formed flowers of dazzling snowy whiteness.



Spirea Van Houttei
One of the best and most ornamental of shrubs. It succeeds well in almost any location. The branches are upright, yet pendulous, giving a most graceful appearance. Flowers are pure white and borne in dense clusters along the whole length of the branches, often weighting them to the ground. Excellent as a single specimen or for planting in groups. Blooms in May.

Purple Lilac
The well known purple lilac of our grandmother's garden. Nothing quite equals the favorite, fragrant lilac, one of the most beautiful of flowers. It is a free bloomer, very hardy, and succeeds almost anywhere.

Elms
American—English
The Elm is one of the choicest and most stately avenue trees, erect and lofty with dark green foliage that remains several weeks longer in fall than most other trees. During summer they seldom shed their leaves and hence are very desirable for lawn plantings.

Norway Maple
One of our most beautiful street and lawn trees. Its large size, compact, symmetrical top, broad, deep foliage, and vigorous growth make it highly desirable. Attains a height of 70 to 100 feet.

Roses
Without doubt the Rose has the most ancient ancestry and most interesting history of any plant in your garden. Six hundred years before Christ the Grecian Poetess, Sappho, wrote:

"Would Jove appoint some flower to reign
In matchless beauty on the plain,
The Rose (mankind will all agree)—
The Rose the Queen of Flowers should be."

Today the Rose still stands as Queen of Flowers. Appreciating the growing demand for choice varieties, our line has been selected from the most desirable new sorts, and the most popular old varieties. Over 100 distinct varieties from which to make your selection.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Your child is in school. You see him for a brief moment in the morning and catch a fleeting glimpse of him in the evening. Except at meal times you have little contact with the child. At the table everybody is busy, and little thought is given to individuals.

Dr. Copeland.

May I venture to suggest that every growing child should be "looked over" at least once a week? You must not trust to chance. Topsy "just growed," but you want your child to be cultivated a bit, and to be given help if need be.

When I was a public school lad I well remember that my dear little mother gave me a thorough inspection every Saturday morning. As I recall it, my hair and hands and certain areas of my ears seemed to be her greatest anxiety.

But what I want to talk about today are not the external and the trivial things. I want to suggest that many important defects may be overlooked unless there is systematic search for them.

Growing children may develop bone or joint diseases. The gait should be watched to see if there is lameness or faulty use of the feet and ankles. The position in standing should be considered. Make sure that the spine is straight up and down, and that the curve of the back and shoulders is correct. Tendency to round shoulders or drooping of one or the other shoulder should be discovered at once.

If the child complains of painful feet or if your inspection results in the discovery of redness, blisters or callouses of the feet, the shoes must be suspected as the offender against foot health. Lameness, pain in the hips or back and quick fatigue may be due to improperly fitting shoes.

This is a matter of greater importance than is generally supposed. Don't laugh at a child's complaint about his feet. You know how it hurts to have aching feet.

(Cintinued on page eighteen.)

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4486. Lady's Dress. Cut in 7 sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38 inch size requires 5 3-8 yards of one material 36 inches wide. The width of the skirt at the foot is 2 1-4 yards. Price 10c.

4504. Girl's Dress. Cut in 4 sizes: 4, 6, 8 and 10 years. A 6 year size requires 3 yards of 27-inch material. Price 10c.

4484. Lady's Coat. Cut in 4 sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 5 1-2 yards of 44-inch material. Price 10c.

4503. Child's Coat. Cut in 5 sizes: 2, 4, 6, 8 and 10 years. A 6 year size requires 2 3-4 yards of 40-inch material. Price 10c.

4499. Girl's Apron. Cut in 4 sizes: 6, 8, 10 and 12 years. A 10 year size requires 2 3-4 yards of 36-inch material. Price 10c.

4304. Lady's Dress. Cut in 7 sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 5 1-4 yards of 40-inch material. The width of the skirt at the foot is 2 1-2 yards. Price 10c.

3100. Set of Infant's Clothes. Cut in one size. It will require 2 3-8 yards of 36-inch material for the dress, 2 1-4 yards of 27-inch material for the petticoat and 2 yards of embroidery for the ruffle. The slippers require 3-8 yard of 18-inch material and the Barrie coat 3-8 yard of 27-inch material for band, and 1 yard 40 inches wide for skirt. Price 10c.

LOST If you can't locate a thing, it might as well be lost. Maybe the very thing you want is offered on our "Want Ad" page in this issue.

When answering ads, please don't fail to mention this paper.

In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

Helen Raddtke writes about her little kitten, which is black and brown and gray spotted. Kitty is full of pranks and likes to run after a string when she trails it along the floor. Helen has four little ducks, too, of which she is very fond. She has good times with her cousins who live 10 miles out in the country, while Helen lives in town. Her home is in eastern Washington.

November 12, Freddie Billingsley, Grant county, Wash., will be 12 years old. Freddie has not been a cousin very long. This is our first letter from him. We hope we shall receive one often. His pets are five little kittens and a dog.

We have another letter from Marguerite Duffy, which pleases us very much. Marguerite was 11 August 25. (We do not give out the cousins' addresses any more, Marguerite.) This cousin lives in eastern Washington.

A farm in Thurston county, Wash., is the home of Dorothy Alice Hutson. She describes herself as follows: "I have blue-gray eyes, light brown hair and am 4 feet 10 inches tall. I weigh 80 pounds and am 13 years old." She is glad that school is to commence soon.

Pep is a dear little puppy belonging to Virginia Teague, a southwest Washington girl. Virginia's birthday is December 18 and she is 8. She has four brothers and three sisters. Her daddy takes THE FARMER.

Birthday Greetings

THURSDAY, September 27—MaCament Dickenson, 11 years old; Elsie Ledbetter, 11; Joyce McDonald, 9.

SUNDAY, September 30—Helen Hoffman, 11 years old.

MONDAY, October 1—Emrose Corbin, 10 years old; Elmer Lampi, 8; Sarah Moses, 11; Erma Woods, 11.

TUESDAY, October 2—Marjorie Dean, 9 years old.

WEDNESDAY, October 3—Inez Osterberg, 9 years old.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Marion Hamilton, Marie Wichert, Bernice Anderson, John Lincoln Warren, Hilma Hoikka, Linda Hoikka, Katharene Davis, Ruby Brown, Audell Wilson, Mabel Johnson, Zoe Ludwig, Gladys Main, Helen Broderick, Dorothy Cole, Marjorie Cuyle, Allen Davis, Amy Weber, Wayne Milam, Kenneth Arrasmith, Ruth Rand, James Miller, Emma Esther Simila, Alphild Johnson, Beatrice Hazleton.

BEDTIME STORIES

By THORNTON W. [illegible]

PETER AND JOHNNY HELP.

That this is true there's no denying—
There's nothing in the world like trying.

Then sometimes you find a way of doing the thing you want to do without knowing it just as Peter Rabbit did. Peter wanted to do something for Farmer Brown's boy in return for the things he had done for the people of the green meadow and the green forest. Jenny Wren and Welcome Robin and Tiny the warbler and a lot more of the feathered band were hard at work killing the bugs and worms in the old orchard and the berry patch and the garden so that the fruit and vegetables might have a chance to grow. Old Mr. Toad and Jimmy Skunk were helping, too. They were all doing it for Farmer Brown's boy because he had done so much to make life better and happier for the little people of the green meadows and the green forest, the smiling pool and the old orchard.

"Then you'll be doing something for Farmer Brown's boy, too."

But Peter doesn't like bugs and worms, and so he couldn't help. And he couldn't think of any other way to help. It had made him feel very uncomfortable and uneasy. He had been talking about it with little Mrs. Peter over in the dear old briar patch when he noticed Redtail the hawk sailing high up in the sky and right away it popped into Peter's head that the workers in the old orchard might be so busy that they would forget to keep watch. Off he started, lipperty-lipperty-lip, as fast as he could go for the old orchard. Sure enough everybody was so busy hunting for bugs and worms that no one was watching for danger.

Such a racket as those birds were making! Peter wondered how they ever did any work with their tongues going at such a rate. But they did and they were so busy that no one ever noticed Peter. He glanced over his shoulder and he saw that Redtail was headed straight for the old orchard. He had heard the noise and was coming to see what it was all about. Peter thumped the ground as hard as ever he could by way of warning. Nobody noticed him. He thumped and thumped and at last Jenny Wren spied him.

Peter just turned and pointed up in the sky, for he was so out of breath from running that he couldn't speak. Jenny looked and saw old Redtail very near now. Of course, she understood the danger right away. In an instant her shrill voice was giving warning. By the time old Redtail had reached the old orchard not a bird was to be seen; not a sound was to be heard. It was as still as if there never had been a bird in the old orchard. Redtail circled over the trees two or three times and then with a scream of disappointment flew away.

No sooner was he gone than out came all the birds from their hiding places and began chattering and working just as before. But Jenny Wren took time to hurry over and thank Peter for his warning. It gave Peter an idea. "Johnny Chuck and I will keep watch while you work," said he.

"Splendid!" cried Jenny Wren. "Then you'll be doing something for Farmer Brown's boy, too."

Peter looked puzzled. "I don't see how," said he.

"Why, if you keep watch so that we can work without worrying you'll be helping us, won't you? And if you help us you'll be helping Farmer Brown's boy, won't you? You know we're doing this for him."

A pleased look stole over Peter's face. "I never thought of that," he confessed. "I'll hurry and tell Johnny Chuck," and Johnny was just as pleased as Peter had thought he would be. So Johnny sat up very straight and watched this way and that on the other side of the old orchard, and all the birds hunted for bugs and worms among the trees of the old orchard, and each was doing it for Farmer Brown's boy. (Copyright.)

Your Health

(Continued from page seventeen.)

All the joy of living is taken away if the feet pain.

"Growing pains" and "rheumatism" in children are thought by many to be "natural" and not worth considering. I cry out against this. Discover why the child has pain, no matter when or how much it may be. It may be the tonsils, adenoids, bad teeth, intestinal disturbance or faulty kidney action that is causing the trouble. There may have developed poisons within the sysem which in their turn have caused the condition responsible for the "growing pains." Spare the child the danger of serious joint diseases by early attention to these forms of discomfort.

You should observe the color of your child's lips and skin. Excessive paleness may indicate anemia in boys, or chlorosis in girls. It may point to kidney trouble. This is particularly true of anemia associated with puffiness of the eyelids, other parts of the face, or of the ankles.

You should feel the neck, to see if there are lumps or swellings. There may be enlarged glands about the ear or under the angle of the jaw. These may be related to bad teeth, diseased tonsils, adenoids or a running ear.

SMUT In Wheat Can Be Prevented

by dusting 60 lbs. seed wheat with 2 ounces of our pure

Copper Carbonate

specially prepared as wheat fungicide. Much more effective than formaldehyde. Easy to apply. Saves seed. Write for particulars.

Mountain Copper Co., Ltd.

Simplex Separators

JUST as you can buy a Ford today for less than several years ago, so today you can buy a Simplex Separator with a better value than formerly. The new Simplex is the supreme achievement of 42 years of separator building. It has two exclusive features not found on any other machine—the link blades and the patent cream regulator. Investigate the Simplex before you buy!

LIFE PRESERVERS FOR LIVESTOCK

By DR. E. E. WEGNER, W. S. C.

Hog Cholera.

There is a distinct movement at the present time to reinstate the hog on the farms of the northwest. There is no question that such a movement is a very natural one and one that well suits the needs of this section of the country. Every farm may well have some of these mortgage raisers, as they can usually be raised to advantage along with other farm activities.

The thought that always comes to me when I contemplate this certain movement is the danger from the most dreaded of hog diseases—hog cholera. The time was when this disease wiped out great herds of valuable hogs and left the owner stranded and often penniless. That was in the days when there was no known treatment.

Today we have a serum treatment that is being used with success wherever swine raising is important. The danger, however, is that the disease will not be properly handled after the animals are once taken sick. Too often the owner thinks that he can handle the situation without the help of his veterinarian or other sanitarian. Now, in some cases, he may be able to do so, but in some other cases the owners are not as successful as they should be for their own interests. Just recently I am advised that an owner tried to treat his herd of sick animals and continued in his efforts until all but three of his hogs were dead. He then wrote to his state college, asking what he should have done, after about $1500 worth of hogs were returned to the earth.

Unnecessary Losses.

Cases such as these cause me to feel that it is very unfortunate that the owners should take such tremendous losses when in all probability it was not necessary. The proper advice in the beginning would have resulted in saving quite a proportion of this herd, but the advice was not sought. I have only the owner's opinion that the disease was cholera, but it probably was, since it quickly went through the herd and killed rapidly.

Would it not have been much better for this owner to have secured the best professional advice that he could have obtained and have had his animals treated, with the possibility of saving a considerable percentage of them? It is often possible to save a great many after the disease has started in a herd if the animals are taken singly and closely examined and their temperatures taken to detect any that may be in the initial stages.

The ones that are found with a rise of temperature and already sick are almost certain to die, but this system of management enables one to ascertain the well ones and they should be carefully segregated. The well ones may be given the serum alone if the infection is severe and it seems likely that they have enough of the virus around the premises to insure their being exposed. The serum will protect them for a few weeks, and if they are exposed during that time they will develop a lasting immunity. If it appears that they are not likely to be so exposed, then they should be given the virus at the same time as the serum.

Who is to say what program should be followed? That is the question that often results in considerable loss. In the case above mentioned, the owner relied upon his own judgment and lost his entire herd. That, of course, is every man's business—to do as he pleases with his own property as long as he does not injure some one else, and if he preferred to treat his herd without being advised he had a perfect right to do so. But I feel that it is deplorable when a man loses his stock without knowing what to do or whom to ask.

The state college or the state veterinarian in any state will always be glad to recommend responsible veterinarians who can be obtained in such emergencies. It is unfortunate that there are not more veterinarians for such needed duties, but since they are somewhat scarce it may be difficult to obtain them on short notice, but when they can be secured they are usually the means of preventing the enormous losses that may occur when hog cholera gets a start in the herd.

SCHOOL FOR HOLSTEIN JUDGES.

Holstein breeders, judges and students of dairy husbandry will be given an opportunity this fall to become familiar with and acquire practical knowledge of the true type Holstein. Three schools will be conducted at three of the leading dairy shows under the direction of W. S. Moscrip of Lake Elmo, Minn., a veteran breeder, well-known judge and chairman of the true type committee of the Holstein-Friesian Association of America. These schools form a part of the regular extension program of education which had its beginning with the development of the paintings and metal models of the true type animals and the wide distribution of their reproductions. Two of these schools will be held at Springfield, Mass., and at Syracuse, N. Y. The third will open Thursday, November 8, at the Pacific International Live Stock exposition at Portland, Ore. Every one interested is invited to attend.

3 Speed transmission

Three speeds forward and one reverse—this is one more handy feature of "Caterpillar" Tractors. They have the pull for heavy work and the speed for light work. Write for full information.

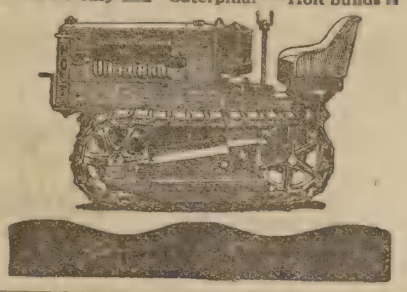
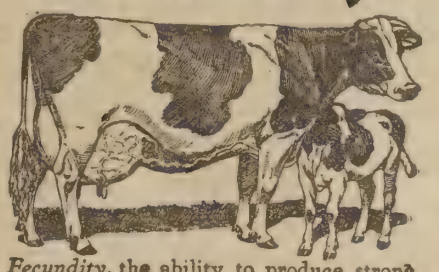
There's only one "Caterpillar"—Holt builds it



Fecundity!



Fecundity, the ability to produce strong, healthy calves regularly, is essential to a profitable dairy cow.

FECUNDITY IN HOLSTEINS MEANS:

Full value from prepotent sires --

Assurance of regular herd increases year after year -- Extra profit from sale of surplus stock --

Regular freshenings and consequent increased milk production for the whole herd -- Larger annual net profits.

Let Us Tell You About Holsteins.

Four-cylinder Five-passenger Touring Car
The Standard of Comparison

A Better Buick for the Family!

It's a Buick—but a new and better Buick—the thousands of farmers who are Buick users will ask nothing further regarding this four-cylinder, five-passenger touring car. For Buick has been a proved friend on the farm of twenty years standing.

It has the new Buick valve-in-head engine providing greater power. There is complete and automatic lubrication of the motor—keeping the crank case filled to the proper level is all that is necessary. There are the four-wheel brakes [on all models] which add so much to driving safety. And also there is the greater beauty contributed by the distinctly new body design.

Would Cooperate to Regulate Price of Wheat

Farmers of Washington and Northwest Look Doubtfully on Federal Price Fixing

Farmers of Washington and her neighbor states are overwhelmingly in favor of price regulation through farmers' cooperative associations and not more than lukewarm to price fixing by the federal government. This is indicated in replies to a questionnaire sent by The Washington Farmer to a random list of 200 farmers in each state of Washington, Oregon and Idaho. The questions and the number of answers to each question in each state and the totals for all three states are given herewith. It will be noted that the last question, relative to cooperative organizations, is answered unanimously in favor of such organizations by all persons whose replies have so far been received. It will be noted that the first question relative to fixing of the price of wheat by congress shows a difference of opinion. Of 59 replies to this question, 22 per cent, or about one out of every five, are in favor of the fixing of the price of wheat by congress at $1.75 a bushel, while 78 per cent, or nearly four out of every five who replied are against such price fixing.

When it comes to a protective tariff for the wheat raiser, 73 per cent were in favor of the protective tariff and 27 per cent against.

As to the bounty system on wheat exports, the bounty to be paid by the farmers themselves, only 19 per cent favored the bounty, while 81 per cent were against.

The proposition to withhold from the market by the growers of 200,000,000 bushels of wheat under government financial assistance, 57 per cent favored the proposition, while 43 per cent were against it.

Another proposition submitted to the farmers was that of the federal government taking over the exportable surplus of wheat. This was favored by 43 per cent, while 57 per cent of the replies opposed the proposition.

Taking the three states respectively, the percentages for and against the six propositions vary, in some cases materially.

The Washington, Oregon and Idaho replies each are opposed to the fixing of price of wheat by congress at $1.75.

As to the protective tariff on wheat, Washington and Idaho replies are in favor and Oregon is opposed by only a slight percentage.

Washington, Oregon and Idaho are united in opposition to the bounty system.

The withholding from the market by the growers of 200,000,000 bushels of wheat is opposed by the Washington replies, is favored by the Idaho replies, the Oregon replies being evenly divided.

When it comes to the federal government taking over the exportable surplus of wheat, Washington and Oregon are in opposition, while Idaho favors.

As has already been said, replies from all three states are universally in favor of the last proposition, leaving the question of price and production to the farmers themselves. Here are the percentages from the three states:

The fixing of the wheat price by congress at $1.75 is favored in Washington by only 21 per cent of the replies received and is opposed by 79 per cent; in Oregon 100 per cent of the replies are opposed, not a single reply being received in its favor; while in Idaho 37 per cent of the replies favor wheat price fixing, leaving 63 per cent opposed.

The protective tariff on wheat, in the Washington replies, is favored by 87 per cent, leaving 13 per cent opposed; in Oregon it is more nearly balanced, 53 per cent being against the tariff and 47 per cent for it; in Idaho 81 per cent favored the tariff, 19 per cent being opposed to it.

The proposed bounty system on wheat exports received only 10 per cent in its favor in the Washington replies, 90 per cent being against the proposition; in Oregon 86 per cent were opposed and only 14 per cent favored it; in Idaho 25 per cent was in favor of the proposition, 75 per cent being opposed.

The proposition of withholding from the market by the growers of 200,000,000 bushels of wheat was favored in Washington by 40 per cent of the replies and opposed by 60 per cent; in Oregon 50 per cent was in favor and 50 per cent opposed; while in Idaho 72 per cent favored it and 28 per cent were opposed.

As to the federal government taking over the exportable surplus of wheat, 36 per cent of the Washington replies favored and 64 per cent were opposed; in Oregon 22 per cent favored and 88 per cent opposed; In Idaho 64 per cent favored and 36 per cent were opposed.

To the last question, as to the wheat farmers themselves fixing the prices of wheat through cooperative associations, and limiting production when necessary, there were 100 per cent favorable replies, no farmer replying in the negative.

These are the results of the questionaire printed herewith, which was sent out with the following letter:

"Would you like to know what the farmers of Washington think of wheat marketing situation, of price-fixing by the government, of bounty on export wheat, of the protective tariff on wheat, of limiting production and otherwise fixing the wheat price by the wheat growers themselves through cooperative organization?

"If the 200 farmers, picked at random throughout the state, including yourself, answer the questions on the return card sent herewith, and these answers are summarized in THE FARMER, you will get a pretty good idea of what the farmers generally think on this question.

"You need not sign the card, only express your opinion by marking a cross under the 'Yes' or 'No' to the questions asked."

A similar communication was sent on the return post card to 200 scattered farmers throughout each of the other two states.

The questions asked and the returns totaled are given in the accompanying table.

Seventeen replies were received from the following counties of Washington: Chelan, one; Clarke, one; Cowlitz, two; Lewis, one; Lincoln, four; Pend Oreille, one; Pierce, one; Snohomish, two; Spokane, one; Stevens, one; Whatcom, one; Walla Walla, one.

Nineteen replies were received from the following counties in Oregon: one from Baker, one from Benton, one from Clackamas, one from Crook, one from Deschutes, one from Malheur, four from Marion, one from Multnomah, three from Polk, one from Umatilla, one from Wasco, two from Washington and one from Yamhill.

Twenty-five replies were received from the following counties in Idaho: Bonner, one; Canyon, one; Cassia, one; Franklin, one; Fremont, one; Gem, one; Gooding, two; Idaho, one; Jefferson, one; Kootenai, four; Latah, one; Lewis, one; Lincoln, one; Madison, one; Nez Perce, two; Payette, two; Power, one; Twin Falls, two.

What might appear discrepancies in tabulations of the figures in this report is due to the fact that some who replied did not answer all questions.

Summary of Replies to Questions Asked Farmers

	Wash. Yes	Wash. No	Ore. Yes	Ore. No	Idaho Yes	Idaho No	Total Yes	Total No
1. Do you believe that congress should fix the price of wheat at $1.75?	3	11	1	18	10	17	13	46
2. Do you believe in a protective tariff for the wheat raiser?	13	2	8	1	22	5	43	16
3. Do you believe in the bounty system on wheat exports, the bounty on exported wheat to be paid by the wheat farmers themselves, with the expectation that it would increase the price of wheat consumed in the United States?	1	9	2	12	5	15	8	36
4. Do you favor the withholding from the market by the growers of 200,000,000 bushels of wheat under government financial assistance?	6	9	9	9	18	7	33	25
5. Do you favor the federal government taking over the exportable surplus of wheat?	5	9	4	14	14	8	23	31
6. Do you believe that wheat farmers themselves should fix prices for wheat through cooperative associations, limiting production when necessary, the same as manufacturers fix prices and limit output of their products?	14	0	18	0	24	0	56	0

President Seeks Farm Information

Herewith is reproduced a letter from President Calvin Coolidge to the editor of The Washington Farmer indicating the desire of the president to receive practical suggestions from the Pacific northwest as to effective methods by which relief may be brought to the farmers of the country. On this page is also given the result to date of a questionnaire sent to representative farmers throughout this and neighboring states by THE FARMER. In the belief that the replies to this series of questions are a fair representation of the feeling among farmers of these states on the important matters involved, the editor is forwarding to the president a compilation of them as a part of THE FARMER'S answer to his letter of inquiry. Below is the letter from President Coolidge:

THE WHITE HOUSE
WASHINGTON

PERSONAL September 25, 1923.

My dear Mr. Smith:

I am anxious to have the opinion of all those who are sincerely interested in solving the problems which confront the agricultural industry as to the best method in which the Government may act to extend effective aid and encouragement. I am sure that you have had exceptional opportunities to study the situation, and I shall be very grateful to you if you will let me have the benefit of any suggestions, or any plan which you may have formulated, for carrying out this object. Should you, by any chance, be in Washington in the near future, I should be very glad to have you come in and see me and discuss the question further.

Very truly yours,

Calvin Coolidge

Mr. Edwin A. Smith,
Washington, Oregon & Idaho Farmer,
Spokane, Washington.

Why the Decline?

Grain Statistics Do Not Justify It

George C. Jewett, general manager of the American Wheat Growers', Associated, reports that, while Minneapolis and Chicago wheat markets were stronger Saturday than on the preceding Monday. Pacific coast prices ran several cents lower at the end of the week than at the beginning. Mr. Jewett said that dumping of wheat by unorganized Inland Empire wheat growers had piled up an excess of from 1500 to 1600 cars at Portland and Seattle, with the result that the prices dropped 5 cents a bushel in two days.

The decline at the Coast cities, furthermore, is in the face of an official report from the special representatives of the United States commerce department at London, hat Europe will import more wheat this season than had been predicted. Early threshings of the European grain crop indicates a decrease in the yield as compared with August prospects, and the same adviser reports that previous imports of European wheat are likely to be exceeded because of the decrease in the potato production, and because certain countries, notably Poland, will try to build up grain reserves. Moreover, stocks of imported wheat in course of shipment to Europe are well below stocks in transit at this time last year.

The American wheat grower stands at a disadvantage this year, for the Canadian crop, which has been grossly exaggerated, is close at hand and visible, while the conditions of European countries and the needs of wheat-importing lands are thousands of miles away across the Atlantic, and it is especially difficult, since the war, to get accurate and dependable information about agricultural conditions there. In consequence the European importers and the American "bears," who are buying for them, play up the Canadian crop and put the soft pedal on the bread needs of the European countries.

Wheat prices in the United States are consistently hampered by the agents of foreign buyers and other exporters, and by American millers, who naturally and constantly want cheap wheat—first, because the cheaper they buy the less will be their losses if prices should go still lower, and the greater their profits if prices should go up; and, second, because the lower the price of wheat the larger the foreign market for their flour.

Copper Carbonate

Must Be Good to Get Best Results

Experiments in the use of copper carbonate in the treatment of seed wheat for the prevention of smut and the reduction in the quantity of seed required have convinced experimenters that there is a wide difference in the effectiveness of the various brands of copper carbonate being used by the farmers. While no hard and fast set of rules has yet been worked out regarding the kinds and quantities of these products to be used under varying conditions, the college pathologists and county agents are in position to give personal advice to farmers who inquire for information concerning the individual problems which confront them in the warfare against smut. It is known that the copper carbonate containing low percentage of metallic copper is much less effective than that containing high percentage. For instance, it is the opinion of George L. Zundell, extension plant pathologist of the state college at Pullman, that three ounces of the standard 50 per cent copper carbonate is as effective as four ounces of the usual lower standard product when applied to a bushel of seed wheat. It is also indicated that a simple test to determine the adhesive ability of the copper carbonate dust is desirable. This test may be made by any one by the use of a small bottle. A little wheat is placed in the bottle and a small quantity of the dust added. The bottle is then well shaken. If the greenish dust clings to the kernels of the wheat in an even coat, it is an indication that it will prove effective; if it does not cling to the kernels evenly it is taken by the experts to indicate that it will probably not be satisfactory.

Farmers who are uncertain as to the kind of copper carbonate to use should write Mr. Zundel or get into personal touch with their county agents and secure their personal advice.

SAYS DAIRYING SAFEST.

Ed Cross of Oakville, Wash., declares dairying about the only line of farming by which the man on the farm can make a living in these times. Mr. Cross had 16 head of registered Holsteins of excellent breeding. About three years ago he bought Cox DeKol Butter Boy from Deval Falconer of Michigan. The bull's heifers are now just about ready to freshen.

THE WASHINGTON FARMER

Successor to
THE RANCH, PACIFIC DAIRYMAN, HORN AND HOOF.
VOL. XLIX. NO. 14.

Trade Mark Registered U. S. Patent Office.
Entered as second-class matter, January 13, 1916 ,at the postoffice at Spokane, Washington, under the act of March 3, 1879.

Published Weekly on Thursday.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Take Care of the Clubs

Every year a considerable number of boys and girls, the pick of the many hundreds engaged in club work throughout the state, attend the state fair at Yakima to demonstrate their title to awards and honors for their practical knowledge and skill in the things that club work teaches. Their part is one of the most valuable at the fair, not only to the boys and girls who attend, but to those who are inspired to strive for the privilege the following year and to those older persons who gain inspiration from club accomplishments.

Club participation has become a permanent feature of the Washington state fair, as it has of nearly all the leading fairs of the country. It deserves as liberal consideration from the fair management and from the people of the state as a whole as any division of the fair's activities. In certain respects it deserves greater thoughtfulness, for the boys and girls who compete at the fair are, in a great many cases, long distances from home. They are accompanied in some instances by parents; otherwise by a local or county club leader, whose duty it is to encourage them, inspire them, look after their needs and protect them from undesirable influences.

The Washington state fair has been a little slow in providing adequate, permanent quarters for its boy and girl guests. Many another less favored state or smaller district has done more for the care of these future leaders in farm life than has Washington. It is not uncommon for fair managements to secure from one source or another sufficient appropriation for the construction and maintenance of good buildings and sanitary equipment of permanent nature for the use year after year of this growing feature of their fairs. Washington has not yet done this. Its club members are sheltered in two tents—one for the boys and one for the girls. Club leaders have general supervision of the camp, and one or more remain at each tent during the night. Otherwise no special protection is afforded. No private places of retirement are provided for either boys or girls. The result is not entirely satisfactory, in the minds of many who are devoting their time, effort and best thought to club work. It is not as stimulating to the young folks as it should be. And, what is even more vital, club workers report instances in which misguided individuals have committed or attempted to commit highly improper acts in or about the club camp.

Our purpose in taking up this subject is not one of criticism, but one of constructive suggestion. The agricultural and industrial exhibits at the state fair are housed in permanent buildings; the live stock barns are reasonably adequate in both form and space. Washington can not afford to care for its live stock and farm crops better than it cares for its boys and girls.

If steps are taken, as they should be and as we have faith that they will be, before another fair time arrives, for betterment of the club quarters on the state fair grounds, the management should receive the support not only of club workers, but of every resident of the state who realizes the importance of stimulating and protecting the men and women of tomorrow.

No Cause for Immediate Worry

There is a growing sentiment in favor of the production of forage crops, especially alfalfa and sweet clover, on the wheat lands of the Inland Empire. That some such steps must be taken to make the soil of this area permanently productive is evident. The question has been raised at once, though, what can be done with the forage and hay crops so produced? The fear has been freely expressed that it would lead to excessive live stock production with inadequate markets for the animal products.

While real progress has been made during the past few years in introducing legume crops to the wheat lands, there appears no ground for worry at the present time. There are yet in the wheat-growing sections scores and scores of farms that produce no pasture crops on their wheat lands. The overwhelming majority of those that are producing such crops are doing so on only very small areas. Until a majority of the farms are producing some forage crops and doing so on considerable acreages, there need be no fear that the thing will be overdone. To be sure, the great Palouse wheat region and similar wheat-producing areas must always make wheat their main crop. The legume will be but a side issue for the production of live stock as a wheat farm by-product and the improvement and maintenance of soil fertility for the more profitable production of wheat. The problem now is to get enough live stock feed with its consequent live stock production on these lands. The immediate danger of their overproduction has been considerably overestimated.

That the Future May Enjoy It

The Kiwanians evidently believe that there is something worth while in planting trees that others in the future may enjoy the shade and the fruit.

A plan is being perfected to plant English walnut trees along the highway between Colfax and Pullman, in the Palouse country, as a monument to the Kiwanis International.

The walnut trees will be planted at some distance apart and maple trees will be set out between them in the hope of beautifying the drive at once, as the walnuts are of slow growth. When the permanent trees have reached maturity the maples will be removed.

The nursery at Washington State college will furnish all the trees. Planting will take place in the near future.

Harrowing of Doubtful Value

The State College of Washington, through its experiments on the college and sub-station farms, has arrived at the conclusion that it does not pay to harrow fall wheat. There may be occasional instances where, under local conditions, harrowing is desirable, but as a rule the college discourages it, having found that no benefit is obtained or at least not enough to pay for the expense incurred.

Makes Work Worth While

It is not drudgery to work with a good piece of machinery or with good tools. Neither is it drudgery to work with high class live stock. You can hardly blame a boy for leaving a farm if he has to get along with a scrubby team or a gallon-a-day cow. But enable him to take pride in what he has and what he works with and he will take pride in the acomplishments for which he strives.

Washington State Gleanings

The first order for lumber for reconstruction of Japan, about 80,000,000 feet, has been received, R. B. Allen of Seattle, manager of the West Coast Lumbermen's association, has announced. The order has been placed with exporters in Vancouver, B. C.; Portland, San Francisco and Seattle.

CROP ESTIMATE IS CONSERVATIVE.

Although the crop estimate for the Wenatchee district is officially placed at 17,500 cars, District Horticultural Inspector Frank C. Nielson says that this estimate is conservative and practically every large packer and shipper in the district is of the opinion that the crop will exceed 18,000 cars, while some place it at 20,000.

SHOW TREATING OF SEED.

Professor George L. Zundel, plant pathologist of the extension service of Washington State college, recently gave demonstrations of the copper carbonate method of treating seed wheat at Meyers Falls, Rice, Daisy, Chewelah and Springdale. The meetings were held under the auspices of H. J. Plumb, county agricultural agent.

SETTING HEN TAKES RIDES.

Covering a setting of eggs in a nest in a corner of a hayrack, a hen was given daily rides during the haying season on Albert Ford's farm, near Pomeroy. Biddy had built her nest in a protected corner and care was taken not to disturb her. She would leave the nest at times to forage in the field, but always returned. Toward the close of the haying season she hatched a fine brood, according to report.

WANT STANDARD HISTORY TEXT.

Yakima County History Teachers' association has appointed the following committee: Mrs. Rose Palmquist, Naches; Miss Emma Cawdry, Zillah, and E. J. Arntzen, Wapato, to make a thorough investigation of the principal books on civics and history in use in the schools and report to the meeting of the association to be held December 8, when an effort will be made to seek standardization of these text books in the county school.

MOSSYROCK COMMUNITY FAIR.

On October 5 and 6 the Mossyrock Community fair will be held at the grounds at Mossyrock. Officers in charge are Ted Landes of Mossyrock, president; Jim Tucker of Silver Creek, Walter Young, Mallie Damron and Miss Mabel Hinshaw of Mossyrock, directors. The latter is secretary. Miles Coleman of Mayfield has charge of the live stock division; Clyde Morgan of Mossyrock will have charge of the agricultural and horticultural division; Miss Effie Jordan of Ajlune will superintend the women's department and Miss Mabel Hinshaw of Mossyrock will be in charge of the educational department and school work.

MANY GATHER HUCKLEBERRIES.

Hundreds of people are going and coming from the huckleberry fields in the vicinity of Stevenson every day, laden with all the fruit they can carry. It is estimated 500 gallons of berries are gathered every day, and the harvest will continue as long as the weather is fit. When the snow comes tons of berries will still remain untouched, for the berries cover thousands of acres. Berries are larger and more plentiful this year than for many seasons.

Next year it is thought the new roads in the forest will be completed enough so automobiles can be driven directly to the fields.

BERRY CROP BRINGS $100,000.

Gross volume of business done at the Chehallis cannery for the present season by the North Pacific Cooperative Berry Growers aggregated almost $100,000, according to figures presented at the meeting of southwest Washington berry growers.

In addition to 14 carloads of strawberries shipped fresh from the Chehallis plant, a tonnage of 384,052 pounds of strawberries was packed, mostly barreled. Tonnage of other berries handled follows: Raspberries, 42,972 pounds; loganberries, 101,256 pounds; gooseberries, 10,936 pounds; cherries, 4594 pounds.

The bulk of the barreled goods has been sold and it is anticipated that before the end of the year growers will have been paid practically in full.

PLAN RODENT CAMPAIGN.

The complete elimination of the orchard mouse is aimed at in the fall campaign being waged by the Chelan county and state horticultural departments in the Wenatchee section, aided by the United States department of agriculture. Leo K. Couch of the biological survey has been on the trail of the mouse, the gopher, the ground hog and other predatory animals among the orchards of the Wenatchee district and the wheat fields of the northwest for several years and he will assist in the final drive this fall.

Experiments show that the best results are obtained by a wet solution of poisoned grain. In the past poison was mixed and distributed to the growers, but in the future the poison mixture will first be prepared, then applied to grain and the finished product sold to fruit growers at cost. This is suitable for either mice or gophers and it is hoped to rid the orchards of both pests this year.

BANNER CROP NEAR ODESSA.

The 1923 grain crop produced in the Odessa section of the Big Bend country, in Lincoln county, is proof of the productiveness of this country's soil. The territory adjacent to Odessa produced in the neighborhood of 2,000,000 bushels of wheat, the largest single crop in its history. The average for the entire wheat section is exceptionally good and is estimated at between 20 to 25 bushels per acre for spring wheat and 30 to 35 bushels for winter wheat.

An illustration of the good average is the yield received by David Hardung, a farmer eight miles southeast of Odessa, who harvested a 1000-acre field, on which he received over 31,000 bushels of wheat. This was partly spring wheat and the average for the entire field is 33 1-2 bushels per acre. This has probably never been surpassed in this country, even during the banner crop years of 1907 and 1915.

Farmers also report exceptionally large hay yields throughout the entire farming section, furnishing ample feed for horses and other stock on the farms for the coming year. Most of the wheat has been testing No. 1 and as high as 63 pounds to the bushel, and warehouses are being crowded by heavy wheat hauling, which will continue throughout the months of October and November until the large crop is marketed.

Relieve Wheat Situation

At the Same Time Afford Practical Aid to the Japanese

The Pacific Northwest Farm Trio gladly seconds the helpful suggestion made by the Orange Judd Farmer in the following letter to Secretary of Commerce Hoover:

Dear Sir: The frightful calamity in Japan which has so deeply aroused the sympathy of America, calls for the most prompt and effective possible action in the way of food relief. With this in view permit us to call to your attention the situation regarding wheat in the Pacific coast states. Fortunately the wheat crop this year in the Coast states and in Idaho is very large, much above normal. The total crop in the four states reaches nearly 130,000,000 bushels. Their domestic requirements may be regarded as approximately 45,000,000 bushels, thus leaving a surplus this year of some 85,000,000 bushels, or very much more than usual for these states.

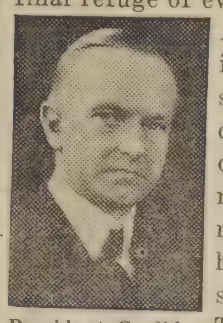
Japan is the one oriental country that is already familiar with the use of wheat flour. She produces approximately 30,000,000 bushels each year herself and imports an additional substantial amount. Wheat is the cheapest food now to be had, and with the Japanese people already familiar with it, with large quantities immediately available at practically Pacific tidewater and with our Coast wheat of a character and quality to which the Japanese people are already accustomed, we beg to suggest that this readily available food supply be promptly and heavily drawn upon to relieve the suffering of a stricken people.

Here is a sensible, practical suggestion that would be to the mutual benefit of the stricken Japanese people and the distressed wheat growers of the United States. Japanese capital, engaged in the stupendous task of rebuilding the wrecked cities, willl draw heavily on the lumber resources of the Pacific coast states. Already the large lumber associations of Washington and Oregon are asking the eastern trade to draw lightly on stocks in this region until the pressing needs of Japan are provided for. Japan could also draw quickly upon the wheat reserves of the Pacific states.

The Japanese government and people are especially grateful at this time to our government. The $5,000,000 to be expended by the American Red Cross has already been oversubscribed. In other ways the government at Washington is properly doing all it can to relieve the dreadful distress of the stricken Japanese nation, and a suggestion from Secretary Hoover and other members of the government at Washington, of willingness to cooperate with the Japanese government and Japanese importers in the purchase and transportation of American wheat, undoubtedly would be received in a friendly and responsive way.

Final Refuge of Every Right

The constitution of the United States is the final refuge of every right that is enjoyed by any American citizen. So long as it is observed, those rights will be secure. Whenever it falls into disrespect or disrepute, the end of orderly organized government, as we have known it for more than 125 years, will be at hand. The Constitution represents a government of law. There is only one other form of authority, and that is a government of force. Americans must make their choice between these two. One signifies justice and liberty; the other, tyranny and oppression. To live under the American constitution is the greatest political privilege that was ever accorded to the human race.—President Coolidge.



President Coolidge.

Secrets Not for Man

Old Question Remains, "Canst Thou by Searching Find Out God?"

The secret things belong unto the Lord.—Deuteronomy 29:29.

Man is delving deeper and deeper into the mysteries of plant and animal life. Day by day the soil is giving up more and more of her secrets. Marvelous strides are being taken into the mysteries of electrical energy.

Yet the question is still asked: "Canst thou by searching find out God?" We are constantly falling back to that couplet:

God moves in a mysterious way
His wonders to perform.

It may be just as well to confess first as last that there are unexplainable things in human life, that there are secret things that belong unto the Lord. It was because Job was convinced that there were secrets in the keeping of his God that he was enabled to say: "Though he slay me, yet will I trust in him."

ARE PROUD OF THEM.

Indiana Farmer's Guide: If there were no other benefit to keeping better stock than the feeling of pride that comes with their possession, it would be worth while. It is something to be able to show off one's flocks and herds and say they are of good breeding. When the wife's uncle comes out from town for a visit, it is satisfying to point out the herd bull and say, "He's a purebred. See what a fine-looking animal he is." Or to call the hogs up to the barn and boast that every one in the lot is of pure breeding. No one can become very enthusiastic over a scrub. And it is the stuff one is enthusiastic over that usually proves the most profitable, for it is apt to get the extra feed and care that will make it so.

BREEDING BY PERFORMANCE.

Wallace's Farmer: Breeding by performance rather than by looks has made tremendous gains possible in the producing quality of dairy cattle. It is doing the same thing in the development of high yielding strains of corn and of other farm crops.

FARM BUSINESS AND MARKETS OUTLOOK

WHILE the United States will have a surplus of about 160,000,000 bushels of wheat this year, there is actually a shortage in this country of good milling wheat. The monthly review of the Continental and Commercial bank of Chicago concludes that the yield this year of hard red wheat, the basis of milling in this country, is likely to be 130,000,000 bushels short of the average.

That is the chief reason why American millers are paying more than export prices.

But, while there is a shortage of good milling wheat in the United States, Canada has a gigantic surplus of good milling wheat,

Representative Sydney Anderson of Minnesota, president of the national wheat council, is urging President Coolidge to act under the provisions of the present tariff law, which permit him to increase by 50 per cent the tariff rate of 30 cents a bushel on imported wheat. That would make the tax 45 cents a bushel and tend still further to shut out Canadian milling wheat.

A Washington, D. C., dispatch says that it appears to be the conclusion of the president and the cabinet that the present tariff is operating to the benefit of the wheat farmer and that the spread between Canadian wheat and wheat grown in the United States is about 28 cents a bushel. The president is said to have been much impressed by the opinion of Congressman Anderson and others that the tariff holds out the quickest and best solution of immediate relief.

Late dispatches from Washington indicate that there is slight possibility of a government price-guarantee of $1.75 a bushel, as proposed by Senator Gooding of Idaho. Secretary Wallace of the department of agriculture is against that plan. He says he has little faith in arbitrary price-fixing of any one crop. "Even if it should afford temporary help," he says, "it would almost certainly within a short time make conditions worse for the farmer instead of better."

If congress should be called in special session by the president, a step that is not probable, undoubtedly there would be opposition to the proposed guarantee. It would be argued that a guaranteed price on wheat would have the effect of inducing farmers to grow still more wheat and to cause many of them to drop other crops.

On the other hand, it would be argued by the friends of a wheat price guarantee, that they were not asking for this as a permanent policy, but only as a temporary relief.

But the answer would be shot back against that explanation, that if the government entered upon a policy of buying wheat above the market price, even temporarily, how could it consistly refuse to buy other agricultural products at prices above the market, if those prices should fall below the cost of production? "This year," the objectors would say, "it is wheat, but next year it might be corn, or cotton, or tobacco, or apples, or potatoes, or hay, or dairy products, or wol, r sugar beets.

We may be mistaken in ur survey of the situation, but we do not believe that the price guarantee is the horse that will pull the wheat grower out of his trouble. We do not believe, in the first instance, that the president will call a special session, nor do we believe that if a special session were convened there would be any probability of a majority of the house and the senate's passing the Gooding bill.

Big Run Weakens Cattle Market.

Cattle markets have staggered under the heaviest load of the season during the last 10 days. Prices were pared most rapidly in the early part of this period and losses compared with a week ago are slight. Dressed beef trade has been uneven, partly because of Jewish holidays, which will cease to be a factor after this week. Western cattle are showing fairly high finish and are being substituted for short-feds at much higher prices.

Low grade steers as well as cows and heifers held fairly steady throughout the period, but these kinds are sure to become more numerous in a few weeks and sell at greater discounts. The veal calf market took another spurt, with prices the highest of the season. Larger receipts in this division are due in the next few weeks.

New Crop Hogs Arrive.

New crop hogs are showing up in larger numbers right along. Many lack finish, a reflection of high-priced corn, and a preference is being shown for heavier weights which are in better condition. Also the spread between butcher and packing grades has narrowed materially, owing to a change in relative numbers.

Packers appear anxious to readjust prices down to a new crop basis at the earliest opportunity, so that it is probable that the highest prices of the season have been passed, although numerous upturns are likely to take place from time to time. The market has declined about $1 from the September high spot, with greatest losses on lightweights and pigs.

Export demand for hog products appears to be excellent most of the time.

Lamb Market Deluged.

Lamb markets were deluged last week, with the largest run in practically two years. Prices declined, but, supply considered, the slump was not sharp. Western lambs carried a higher percentage of feeders than heretofore or values might have been swatted harder.

Wool buying has been in larger volume in the last 10 days than for a number of weeks. Mill holdings are gradually being worked off and the goods market is more healthy. Imports are much below the monthly average requirements of foreign wools. Foreign markets are firm. The London auction continues on a steady basis and the first sale of new clip Australian wools opened unchanged on merinos and 5 to 10 per cent higher on crossbreds than last June.

Wheat Regaining Strength.

Wheat prices have shown surprising strength in the last week. Most of the loss since the announcement of the record yield in Canada has been regained.

That the market has been able to advance in the face of the evidence of wheat abundance, both immediate and prospective, points to large buying power.

Corn at Season's High Mark.

Cash corn buyers at present are paying the highest prices of the season.

Oats prices advanced with corn to the highest point on the new crop.

The rye market is following wheat, but is in a stronger position than the latter.

Cash Grain Markets.

The range of cash grain prices for the week ended September 26 was a follows:

CHICAGO—Wheat—No. 2 red, $1.02 3-4@1.06 1-2; No. 2 hard, $1.05@1.11 1-2; No. 33 hard, $1.01 1-2@1.06 1-2.

Corn—No. 2 mixed, 87 1-2@91 3-4c; No. 3 mixed, 87 1-2 @91 1-2c; No. 2 yellow, 88 1-4@92 1-4c; No. 2 white, 87 3-4 @92c.

Oats—No. 2 white, 40 1-2@45c; No. 3 white, 39@42 1-2c; No. 4 white, 37 1-2@41 1-2c.

Rye—69 1-4@70 1-2c.

Barley—51@72c.

Seed and Feed.

Red clover seed prices advanced sharply last week and are now about $4 a bushel above the low point of the season.

The feed market is easier, especially mill feeds, as producers are using wheat instead. Bran prices are quoted $2 lower in some markets. Linseed meal production is heavy, with mills operating at capacity. Favorable pastures are delaying as well as reducing the fall demand.

Hay Market Less Firm.

Receipts of hay are light, but demand is more limited and prices are not so firm as recently. Immediate needs at the large markets seem to have been supplied. The demand for alfalfa from the south has improved.

Setback in Egg Market.

The egg market is experiencing its first real setback since the fall advance started. Receipts are running heavier than usual at this time of year, but they are gradually shrinking and will probably decline another 50 per cent in the next two months, so that prices will soon resume their upward trend. Storage eggs are in rather weak position, as the reduction in holding during August was much less than indicated in the government's preliminary report and, even though stocks are larger than a year ago, they have not been reduced as rapidly thus far in September as in 1922. Low grade fresh eggs are affected more or less by the storage situation.

Butter and Cheese.

The advance in butter prices was checked last week. Distributors did less buying for future requirements and a great deal of storage butter which now shows a handsome profit was pushed on the market. Production reports show that the make is running 5 to 8 per cent larger than at the corresponding time last year, but it is decreasing from week to week in accordance with seasonal tendency.

Cheese distributing markets closed practically steady last week.

Fruits and Vegetables.

Shipments of potatoes from producing sections have practically doubled in the last two weeks. Prices weakened as the larger supply reached wholesale markets. The big fall movement generally reaches its peak from the second to the fourth week in October. Northern round whites are quoted at $1 to $1.30 per 100 pounds in the CChicago carlot market, while Rurals are $1.65.

Apple prices have been practically steady, with fall varieties at $4 to $5 a barrel at Chicago. Washington fancy Jonathans, medium to large, are selling at $2.50 to $3 per box, with extra fancy at $3 to $3.50. Carlot shipments from producing sections are above normal for this time of year. The peak of the movement is usually reached from the second to the fourth week in October.

Onion prices were slightly lower last week, with yellow varieties quoted at $3 to $3.25 on the Chicago market. The outlook for the sale of the late crop is considered excellent, as the yield is 10 per cent under last year and the season has opened on a much higher price level than in 1922.

(Continued on page twenty-four.)

How Prevent Wheat Burning After Legume?

By F. J. SIEVERS, Head Department of Soils, State College of Washington

The increases in land values as a result of the war, together with the high cost of agricultural production, and a lack of and consequent proportional increase in the value of many farm products has confronted the farmer with a problem the solution of which may mean changes that will affect his entire system of farm management. The wheat raising sections of the country have possibly been as hard hit as any, and in this respect the Inland Empire, and especially the Palouse region of eastern Washington, is no exception. Because of the fact that it has been proven, experimentally and otherwise, that this region receives sufficient precipitation annually to make continuous crop production possible without the necessity of summer fallow, it is impossible for many free advisers of the farmer to appreciate why diversified farming is not more generally followed. The practice of summer fallow wheat production is still quite general here in spite of the fact that such crops as clover, peas, alfalfa, sweet clover, sunflowers, potatoes and possibly corn are climatically well adapted and can be grown at a profit. Furthermore, a wheat crop following most of these other crops enumerated will generally produce a higher yield than is obtained on average summer fallow land.

Those who have made a study of the agricultural practices the world over agree in general that the system of farming followed in any one community or locality at any particular time is the most profitable and best adapted system from the standpoint of the farmer. This speaks well for the farmer's judgment and it also indicates that changes if necessary in the system of farm management of any locality must and will be made gradually and consequently revolutions should not be expected in this field. Changes in field practices that appear comparatively simple to the outsider oftentimes offer almost insurmountable problems to the man close to the soil.

Difficulties Encountered.

There are several soil fertility difficulties encountered by the Palouse farmer when he attempts to diversify or get away from the summer fallow practice. In sections like the corn belt where summer rainfall is liberal there is always sufficient moisture in the soil during the growing season to promote the decay of crop residues, like stubble, straw or manure, resulting from the preceding crop. In the Palouse region, where the summers are exceeding dry, all fields cropped to cereals become decidedly droughty near the surface very early in the spring. Unless a crop is grown that requires some kind of tillage which will retain the soil moisture near the surface the crop residues above referred to will accumulate or decompose so slowly as to have a depressing effect on the yields. The farmer fully apreciates this depressing effect of crop residues on the yield of small grain and in his attempt to continuously grow cereals (the only crop for which there appeared a ready market) he has frequently seen fit to burn the straw as well as even the stubble of the preceding year. Manure, too, has been allowed to accumulate in the barnyard or to be hauled on the road for the same reason. This destruction of organic matter is anything but encouraging from the standpoint of maintenance of permanent productivity of the soil. The scientific fact at the basis of this practice is that all crop residue, like straw or strawy manure, which have a low nitrogen content, when first applied to the soil will not only interfere with the accumulation of available soil nitrogen, but will cause such soil nitrogen as is already available and ready for use of the growing plant to become at least temporarily insoluble and unavailable. Available nitrogen is the only element of plant food in which Palouse soils are deficient, and the yield of wheat in an ordinary season is directly proportional to the amount of this element of plant food within reach of the plant. Summer fallowing is practiced in that portion of eastern Washington where the rainfall is 18 inches or above for the prime purpose of promoting moisture conditions in the soil that make for greater accumulation of available nitrogen. This same amount of rainfall occuring in the same amount of available occurring in the season would make summer fallowing unnecessary. From the standpoint of profitable production, continuous cropping with cereals causes the development of plant food problems that alone make this practice impossible, without even taking into condition the weed problems that generally become so prominent as to be a deciding factor where such a system of cropping is followed.

What a Legume Does.

When legumes like clover, alfalfa, sweet clover or peas are substituted for the summer fallow, they not only do well following a cereal crop because they depend upon the air for a large amount of their nitrogen supply, but they also return a residue that has a high nitrogen content, which upon decay leaves a large amount of nitrogen available for the succeeding crop. That legumes have this power of enriching the soil is a generally recognized fact in all agricultural sections and plays an important part in the selection of a satisfactory crop rotation system. In the corn belt it is considered poor practice to follow a legume sod with a small grain crop because the large amount of available nitrogen in the soil will cause a very heavy vegetative growth, and lodging invariably follows. In general field practice, corn, a crop that can not easily be overfed, is commonly grown immediately following a legume, and this works out splendidly where corn is climatically so adapted that its production on a large scale is justified.

The "Burning" Problem.

In the Palouse region, however, wheat is the farmer's "first love" because the cool nights, low humidity and short growing season, together with the extremely rolling topography, make corn or other intertilled crops less well adapted. He has attempted, therefore, to follow the legume crop with wheat. The result has been that his wheat here, due to the large amount of available nitrogen, tiltered or stooled very profusely and promoted the development of a large amount of vegetative growth similar in this respect to what is true for the corn belt, but with this difference: In the corn belt where summer moisture is plentiful the grain lodged before it became mature; here in the Palouse, where the summers are dry, the grain dried up before it matured, resulting in a condition commonly referred to as "burning." Both burning and lodging are very undesirable because they have about an equally depressing effect on the yield.

In spite of the fact that such intertilled crops as corn, potatoes and sunflowers can be grown with some degree of success it is very evident that the Palouse farmer must adapt for the most of his land a rotation system consisting of legumes and wheat, where each is grown about 50 per cent of the time. In other words, when diversified farming becomes the accepted practice it will mean that the acreage of wheat will remain about as at present and that the next best crop, legumes, will be grown on land now in summer fallow. This will necessitate the development of some plan that will serve as an insurance against the loss from "burning."

A Clew to the Solution.

It has been shown that straw and other residues low in nitrogen when applied to a soil will retard the development of available nitrogen, while the soil following a legume sod contains this available plant food in excess. What suggests itself at once?

Incorporate straw with the soil at the time the legume sod is plowed up. Acting on this suggestion, the soils department of the Washington experiment station has conducted investigations along this line with the result that it was found where from one to two tons of straw were appied to a legume sod (alfalfa) just before plowing the undesirable effects of the legumes were temporarily overcome, no crop burning was experienced and normal yields were obtained.

This practice when once generally accepted also provides an opportunity to conserve those crop residues which are now largely wasted, thus causing the soil organic matter to be maintained. The general result is very desirable. The physical condition of the soil is improved, the fertility is maintained, the production per acre is practically doubled, the cost of production is decidedly decreased, while the profit to the farmer is greater and the agriculture of the Palouse is put on a permanent basis. Diversified farming with legumes in the rotation in place of summer fallow is not only essential if yields are to be maintained, but it is the only system on the basis of which present land values are justified.

In eastern Washington, where the annual rainfall is 18 inches or more, summer fallowing is necessary if proper crop rotation is practiced. The piles of wheat here shown are significant. At the left is an acre's production of wheat after wheat, or 21.5 bushels. In the center the production of wheat after peas (a legume), or 47 bushels. At the right the production of wheat after summer fallow, or 31.5 bushels.

Unity Gets Results in Whitman

What can be done in one month, with the backing of the farmers, business men, bankers, commercial clubs and farm bureau, was evidenced in the community exhibits and boys' and girls' club entries at the La La Lalouser fair, held in Colfax, Whitman county, September 6-8. This section of the fair was conducted by the Whitman county farm bureau, under the management of Brick Burford, secretary, and was the first of its kind at Colfax.

A hay palace, topped by a canvas roof, contained the community exhibits of Whitman county, which consisted of everything that can be raised on a farm.

The districts represented were Hubbard, which won first prize on the 148 varieties displayed; South Palouse, second; Colton, third; Diamond, special mention, and the Almota fruit exhibit, which was brought in by Mrs. Mary C. Spaulding as a community display.

The farm bureau women's department had a display of hats, dress forms and sewing, and the Whitman county public health service had a booth in conjunction with the anti-tuberculosis league.

Exhibits brought in by the boys and girls plainly showed that club work in Whitman county is distinctly "on the map" and that the club leaders, business men and women and parents of the club members appreciate its value.

Business men and banks of Colfax gave every aid toward the furtherance of this work in the county and the commercial clubs of St. John and Garfield paid the expenses of their boys and girls and the taking back and forth of their pigs to the fair.

The county commissioners, P. M. Price of Colfax, William McCoy of Oakesdale and A. L. Maxwell of Palouse, are sure that club work is an asset to any community, and to prove their faith they gave a prize of $5 to each boy and girl who entered a pig.

In the pig club entries Garfield, under the leadership of Houston McCroskey; Thornton, under M. B. Jacques; Pullman, under L. S. Tromenhauser; the Eccles district of St. John, under Norman E. Crane; the Hulin district, under Jerry Hodge, and the Wilcox district, under B. F. Kammerzell, were represented by 20 club members and 82 pigs. Many of the boys could not come because of the late harvest. Myrtle Scott of the Eccles district came over with a litter of 13 pigs, and her father and mother suspended work at home to come with her.

Three breeds of pigs were shown—Chester White, Duroc Jersey and Poland China. Each class was judged by C. M. Hubbard, swine specialist of Washington State college, then turned over to the boys and girls for judging.

Prize money for the club contests and best pigs entered were given by the La La Palouser management, the Colfax State bank, Colonel L. Strobel, Colfax; National bank and Lou Brunning, Colfax. B. F. Kammerzell of Colfax gave a purebred Poland China boar pig for the best litter of Poland China pigs entered.

In the judging contest Anton Harms, Pullman, won first prize; Henry Schafer, Garfield, second; Johnny Hinrichs, Pullman, honorable mention.

For the best litter on the grounds, all breeds considered, Myrtle Scott was first with her Duroc Jerseys; Louis Chesnut, Colfax, second on Chester Whites; Joe Kincaid, Pullman, third, on Duroc Jerseys. The Kammerzell prize for the best litter of Poland China pigs went to Guy Hughes, Thornton.

Poland Chinas, sow pigs—First and second, Edgar Halling, Colfax; third, Guy Hughes, Thornton. Boar pig—First and

GENERAL ADVERTISING.

Swedish Inventor Has New Oil Light

Claims Whiter and Much Cheaper Light Than Electric or Gas.

Edison enabled us to enjoy the benefits of electric light, Count Welsbach's mantle made it possible to have the incandescent gas light, but it remained for a Swedish engineer named Johnson, now living in Chicago, to devise a lamp that would burn ordinary, every day kerosene oil and produce a light said by the many scientists who have seen it to be whiter than electric. The lamp is as simple to operate as the old style oil lamp, burns without odor, smoke or noise and is proving a sensation where oil light is needed.

Mr. Johnson offers to send a lamp on ten days' free trial and will even give one to the first user in each locality who will help introduce it. A letter addressed to W. R. Johnson, 31 N. Fifth St., Portland, Ore., will bring full particulars about this wonderful new lamp. He has an interesting agency to offer, too.—Adv.

You Can't Overwork it!

STURDIER than ever! Easier to care for! More comfortable! That's the 1924 Harley-Davidson. Aluminum-alloy pistons prevent overheating, reduce vibration; full-floating, semi-elliptic springs make roomy sidecar easier riding; Alemite lubrication (first on any motorcycle).

Save time and money, save wear and tear on your car by using a Harley-Davidson for business errands to town, creamery, neighboring farm, school, etc. Two cents a mile pays for gasoline, oil, tires and all.

Ask your dealer about his Pay-as-you-Ride-Plan. Write us for free literature, showing 1924 models in full color.

Live Stock Awards at the State Fair

In last week's issue of The Washington Farmer the awards in the hog department of the Washington state fair were reported in full. The awards in the other divisions of the live stock show are herewith given:

The Beef Cattle.

Strong competition in the Hereford section was the most notworthy feature of the beef cattle show, though even this competition did not bring out quality of exhibits superior to those of the Shorthorns and Aberdeen Angus. Three of the five breeders exhibiting the white faces were from outside the state and none of the championships remained in Washington. The beef Shorthorn show was a strictly home affair, with one West Side and one East Side herd competing. Likewise, the milking Shorthorns and the Aberdeen Angus were all Washington cattle, the former coming from the Northwood of west Washington and the latter from the Congdon & Battles herd of the Yakima valley. The awards in the beef cattle division follow:

The Herefords.

Bulls: Three bulls, any age—1, O. A. Boggs & Sons, Daysland, Alberta; 2, Diamond B. Ranch, Lowell, Ore.; 3, Herbert Chandler, Baker, Ore.; 4, Weatherford Bros., Dayton, Wash. Two bulls, any age—1, O. A. Boggs & Sons; 2, Herbert Chandler; 3, Diamond B. Ranch; 4, Weatherford Bros. Aged bull—1, Boggs & Sons, on Alberta Panama (senior and grand champion); 2, Diamond B. Ranch, on Don Fairfax; 3, Chandler, on Debonair 119th; 4, Alf Goode & Sons, Yakima, Wash., on Menlo 6th. Two-year-old—1 and 2, Boggs & Sons, on Dudley's Panama and Alberta's Panama 3d; 3, Herbert Chandler on Money Prince 2d; 4, Weatherford Bros., on Don Blanchard 3d. Senior yearling—1, Chandler, on Prince Donald; 2, Diamond B. Ranch, on Dan Rupert 7th. Junior Choice Gomez (junior champion) and Oregon yearling—1 and 2, Diamond B. Ranch, on Gomez; 3, Boggs & Sons, on Shadeland Panama 5th; 4, Chandler, on Donald Rupert. Senior calf—1, Chandler, on Donald Rupert 9th; 2, Boggs & Sons, on Columbus Don Junior; 3, Weatherford Bros. on Don Blanchard 25th; 4, Goode & Son, on Teddy. Junior calf—1, Chandler, on Prince Weston; 2 and 3, Weatherford Bros. on Don Blanchard 27th and Don Blanchard 30th; 4, Goode & Son, on Tamico.

Females: Aged cow—1 and 2, Boggs & Sons, on Panama Lady 2d and Miss Panama; 3 and 4, Chandler, on Semolina 2d and Mary Debonair. Two-year-old—1 and 2, Boggs & Sons, on Lady Panama 3d (senior and grand champion) and Miss Columbus Panama 2d; 3, Chandler, on Princess Donald; 4, Diamond B. Ranch, on Illah Fairfax. Senior yearling—1, Weatherford Bros., on Betty Blanchard 19th; 2, Goode & Sons on Leah; 3, Harold Holmes, Mabton, Wash., on Eliza 2d. Junior yearling—1, Chandler on Bonnie New Year (junior champion); 2 and 3, Boggs & Sons, on Lady Dudley 2d and Panama Lady 4th; 4, Weatherford Bros., on Lady Blanchard 24th. Senior calf—1, Weatherford Bros., on Betty Blanchard 37th; 2, Chandler, on Hazel; 3 and 4, Boggs & Sons, on Miss Columbus Panama 3d and Miss Alberta Panama.

Herds and groups: Aged herd—1, Boggs & Sons; 2, Chandler; 3, Diamond B. Ranch; 4, Weatherford Bros. Yearling herd—1, Chandler; 2, Boggs. Calf herd—1, Weatherford Bros.; 2, Boggs & Sons; 3, Chandler; 4, Diamond B. Ranch. Get of sire—1 and 2, Boggs & Sons; 3, Chandler; 4, Weatherford Bros.

The Shorthorns.

Bulls: Three bulls, any age—1, Frank M. Rothrock Co., Spokane, Wash.; 2, J. D. McGuire, Tenino, Wash. Two bulls, any age, bred by exhibitor—1, Rothrock Co.; 2 and 3, McGuire. Senior yearling—1, Rothrock Co., on Hercules Marshall; 2, E. W. Taylor, Sunnyside, Wash., on Viceroy. Junior yearling—1, Rothrock Co., on Hercules Brilliant; 2 and 3, McGuire, on Oak Grove King and King's Perfection. Senior calf—1 and 2, Rothrock Co., on Hope. Junior calf—1, McGuire on Oak Grove Hercules Emblem (junior and grand champion) and Hercules Favorite; 3, McGuire on Baron Gainford; 2, Rothrock Co., on Hercules Gloster.

Cows: Aged cow, with calf at side—1, McGuire Chief's Hope (senior champion). Three years or over—1, McGuire, on Escana Lady. Two year olds—1 and 2, McGuire on Hercules Missie 3d and Mayflower Rose. Senior yearling—1 and 2, Rothrock Co., on Hercules Silvia 3d (junior and grand champion) and Hercules Missie; 3, McGuire, on King's Hope. Junior yearling—1 and 2, Rothrock Co., on Golden Margaret 9th and Hercules Topsy 6th; 3, McGuire, on Oak Grove Lady. Senior calf—1 and 2, Rothrock Co. on Hercules Silvia 5th and Hercules Rose 4th; 3, McGuire, on Oak Grove Rose.

Herds and groups: Yearling herd bred by exhibitor—1 and 2, Rothrock Co.; 3, McGuire. Pair of calves, 1 bull and 1 heifer—1 and 2, Rothrock Co.; 3, McGuire. Get of sire—1 and 2, Rothrock Co.; 3, McGuire.

Aberdeen Angus.

Only the herd of Congdon & Battles of Yakima, showed in the Aberdeen Angus department. It made up an excellent show of well filled classes and received the following awards:

Bulls—1 and 2, on groups of three, any age, and 1 and 2 on groups of two, any age. Aged bulls—1, on Prizemere 10th. Two-year-olds—1 and 2, on Queenmere 14th (senior and grand champion) and Eileenmere 6th. Senior yearling—1 and 2, on Blackmere 16th (junior champion) and Ericaman C. B. 8th. Junior yearling—1 and 2, on Prideman C. B. 22d and Blackmere 15th. Senior Calf—1 and 2, on Prideman C. B. 25th and Barbarian of Rosemere 7th. Junior calf—1 and 2, on Irenmere 6th and Prizemere 30th.

Females: Aged cow—1, on Pride of Rosemere 37th (senior and grand champion). Two-year-old—1 and 2, on Pride of Rosemere 40th and Queen of Rosemere 15th. Senior yearling—1 and 2, on Barbara C. B. 2d (junior champion) and Erica C. B. 6th. Junior yearling—1 and 2, on Queen of Rosemere 16th and Meadow Lark C. B. Senor calf—1 and 2, on Blackcap of Rosemere 20th and Pride of Rosemere 49th.

Herds and groups—1, on aged herd; 1 and 2, on yearling herd bred by exhibitor; 1, on calf herd bred by exhibitor; and 1 and 2 on get of sire.

Baby Beef Clubs.

Aberdeen Angus Steers—1, 4 and 7, Thomas Newton, Cle Elum, Wash.; 2 and 3, Alva Pays, Cle Elum, Wash.; 5 and 10, Rodger Pays, Cle Elum, Wash.; 6 and 8, George Hliboky, Cle Elum, Wash.; G. Harvey Varnum, Mabton, Wash.

Shorthorn Steers—1 and 4, Thilmore Wilson, Ellensburg, Wash.; 2 and 3, Erling Hanson, Ellensburg, Wash.; 5 and 6, Carol Robinson, Ellensburg, Wash.; 7 and 8, Eugene Wilson, Ellensburg, Wash.; 9 and 10, Walter White, Ellensburg, Wash.

Champion steer of all breeds—Thilmore Wilson on Shorthorn.

Fat Cattle.

Steer or heifer one year and under two—1 and 2, Congdon & Battles on Aberdeen Angus; 3, Thilmore Wilson, Ellensburg, Wash., on Shorthorn; 4, Thomas Newton, Cle Elum, Wash., on Aberdeen Angus.

Steer or heifer under one year—1, Jogh Mathison, Zillah, Wash., on Shorthorn; 2, Congdon & Battles on Aberdeen Angus; 3, G. Harvey Varnum on Aberdeen Angus.

Grand champion animal—Congdon & Battles on Aberdeen Angus.

Milking Shorthorns.

The high-class herd of Northwood farms of Redmond, Wash., made up the entire milking Shorthorn show. This herd won all awards as follows:

Bulls—Three years or over—1 and 2, on Gretna Challenger (senior and grand champion) and Northwood Defender. Two years old—1, on Northwood Pride. Yearling—1 and 2, on Northwood Salem (junior champion) and Northwood Julian 2d. Under one year—1 and 2, on Northwood Monarch and Northwood Oxford.

Females—Three cows in milk—1, on Lilly L 3d, Lady Susie 3d and Northwood Baroness. Five years or over—1 on Lilly L 3d (senior and grand champion). Three years and under five—1 and 2 on Lady Susie 3d and Northwood Baroness. Two year old—1 and 2 on Annabel 2d and Northwood Winnie 2d. Yearling—1 and

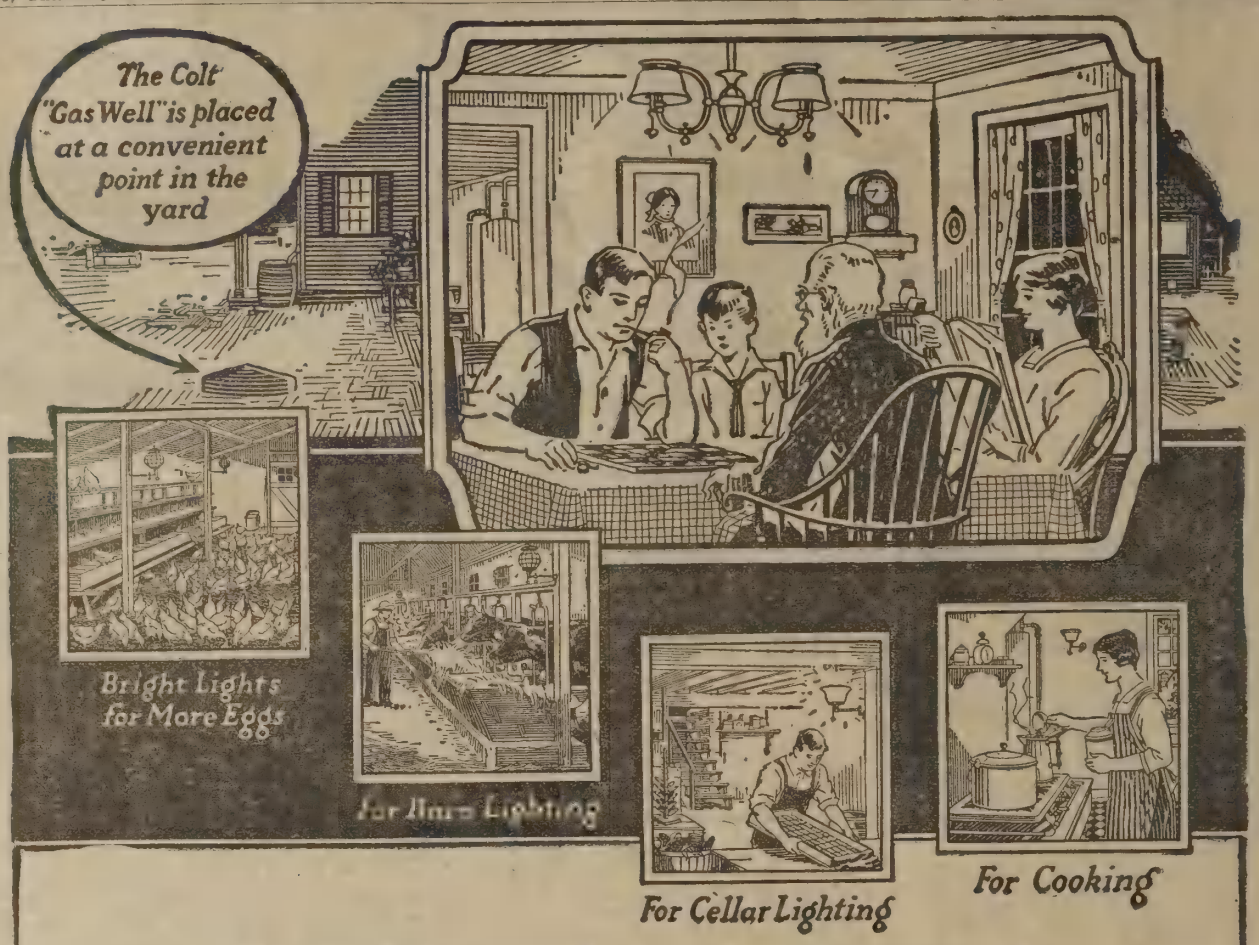
If you want something not offered among our classified ads this week,



Is this place yours?

Study these pictures. They tell a true story of home comfort. They tell of the blessings brought to thousands of farms by Union Carbide since its discovery 31 years ago. They tell how Union Carbide Gas—made right at home, automatically, in the Colt family "Gas Well"—gives you what you have always wanted—modern town comforts and conveniences.

Feed Union Carbide and common water to the Colt "Gas Well" at very infrequent intervals—usually three or four times a year—and you have a positively dependable automatic servant willing and ready 24 hours of every day for cooking your meals, for heating your water, for ironing your clothes. And then at night—after the chores are done and you gather around for reading and recreation—the soft white light of this Union Carbide Gas makes the old home so comfortable! .... You'll have no more eyestrain, no more gloom; Union Carbide Gaslight dispels every shadow.

It's the wonder light for the barn—makes your work easier. Light up your poultry houses and greatly increase your egg production. Colt "Gas Wells" are helping thousands to make their farms pay. A Colt "Gas Well" is readily installed. Small iron pipe, concealed in the walls and flooring, carries the gas to any point for lighting, cooking, ironing, or water heating. And you get Union Carbide direct from convenient Union Carbide Warehouses everywhere at factory prices.

We make it so easy—take a year to pay

When you know how reasonable is its cost, and how easily it is installed, you will want this Colt "Gas Well." Get the proof—a wonderful story. Mail the coupon today—NOW.

SPEED WAGON

REO

The Grain Grower's Express Route

WHEN time means dollars to the grain grower, fleetness and unfaltering dependability are vital. Speed Wagon usefulness, then, is tremendously evident.

For Speed Wagon fleetness discounts time. Its stamina discounts difficult road conditions. Its eager power, brute strength, proper balance, pneumatic tires and overall compactness emphasize its agility on the road, in the field and at the loading dock. And endurance qualities for a quarter million miles of service guarantee supreme economy.

No single feature alone is responsible for Speed Wagon dominance. To *balanced goodness* goes all the credit. Nearly a hundred thousand are serving and saving because the Speed Wagon is designed and manufactured as a complete unit in the big Reo shops,—not assembled!

Twelve standard bodies. Capacity 500 to 2500 pounds.
Chassis, $1185 at Lansing; add tax.

LIVESTOCK AND DAIRY

Blackleg Control

Immunization by vaccination is the only practicable and effective means of protecting animals against blackleg and eventually ridding pastures of the infection, says the United States department of agriculture in Farmers' Bulletin 1355, prepared by Dr. John R. Mohler, chief of the bureau of animal industry. This disease, which is found in all climates and altitudes in practically all parts of the world, is the cause of great losses in this country, particularly in the great cattle raising and feeding sections of the west.

In the new bulletin all of the important information on this disease has been brought together in concise form. The nature of the malady and the characteristic symptoms are so described and compared with those of other diseases that there can be little danger of confusion. Cattle, especially young animals from 6 to 18 months of age, are most susceptible, but sheep and goats also are subject to it, and in exceptional cases hogs have contracted it. Man, horses, dogs, cats and fowls appear to be immune from the infection. Improved animals seem to be less resistant to it than common or low-grade stock. Spring and fall are the seasons of greatest prevalence, but blackleg may occur at any time of the year.

Medicinal treatment has been found worse than useless as animals sick with the disease are sure to die, and the longer they are kept alive the greater the danger of infecting others in the herd. Those sick with blackleg should be killed and burned or buried deeply in quick lime. Protection against infection is afforded by vaccination, and there are a number of reliable preparations on the market. Formerly the department of agriculture manufactured and distributed blackleg vaccine (but as a result of an act of congress, this distribution was discontinued beginning July 1, 1922.)

Copies of the bulletin may be had, as long as the supply lasts, by writing to the department of agriculture, Washington, D. C.

The Hambletonian

By E. L. POTTER, O. A. C.

Will you please tell me whether the Hambletonian is a thoroughbred horse? R. H. J.
Huntington, Ore.

The Hambletonian is a strain of the American trotter descended from the famous horse, Rysdyk's Hambletonian. The value of Hambletonian blood has been such that at the present time practically all of the American trotters descend from this one horse and it would probably be difficult to find a horse registered in the American trotting register that was not a descendant of Hambletonian. Since the Hambletonian blood has permeated the entire American trotting breed, the word Hambletonian has fallen into disuse.

The word "thoroughbred" should be used correctly as designating the English running horse, which, of course, is the same breed as is used for running races in this country. The American trotter, which of course includes our pacers, was developed from a thoroughbred foundation, but is now a separate breed. The original horse, Hambletonian, had doubtless a good deal of thoroughbred blood in his veins, but would not be considered strictly a thoroughbred horse, especially since his merit lay in his ability to sire horses that were fast at the trot and pace rather than at the gallop.

Of course the word "thoroughbred" is often used as meaning the same as purebred and hence might be applied to any breed; for instance, we speak of thoroughbred American trotters, thoroughbred Percherons, or thoroughbred Shorthorns. The use of the word thoroughbred in this manner is not considered correct, and while so used by many farmers and horsemen in their conversation it is not used in that manner by any of the standard horse periodicals or by any of the better writers on horse subjects.

In closing, will call attention to the peculiar spelling of the word "Hambletonian." Mr. Rysdyk, the owner of the original Hambletonian horse, was an illiterate man and spelled the word in the manner indicated and it has been so spelled in all the official records of the American trotting register, although doubtless the word was intended to be "Hamiltonian."

VETERINARY

By DR. S. B. NELSON.

Bloody Milk—We have a heifer with her first calf that gives bloody milk.
Shelton, Wash. MRS. V. B.

Give the cow 1 teaspoonful of hyposulphite of soda in the drinking water, morning and night for some time.

Sore Teats—What can I do for a cow that has sore teats? Every time I milk the left teats she kicks. There is no noticeable sore on her teats or swelling.
Tacoma, Wash. J. E. J.

Apply a little lanolin to the teats after milking. Wash the teats in hot water for four or five minutes before milking. Dry and milk.

Cream Tainted—We have a cow and the cream on her milk tastes musty, even when sweet. The milk does not taste, though. She runs on pasture and we feed about two quarts of bran and shorts twice a day. C. B. J.
Eatonville, Wash.

Give your cow one and one-half pounds of epsom salts. Three days later begin giving her a heaping teaspoonful of hyposulphite of soda in a pint of water morning and evening.

Use Teat Knife.—I have a cow just fresh with second calf. She had a caked udder with her first calf and one teat failed to function, but there was no soreness or any seeming soreness. With this calf the udder seems normal, as does the teat, and it is full of milk but gives out at one or two strokes and refills slowly. I am bathing the udder and rubbing it with grease. I have read that there is a way of cutting the duct. The udder is hard at that quarter but normal in size and subnormal before she had the calf.
Vancouver, Wash. W. G.

The opening in the membrane at the base of the teat near the udder has partially closed. The treatment is to procure a small teat knife, which consists of a very fine knife that works on a hinge so that it may be concealed in the small tube which acts as its handle. When the knife is inside the tube, the tube is pushed up into the udder and up through the membrane. Then the knife blade is released and the knife is drawn down through the membrane. The knife blade is hidden in the tube again and pushed up into the udder, turned one-fourth of the way around and then drawn down again. This is repeated four times until four slits have been made in all four directions of the compass.

Be sure and put the blade back into the tube again before the knife is drawn out through the lower opening of the teat. The teat should be dipped in tincture of iodine and the knife should be thoroughly boiled before it is inserted into the teat.

The Bergmann "Sport Pac"

Sold by leading shoe stores or direct if no dealer near you.

"True Value All Thru"

This shoe has been declared the greatest outdoor shoe ever built. Bergmann has been repeatedly criticized from a business standpoint for building it too well.

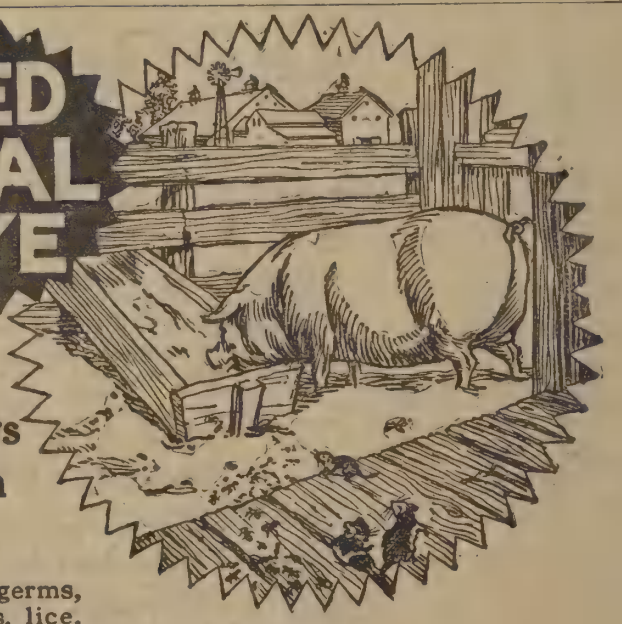
RED SEAL LYE



Destroys Pig-Pen Pests

— disease germs, worm-eggs, lice, insects, etc. Drives out rats and mice. Sweetens the swill. Kills odors. Makes hogs healthy.

RED SEAL Lye is the best farm-disinfectant to be used in stables, pens, poultry-houses; in fact, any place where vermin breed. Also makes a practical sheep-dip, tree-spray and cleaner for automobile transmission-cases, farm-machinery, etc. (Do not use on aluminum.)

Booklet containing complete list of uses, with description of each, sent on request. Full directions in every can. Be sure and buy only the genuine RED SEAL Lye.

Room for More Farm Flocks

Sheep Offer Opportunity to the Washington Wheat Farmer

By C. M. HUBBARD, State College Live Stock Extension Specialist.

"I would not farm in this wheat section without sheep," says George Iceus, a well-known farmer near Palouse. "We had practically no weeds in our summer fallow this year, but keeping 30 ewes and their lambs on 90 acres. We make our easiest money from sheep, and the greater share of what they eat is ordinarily wasted in this section."

"My flock of Shropshires lambed 125 per cent this year and show an average wool clip of 10 pounds," said J. N. Meyers of Uniontown. 'While we have only 25 breeding ewes, we need 100 head, as they pay more than any other farm stock under our conditions. They eliminate the weeks and, on the whole, consume a great deal of roughage which is of little value, changing it into lambs and wool. Our community would be better off with more farm flocks."

Such was the tenor of the remarks from some 10 Whitman county farm flock owners, when recently interviewed as to their farm-flock experience.

This naturally suggests the question: "What is the outlook for the farm flock in Washington? What is the place of the farm flock in this state?"

A short review of sheep history for the last 23 years is of value in this connection and, while too many statistics may be tedious, a few are of value in presenting the case for the farm flock in the northwest.

Going Down.

In 1900 we had 61,504,000 head; in 1910 52,447,000 head; in 1920 39,925,000 head and in 1922 around 37,000,000 head of sheep in the United States. Our wool production is also on the decline. In 1919 219,958 pounds; in 1920 235,005 pounds and in 1921 224,564,000 pounds. We manufacture into clothing over twice as much as we produce. A nationwide decrease in lamb production is in line with the decrease in ewe stock.

This decrease in sheep and wool production is due to several factors, including the breaking up of range area through homesteading, changes in the lamb and wool tariffs, a lack of realization of the profit to be obtained from sheep, an unfounded aversion on the part of certain farmers, intestinal parasites in the cornbelt and south, destruction by dogs, etc. Unfortunately, the decrease in range stock has not been made up by a corresponding increase in our farm flocks. A permanent system of agriculture, wherein the farm flock has a definite niche to fill, has not been definitely settled on by farmers, as a whole, in many of our states. The great farming state of Ohio, entirely lacking in range territory, carries 1,957,000 sheep on the farm flock basis. Totaling range bands and farm flocks, we have in Washington only 500,000 head. The larger share of these are range ewes. Oregon has a total of around 1,823,000 adding to her agricultural wealth.

What the Future Holds.

Farmers interested in starting small flocks this fall naturally ask, "How about the future of the farm flock?" Indications point to several years of sheep prosperity, but the "wave" or "tide" of sheep and wool values fluctuates. This is true of all farm crops and stock, however. Each of the last two years has seen high wool values; this being especially the case with fine wools and the various medium wools shorn from the so-called black-faced breeds. Lambs have sold at good figures, generally speaking, especially if they were marketed reasonably early in the season. Prices on good high-grade ewes are climbing. Considering the underproduction of wool and lambs in the United States and granting no revision downward in the tariff, farm flocks should increase materially in the next few years to the greater profit of the farmers concerned. Every farm-flock owner approached in one county stated that there undoubtedly should be more farm flocks in their community.

Farmers have heard for years of how sheep utilize the cheaper roughage of the farm, the weeds, the summer fallow, pea straw and the stubble fields, turning them into valuable lambs and wool; that little labor is required and the per cent of returns is high on the capital invested.

Where can ewes suitable for farm-flock purposes be obtained and at what prices? Farmers may obtain old ewes, bred, with sound udders and in fair condition, of Lincoln-Rambouillet or Rambouillet breeding, from range men, at around $8 from Yakima and a few other Ellensburg points. These ewes have served their alloted time on the range, but are good for another year or so of use under farm flock conditions, if given good care and proper feeding. Bred to Hampshire rams for early March lambing, the resulting quality lambs can be marketed in July and the ewes themselves in August. If the farmer so desires, the resulting ewe lambs may be saved to start a permanent farm flock. This method will appeal to the farmer with a small amount of available cash—and most farmers are in that position.

Good, young ewes of Rambouillet, Lincoln-Rambouillet breeding, or grade blackface ewes of Shropshire or Hampshire breeding will cost from $11 to $13 this fall. As these prices are above the average for young ewes over a series of years, many farmers will undoubtedly prefer the older ewes, marketing them in August, when they will have had a chance to put on flesh after their lambs have been sold.

Nothing for In-and-Outer.

To the thrifty farmer, inclining toward diversification and a permanent type of agriculture, the farm flock should appeal. The "in-and-outer," who jumps from one kind of live stock or farming to another from year to year, will not get anywhere with sheep. Naturally this statement holds true with every phase of agriculture.

If one makes a little study of sheep, their breeding, proper feeding and what makes for good management, there is no reason why the farm flocks of Washington should not be as profitable as they are in the other good agricultural sections of our country.

Robert Cissna

The Washington Farmer is grieved to learn of the death of Robert Cissna at Yakima, age 72 years. Mr. Cissna was widely known as one of the largest and most practical beekeepers in the west. He had the sympathetic support and help of his wife in his favorite occupation. Mr. and Mrs. Cissna made successful honey exhibits for nearly 20 years.

Robert Cissna was born in Indiana in 1851, and spent nearly half his life in that state. He came west and settled in western Washington, coming from Bellingham to the Yakima valley nearly 22 years ago. He suffered much during the last of his sickness, being afflicted with cancer for about three years.

He is survived by six children, two brothers and one sister. The children are: Mrs. Arvilla Waples, Lynden, Wash.; Leroy Cissna, Chicago; Earl, Harry, Eleanor and Bertha at Yakima.

Sale of Hampshire Rams

The auction sale of registered Hampshire rams held at the Kittitas county fairgrounds on Friday during the fair brought an average of $27.61 for the entire 63 head entered. The top price was $52.50 for a yearling ram consigned by W. L. Coburn of Ellensburg and purchased by Stanley Coffin & Son of Yakima. Had it not been for a few of the lambs that were undersized the average would have been closer to $35, according to members of the Kittitas County Hampshire Breeders' association, who put on the sale.

The range sheepmen have been coming to this valley for many years for their ram lambs and the demand has been strong enough to warrant a large percentage of the breeders to keep only one breed, the Hampshires. As a general rule each man has planned on disposing of his surplus lambs by private sale, but the auction sale method met with a decided success this year in connection with the county fair at their new grounds.

The consignors who sold lambs were: S. P. Wipple & Sons, E. W. Wilson, Carol Robinson, Peter Wipple & Son, Lynch & Hubbard, W. L. Coburn, all of Ellensburg, and Verbal Hall of Thorp.

Those who purchased lambs from the breeders were: Stanley Coffin & Son, Yakima; Archie Prior, Yakima; E. T. Cranmer, Wenatchee; R. M. Lindsay, Stanwood; F. M. Rothrock company, Sprague; C. M. Richards, Ellensburg; F. H. Zentner, Waterville; K. O. Kohler and J. L. Kay of Ellensburg and J. F. Sears of Yakima.

Honor Guernsey Breeders

An interesting feature of the Guernsey breeders' banquet held at Yakima during the state fair, was the presentation of two trophies, one to H. E. Angel of Mabton and the other to Wallace & Fordyce, who will disperse their herds this month. The trophies were given as a token of appreciation for the work done in the advancement of the breed that the breeders have carried on since beginning their work in this state. The presentation was made by Leland J. Clark of Bellevue, secretary of the Washington State Guernsey Cattle club. George Gue of Auburn acted as toastmaster and called upon Axel Hanson of Minnesota, who judged in the dairy department; E. L. French, director of agriculture, and E. L. Westover, western representative of the American Guernsey Cattle club. There were about 40 present at the banquet which was held at the Hotel Commercial.

AGRICULTURAL EXPOSITION.

An international agricultural exposition is to be held in Adana, Turkey, next November, under the auspices of the ministry of national economy. The exhibits will comprise specimens of agricultural products, draft animals and products of industries affiliated with agriculture. Foreigners may take part and exhibit farm machinery and draft animals.

WOLVERINE

1,000-Mile Shoes

Cordovan Horsehide Double-Tanned

Redfield, Ia., May 29, [illegible]

I have your good letter returning my money which I sent for shoes.

Now I want the shoes. I am wearing a pair of them now and they may wear out some day, although I doubt it.

I have been getting your shoes through my father, A. E. Smith, who is one of the oldest business men in Redfield, but he is not handling shoes.

Can't we fix it some way so that I can keep on wearing Wolverine shoes? You might send the order I gave you to A. E. at your present price C. O. D. Postage not included.

I particularly want the pair of work shoes, so let me know if there is any way I can get them. You have no regular dealer in this territory that I know of.

Yours very truly,
W. L. SMITH.

Ask for

Hi-Cut King of Storms

For oil man, hunter or woodsman, there's no shoe like this. It fits ankle and instep as comfortably as a low shoe. Almost impossible to wear out. Dries soft after wetting.

Dries Out Soft After Wetting

Easy to Wear but Hard to Wear Out

All leather used in Wolverine 1,000-mile horsehide work shoes is double-tanned by our own private process in our own tanneries.

We make no other shoe. Our entire organization is devoted to producing the world's strongest work shoe. We do our own tanning because it assures us the best leather. Horsehide is naturally the toughest leather used by man. For centuries it has been known as the strongest leather for dress shoes. Big league baseballs have horsehide covers because it is the only leather strong enough to stand such hard knocks. So we use it exclusively in Wolverine work shoes.

By our exclusive method of double-tanning we make it soft and pliable as buckskin. And it always stays soft. Other leathers dry out hard after wetting. Wolverine horsehide shoes dry soft as velvet. Wear them in water, mud and slush as often as you please. They'll always dry soft and comfortable.

We buy select horsehides for our leather. And only the choice Cordovan cut is used in Wolverine 1,000-mile shoes. Notice how thick the leather is—yet how soft it feels. Double-tanning means double wear and double comfort, too. You can wear these shoes in all kinds of weather. No matter how wet they get they dry out soft and pliable.

Wolverine Comfort Shoe

Tenderfeet welcome these shoes. They're soft and flexible as a moccasin. Yet [illegible] like iron. And so light and easy, you'll never know they're on duty. For tenderfeet, or where you do not encounter wet weather, wear this comfort shoe.

You'll find real economy in the wear they give. Wolverine horsehide shoes usually wear at least 1,000 miles. We are told they actually wear 3,000 and 4,000 or more. If you are naturally hard on shoes, you'll find them the most economical shoes you ever wore. And you'll enjoy new foot comfort at the same time.

There's a Wolverine horsehide shoe for every need. For farm or railroad, mines, oil field or woods, there's a special model that exactly suits conditions. And all are the same tough, pliable double-tanned horsehide.

If your dealer cannot supply you with Wolverine 1,000-mile shoes we'll see you are supplied by our nearest dealer. Write for catalog.

POULTRY AND RABBITS

Pullets or Hens?

Which Are Best for Reproduction?

Members of the newly formed Washington Accredited Hatchery and Breeders' association may continue their plans to raise chicks from pullet eggs, in spite of the fact that many of the members preferred that only mature hens be used as breeders. This subject was the center of interest at the Seattle meeting, September 10, which, by the way, was one of the liveliest meetings ever held by the association. There were representatives from 10 western Washington counties, several of which have organized local accredited hatchery associations, which had instructed their delegates how to vote.

A peculiar situation arose at the beginning of the meeting. An examination of the records showed that, although the association had been properly organized, there had never been any dues collected from any one, as required by the constitution. They, therefore, had an association technically without members. The secretary called for a general contribution of dues from the delegates present in order that the meeting might continue and any business transacted be held valid.

The question then arose as to the officers, and a vote was called to sustain the officers who were elected at the June 4 meeting. They were: Jay Todd, Seattle, president; E. R. Wells, Prosser, vice president, and P. S. Dickey of Puyallup, secretary and treasurer. Since there was a majority who were not in favor of sustaining these officers a new election resulted, and B. C. Young of Bellingham was elected president, while the other two officers were reelected. Another vote was called for, which placed Mr. Todd on the executive board, according to the constitution, which requires that the past president act as the fourth member of the board.

The Pullet or the Hen?

The remainder of the day was spent in a discussion of the rules and regulations, and particularly to rule No. 5, which deals with the hatching of chicks from breeders under 18 months old. Seven of the county associations had previously declared that they would not support the state association if the rules and regulations were to allow this pullet clause, according to W. D. Buchanan, since they felt that a better chick could be raised from a hen over 18 months old. Those who favored pullets argued that a young bird properly raised would produce as good a chick as would an older bird, and they defied any proof to the contrary. The discussion simmered down to an admission that all were working for the better interests of the poultry industry and to establish a plan that would guarantee a high grade of chicks and at the same time keep out any unscrupulous person who might take advantage of the rules and force pullet breeders so that they would not produce good, strong chicks.

Harmony was at last reached when both sides agreed to compromise by leaving section 5 as it stood, and amending section 2, with the following clause: "All hatcheries must designate whether they are hatching from pullets or hens over 18 months old, and also agree to furnish a list of the number of each class, the list to be published at stated intervals."

A further change in the rules was made by amendment to section 12, which will allow counties having a local organization with a secretary in the county, who will cooperate with the supervisor in securing better supervision, to retain one-fourth of their fee collected on breeding stock, to be used the local organization sees fit.

The only other change was in the by-laws in article 4, this being the requirement for membership. The accepted amendment now reads, "any one interested in accredited hatchery work who pays in advance and agrees to comply with the rules of the association is eligible to membership and shall be considered a member, unless he fails to comply with the rules within 60 days after the annual meeting."

Before the meeting adjourned Professor J. S. Carver, the newly appointed head of the poultry department at the state college, was called upon for a short talk.

The application blanks, which are being sent to all members of the Accredited Hatchery and Breeders' association, include three divisions, namely, the accredited flock, the accredited hatchery and accredited trapnesting. This plan allows for any poultryman to sign up under any one, or all three branches, as he so desires.

TURKISH EGGS.

The principal centers of production of Turkish eggs are Bartin, Samsun, Inebol and Ada-Bazar in Anatolia; and Cuzun-Kenpru and Adrianople in Thrace. The average annual production approximates 150,000 cases of 1440 eggs each, according to the foodstuffs division of the department of commerce. From 50,000 to 60,000 cases are yearly exported to Marseilles and Barcelona; the rest being consumed locally. Wholesale prices this summer have ranged from 190 to 200 piasters ($1.24 to $1.31) per 100 eggs.

$5 for Your Opinion

The Washington Farmer will award three cash prizes amounting to $10 to the three best articles on the following subject:

It Can Not Be Done!

High egg production can not be had without Crushed Oyster Shell

NO matter what food formula you follow, or how careful you are in housing your fowls, large egg production is not possible if pure crushed oyster shell is not kept before your hens all the time.

The reason is simple—egg shells are made of calcium carbonate. It must always be remembered that oyster shell is not a grit; but a food.

Good food and pure water generously given will force more eggs, provided the elements to make the shell are also given. Otherwise the food goes into fat and a low egg production is had.

Pilot Brand Oyster Shell-Flake is the best and cheapest means of getting calcium carbonate to hens because it is over 98% calcium carbonate and is easily assimilated by fowl. The cost is but the price of one egg per hen per year.

Pilot Brand Oyster Shell-Flake for poultry is pure oyster shell properly crushed and screened, containing no grit—no dirt—no clam shells. Pilot Brand is always packed in new 100-lb. 12-oz. burlap bags.

Even well bred stock fed on a well-balanced ration and pure water; given plenty of exercise and good housing will not give a profitable result without crushed oyster shell.

To be sure of pure crushed oyster shell, ask for Pilot Brand. It may cost a trifle more than others, but there is no dirt, no clam shells and hence no waste in Pilot Brand, consequently it is always cheaper.

If your dealer doesn't carry Pilot Brand send us his name and we will see that you are promptly supplied.

ORCHARD AND GARDEN

Five Carloads

Is Yield of 700 Pear Trees

A total of five carloads of pears from 700 trees on the Stanley Millichamp orchard, west of Wapato, is said to be one of the best production records in the valley. The orchard has some trees that are 10 years old, while some are only 5 years. The record of the boxes in one of the cars shows that it contained 52 boxes of 70s, 231 boxes of 80s, 113 boxes of 90c, 98 boxes of 100s, 10 boxes of 110s, 3 boxes of 120s and 4 boxes of 135s. This record is typical of the sizes in all the five cars. The total number of boxes was 2445.

There was a 5-year-old tree which bore nine boxes and some of the 10-year-old trees went as high as 15 1-2 boxes to the tree. The pears were packed in lined boxes and corrugated cardboard was used in the bottom and top of boxes. Two of the carlots were sold at $2.25 a box for the fancy grade, which is 25 cents a box above the market. The balance of the crop, Mr. Millichamp will put on the New York auction.

Mr. Millichamp attributes the fine crop and large size to his method of pruning. He prunes heavily and finds that it promotes bearing and the production of high quality fruit. Blossom pruning was tried on one tree, with the result that there was a lesser crop of pears on that tree than on trees of the same size near it that were treated according to his method.

Storage for Apples

It is not a difficult matter to have a packing house that will keep apples or other fruit cool in the summer months, as well as keep them from freezing later in the fall and winter seasons. A. J. Linstad of Vashon, King county, has recently completed a new packing and storage house that will suit any purposes of this kind.

The building measures 18x30 feet and has double walls which are filled with sawdust to keep an even temperature inside. It has a capacity for about 1500 boxes of apples, but as a general rule the space is not all used for storage, but part of one end is used for packing and making boxes. The entire structure was built by the owner at a cost of $265, which is for material only.

"I find that it keeps the fruit plenty cool in the summer months if I leave the doors open at night and close them during the heat of the day," said Mr. Linstad. "It is not a hard matter to hold the temperature at from 60 to 65 degrees, even when the days are warm, but care must be taken to keep all doors closed tight and there can not be too much running in and out, as that will let in too much warm air. In the fall when the nights are frosty the temperature can be held down as low as 65 degrees, if desired."

The storage house is used during the winter months to keep the fruit from uneven temperatures and there is very little danger of loss from heavy freezing weather when the fruit has been picked and stored in such a building. Very often such houses are built with cheaper construction by having a covered pit with doors at the end large enough for driving a team of horses in.

Mr. Linstad has a large part of his home orchard planted to the red Gravensteins and finds them a profitable apple to sell on the local markets. This year the crop will not be as large, since there were not as many apples set on as there have been in ordinary years. There are also a few trees of the Duchess, which are an early variety and ripen in August. They sell fairly well, but are more sour and do not have the flavor of the Gravensteins.

Use Much Superphosphate

The use of superphosphate and barnyard manure has been demonstrated and found to be the most effective fertilizers on Thurston county soils, according to demonstrations put on in different parts of that district by E. B. Stookey, county agent.

One of the demonstrations is on the L. M. Goldsmith farm, near Yelm, and consists of two main plots. He got an increased yield from one of the small plots treated with superphosphate over a similar plot adjoining which had been cultivated but not fertilized. In three years the treated plot has maintained a consistent lead over the other one, and this season shows a difference of 41 per cent. The same comparative increase is shown where superphosphate is used as a supplement to barnyard manure.

On another farm at Hunter's Point the first year's fertilization on strawberries showed an increase of 6 per cent from the use of superphosphate. Nitrate of soda showed a somewhat better increase in this trial.

On strawberries at Yelm the first year's trial showed an increase of 10 per cent.

On wheat and vetch and on clover and grass at A. R. Dull's, south of Yelm, superphosphate has made a wonderful showing the last two years.

On fall-sown wheat and vetch a spring application of superphosphate caused a 13 per cent increase on the J. D. Smith farm south of Oylmpia.

On strawberries the first year at Grand Mound, Charles Moore got an increase of 16 per cent from superphosphate.

The demand for superphosphate in the county this fall, according to Mr. Stookey, may require several carloads. The market project leaders in the various communities are making plans to take orders with the idea of pooling them, as has been done successfully the last two years.

SMOKER GENERALLY SATISFACTORY.

I read recently about using chloroform to rob bees. Would this be harmful to bees in any way? If it is all right to use chloroform, what time of day would be the best to use it? MRS. G. S. L.

This question was referred to H. A. Scullen, specialist in bee culture, who says: "I would suggest that you use chloroform with caution. I have never heard of it being used and would not advise it generally. Ordinarily a good smoker properly used is all that is necessary. In regard to the time of day to make examination, will say that as a rule it is better to examine bees during the middle of the day, when they are working well on honey plants."

SUCCEEDS WITH BLACKCAPS.

R. H. Dunnington, living on a 35-acre farm a mile north of Mabton, on the Yakima river, in Yakima county, last season picked over 100 crates of blackcap raspberries from his one-year-old acre of this fruit. He received from $2.50 to $3 a crate for them and says that he received more benefit from this acre of berries than from half the rest of his ranch. Next season he expects to harvest 500 crates.

REMEMBER YOUR SUCCESS.

If the varieties in your garden are satisfactory or unsatisfactory this year, remember it, so as to profit from the experience next year.

GENERAL ADVERTISING.

Stop Using Coal and Wood

New Device Burns 95 Per Cent Air

Did you ever think of burning air in order to heat your home or do your cooking? I have a new invention—gives three times the heat of coal or wood, yet burns 95 per cent air, and only 5 per cent oil.

Thousands of housewives, happy to be free from the drudgery of coal and wood, are enthusiastic about my amazing new invention—the Oliver Oil-Gas Burner. It frees them from the dirt and muss of heating and cooking the old way and, also, it saves them expense and worry of coal and wood at this time.

The device sets right into the firebox of any stove or furnace. It is entirely safe and requires no adjustment. Just a turn of a little valve and the housewife instantly has as much or as little heat as she wants—three times the heat of coal or wood—when she needs it in the coldest weather. I want every woman to have the use of my invention.

If you will write to me, you will receive an attractive booklet FREE that tells all about it. I am now making a special low price offer, including a 30-day free trial, and am also looking for good, live distributors. If you are interested I will tell you how to earn $500 a month, or, in only your spare time, how you can make $100 a month. Write to me today. Address Mr. B. M. Oliver, 2121-J Oliver Building, St. Louis, Missouri.—Adv.

Help your MOULTERS MOULT

If you want your hens to moult naturally—

If you want them back on the egg job promptly—fall and winter laying—

Then you must make sure that your moulters are healthy and hungry.

They must eat lots, and be able to digest what they eat.

That's just what

Dr. Hess Poultry

PAN-A-CE-A

does for your moulting flock.

It's a tonic that begins with the appetite—improves a hen's whole system.

It has Iron that keeps the paleness away, makes the combs and wattles red—the blood rich.

Pan-a-ce-a starts the food the egg way as soon as the moult is over.

No time lost.

No dormant egg organs after the moult, where Pan-a-ce-a is fed.

Tell your dealer how many hens you have. There's a right-size package for every flock.

100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
50 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

GUARANTEED

LET US TAN YOUR HIDE.

Horse or Cow hide. Calf or other skins with hair or fur on, and make them into coats (for men and women), robes, rugs or gloves when so ordered; or we can make your hides into Oak Tanned Harness or Slaughter Sole or Belt Leather; your calfskins into Shoe Leather. Colors, Gun Metal, Mahogany, Russet or lighter shade. Calfskins tanned in the lighter shades of shoe leather, also make elegant robes and table covers; great for birthday, wedding and holiday gifts.

LET US FIX YOUR WORN FURS

freshen, repair and reshape them if needed. Furs are very light weight, therefore it would cost little to send them in to us by Parcel Post and get our estimate of cost; then we will hold them aside awaiting your decision. If you say "go ahead," very well; we will do so and hold them free of storage until you want them. If you say "no," we will return them post-paid.

Our illustrated catalog and style book combined gives a lot of useful information. It tells how to take off and care for hides. About our safe dyeing process on cow and horse hides, calf and fur skins. About dressing fine fur skins and making them into neckpieces, muffs and garments. About taxidermy and Head Mounting.

CHAPTER XIV.

A Migration.

All that summer John tended the work stock, keeping them together on good feeding ground during the short night and driving them into camp soon after daylight.

Much of this work was very pleasant; the two herders, Curran and John, met regularly and many were the long talks and interchanges of experiences they enjoyed.

The rainless summer nights were cool enough to be refreshing and yet warm enough to make the time spent in the open air delightful. But when rain came all this was changed. The horses became nervous and restless and required constant watchfulness and continual riding, regardless of treacherous foothold and hidden, water-filled prospect holes. The long, yellow "slicker" or oilskin coat, being cut deep in the back and hanging over the rider's legs to his spurred heels, served but poorly to keep out the driving rain, and by morning he was fairly soaked. Arriving in camp with his dripping charges, he would dismount stiffly, and after a half-cold breakfast crawl into a damp bed under an oozing tent.

John, however, learned to take things as they came, good or ill, gathering valuable experience from right and left. Curran was a horseman of long standing, and gave the fast-maturing boy a great many points that served him in good stead later in life. He taught him how to detect any uneasiness in the stock that might grow into fright and start a stampede; how to check this by voice and by constant active presence; and, above all, by force of example he showed that only through quick thought and unhesitating exposure of himself to danger could harm to his charges be averted. By nature courageous, almost to recklessness, John learned these lessons unconsciously.

And so the summer passed—herding horses at night, sleeping and panning gold by day. By the latter operation he was able to add, on an average, 50 cents a day to his hardly princely income of $7 a week.

As the warm season drew to a close, the night wrangler's work became more of a hardship and less a pleasure; only by dint of constant exercise and a roaring fire was the life made endurable. The night's work over, horse and rider would come in stiff with cold and not infrequently wet as well.

"Well, kid, the outfit breaks camp this week," said cook to John one cold, wet morning in November as he slid off his patient beast. "Here's your coffee; keep it out of the wet."

"Can't break any too soon for me," said John, sipping the steaming beverage and clinging tightly to the tin cup with both hands for the sake of the warmth it contained.

"Must be pretty tough this time o' year," said cook sympathetically. "More coffee?"

"You bet," answered the other. "I couldn't stand it if I wasn't all-fired tough. I'll have to be tough if I go range ridin' this winter."

Curran put this thought into his head, where it had been growing until it became a resolve.

"So you're goin' range ridin', eh, kid?"

John nodded and asked the cook where he was going.

"Well, I'll tell yer," he said, stopping to wipe his hands on the flour bag that served for an apron, "I'm goin' straight back east where my folks live; soon's I get back to town I'm goin' to buy a railroad ticket east and go right off."

"Good enough," said John confidently, but rather skeptical at heart, for he knew of many men whose good resolutions melted under the direful influence of the first glass of whisky that went down their throats. "Well, I'm off to bed," he concluded, making for the bed that Frank had vacated but a little while before. He knew he needed all the rest he could get. The following morning, as he came near the collection of tents with the horses, he heard Murphy shouting: "Rustle round now, boys; get the cook outfit loaded, the tents down, and your beds rolled up—quick. We'll be in town by noon."

The work was taken up with such a will that John barely got his share of coffee, bacon, beans and bread before the cook's stores were stowed away ready for traveling.

It was a very different crowd that now set out for the town, and yet it was the same lot of men. Nine months' heavy, open-air work had dispelled weakness and brought strength, had replaced bad temper with cheerfulness and had, moreover, filled pockets with Uncle Sam's good coin.

Frank and John, his chum, again sat on the scraper that trailed behind a wagon, not now for fear of contact with ill-tempered, almost desperate men, but for the sake of comparative quiet and to escape the practical jokes that none in the wagon could avoid.

"Well," said Frank, "would you rather wrestle dishes in Helena or wrangle horses in the open?"

"I'd rather wrangle than wrestle," said John, taking the cue with a laugh, "weather or no; and I'd like to go out again soon."

On reaching town the men parted company, each to seek the pleasure that most attracted him. John at once hunted up Tom Malloy, who was still prosperous and evidently glad to see him.

"Well, kid, how did you get along?" he said, in his old, familiar, kindly way. The boy first paid him for the saddle he had borrowed, to which he had become accustomed and attached, and then told in detail of his experiences.

"Do you want to get back to pot-wrestling?" asked Malloy at length.

"No; not on your life!" and John told him of his liking for work in the open and his distaste for town life.

"Right you are, kid," said Tom encouragingly, "the town's no place for you, or for me, either," he added rather sadly. "I'll be done up some day"—a prophecy which proved but too true.

John and Frank took lodgings together, and for a time did nothing but travel round the town, noting the changes that had been made since they had been away and taking in such cheap amusement as the place offered. It was on one of these jaunts round the streets that John met his friend, the cook, blear-eyed, slouchy and dirty, the bold mustache he was usually so proud of drooping dismally.

"Why, cook, I thought you were in the east by this time," said the ex-wrangler, remembering the solemn resolution confided to him a few days before.

"No, I just stopped for one drink and that settled it," confessed the other. "Haven't a quarter to buy a dinner with now."

John took him to a restaurant and fed him.

This was the first of a series of encounters with ex-campmates. The first feeling was one of wonder and disgust that the demon of drink could make such short work of a man; and then came the fear that the constant drafts upon him would use up his small savings.

"Frank," he said one day, "I've got to get out of this or I'll be stone broke; do you know of any fellow that will take me on a range?"

"Why, what's the matter?"

"Oh," said John, "this gang takes me for the treasurer of an inebriates' home, I guess, and will soon scoop every cent I've got."

"That's it, eh?" returned Bridges. "Well, I'll go down the Missouri with you. I'm pretty well acquainted 150 miles or so below, and I know where I can go range ridin' for a big cattleman any time."

"If you think you can work me in, I'll go," exclaimed the younger. "I'll buy that sorrel cayuse from Murphy. I can get him for fifteen, I guess, and we'll go tomorrow—that is, if you can work me in." This last was spoken rather dubiously, but Frank assured him that he would fix it somehow, and the compact was sealed.

The balance of the day was spent in getting their outfit ready. Frank was already provided with horse, saddle and bridle and the other appurtenances of the rider: chaps, spurs, oilskin slicker and blankets. Some of these John possessed also, but he still lacked a horse; a few simple necessaries in the shape of a frying pan, tin cups, coffee, flour, sugar and the inevitable beans must be supplied for both. The dicker for John's sorrel was made in short order, and by nightfall all the outfit was complete. At daylight the following morning they were busy making up the packs, and a hard job they found it, for nothing seemed to fit, and apparently there was enough stuff to load a whole train. It was made up at last into two packs and lashed securely behind the saddles; they mounted and rode out of the fast-awakening town. One of the two at least was leaving it for a long time, to return under very different circumstances. Nothing of this sort entered their minds, however, and they went out as unconsciously as if off for a half-day's trip.

Frank knew the country pretty thoroughly, having been over it once or twice before, so it was plain sailing most of the time. Day after day they traveled along at a dog's trot—a gait that the western horse can keep up all day and one which a rider brought up to it finds perfectly comfortable, but which would shake the teeth out of an easterner. The trail was clearly marked, easily followed, and much of the way wide enough to allow the horsemen to ride side by side.

Though the two had been partners for several months they had seen but little of each other; during the day at the railroad camp Frank worked while John slept, and during the night the reverse was the case. This was the first chance either had of really knowing the other, and both were well pleased. There was plenty of time and opportunity to talk, and they soon found that they had plenty of acquaintances in common.

"Ever been to Miles City?" John said one day as they were trotting steadily along. The leather of the saddles creaked and the cooking utensils made a regular accompainment to the thudding hoofbeats.

"Sure. Two years ago this spring."

"That was about the time Dick Bradford and Charley Lang shot each other, wasn't it?" John was referring to a "killing" that was famous the country round.

"Yes, and I was right there in Brown's place at the time."

"Tell me about it, Frank. Some say Bradford was to blame and some say that Lang deserved it. I knew Charley Lang a little and thought him a nice fellow."

"Well," said Frank, "it isn't a long story; it all happened the same day, the quarrel and the killing. For some reason there was bad blood between them; both had been drinking, and a little dispute was enough to make them ready to pull their guns on each other."

"Charley was pretty quick with his gun," interpolated John, full of interest.

"So was Dick; but their friends took their shootin' irons away from 'em, and for a time there was no further trouble, but the old hands feared that the business would not end there. Both men came to Brown's place before supper. Maybe you know the joint—a good many things have happened there, and Brown himself could tell enough stories to fill a dozen dime novels."

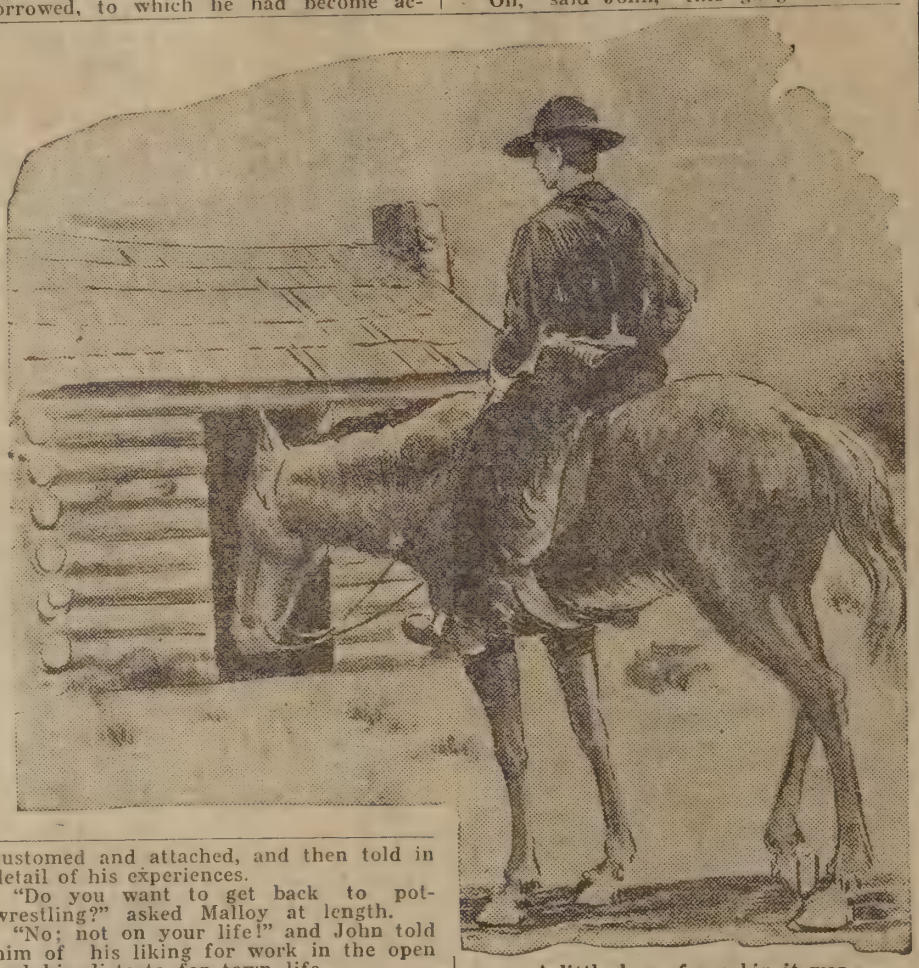
John nodded.

"It wasn't very pleasant there then; the two were plainly looking for each other's gore, and we all wished we could put a couple of hunderd miles between them. Well, anyway, Dick saw Charley and called him an ugly name and then invited him to take a drink. He might has refused; that would have been bad enough, but he did worse, accepted, and took the glass in his left hand—which, as everybody knows, is a deadly insult, to accept a man's hospitality with your left hand, leaving your right free to pull your gun."

"But I should think it might just happen so," suggested John.

"So it might, but Charley made the meaning clear by the look he gave Dick. Nothing occurred then—neither had a gun—but after supper they managed to get a six-shooter apiece and soon turned up at Brown's again. When I came in Charley was sitting on the end of the bar, talking to the 'barkeep,' his hat on the back of his head, his legs swinging, the spurs on his heels jingling when they touched—the most unconcerned man going. Dick was leaning against the wall the other side of the room. He was mad clean through. A couple of fellers were with him, but they couldn't stop him from jerking out his gun. He fired, but Charley had had his eye on him and reached for his six-shooter. The same instant the ball hit him in the chest. He slid off the bar, but as he fell he fired twice, and both shots went through Dick's heart. Dick died right off and Charley lived only a few minutes—he died in my arms."

(Continued on page twenty-one.)



A little box of a cabin it was.

Bits of Fun For Everyone

Our Boarding House.

"What's the matter with the third floor back?"

"Growling at his bed."

"What's wrong now?"

"Said he thought the house might at least start the year with a clean sheet."

Real Test of Pressure.

This machine here," explained the professor, "is for testing cement and building stone. You can not imagine the pressure it exerts to crush the material."

"Oh, I don't know," remarked the sunburned student, "did you ever go barefooted and have a mule step on your foot?"—Capper's Farmer.

Using His Head.

Citizen—That's my car. A thief is just fixing a blowout.

Policeman—All right. I'll go over and arrest him.

Citizen—Sh-h-h! Wait till he gets the tire pumped up.—Toronto Telegram.

Hero of His Class.

"How do you get on with spelling?" Harry's mother asked him, after his first day at school. "You look so pleased that I'm sure you did well."

"No, I couldn't spell much of anything," admitted Harry, "and I couldn't remember the arithmetic very well, nor the geography."

But mother showed her disappointment, but Harry had consolation in reserve.

"But that's no matter, mother," he said: "the boys admire me; they say I've got the biggest feet in the class."—Chicago News.

But He Didn't Go.

A man "butted in" at a waiting line before the railroad ticket window at New York and the men who were in a hurry glowered.

"I want a ticket for Boston," said the man, and he put 50 cents under the wicket.

"You can't go to Boston for 50 cents," returned the ticket seller.

"Well, then," asked the man, "where can I go for 50 cents?"

And each of the 14 men in that waiting line told him where he could go.

'Nuf Sed.

"Do you find it hard to write?" asked the friend of the would-be-author.

"Ah, no," he sighed, "writing is as easy as running into debt, but getting anybody to buy the stuff is as hard as paying the debts."—Cincinnati Inquirer.

Welcome Visitor.

The little boy met the expected visitor half way down the garden path.

"Are you Mrs. Robinson?" he asked, anxiously.

"Yes, dear," was the reply. "Are you glad to see me?"

"Rather! Mother's sure to cut the cake now!"

A Substitute.

Minister—My good man, do you keep the 10 commandments?

Drug store clerk—No, but we have something just as good.—Carolina Tar Baby.

Simply Unbeatable Prices on the World's Best Fall Styles

Yes, prices that are absolutely rock-bottom. Sharood invites you to order any of these amazing bargains on approval. Don't send one cent. Just a letter or postcard brings you any of these smashed price bargains. Merely give Name and Number of each Article You Want. Also State Size and Write Your Name and Address Plainly to Avoid Delay. Pay nothing till goods arrive, then only the amazing bargain price and postage. If you are not delighted with your bargain for any reason at all, simply return the goods and your money will be cheerfully refunded. ORDER NOW.

How to Prevent Fire on the Farm

By PROF. L. J. SMITH, Washington State College

THE farmer dreads a fire more than any other householder and with good reason. His buildings are grouped in such a way that a fire in one may mean the loss of several. The farmer is isolated and can not, like the city dweller, get quick and efficient help.

We all know the uselessnes and tremendous waste of fires, yet in the United States the loss from fires is steadily on the increase. It now amounts to nearly $500,000,000 annually, or enough to pay the taxes of the state of Washington for seven or eight years.

Fifteen thousand people lose their lives annually because of fires. These are mostly women and children. What an enormous toll the fire fiend exacts!

In the light of these facts it is worth while for any serious-minded person to spend a few minutes in the consideration of the common causes of fires.

It is said that three-quarters of the fires are preventable, more than half the fires are caused by carelessness, and that more fires are caused by smokers than by any other cause.

Defective chimneys cause many fires in the country. The chimneys settle and cracks develop. Often the mortar is of a poor quality and crumbles away. The safe chimney is one that begins in the basement and has an inner lining of terra cotta or fire clay chimney tile set in Portland cement mortar. No chimney should be erected upon wooden supports.

Fires start in curious ways. The writer once had an experience which illustrates this very well. The kitchen had a cupboard between the outer door and the range, which did not go to the ceiling as a cupboard should. Some newspapers had been spread on top of the cupboard so that the accumulating dust could easily be removed. One morning a strong gust of wind blew these papers down onto the stove, and had the writer not happened to come in, the kitchen would have been in flames in a few minutes.

Often the woodbox is right where a spark from the open damper might drop right into it. If the housewife happened to be upstairs a disastrous fire might result, and possibly a child might lose its life.

People in the country should use safety matches. The city dweller is rapidly being educated to use them entirely. They eliminate a common source of fires and will save hundreds of children's lives annually. Are you still using the old-fashioned match?

Greasy rags, such as are used with floor oil should never be left about the building. Burn them up directly after using. Live coals in ashes are another source of fires. Never keep ashes in anything but metallic containers. They are too often hurriedly dumped in a wooden box on the porch to be later carried away when the box is full. Never dump ashes alongside of a building.

A stove or heater should never be so close to the wall as to blister the paint or varnish. If it must be close to a wall put a sheet of tin or galvanized iron behind the stove. The same applies to protection under the stove. If a pipe must pass through a partition, be sure that it passes through a good thimble where air can circulate around the pipe. Never join two pieces of pipe in a partition. Long stove pipes are dangerous. They should be well supported, so they will not come down or pull apart.

Don't litter up the basement with a lot of junk. It makes one more fire trap.

If a fire downstairs at night should cut off your stairway, what would you do? The mature members of the family should know right now what they would do. When the house is full of smoke and everybody is dazed is not a time to figure out such a problem. It is the duty of parents to know what to do in such cases. You may never need to do the right thing but once; but what a tragedy it might be if you did not do the right thing then!

Keep a good light ladder handy to the house. Keep the barnyard clean from straw and litter, especially during the dry season. Every farm building should have some means whereby one can get on the roof easily and quickly. A pail of water in time has saved many a farm building. A covered barrel of water with a pail inside would have been worth a thousand dollars to many a farmer.

Petroleum products cause more deaths by fires than all other causes. "Not knowing it was loaded" has caused many a tragedy; but "not knowing it was gasoline" has caused more. Gasoline should never be kept in the house in small quantities. It should never be used for cleaning purposes by lamp light, or where there is a fire in the room. One may light a fire with kerosene a thousand times, but it may "get you" eventually.

Turpentine is equally, if not more, dangerous. It is said that the Lord especially protects drunken men and fools, but I doubt if it applies to the driving of automobiles and to the use of petroleum products for starting fires in stoves. Oil is no respector of persons.

Cotton clothing and light dresses catch fire very easily. If a child catches fire in the home what would you do? Now is the time to figure it out. Have you a loose rug or heavy woolen overcoat handy to smother such a blaze and save the little life? The unnecessary loss of life is a terrible thing; but to have such a loss occur and know that quick thinking and acting would have prevented it is more terrible.

Systematic Rotation

An interesting system of rotation has been adopted and is proving to be a very practical combination with a dairy on the A. J. Lawson & Son farm near Blanchard, Skagit county.

The rotation consists of oats or barley for three years, the third crop being seeded down to clover and timothy. For the following two years the clover is used as a meadow, while it is pastured the third year. At the end of that season the sod is plowed up and the soil prepared for another three years of oats or barley.

"In this way we are able to keep our land in excellent shape," said Mr. Lawson, and still have plenty of hay and grain crops as well as pasture. We change this rotation at times in order to get a better stand of clover, since we find that wheat makes a better nurse crop than oats. It not only makes a lighter growth but there is less foliage, and it does not shade the ground as is the case with oats.

"We have found that corn makes one of the best silage crops, and we have had fairly good luck in getting it to ripen. Others, however, prefer oats and vetch, which makes a heavy yield of silage, but we prefer corn, since it affords an opportunity to cultivate the ground to keep out the weeds."

The Lawson farm consists of 190 acres in all and has one of the larger registered Holstein herds in the county. There are 50 head of animals, 24 of which are milk cows. The Lawson herd was shown at the Skagit county fair this year, where they made a creditable showing in spite of the fact that there was very little time spent in fitting for the show.

GRIND WHEAT FED TO HOGS.

That wheat fed to hogs should be ground to give best results in producing pork is the contention of Professor Howard Hackedorn of the State College of Washington.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising, 10 cents per word per insertion. Open also to nonsubscribers.

In using these columns advertisers must observe (1) No advertisement will be accepted for less than $1.00 per insertion. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review building, Spokane, Wash.

Club Work at Spokane Fair

One hundred and fifty boys and girls representing the best members in club work in the state of Washington, assembled at the boys' and girls' club camp at the Interstate fair in Spokane recently and took part in the various contests. There were representatives from Spokane, Stevens, Adams, Pend Oreille, Grant, Benton and Grays Harbor counties present during the week, each club remaining until its contests were held, and then returning home.

Miss Elmina White, Pullman, club representative for the state of Washington, was in charge of the camp. She was assisted by W. J. Green, Spokane county club leader, and a corps of workers which included Miss Selena Deno, 17-year-old club girl and leader, who this year became interstate sewing champion. She took charge of the registration and assisted with the clerical work.

County Contest Winners.

The first two days of the fair were given over to contests in which only Spokane county club members took part. First place in the county contests enables the winners to entry in the district. They resulted as follows: Canning—Cheney team, composed of Nancy Colyar and Josephine Moore. They were unopposed by other contestants, but their demonstration, according to Miss White, was a perfect one. Allan Stout became champion gardener. Selena Deno, Sunset, won first place in the senior sewing contest and Ruth Corey, Richland club, won first in the junior contest. Chrissie Keuster of the Bear Creek Dairy club, Chattaroy, won first in the county dairy contest. This little girl was a member of the Washington state dairy judging team two years ago, which won a trip to the National Dairy show at St. Paul. At that show she won a silver medal, which was greatly admired by dairy club members at the Interstate fair when Chrissie appeared wearing it on her uniform.

In the county dairy calf club contest Sunset community and Spring Valley were rivals for first honors, each club having an exhibit of about 10 calves.

Margaret Campbell of Sunset won first with her 4 1-2-month-old Jersey, Pilot's Lassie Queen. She also won second prize on the same animal when she entered the open classes with it, winning $12. Other winners were: Raymond Wilson of Spring Valley, second on Holstein; Dayton Hood, Spring Valley, third on Holstein; Bessie Janney, Bear Creek club, fourth on Jersey; Hugh and Burgess Hart of Spring Valley won fifth and sixth place, respectively, on Holsteins. Y. T. Hood, leader of the Spring Valley club, accompanied the boys.

Grand Champion, Helen Brown.

The county contest to determine the best grade heifer or cow was awarded Helen Brown of Sunset. She also won grand champion on her calf over all other animals there, even the purebred. Helen says she is going to get a good start in dairying. She has already made a success of poultry raising, for last year she was interstate poultry champion and this year is leading several poultry clubs in her community. Jack Steiner, Elton Deno, Gordon Brown and Jack Adams, all of Sunset, won second, fourth, fifth and sixth prizes, respectively. Norman Janney of Bear creek won third in this contest.

In the district contests boys and girls from sections of eastern Washington were eligible for competition. They were held Thursday and part of Friday and resulted as follows:

Canning—Spokane county team, composed of Nancy Colyar and Josephine Moore of Cheney, first. These girls made a score of 99 per cent on their demonstrations. Second place was awarded the Adams county team from Benge, composed of Elsie Butts and Florence Morgan.

Swine—Edwin Pease, Usk, Pend Oreille county, first; Arnold Bohren, Daisy, Stevens county, second; William Miller, Spokane county, third.

Clothing—Elsie Johnson of Spokane county won first place with a score of 95, defeating Ruby Skeels of Addy, Stevens county.

Garden—Alfred Pease, Usk, Pend Oreille county, first; Adolph Knoston, R. F. D. Spokane, second.

Dairy—Chrissie Keuster, Chattaroy, Spokane county, first.

Poultry—Pearl Caudill, Spokane county.

Potato—Gordon Brown, Spokane county.

Winners of first place in district contests will try out for first place in the state contests at the Yakima fair this week.

Interstate Contestants.

Four interstate champions were brought to the Interstate fair from Benton county by Miss Gertrude Gage, club leader, from Kennewick. They were: Preston Anglin, 14-year-old cooking club boy, who demonstrated the proper diet for a child between the ages of 20 months and 6 years, preparing three meals and a lunch before an interested audience, and later setting the table and serving the meals, at the same time explaining to his visitors just why certain foods were good for a growing child and why certain others were not; Edward Lum of Kennewick, 15, who brought a garden exhibit with him, gave a talk and judged other exhibits, receiving the praise of the judge, who said it was the best exhibit he had ever seen because of its uniformity and variety of products; Elizabeth Drenkhahn of Benton City and Ethel Kelso, Kiona, who composed the canning team and were given first place on their demonstration and exhibit.

George J. Robinson of Elma, Wash., who finishes club work this year because he has reached the age limit, came all the way from Grays Harbor county to exhibit his bees at work and to give a demonstration and explain about his project. Investigation of George's record book disclosed that his bees, after the honey crop is sold, will pay him about $270 for the season.

Other interstate champions include:

Sewing and clothing—Selena Deno, Spokane.

Potato—Mark Wells, Spokane.

Swine—Lester Hartley, Cheney.

Poultry—Pearl Caudill, Spokane. Success in these contests means that the boy or girl is champion in his or her respective project for the three states of the northwest—Washington, Idaho and Oregon.

Girl Wins Judging Contest.

Over a picked field of boy and girl pig and calf club members, Miss Margaret Campbell and Miss Helen Brown of Sunset were awarded first and second place, respectively, in the stock judging contest, which was open to any one under 21. Margaret's total score was 429 out of a possible 500. Helen Brown, state president of the Four H club, was given a total score of 415. The judging was held in four different departments, which included dairy, beef cattle, horses, sheep and swine. John L. Smith was judge of the dairy cattle and Professor Hubbard of Washington State college named the winners in the other departments. Other contestants scored as follows: Edwin D. Pease, Usk, 410; Lester Hartley, Cheney, 381; Eugene Heuter, Cheney, 377; Gordon Brown, Spokane, 376; Ernest Heuter, Cheney, 369; Edgar Boucher, Cheney, 367; William Miller, Spokane, 310, and Alfred Pease, Usk, 295.

"This was one of the most successful years in the boys' and girls' club work since it first came into the fair in 1915," said Miss White. "In 1924 I look for a greater number of exhibits and contestants from outside counties. I was greatly surprised when I heard that there were 150 contestants this year. This is surely a record.

"There have been wonderful strides made in the club work since it has been begun and next year is certainly going to be a wonderful year in Spokane. The boys and girls who were here showed unusual enthusiasm over the prospects for 1924, and there are many youngsters from distant counties and from Idaho districts who intend to enter next year, but were prevented from coming this year because of the fact that the Lewiston and Yakima fairs followed so closely upon the heels of the Interstate fair."

Unity Gets Results in Whitman

(Continued from page six.)

second, Guy Hughes; third, Edgar Halling. Duroc Jerseys, sow pig—First, Myrtle Scott; second, Henry Schafer, third; Veryl Farley, Pullman. Boar pig—First, Joe Kincaid; second, Henry Schafer; third, Myrtle Scott.

Chester Whites, sow pig—First and second, Louis Chesnut. Boar pig—First, Louis Chesnut; second, Ralph Cole, Pullman.

All of the canning club work was won by the Thornton school as follows:

Berries—First, Virginia Johnson; second, Velma Sloan; third, Angus Kerns.

Fruits—First, Velma Sloan; second Flora Joynson; third, Angus Kerns.

Vegetables—First, Charlotte Pickett; second, Wilhmeta Matney; third, Nora Johnson.

Corn, best 20 ears—First, Walker Bailor Colfax; second, Wright Bailor.

Potatoes, best 12 of any variety—First and second, Elman Lyle on Netted Gems.

Coppei wheat, best bushel—First, Roy Jones, Penawawa; second, Phillip Heidenrich, Colfax.

Jones Fife, best bushel—First, Phillip Heidenrich.

Triplet, best bushel—First, Roy Jones; second, William Dahmen, Colton.

Bluestem, best bushel—First, C. E. Maynard, Colton.

General display of vegetables and roots—First, Phillip Heidenrich; second, A. E. Kirkland, Winona.

Best display of fruits—First, Phillip Heidenrich.

ALFALFA AND MORNING GLORY.

It has been suggested that alfalfa might serve as a choke-out crop in combating wild morning glory. The objection voiced at once is that during the choking-out process the seed of the pest would probably be scattered to uninfected fields through the use of the alfalfa hay. If, however, the patch were fenced off and the alfalfa fed for pasture on the ground some beneficial results might be obtained. Experiences of farmers along this line might profitably be passed on to others troubled by this noxious weed.

A Simple Guide to Proper Food Selection

Nourishment— Grape-Nuts with cream or good milk contains every element necessary for perfect nutrition.

Digestibility— Grape-Nuts is partially predigested by 20 hours' baking. It is easily assimilated by child or adult.

Flavor- Grape-Nuts, made of wheat and barley, is sweet with natural sugar self-developed from the grain in the making. It has a delightful, nut-like flavor.

Character— Grape-Nuts is *real* food—the kind you can depend upon for strength and energy. Its crisp granules invite thorough mastication, thus helping to keep the teeth and gums healthy.

Economy— Grape-Nuts is so compact that a package contains many servings; and each serving provides unusual nourishment. A portion for the cereal part of a meal costs about *one cent.*

TRAIN to Be an AUTOMOTIVE MECHANIC

A six months complete automotive course that gives you all the knowledge of automobiles and all the skill in handling and repairing parts that can be crowded into 26 weeks of hard study and earnest effort. You get: **250 HOURS** mastering the facts and principles of automobile construction and operation. **120 HOURS** taking apart and assembling automobile equipment. **120 HOURS** working with auto electrical equipment. **180 HOURS** actually repairing automobiles. **175 HOURS** operating the machine tools used in up-to-date repair shops. Skilled teachers; ample equipment; thorough training.

We actually believe that there is no more practical or more thorough course offered anywhere. We want you to have the fullest possible freedom in investigating the school. Come and see the equipment for yourself. Take a few days absolutely free training if you wish. Talk first hand with the large employers of automobile mechanics in Seattle who give first preference to Y. M. C. A. graduates. Write for free catalog.

Live Stock Awards at the State Fair

(Continued from page eight.)

2 on Northwood Maggie (junior champion) and Northwood Rosette. Under one year—1 and 2, on Northwood Polly and Northwood Flora B.

Herds and groups—1 on graded herd, yearling herd bred by exhibitor, calf herd bred by exhibitor and get of sire.

The Dairy Cattle.

Guernseys and Jerseys competed most strenuously for top awards in the dairy cattle division. In the Guernseys, the noted herds of Wallace & Fordyce and H. E. Angell & Son, which are to be sold at auction in October, made the greater part of the show, though Roy R. Bush and a few other smaller breeders shared the awards. Among the Jerseys, Midfields farm of Lewis county and Glen Tana farm of Spokane county fought a good-natured battle for top honors, with the winnings fairly well divided, and a few smaller breeders taking occasional awards. Hollywood's excellent herd of Holsteins gave special strength to the black and white show, though other breeders made the competition interesting. In the Ayrshires E. W. Van Tassel's herd from Wenatchee had no competition. The awards were:

The Guernseys.

Bulls—Aged bull—1, Wallace & Fordyce, Sunnyside, Wash., on Chicona Lover Bold (senior and grand champion); 2, H. E. Angel & Son, Mabton, Wash., on France's May King; 3, Roy R. Bush, Outlook, Wash., on Lord Plato of Edgemoor. Two-year-olds—1, Indian City farm, Spokane, Wash., on Amny's King. Yearling—1, T. F. Myers, Outlook, Wash., on Coamos Lover Bold; 2, Bush on Old Homestead's Guernsey Hero; 3, Angel & Son on Ruby Dell Foxey. Senior calf—1, Wallace & Fordyce on Fawndale Dixon (junior champion); 2, Angel & Son on Dame's Prospector of Ruby Dell. Junior calf—1, Bush on Old Homestead's Asher; 2 and 3, Wallace & Fordyce on Fawndale Matator and Fawndale Lover Bold.

Females—Four years or over—1 and 3, Angel & Son on Middledale Grace Darling (senior and grand champion); 2, Bush on Cynthia of Groton Farm; 4, Wallace & Fordyce on Aloha Darling. Three years old—1, Angel & Son on Glenwood Diamond's Gladys; 2, Bush on Old Homestead's Lily Bell. Two-year-old—1, Wallace & Fordyce on Anchor Rose of Fawndale; 2, Angel & Son on Dairy Maid of Ruby Dell; 3, Roscoe Angel, Mabton, Wash., on Laura's Kate of Bonnie Brae. Senior yearling—1 and 4, Bush on Old Homestead's Sunshine and Old Homestead's Katherine; 2 and 3, Angel & Son on Ruby Dell Butter Queen and Ruby Dell Goldie. Junior yearing—1, Angel & Son, on Aloha of Ruby Dell; 2 and 3, Bush on Old Homestead's Polyanna and Old Homestead's Angel. Senior calf—1 and 2, Wallace & Fordyce on Jean of Fawndale (junior champion) and Kate of Fawndale; 3, Bush on Old Homestead's Lily Belle's Jewel. Junior calf—1, Wallace & Fordyce on Fawndale Primadonna; 2 and 4, Angel & Son on Ruby Dell Rexella and Ruby Dell Sultana; 3, Indian City farm on Goldenrod's Helen.

Herds and groups—Graded herd—1, Angel & Son. Young herd—1, Angel & Son; 2, Bush. Calf herd—1, Wallace & Fordyce; 2, Angel & Son; 3, Bush. Get of sire—1, Wallace & Fordyce; 2 and 4, Angel & Son; 3, Bush. Produce of cow—1 and 2, Angel & Son; 3, Wallace & Fordyce; 4, Bush.

The Jerseys.

Bulls—Aged bulls—1, Jesse Brown, Woodinville, Wash., on Eminent Sultan Millview Boy. Two-year-olds—1, Midfields farm, Winlock, Wash., on Fussy's Fern's Noble 35th (senior and grand champion); 2, Glen Tana farm, Spokane, Wash., on Glen Tana Morocco Wonder. Yearling—1, Glen Tana farm on Glen Tana Morocco Majesty; 2, Midfields farm, on Midfields' Manila. Senior calf—1, Nichols & Plunket, Ellensburg, Wash., on Olga's Brown Lad; 2, Glen Tana farm on Glen Tana Wonderful Star; 3, Jesse Brown on unnamed calf; 4, Midfields farm on unnamed calf. Junior calf, 1, Glen Tana farm on Glen Tana Wonder Glory (junior champion); 2 and 3, Midfields farm on unnamed calf and Rose's Proud Lad; 4, David Rankin, Yakima, Wash., on Olga's Golden Duke.

Females—Four years or over—1 and 3, Midfields farm on Brighter Dawn (senior and grand champion) and Star of Yewloa; 2, Glen Tana farm on Glen Tana Sibyl 2d; 4, Jesse Brown on Shellrock's Lovely Lass. Three-year-olds—1 and 2, Midfields farm on Oma's Celebration and Panacea of Midfields. Two-year-olds—1 and 3, Midfields farm on Sweetheart Image and St. Mawes Mary Olga; 2, Glen Tana farm on Glen Tana Morocco Inez; 4, Jesse Brown on unnamed heifer. Senior yearling—1, Glen Tana farm on Glen Tana Morocco Lady (junior champion). Junior yearling—1 and 2, Midfields farm on Midfields' Lady Winkle and unnamed heifer; 3, Glen Tana farm on Glen Tana Morocco Fairy; 4, Rankin, on Gloria Patricia. Senior calf—1 and 2, Nichols & Plunket on Majesty's Cowslip Roxie and Loretta's Cowslip Lass; 3, Glen Tana farm on Glen Tana Wonderful Dorothy; 4, Midfields Zita Helen. Junior calf—1, Nichols & Plunket on Star's Sly Puss; Midfields farm on unnamed calf; 3, Glen Tana Farm on Glen Tana Morocco Irene; 4, Rankin, on June.

Herds and groups—Graded herd—1, Midfields farm; 2, Glen Tana farm; 3, Jesse Brown. Young herd—1, Glen Tana farm; 2, Midfields farm. Calf herd—1, Glen Tana farm; 2 and 4, Midfields farm; 3, Nichols & Plunket. Get of sire—1 and 4, Midfields farm; 2, Nichols & Plunket; 3, Glen Tana farm. Produce of cow—1 and 4, Midfields; 2, Glen Tana farm; 3, Rankin.

The Holsteins.

Bulls: Aged bull—1, D. F. Nugent, Granger, Wash., on Allamuchy Sadie Vale Rose (senior champion); 2, Stephen E. Chaffee, Sunnyside, Wash., on Chief of the Ormsbys. Senior calf—1 and 2, Hollywood Farm, Hollywood, Wash., on Goliah 2d of Hollywood (junior and grand champion) and Judge Segis 20th; 3, J. R. Hobson, Outlook, Wash., on unnamed calf; 4, Chaffee, on Glencliff Segis Ormsby DeKol. Junior calf—1, Western State Hospital, Steilacoom, Wash., on Steilacoom Sir Veeman Hengerveld; 2 and 3, Chaffee, on Glencliff Riverview Ormsby and Glencliff Ormsby Alderwood; 4, J. R. Hobson, Outlook, Wash., on unnamed calf.

Females: Aged cow—1 and 4, Hollywood Farm on Snow Ball Powers Mutual (senior and grand champion) and Hollywood Segis Phoebe Veeman; 2 and 3, Chaffee on Myretta Segis Canary DeKol and Bessie Homestead Traherne Fayne. Three-year-olds—1, Hollywood Farm, on Hollywood Segis Adventuress; 2, Hobson, on Lily Fobes. Two-year-olds—1, Hollywood Farm, on Hollywood Dudley; 2, Chaffee, on Grace Korndyke DeKol Wayne; 3, Cris Verstrate, Yakima, Wash., on Ida Lyons Aggie Hartog; 4, Mrs. A. J. Splawn, Cowiche, Wash., on Hazelwood Ormsby Korndyke Posch. Senior yearling—1 and 2, Hollywood Farm, on Hollywood Segis Colantha Maid and Hollywood Segis Beryl Fayne; 3, Chaffee, on Glencliff Ormsby Piebe Rosie; 4, Hobson, on Pauline Segis Valdessa. Junior yearling—1, Hollywood Farm, on Netherland Segis Ruby; 2, Chaffee, on Miss Cora Fobes; 3, Orris Seward, Yakima, Wash., on Limberlocke Segis Model. Senior calf—1 and 2, Hollywood Farm, on Hollywood Segis Palmer Aaggie 2d (junior champion) and Hollywood Segis Dart 2d; 3 and 4, Chaffee, on Glencliff Pontiac Fobes and Glencliff Bonheur Ormsby Skylark. Junior calf—1, Chaffee, on Glencliff Ormsby Segis Lady; 2, Hollywood Farm, on Hollywood Marion Segis; 3, Hobson, on unnamed calf; 4, Leland Duffield, Yakima, Wash., on unnamed calf.

Herds and groups: Young herd—1, Hollywood Farm; 2, Chaffee. Calf herd—1 and 2, Hollywood Farm; 3 and 4, Chaffee. Get of sire—1 and 2, Hollywood Farm; 3 and 4, Chaffee. Produce of cow—1 and 2, Hollywood Farm; 3, Chaffee.

Holstein Junior Special.

1, Leland Duffield, Yakima, Wash., on Miss Piebe Homestead Fayne; 2, Cris Verstrate, Yakima, Wash., on Ida Lyons Aaggie Hartog; 3, Homer Splawn, Cowiche, Wash., on Hazelwood Ormsby Korndyke Posch; 4, Orris Seward, Yakima, Wash., on Limberlocke Segis Medal; 5, Arthur White, Cowiche, Wash., on Duchess Vessa Fobes.

The Ayrshires.

The entire Ayrshire show was made up of the E. W. Van Tassell herd from Wenatchee. This excellent herd won the following awards:

Bulls: Aged bull—1, on Queen's Scottish Cavalier (senior and grand champion). Yearling—1, on Wenatchee Stewart. Senior calf—1, on Wenatchee Cavalier. Junior calf—1 and 2, on Wenatchee White Cavalier (junior champion) and Wenatchee Peter Bruce.

Females: Aged cow—1, on Lady Bruce 2d. Three-year-old—1 and 2, on Empress Lady of Wenatchee (senior and grand champion) and Lady Bruce of Wenatchee. Two-year-old—1, on Wenatchee Blossom. Senior yearling—1, on Wenatchee Snowball. Junior yearling—1, on Wenatchee Cherry. Senior calf—1, 2 and 3, on Wenatchee Snow. Wenatchee Blue Belle and Stewart Girl of Wenatchee 3d. Junior calf—1, 2 and 3 on Wenatchee Scottish (junior champion), Wenatchee Stewart Lady and Wenatchee Scott. Herds and groups—1, on young herd, calf herd, get of sire and produce of dam.

The Horse Show.

Shires, Clydesdales and Shetland ponies made up the horse show except for two head of Percheron horses, the most worthy of which was the aged stallion shown by Herbert Krueger of Colville. H. W. and M. W. Merritt made the principal show of Shires with their high-class horses from Rosalia, and the Clydesdale show was a one-man affair, but of outstanding quality, from the R. C. McCroskey farm at Garfield. The awards follow:

The Percherons.

There was no competition in this breed. Herbert Krueger, Colville, Wash., was awarded first and championship on his aged gray stallion, Pickett. J. A. Adams received an award on his 2-year-old stallion, Kasba.

The Shires.

Stallions: Aged stallion—1, H. W. Merritt, Rosalia, Wash., on Champ Clark. Three-year-old—1, H. W. Merritt, on Forest Prince (senior and grand champion). Two-year-olds—1, M. W. Merritt, Rosalia, Wash., on George Cooper; 2, David Rankin, Yakima, Wash., on Glad Surprise. Colt—1 and 2, M. W. Merritt, on Prince Albert (junior champion) and King Tut.

Mares: Eight years or over—1 and 3, M. W. Merritt, on Morocco Pride and Keota Sally; 2, H. W. Merritt, on Primrose Victoria. Four years and under eight—1, M. W. Merritt, on Martha Washington (senior and grand champion), 2, W. A. Clark, Tekoa, Wash., on Shasta Daisy; 3, H. W. Merritt, on Keota Molly. Three-year-old—1, Clark, on Mary Pickford. Two-year-old—1, David Rankin, Yakima, Wash., on Hallie (junior champion); 2, H. W. Merritt, on Nancy Lee. Yearling—1, H. W. Merritt, on Princess Victoria. Filly—1, H. W. Merritt, on Henry-Retta. Mare and foal—1 and 2, M. W. Merritt, on Martha Washington and foal and Morocco Pride and foal; 3, H. W. Merritt, on Primrose Victoria and foal. Get of sire—1, M. W. Merritt; 2, H. W. Merritt. Produce of mare—1, M. W. Merritt; 2 and 3, H. W. Merritt. Stud—1, M. W. Merritt; 2, H. W. Merritt.

Clydesdales.

The R. C. McCroskey Clydesdales from Garfield, Wash., made up the entire show in this breed, receiving awards as follows:

Stallions: Eight years or over—1, on Hope's pride (senior champion). Four years and under eight—1, on Meg's Chief. Two-year-old—1, on Sir Henry Lauder (junior and grand champion); 2, on Prince.

Mares: Eight years or over—1, [illegible] Lady Ramsey 2d; 2, on Colony Nancy. Four years

Cletrac

30,000 IN USE

Cletrac is sure footed, safe and dependable.

Cletrac weight is evenly distributed and does not pack the ground.

Cletrac is economical in fuel and oil.

Cletrac does with ease and speed the things you want done ***when they should be done.***

No matter what your tractor problem—farm or industrial—you can put 100 per cent dependence in the Cletrac, and you will not be disappointed.

More than 30,000 in use. Sales and service stations in upwards of 800 centers in the United States and 67 foreign countries.

Millions of dollars invested in plant and equipment.

Decide upon a Cletrac. Put it to work. It won't get tired. It won't get sick. It won't die.

Better send for catalog right away. A letter or post card will bring it to you.

Own This Modern Light-Draft Spreader

IF THE MAN without a spreader knew how he could increase the crop returns from every ton of manure by using a **McCormick-Deering Manure Spreader,** he would change his method mighty soon. It isn't a matter of what the other fellow is doing—it is a plain dollars and cents proposition. If you waste your time at uneven spreading you lose profits that should belong to you.

The McCormick-Deering spreader performs two important operations. First, it shreds the manure—tears it to pieces as it passes through the two steel beaters and the spiral wide-spread device; second, it spreads evenly and uniformly, in any quantity desired.

Among the features of the McCormick-Deering spreader are: An auto-steer which permits the spreader to be turned in close quarters, and which eliminates neck weight; adjustment for six feed speeds; and the all-steel frame with all appliances bolted to it direct.

Ask the McCormick-Deering Dealer to point out these features.

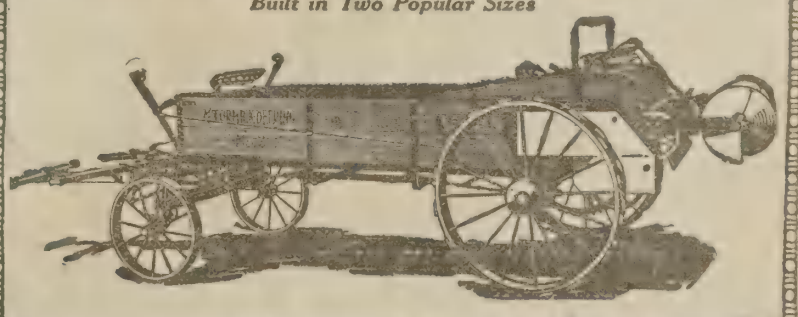
606 So. Michigan Ave. Chicago, Ill.

McCormick-Deering Manure Spreaders

Built in Two Popular Sizes



What Does It Cost to Produce Hay?

By L. A. HUNT.

At a recent meeting at Toppenish, Yakima county, a large number of members of he Northwest Hay association undertook to work out the cost of producing a ton of hay under conditions existing on the Yakima reservation. After considerable discussion the following table was approved: Cost of land, $200 per acre, interest

7 per cent	$14.00
Taxes	6.00
Water maintenance	1.20
Water right	1.50
Charge for seed, $4 per acre for three years	1.33
Charge for plowing and harrowing three years	1.00
Ditching out each year	1.00
Irrigation	2.00
Cutting and stacking, $2.50 per ton	10.00
Baling, $2.50 per ton	10.00
Hauling, $1.25	5.00
Actual cost	$54.03

The items entered as charge for seeding and charge for plowing of land, etc., and for cutting and stacking hay, baling and hauling, are items which it is claimed can be contracted at this price. There can be a slight question as to the entering of the water right charge of $1.50 per acre. It is maintained, however, that this $1.50 per acre is a part of the original purchase price of the land, being the government lien for water right and is not included in the cost of land at $200 per acre, and that this $1.50 per acre is not always a constant figure and that it must be met each year for at least the next 20 years, and as it is certainly proper to include a part of it and the inclusion of the entire amount only adds 37 1-2c per ton to the estimated cost, it is not vital. The figures therefore show a total cost of producing an acre of alfalfa hay to be $54.03 where nothing is allowed for supervision or management.

It was claimed by this meeting that the average life of a crop of alfalfa in this territory was three years and that the average yield per acre was not to exceed four tons. It was further pointed out that the crop return during the average two years during which the land is not in alfalfa is not equal to the alfalfa return. However, no charge for such loss is charged against the cost of producing hay.

It is generally considered fair to allow at least 10 per cent for management. There would be some argument as to whether this 10 per cent should figure on the investment or upon the cost price per ton. In any event, such allowance would raise the fair price of alfalfa to at least $15 net to the grower and again this does not take into consideration the fact that four tons per acre cover the entire yield, making no allowance for weather, damage, or off-grade hay, and these are items of very considerable significance.

The purpose of publishing these figures is that every hay grower may compare his own experience with these figures as there will be many cases in which growers will find themselves operating both above and below this cost. If these figures are correct, what is a fair price for alfalfa hay?

Have You Control of Your Car?

By Professor L. J. Smith.

Car owners often think that the most important part of their car is the motor. An automobile must have power and plenty of it. The motor must not fail.

While the above is true, yet there is one thing that every driver is called upon to do sooner or later: that is, to stop and stop quickly. Your life and the lives of others depend upon the control you have of your car.

The brakes are, therefore, one of the most important parts of your car. Yet how they are neglected! We have our motor carefully overhauled each year. How many of the readers of this article have had a competent man go over the brake mechanism this season? And yet, it may be that upon this your life will this season hang in the balance.

It is said that one car in 10 has an accident every year. Will that one be yours? A lot depends upon your control, which means the condition of your brakes.

When the brakes are in proper condition a car going 10 miles an hour should be able to stop in 9.2 feet; 15 miles, in 20.8 feet; 20 miles, in 27 feet; 25 miles, 58 feet; 30 miles, 83.3 feet; 35 miles, 113 feet; 40 miles, 148 feet; 50 miles, 231 feet.

Woman drivers haven't the strength to apply the brakes strongly. Hence the brakes of their cars need more careful and frequent inspection.

To test your car according to the chart, get some one to stand beside a mark across a smooth part of the road. Start with the 10-mile speed. When the front of the car comes to the mark, the person on the road gives a signal and the driver pushes out the clutch and at the same time applies the brakes. When the car is stopped, measure from the front back to the mark on the road. Then turn around and make the test from the other direction. Don't apply the brakes too hard at the start or the rear wheels will lose their grip on the road and skid.

Ellington Is Delegate

Professor E. V. Ellington will represent the State College of Washington, where he is head of the dairy department, at the World's Dairy congress to be held in Washington, D. C., Philadelphia and Syracuse October 2-5 inclusive. Professor Ellington has been honored by election as one of the secretaries of the congress, which has never before held its sessions in America. There will be 30 foreign countries represented in the conferences, which are the most important conclaves of the sort ever convened.

Professor Ellington is also the delegate from the Western Dairy Instructors' association, of which he has recently been made secretary. While in the east he will represent Washington at the dedication of Cornell university's new $600,000 dairy building, the first week in October, and will also visit the nutrition laboratories at Johns Hopkins university, Baltimore, and the dairy division of the United States department of agriculture at the nation's capitall.

STOCKMEN HOLD BANQUET.

Stockmen and others attending the Grays Harbor county fair at Elma held a banquet on Friday evening, August 31. County Agent W. E. Cowan acted as toastmaster. John R. Martin, James Glancy, Don McGruder, J. E. Wivel, Robert Poulson, Kenneth Hinshaw and J. E. Calder, live stock enthusiasts, gave short talks.

"Sheet Writers" Excluded

In the following circular letter President W. H. Paulhamus gives notice that "there is no longer any room on the grounds of the Western Washington Fair association for 'the professional solicitor,' because the strong-arm methods of the "sheet writers" will no longer be countenanced on the Puyallup fairgrounds. This is most gratifying to THE FARMER, whose prolonged campaign against these outrageous methods of obtaining subscriptions, aided by broad-minded and long-visioned fair managers, is bearing fruit. Even outside of the fairgrounds it again warns its subscribers against the panhandling sheet writers working the streets of any town or city. We don't get our circulation that way.

Here is Mr. Paulhamus' letter:

"To the Agricultural, Poultry and Stock Magazines Distributed or Printed in the Pacific Northwest: The Western Washington fair has had more difficulty with the strong-arm methods of solicitors who take advantage of the popularity of poultry, stock and agricultural journals, with the result that they perform about as much high-handed work at the average fair as the worst citizen that we could have on the grounds.

"The undersigned has been trying to rectify this condition from year to year, but without success. I have reached the conclusion that there is no longer any room on the grounds of the Western Washington Fair association for the professional solicitor. The fair is better off without him. He can not rent a booth for a thousand dollars, because the method adopted by many of these professional solicitors is just as bad as petty larceny.

"The Western Washington fair appreciates the importance of the agricultural press, without which agriculture can't possibly succeed, but the legitimate agricultural press is not interested in a solicitor who will treat the public in an unfair manner. The Pacific northwest will prosper most from an agricultural standpoint, provided the farmers support the publications issued in the Pacific northwest.

"If you pay for booth space you are entitled to solicit subscriptions, provided there are no presents and the solicitor will stay within the booth and not violate reasonable subscription methods.

"There will be a special effort made to keep off of the grounds of the Western Washington fair all professional solicitors, regardless of what paper they represent. This for your information. W. H. PAULHAMUS, President."

Less Vibration

With This *Non-Detonating* Gasoline

There's a marked difference in the way gasolines explode.

One Kind **detonates**—a crash against the piston head delivers all the power in a single blow.

These sudden blows, repeated, cause vibration, increasing wear and tear.

And **detonating** gasoline limits compression by its tendency to explode prematurely.

Thus a loss of power and efficiency in your motor result.

More Power *Prolonged*

Union is **non-detonating** gasoline. The explosion is prolonged, sustained. Piston heads are thrust rather than "kicked" down. You will find a new "lift" on hills and no "knocking."

Non-detonating gasoline permits of higher compression, for as all authorities know, compression is limited by the tendency of a gasoline to **detonate.** So more power is delivered by Union Gasoline. You find a new rush in the pickup and more speed on the level.

Impulses come more smoothly, so there's less vibration—this saves wear and tear.

And all this higher efficiency means greater fuel economy in motor cars, trucks and tractors. So Union **Non-Detonating** Gasoline delivers superior service in several important ways.

Union is always **uniform.** It doesn't disintegrate, thus doesn't deteriorate in storage. It has all the power when you use it that it has when it leaves the Union plants.

Cattle Ranch to College

(Continued from page fourteen.)

"What a way to die!" was the only comment John made.

"Those were the very last words Charley spoke," said Frank, more to himself than to his listener.

"I guess Miles City was the toughest place going then," said the boy. "Why, I was driving through the town with my father one day (that was when we were opening a big coal mine down the Yellowstone) and we went under a half-finished railroad bridge and there, hanging from the ties, were the bodies of three men. Lynched. Ugh!" John shuddered at the remembrance of it.

"Was that the case where there was some talk of the men being killed first and hung afterward?" inquired Frank.

"Yes. There had been a row in Brown's place, and these three had been put in jail, but during the night they were taken out and in the morning were found as we saw them. The regular vigilance committee had not done it, and the doctor said death first, hanged afterward."

Both of these characteristic stories were common talk whenever a crowd got together, but neither Frank nor John had heard the facts told by an eyewitness before.

It must not be thought all the conversation of these two was of this blood-and-thunder variety. Frank had lived in the east, and marvellous were the tales he told about the buildings, the people and their doings. The two were so interested in each other, and what each had seen, that the time passed very quickly, and so John was surprised when Frank said late one afternoon: "See that blue range of hills about 30 miles ahead?"

John looked and nodded an assent.

"Well, Baker's ranch is right at the foot of them, and Sun river runs through it. That's where we're goin'."

The following morning they rode toward the ranch house, past the minor buildings, the barns and sheds, past the hay stack, now bulging with its winter store, past the inevitable horse corral, just then containing several horses which were circling round trying to avoid a cowpuncher's "rope." As they reached the ranch house proper—a low, single-storied house built of logs and roofed with split logs covered with turf—a chunky, white-haired man in overalls stepped out of the door.

"Hello, Mr. Baker," said Frank. "You see you can't lose me."

"Well, Frank, it's you, is it? I'm terrible glad to see you. How are you?" Mr. Baker's greeting was cordial. "Who's your friend? What's his name?" he added, noticing John for the first time.

He was introduced, and the warm grasp of the hand that John got from the old ranchman won him at once.

"Mrs. Baker will bubble over when she sees you, Frank. Tie your horses and come in."

A long hitching rail ran along the front of the shack, and to this Frank and John made their horses fast.

Mrs. Baker's greeting was even more cordial than her husband's, and the youngster looked on at the display of affection rather wistfully. Nor was he ignored in the general greetings.

"You're just the fellow I want to see, Frank," said the cheerful, kindly, buxom, albeit gray-haired ranchman's wife. "Mr. B.'s getting kinder old to be chasing round the ranch looking after cattle and range riders, and I want you to see to all that, so I can keep Mr. Baker at home. Will you do it?" She looked from her husband to Frank and back again.

"I'm looking for a job, and so's my friend Worth here. If you'll take us both I'll be glad to stay," and Frank began to enlarge on John's virtues, and told how they had shared the same bed. He characterized him as a "plumb good feller."

"Of course he can get to work," said the couple together.

"Got a saddle?" asked the old man.

"Yes, I've got a good outfit," answered the boy.

"Well, you can go range ridin'." The ranchman spoke in a tone that was not to be gainsaid—it amounted to a command. John understood vagely that range riding was something like horse wrangling, only the job he was now about to undertake would last during the day and night, too.

The following day the boy was sent forth to his new work. It was cold, and the gray November sky had a look of snow in it; the air, too, felt snowy. In the ranch house all was warm and comfortable: a great fire of cottonwood logs was blazing in the open fireplace, a few pictures and examples of needlework—the evidences of a woman's hand—were interspersed with mannish things: rifles in rough wooden racks, antlers of deer and prong horns, bridles decorated with silver hung here and there on nails, and a long wooden peg, driven into the whitewashed logs, supported a richly carved saddle, Mr. Baker's own.

From this cheer and comfort John went into exile, to last several months—the cold, bitter, winter months of the northwest.

With the instructions of Mr. Baker the warnings of Frank ringing in his ears, he started off for the shack he was to share with an old, experienced cowpuncher throughout the winter. The eight miles were soon covered, and he drew up before the little log shack which was to be his winter home. A little box of a cabin it was, perhaps 12x15 feet, built solidly of logs and backed up against a low bank for the shelter it afforded. He dismounted and entered; a single small window lightened the gloom somewhat and enabled him to see the familiar rough bunks on either side, one for each occupant; a rough deal table supported on one side by the wall and on the other by two legs; a frying pan, a coffee pot, and a few tin cups—none overclean—hung near the fireplace; these completed the decorations and furniture of the range riders' shack. It was one of several placed at varying distances from the home ranch.

After tying his horse and bringing in the few belongings he possessed, he sat down on the empty bunk and waited for Barney Madden, his mate, whom he had never seen. He wondered what kind of a fellow he was.

Model '99—Note the hammerless, solid breech. Nothing can get in to jam that powerful action. Built for .22 hi-power; .250-3000; .30-30; .300; .303.

The Savage Sporter—*bolt-action .22 repeating rifle.* 23-inch round barrel, genuine American walnut stock, varnish finish, pistol grip, open sporting sights, five-shot detachable box magazine.

The lever of lightning speed

THERE'S speed in a Savage lever-action—in the short throw of the lever—in the powerful action that *always* functions.

There's speed, too, in the bolt-action—that smooth-working, easy-throwing bolt-handle. And deadly accuracy. Lever or bolt-action, a Savage shoots true.

And into the Savage magazine you can cram your soft points without denting a nose. For the Savage rotary magazine supports the cartridge *at the base*—no battering from recoil.

There's a Savage for every kind of American game

.22 Hi-power. Ideal for small and medium game—from woodchucks to wolves. Accurate at long and uncertain ranges.
.30-30. A standard and ever-dependable for deer and similar game at moderate ranges.
.303. The hard-hitting old .303—famous for 20 years. Ideal for deer, caribou and black bear. Unsurpassed for timbered country.
.250-3000. An all-around rifle. Terrific speed and low trajectory make it *the* gun for mountain sheep, goats and deer at extreme ranges.
.300. Delivers a smashing blow. Big enough for the biggest game. Splendid for moose and elk.

And the Savage .22s—the *Sporter*—the new bolt-action repeating .22—and the slide-action, Model '14—every feature originally and distinctively Savage—sturdy and accurate. Ask at your dealer's or write direct for our interesting catalog.

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

THE TEST OF LIFE.

What is a failure It's only a spur
To a man who receives it right,
And it makes the spirit within him stir
To go in once more and fight.
If you never have failed it's an even guess
You never have won a high success.

What is a miss? It's a practice shot,
Which we often must make to enter
The list of those who hit the spot
Of the bull's-eye in the center.
If you never have sent your bullet wide,
You never have put a mark inside.

What is a knock-down? A count of ten,
Which a man may take for a rest.
It will give him a chance to come up again
And do his particular best.
If you've never been bumped in a rattling go,
You never have come to the scratch, I know.
—Edward Vance Cook.

Experience Letters

Dear Family Circle: I must tell you how we have been spending the summer. The Hood Loop highway is being graveled and nine of the men who work on the crusher have their families out here in camp.

This is as lovely a camp ground as can be found and will be a wonderful place for summer vacationists to rest, not too far from town, a wonderful amount of shade, good, cold spring water at short intervals along the highway, which follows the east fork of Hood river in which are found many good fish.

There are 21 children in camp between the ages of 13 years and 4 months.

We have a Sabbath school which meets every Sunday in a grove which we have fixed up with seats, with the tree tops and the beautiful sky for a roof. Every Sunday evening we have a young people's meeting, and the Rev. Mr. Hutchesson meets with us at times and preaches a sermon, which we all enjoy.

Th ladies of camp have a sewing circle which meets once a week at the different tent homes.

Wishing the rest of the Family Circle could enjoy such wonderful summer joys, I remain a member of the Family Circle.

Parkdale, Ore. MRS. A. BURTON.

Family Circle Girls

Dear Mrs. Barland: I am another reader of the Circle and find it very, very interesting.

I feel the same as A. P. H. does in regard to the smoking question. Why should girls lower themselves to that degree just because the boys smoke when there is no question in the minds of any one that it is a harmful habit? Suppose we have a right to smoke, just as much a right as the boys. That is no reason why we should follow in their mistaken footsteps, is it?

A. H. wanted to know the opinion of the readers concerning girls going with boys younger than themselves. I think it is all right I know several women who are older than their husbands and they seem satisfied with each other.

I am going with a young man just a year older than I am and the first evening he took me out he wanted me to kiss him. I told him I didn't believe in that sort of thing and I couldn't do anything I didn't believe in. After a good deal of talking and argument I convinced him that it was not the thing for young boys and girls to do and I have been going with him for 10 months now and he has never asked me to kiss him since.

I believe the trouble with the girls who practice the kissing habit is their desire to be popular and they think that is the way to become so. Girls, you are mistaken; the boys may make you think your ways are all right, but this boy I am going with tells me that boys do not respect these girls and that they stand around the corners talking about them. He says this is a sample of the talk he hears about girls who are seeking this sort of popularity: "Oh, daddy! If you want a cozy girl go with such a one," or "You can get lots of kick by going with such a one." (This isn't high-class kind of talk, I know, girls and boys, but I happen to know that it is true and I am giving it to you as the girl has written it with some modifications, which make it a little less rank, because it is well that you girls should know the true attitude these seemingly friendly boys have, toward this careless conduct on the part of the girls who think it makes them popular.—A. W. B.) The girl continues: We girls don't want boys talking this way about us, even if it does seem to make us popular for a while. Boys don't like this soft stuff forever, so let's hold our heads high and not lower ourselves to the level of the slums. Let us keep to a standard of right and purity, so that we shall be respected and looked up to and that men shall say, "That's the kind of a girl I want for a wife." Always a reader. C. L. W.

Idaho.

Family Circle Boys

Dear Mrs. Barland: and Family Circle: In a late number of THE FARMER you invited young men to write and here is my opinion and thanks for the opportunity of expressing it.

I have decided that the "social muddle" is to be acounted for by the fact that there is a general misunderstanding between the boys and the girls. They each believe of the other that they expect and demand petting, whereas the truth is that both sexes wish only companionship and entertainment.

Boys would rather talk athletics, books and such or hike, row or picnic with a girl than pet her. The same with the girl, I suppose (after reading brown-eyed Nell's letter). So let's forget the petting stuff and go in for good, clean, real fun.

About the best times I have ever had were on "weinie roasts," hikes and picnics and such are easily arranged for small groups and a good thing to substitute for car rides which end in petting parties, etc., is a "sing." We all meet at an appointed hour at the home of one of the group. We take along musical instruments, popular songs and girls. The evening is spent in singing and playing and impromptu solos and duets furnish fun and enjoyment. Refreshments are unnecessary, though much enjoyed by the boys.

All petting and dark corner athletics are forbidden and an effort is made to see that every one joins in the fun. This mingling of boys and girls together for a good time eliminates any cause for comment.

Playing tennis, cycling and swimming are also interesting and clean sport if done in the right spirit.

I agree with Miss Lucille as to dress for girls. I admire bobbed hair and pretty one-piece dresses very much

I have a word to say to the "dads," too. It isn't much advice a boy gets from his father nowdays. If advice is asked for or confidence given one gets some such reply as, "Got the fever, too, lad?" or "Thrash it out for yourself, lad, I don't understand 'wimen,'" or perhaps he will get "Better let the girls alone, son." Who wants such advice as that? What boys want and need is a good heart-to-heart talk, so they can "get the hang of things."

I guess this is enough for this time. Success to you, Mrs. Barland.

Idaho. F. L. L.

The above letter is a straight-from-the-shoulder sort that I am glad to get. Let me urge other young men to write, giving us their honest views along the lines which we are discussing. About all the great national magazines are giving much space to these vital questions which concern young people and which, as a matter of fact, lie at the very heart of our national life and well-being.

THE FARMER is going into thousands of homes every week and it will be a strange thing if many are not made thoughtful as they read actual experiences and ideas of those of their own age and walk in life.

It is an easy matter to write a long article admonishing young people to be good and behave themselves, but acording to my reasoning you can be of much more help to each other than much preaching would be. Be free, dear folks, to write and we especially desire letters from young people about 18 to 25. Your friend,

ALICE W. BARLAND.

DISGUISED.

Young Lady—Were you pleased with the new school, little boy?

Little boy—Naw! Dey made me wash me face, an' when I went tome de dorg bit me 'cause he didn't know me.—The Antidote (Peekskill).

Just Folks

To some providence is an opportunity.

Confidence is confidence; it may be overconfidence, never underconfidence.

Words may be objectionable because ause they are true, and words may be leasing because they are untrue.

You can put off death by forgetting it r you can hasten death by forgetting it; is all according to what you live for.

Over 40 years ago I knew a public-spir-ed man in a New Hampshire village. I o not remember of his making any peeches in public or heading committees f his townfolk. Yet I am firmly of the pinion that he was a public-spirited citi-en.

He had left the old farm as a young an and acquired a measure of wealth y manufacturing and trade in Massa-husetts, when he returned to the small wn near the old farm, bought one of e best dwellings for his family and also **owned a business building adjoining. A large room occupying the upper story of this building was made into a museum, containing a collection of geological specimens as well as curios from Asiatic countries which had been picked up in Boston. He welcomed visitors. He talked intelligently about his collection and especially was he glad to get the boys and girls interested. He did one thing more. He put a safe, such as you see in small country stores, in a corner of his museum and invited the school children to save their pennies.**

Remember, that was 40 years ago in a small New England town.

Last summer I passed through that town and saw the sign "Meredith Village Savings Bank," on that same building, which of old contained the museum.

That is all I know about it. I know that Seneca Ladd started the children in the saving of their pennies and now I see the village savings bank sign, and I conclude that this was a public-spirited act which has continued to have its beneficent influence upon that community for more than a generation.

"Mother, you're the bestes' cook in the whole world!"

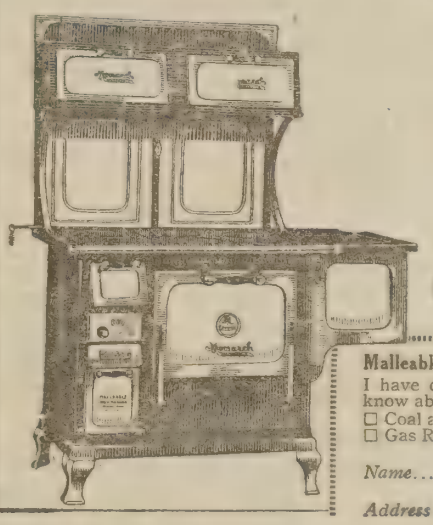
What gives a mother greater pleasure than to make the kiddies happy with the goodies she prepares for them.

And how simple it is with a Monarch Range in your kitchen!

A Monarch oven is ready for any kind of baking in remarkably quick time—and with such little fuel.

A hot oven — a slow oven — a range that gives any service the occasion demands, and continues to do so for years to come.

To insure such service, the Monarch is built of unbreakable malleable iron, so it can be riveted—the only way to avoid air-leaks that cause fuel waste and cooking failures.



Investigate Now

There's no economy in using the old range even though it can be made to do for another year or so. Mail the coupon for information that will give you new ideas of what range service and economy should be.

Monarch MALLEABLE

Malleable Iron Range Co., 26-87 Lake Street, Beaver Dam, Wis.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all state and national food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.

High Points in News of the Week

As predicted last week, the German government has taken steps looking toward the discontinuance of opposition to France in the Ruhr district. On the surface, it appears that Germany is acting with good faith in this attempt to facilitate production in the territory occupied by France, but French officials are apparently taking no chance. Premier Poincare reiterates his original declaration that deeds and not words on the part of Germany will be believed. So far as public information goes, France is taking no action that will lessen the physical efficiency of its control of the Ruhr territory. It is understood that Germany will ask France to withdraw her military forces from this territory under agreement that Germany shall restore industrial activity and begin at once the delivery of fuel and other products from that region as provided in the original peace treaty. It is evident, however, that France is in no mood to let go the strangle hold which she has on this territory until the actual payment of reparations is begun.

The action of the government at Berlin in ordering the cessation of passive resistance on the part of the German people in the Ruhr district has led to activity on the part of the communists in that territory and elsewhere in Germany threatening to prevent the carrying out of the official orders. This situation has resulted in the setting up of military law in a number of localities, notably the province of Bavaria, where a virtual political dictatorship is now in control. Whether or not Germany will be able to restore industry to normal condition in the Ruhr district in the face of the opposition which is being manifested is a matter of outstanding interest to the world at large.

In most circles, Germany's action is looked upon as an evidence of sweeping victory on the part of France. There has been a tendency for French and Belgian securities to rise on the stock markets as a result, though there has been no evidence of outstanding strength on the part of any securities as a result of the new developments.

France and Belgium have opened a recruiting office in the Ruhr district with the object of employing 30,000 German railroad men to operate the railroads in the occupied territory, where they have been nearly idle for months. Every man who is not employed must first take an oath to obey the allied authorities.

* * *

Wheat growing interests of the central west called upon President Coolidge last week urging him to take whatever action is necessary to restore balanced conditions in wheat growing industry. The proposal was received by the president and Secretaries Wallace, of the department of agriculture, and Hoover of the department of commerce and Director Meyer of the war finance corporation. While the president has expressed keen interest in arriving at an equitable solution of the farmers' problem, there is nothing to indicate that he has yet arrived at a conclusion as to immediate governmental aids that might prove effective. Not only the president but Director Meyer and Secretaries Wallace and Hoover are urging increase and expansion and efficiency in cooperative farm organizations with a view to strengthening the farmers' position. It is evident that farm problems will again take a prominent position in the councils of the nation when congress meets in regular session in December.

* * *

Violent rains and a cloudburst in Wyoming last week resulted in large property losses and in the loss of approximately 50 lives. Greatest loss of life occurred when a passenger train went into the Big Muddy river when a bridge gave way under it.

* * *

At least 18 persons are known to have lost their lives as a result of a tornado and cloudburst which hit western Iowa and eastern Nebraska last week. Property damage is estimated at not less than one million dollars.

* * *

An election is being held this week in the Philippine Islands, the outstanding issue being the question of Philippine independence. One party is pledged to a continuance of the administration of the Philippine government by the United States, as at present, and the other is pledged to continued effort for the setting up of a completely independent nation.

Former Premier Lloyd George of England is now on his way to America, where he will spend several weeks visiting in Canada and the United States. He is reported to be coming as a private individual and not as a representative of official England in any degree.

Farm Business and Markets Outlook

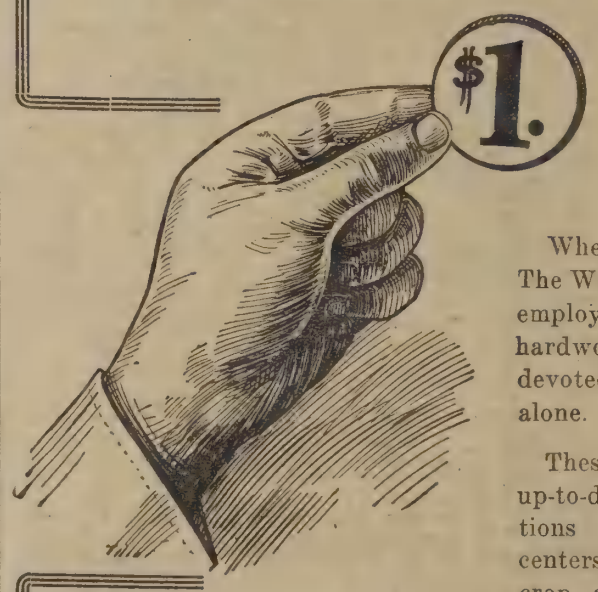
For $1 You Employ Scores of Workers for 5 Years



Rock Bottom Subscription Price Due to Cooperation

When you subscribe to The Washington Farmer you employ the services of a big, hardworking organization devoted to your interests alone.

These people get accurate, up-to-date market quotations from the principal centers, prepare careful crop and weather reports, or glean the news and views expressed at conventions, shows and farm gatherings.

Others in the organization conduct the departments, comb the state for farm facts, and answer your questions. They find out and report the experiences of hundreds of practical farmers whose problems are not those of some distant field, but of the same state in which you live. Then there are those whose pleasant task it is to find the stories which will give you the greatest enjoyment to collect the household hints and helps which will prove most worth while, or to discuss for our great circle of thoughtful readers the many topics and issues of current interest.

For the expenditure of a dollar you secure the services of this great organization for five full years. This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

$1.00 for 5 Years

50 cents for 3 years, 25c for one year.

THE WASHINGTON FARMER, ...1923.

If your subscription is already paid in advance it will be extended from the date to which it is paid. Oct. 4, 1923.

Aunt Nellie takes pleasure in presenting Freeda Dittmar to the Corner cousins. Freeda says her parents have taken THE FARMER for five years. This new cousin will be 10 years old September 20. She is a Spokane county girl.

Every morning Hannah Wells takes the cream to the creamery. She likes to ride her pony very much. She hasn't any brothers, sisters or playmates, so she has to amuse herself, and, from her letter, Aunt Nellie knows she has done this very nicely. She helps mother and father whenever she can and this summer her grandma and grandpa from Iowa have made them a visit. She writes that daddy had 16 acres in grain this year.

Birthday Greetings

THURSDAY, October 4—Loretta La-Follette, 11 years old; Gwendolyn Schuyleman, 9; Mildred Watson, 8.

FRIDAY, October 5—Geneva Strahm, 9 years old.

SATURDAY, October 6—Stella Cade, 10 years old; Artie James, 10; Ruth Powers.

SUNDAY, October 7—Thordis Fjerlie, 10 years old; Blanche L. Gourlay, 9; Linda Hoikka, 9; Lillian Ward, 10; Ruth Rand, 9.

MONDAY, October 8—Ruth Stuhr, 10 years old; Marguerite Jones, 11; Wayne Milan.

TUESDAY, October 9—Erma Brannan, 11 years old.

WEDNESDAY, October 10—Marvin De-Goyer, 9 years old; Annie Mae Wyatt, 11.

LETTERS WEELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Emma Rauber, Freda Stump, Verna Stevens, Beatrice Hazelton, Leda Ruby Harrell, Jessie Fisher, Phyllis Van Dyke, Bertha Van Derchelden, Alice Lavina Halsted, Anna Van Derchelden, Mary Elizabeth Propst, Gladys Halverson, Helen Wise, Elsie Forsgren, Elizabeth Anderson, Maurice Gerritsen.

BEDTIME STORIES

By THORNTON W. BURGESS.

HELPING BY WATCHING.

Peter Rabbit felt very important as he kept watch in the old orchard. He couldn't kill bugs and worms because in the first place he couldn't climb trees, and in the second place he didn't eat bugs or worms. So indeed, Peter couldn't even think of such a thing and feel comfortable. But he had found a way of helping those who could. He could watch out for danger, so that the others could give all their attention to the bugs and not worry for fear they would be surprised by their enemies, and this made Peter very happy. You see, he felt now that he was really doing something for Farmer Brown's boy. The latter might not know it, but the little feathered folk who were working so hard to save the fruit by killing the bugs and worms that were spoiling the trees knew it, and Peter himself knew it, and that was enough.

So Peter sat up very straight with his long ears pointing straight up to the blue, blue sky, and he watched this way and he watched that way. Over on the other side of the old orchard was Johnny Chuck doing the same thing. In the trees the birds were working with might and main and chattering merrily as they worked. Even Sammy Jay was helping. Peter wouldn't have believed it if he hadn't seen it for himself. But he did see it. He saw Sammy tear open a big nest of caterpillars, and when Sammy got through there wasn't a caterpillar left.

"Good for you, Sammy!" called Peter.

Sammy pretended not to hear, but he did hear and secretly he was pleased. You see, Sammy doesn't often hear nice things said to him, and it gave him a very pleasant feeling inside, though not for the world would he have admitted it. It was while Peter was watching Sammy to see what he would do next that he felt the ground rise under him. It was so sudden and unexpected that he nearly lost his balance, and had to drop down on all four feet. It frightened him, too. He jumped off to one side and then looked where he had been sitting to see what it meant. There was a little ridge where the earth had been pushed up from beneath and even as Peter looked the ground moved as if something was shoving it up and the little ridge was a few inches longer than before.

Peter knew right away who had frightened him. He knew that little ridge was made by Miner the mole and that Miner was making a tunnel right along just under the surface through the old orchard. Of course, Miner hadn't known that Peter was sitting there, and he had just happened to push his tunnel right under Peter. Now most people are apt to be a little bit cross when they are frightened, especially if they find that there was nothing to be frightened of. It was so with Peter.

"Ha!" exclaimed Peter. "I'll teach you to frighten honest people!" And with that he hopped over to the spot where by the movement of the earth he could tell that Miner was at work. And then what do you think he did? Why he thumped with all his might right over Miner the mole. Of course It wasn't a nice thing to do, not at all a nice thing to do. It was trying to get even and it was doing it in an unfair way. You see, Miner hadn't intended to frighten Peter, but Peter did intend to frighten Miner. He did frighten him, too. Who wouldn't be frightened to have a terrible thump just over their

"What are you doing down there under ground, anyway?" demanded Peter.

head? Miner was just as much frightened as Peter had been a few moments before.

He backed along his tunnel until he reached the nearest opening. He didn't come out because the sunlight hurts his eyes, but he scolded angrily at Peter, who had followed by watching the roof of the little tunnel move.

"What are you doing down there under ground, anyway?" demanded Peter.

"Tne minding my own business, that's what!" retorted Miner crossly. "It's a pity if a fellow can't hunt for his food without having other people try to frighten him to death."

"What kind of food do you find down there?" asked cPter.

"Grubs and worms," replied Miner shortly. "If it wasn't for me they'd ruin half the green things that grow."

"Then you're helping Farmer Brown's boy, too!" cried Peter delightedly. "If I had known that I wouldn't have been so mean and frightened you." (Copyright.)

Home Recipes

Bran muffins: Two cups of bran, one cup white flour, one cup buttermilk or sour milk, one teaspoon soda, one-half teaspoon salt, three tablespoons molasses, one-half cup raisins if desired. Add buttermilk in which the soda has been dissolved and molasses. Pour into greased muffin pans and bake in a moderate oven. This makes one dozen muffins.

Fried chicken: This is the time for fried chicken and some cooks seem to dry it so it losses flavor. Try this way.

Cut the chickens into pieces so all will lie as flat as possible. Dip into a beaten egg mixed with two tablespoons of milk each piece, then into flour and drop into a frying pan with plenty of hot butter or butter and meat fryings mixed. Cook it quickly, so as to brown on each side; it should take possibly 10 minutes. Have more fat ready in a roasting pan or some suitable pan and place the chicken in it and when it is hot and frying well, turn over it a cup of sweet milk and cover closely and put in the oven. Cook until tender. It should be seasoned properly with salt and pepper. Leave off the cover the last 15 minutes. A. W. B.

Grape conserve: One basket of grapes, three oranges, pulp and rind, one pound raisins, three pounds sugar. Cook grapes in as little water as possible and strain through a sieve. Remove all the white fine shreds and cook in water till tender. part of the orange rinds, cut the outside in Cook all together and add one-half pound of nut meats. MRS. M.

Spiced plums: Use large blue plums, prick well with a fork; four large cups heaped up, four cups sugar, one-half cup vinegar, one-half teaspoon cinnamon, one-fourth teaspoon each cloves and allspice. Cook all together until thick; put in jars. Good with roast meats. Mrs. C.

Cucumber catsup: Four large green cucumbers, one large onion, one pint vinegar, one tablespoon salt, one tablespoon black pepper.

Grate cucumbers and onions and mix well. Let stand an hour or more, then drain off the water. Add seasoning, also a grated horseradish if convenient. Put into bottles and cork tightly.

MRS. C. F. R.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

In these modern days community spirit reveals itself in surprising ways. In olden times the pioneers had "bees," occasions when all the neighborhood gathered to assist in raising the framework of a heavy-beamed house or barn or do some other good deed for a neighbor. The women met together to assist at quilting or rag-sewing.

Dr. Copeland.

In those times the nursing of a neighbor who was suffering from accident or sickness was undertaken by the kind-hearted friends in the community. I can recall many nights when my father served his turn in caring for a neighbor who had broken his leg.

Today assistance to the individual is less needed. The vast increase in facilities for human comfort, the multiplication of machinery and the many aids to happiness and convenience have done away with the need of most old-fashioned community activities.

Now we group together to aid the community instead of the individual. We have taxpayers' associations, park and playground societies, town improvement circles and many other organizations. One of the latest ideas is "Clean-up week," or "Clean-up and Paint-up week."

The objectives are the removal of rubbish piles, of insect-breeding places, of tin cans and dead cats. But the plan does not end with street, sidewalk, areaway and vacant lot cleanliness. It extends to the attics and basements of our own homes.

This is a splendid movement, because, for one thing, it protects against fire. Most fires in cities start in basements. I am not sure but this is true everywhere. Anyhow, rubbish accumulations are fire traps. On this account they are a menace to life and safety.

But more than this, rubbish in the home affords a breeding place for rats and mice, notorious carriers of disease. Bubonic plague, epidemic jaundice and we know not how many other diseases are transmitted by rodents.

Vermin of every variety are disease carriers. Repairing the broken plaster, filling the cracks in floors, walls and ceilings, and doing away with all the crevices in which lurk the filthy, crawling, repellent creatures inimical to health and well-being—this is a worthy movement which should arouse the enthusiasm of every citizen.

By all means, let us have a clean-up week in every community. Let us clean the streets and the out-of-the-way places. Let us mend the fences, paint the houses and all the buildings of our particular group.

We depend for inspiration, for happiness, for ambition upon our surroundings. Beauty, cleanliness and orderliness make for clean minds, good thoughts, right habits and, consequently, for good health.

I favor 'Clean-up and Paint-up week." Community and domestic cleanliness is as important to health as is personal cleanliness. Each of us should do a man's part in making a success of this forward-looking plan. Come on, let's start with our own attic!

Time to oil those roofs —

If your shingle roofs are beginning to look shabby, that means they are soon to leak and make trouble. Renew their life for the coming rainy season by an inexpensive application of Oronite Shingle Oil.

Oronite Shingle Oil is a high quality preservative that penetrates the shingles, retards the evaporation of the natural oils in the wood, and prevents the absorption of moisture. Occasional treatments retard warping, splitting and leaks and prevent moss growths. It's the economical way of keeping down repair bills.

Add a little color while you're at it. Ask our agent—there is one near you—to give you tested color formulas, easily followed. He will show you how to apply Oronite Shingle Oil quickly and economically to shingled roofs and side walls.

Shetland Ponies.

About 20 head of highly bred and wonderfully fitted and trained Shetland ponies were shown by F. H. Divan & Sons of Monroe, Wis. They received all awards in their respective lots.

The Sheep Show.

Eleven breeds of sheep filled the sheep barn fairly well, with quality satisfactory in nearly all instances. The awards follow:

The Oxford Downs.

Rams—Aged ram—1, Floyd T. Fox, Silverton, Ore.; 2 and 3, E. F. Hubbard, Corvallis, Ore. Yearling—1 and 2, Hubbard; 3, Fox. Ram lamb—1, Hubbard; 2 and 3, Fox.

Ewes—Aged ewe—1, Hubbard; 2 and 3, Fox. Yearling—1 and 3, Hubbard; 2, Fox. Ewe lamb—1 and 2, Fox; 3, Hubbard.

Get of sire—1, Fox; 2, Hubbard. Produce of ewe—1, Fox; 2, Hubbard. Pen—1, Fox; 2, Hubbard. Flock—1, Fox; 2, Hubbard. Champion ram—Fox. Champion ewe—Hubbard.

Romneys.

Rams—Aged ram—1 and 2, William Riddle Jr., Monmouth, Ore.; 3, George Brown, Aldergrove, B. C. Yearling—1 and 2, Riddell; 3, Brown. Ram lamb—1 and 2, Riddell; 3, Brown.

Ewes—Aged ewe—1 and 2, Riddle; 3 Brown. Yearling—1, Brown; 2 and 3, Riddell. Ewe lamb—1 and 2, Riddell; 3, Brown.

Get of sire—1 and 2, Riddell; 3, Brown.

Produce of ewe—1, Riddell; 2, Brown. Pen—1 and 2, Riddell; 3, Brown. Flock—1 and 2, Riddell; 3, Brown.

Champion ram and champion ewe—Riddell.

Rambouillets.

Rams—Aged ram—1 and 2, Burlingame & Craig, Walla Walla; 3, Bullard Bros., Woodland, Cal. Yearling—1 and 3, Burlingame & Craig; 2, Bullard Bros. Ram lamb—1 and 2, Bullard Bros.; 3, Burlingame & Craig.

Ewes—Aged ewe—1 and 2, Burlingame & Craig; 3, Bullard Bros. Yearling—1 and 3, Burlingame and Craig; 2, Bullard Bros. Ewe lamb—1 and 3, Bullard Bros.; 2, Burlingame & Craig.

Get of sire—1, Bullard Bros.; 2 and 3, Craig. Produce of ewe—1 and 2, Burlingame & Craig; 3, Archie C. Stewart, Aldergrove, B. C. Pen—1, Bullard Bros.; 2 and 3, Burlingame & Craig. Flock—1 and 2, Burlingame & Craig; 3, Bullard. Champion ram and champion ewe, Burlingame & Craig.

The Shropshires.

Rams—Aged ram—1 and 3, Floyd T. Fox, Silverton, Ore.; 2, Felzer Bros., Corvallis, Ore. Yearling—1, Felzer Bros.; 2, Fox; 3, Archie C. Stewart, Aldergrove, B. C. Ram lamb—1 and 3, Felzer Bros.; 2, Fox.

Ewes—Aged ewe—1, Felzer Bros.; 2, Fox; 3, Stewart. Yearlings—1 and 2, Felzer Bros.; 3, Fox. Ewe lamb—1, Fox; 2 and 3, Felzer Bros.

Get of sire—1, Felzer Bros.; 2, Fox; 3, Stewart. Produce of ewe—1, Stewart. Pen—1, Felzer Bros.; 2, Fox; 3, Stewart. Flock—1, Felzer Bros.; 2, Fox; 3, Stewart.

Champion ramb—Fox. Champion ewe—Felzer Bros.

Shropshire specials—Best flock—1, Felzer Bros.; 2, Fox. Best pen—1, Felzer Bros.; 2, Fox.

Southdowns.

Rams—Aged rams—1 and 2, J. G. S. Hubbard & Sons, Monroe, Ore.; 2, Archie C. Stewart, Aldergrove, B. C. Yearling—1 and 2, Hubbard & Sons; 3, Stewart. Ram lamb—1 and 2, Hubbard & Sons; 3, Stewart.

Ewes—Aged ewe—1, Hubbard & Sons; 2 and 3, Stewart. Yearling—1 and 2, Hubbard & Sons; 3, Stewart. Ewe lamb—1, Stewart; 2 and 3, Hubbard & Sons.

Get of Sire—1 and 3, Hubbard & Sons; 2, Stewart. Produce of ewe—1 and 3, Hubbard & Sons; 2, Stewart. Pen—1 and 3, Hubbard & Sons; 2, Stewart. Flock—1 and 2, Hubbard & Sons; 3, Stewart.

Champion ram and champion ewe—Hubbard & Sons.

The Hampshires.

Rams—Aged rams—1 and 2, J. G. S. Hubbard & Sons, Monroe, Ore. Yearlings—1 and 3, Archie Prior, Yakima, Wash.; 2, Hubbard & Sons. Ram lamb—1, Carol Robinson, Ellensburg, Wash.; 2 and 3, Prior.

Ewes—Aged ewe—1 and 2, Hubbard & Sons. Yearling—1 and 2, Hubbard & Sons. Ewe lamb, 1 and 2, Hubbard & Sons; 3, Ed Forquer, Granger, Wash.

Get of sire—1 and 3, Hubbard & Sons; 2, Prior. Produce of ewe—1, Forquer. Pen—1 and 3, Hubbard & Sons; 2, Prior. Flock—1 and 2, Hubbard & Sons.

Champion ram—Carol Robinson. Champion ewe—Hubbard & Sons.

The Lincolns.

Rams—Aged ram—1 and 2, William Riddell & Sons, McMinville, Ore.; 2, Archie C. Stewart, Aldergrove, B. C. Yearling—1, Stewart; 2, William Riddell Jr., Monmouth, Ore; 3, Riddell & Sons. Ram lamb—1 and 3, Riddell & Sons; 2, Arichie Prior, Yakima, Wash.

Ewes—Aged ewe—1, Stewart; 2, Riddell Jr.; 3, Riddell & Sons. Yearling—1, Stewart; 2, Riddell & Sons; 3, Riddell Jr. Ewe lamb—1 and 2, Riddell & Sons; 3, Riddell Jr.

Get of sire—1 and 3, Riddell & Sons; 2, Stewart. Produce of ewe—1, Stewart; 2, Riddell Sons; 3, Riddell Jr. Pen—1 and 3, Riddell & Sons; 2, Stewart. Flock—1, Stewart; 2, Riddell & Sons; 3, Riddell Jr.

Champion ram and champion ewe—Stewart.

The Cotswolds.

Rams—Aged ram—1 and 2, William Riddell & Sons, Monmouth, Ore. Yearling—1 and 2, Riddell & Sons. Ram lamb—1, Riddell & Sons; 2 and 3, D. J. Kirby, McMinnville, Ore.

Ewes—Aged ewes—1 and 3, Riddell & Sons; 2, Kirby. Yearlings—1 and 2, Riddell & Sons; 3, Kirby. Ewe lamb—1 and 2, Riddell & Sons; 3, Kirby.

Get of sire—1 and 3, Riddell & Sons; 2, Kirby. Produce of ewe—1, Kirby; 2 and 3, Riddell & Sons. Pen—1 and 3, Riddell & Sons; 2, Kirby. Flock—1 and 2, Riddell & Sons; 3, Kirby.

Champion ram and champion ewe—Riddell & Sons.

Fat Sheep.

Archie C. Stewart, Aldergrove, B. C., made the fat sheep show with the middle wool breeds. His winnings follow: 1 and 2 on yearling wether; 1 and 2 on wether lamb; 1 on pen of three wethers and champion wether.

Mr. Stewart also showed fat sheep of the long wool breeds, winning awards on all animals entered.

The Leicesters.

E. F. Hubbard, Corvallis, Ore., made the show in Leicesters with practically full classes winning awards on all animals entered.

The Dorset Horned.

Floyd T. Fox, Silverton, Ore., provided the Dorset horned show, winning on all animals entered in practically full classes.

The Milk Goats.

W. H. Higday, Donald, Wash., made the purebred Toggenburg show, winning the following awards:

Aged buck—1 on La Crona's Prince Olwin. Doe, three years or over—1 on J. R. O. May Belle. Yearling doe—1 on Thelka 4th. Doe, under 1 year—1 and 2 on unnamed does. Champions—Champion buck and champion doe.

W. H. Higday, H. H. Abrams, Grammore, Wash., and E. W. Bailey, Naches, Wash., made the show in grade or crossbred milk goats and won the following awards: Doe, 2 years and over—1, Bailey. Doe, two years and under three—1 and 2, Higday; 3, Bailey. Yearling doe—1, Abrams; 2, Higday. Doe, under one year—1 and 2, Higday; 3, Bailey.

Holsteins Are Sold

The complete dispersal sale of registered Holsteins from the Horan Fruit farm at Wenatchee was held at the Skagit county fairgrounds at Burlington September 10. The average price of $126 included a number of young animals which had been on pasture all summer.

The top animal was Howtje Segis Maid, a 5-year-old, sired by Chief Segis, the first herd sire on the Horan place and who has a number of good producing daughters. She is out of Howtje Pledge Maid D. K. The cow has a record of 20.98 pounds of butter and 427.2 pounds of milk and was sold to J. R. Smith of Edison for $300. There were eight animals in the sale that sold above $200.

There was a fair crowd at the sale, but many of the farmers were in the midst of threshing and could not attend, but the price was considered a good one for the shape the animals were in. George A. Gue of Auburn auctioned the sale.

A list of the animals, their purchasers, and prices paid for each, follows: King Imogen Hegerveld, H. Tarry, Mt. Vernon, $50; Spofford Segis Oakhurst, A. Gerriet, Burlington, $100; Andy May Cornucopia Maderia, A. C. Thurman, Mt. Vernon, $110; Sir Kaan Mercedes Paul Lady Lyons 2d, A. Gerriet, $90; Freja Cornucopia Johanna, J. R. Smith, Edison, $200; Wenatchee Sethje Ormsby Wayne, Edward Johnson, Mt. Vernon, $200; Wenatchee Aaggie Fayne Blossom, J. R. Smith, $250; Wenatchee Nora Newman Korndyke, H. Tarry, $120; Wenatchee Gerben Korndyke Segis, T. Dekker, Bow, $200; Wenatchee Veeman Polkadot, B. L. Heggen, Mt. Vernon, $105; Wenatchee Bos Artis, B. L. Heggen, $145; Wenatchee Floa Artis Maid, D. Dykstra, Everett, $85; Wenatchee Ormsby Floa Artis, R. Kooistra, Carnation, $96; Wenatchee Veeman Korndyke, D. Dykstra, $80; Wenatchee Anchor Floa Artis, D. Dykstra, $110; Wenatchee May Artis, J .Dekker, $210; Wenatchee Mech. Veeman, D. Dykstra, $105; Wenatchee Pietertje Floa Artis, E. V. Landell, Bow, $115; Wenatchee Nora Newman Artis, B. L. Heggen, $150; Wenatchee Crescent Floa Artis, D. Dykstra, $160; Wenatchee Lyons Artis, B. L. Heggen, $80; Belle Susie Edgerly, J. R. Smith, $110; Gertie Heng Polkadot, J. R. Smith, $200; Wenatchee Segis, D. Dykstra, $225; Lalla May Cornucopia, R. McKibben, Mt. Vernon, $230; Houwtje Segis Maid, J. R. Smith, Edison, $300; Wenatchee Mech. Lucy, H. Tarry, $115; Anna Cornucopia Johanna, L. R. Hanson, Mt. Vernon, $162.50; Nellie Mech. Lucy, R. V. Wyatt, Lyman, $90; Brita Ormsby Korndyke, C. F. McClain, Mt. Vernon, $105; Wenatchee Mech. Veeman 2d, T. Dekker, $85; Wenatchee Segis Veeman, R. Kooistra, $70; Wenatchee Segis Korndyke, W. K. Henry, Bow, $70; Wenatchee Crescent Floa Artis 2d, W. K. Henry, $75; Wenatchee Ormsby, Peter Omdal, Bow, $60; Wenatchee May Artis 2d, H. M. Eakins, Burlington, $75; Wenatchee Newman, R. Kooistra, $67.50; Wenatchee Pietertje Floa Artis 2d, A. C. Thurman, $60; Wenatchee Bos Artis 2d, J. Dekker, $90.

SHOWED DUROCS AT LEWISTON.

The Duroc Jersey show at the recent Lewiston-Clarkston fair was made up largely, if not entirely, of Washington hogs. The principal exhibitors were Earl F. Harper of Johnson, B. W. Powers & Sons of Palouse, Elmer and Homer Sawyer and Marjorie Jones, club members of Palouse, and W. J. Davis Jr., Johnson. Their winnings are found in the following awards in the Duroc Jersey futurity and, in addition, they divided the ribbons in the open classes for this breed.

Junior boar pigs—First and third, Sawyer brothers, Palouse, Wash., on Joe Sensation and Orion Sensation; second, Earl F. Harper, Johnson, Wash., on Mayview Orion; fourth and fifth, W. J. Davis Jr., Johnson, Wash., on Davis' Pathfinder and Davis' Pathfinder 2d; sixth, Marjorie Jones, Palouse, Wash., on Latah Brownie.

Junior sow pigs—First, second and fourth, Harper on Mayview Double Orioness 2d, Mayview Double Orioness and Mayview Double Orioness 3d; third and fifth, Sawyer brothers on Lady Sensation and Critic's Sensation Fannie; sixth, Marjorie Jones on Latah Beauty; seventh, eighth, ninth and tenth, B. W. Powers & Sons, Palouse, Wash., on Red Giantess, Red Giantess 1st, Red Giantess 2 and Red Giantess 3d.

Litters of four—First, Harper, on litter of Mayview Queen Orioness; second, Sawyer, on litter of Pauline Sensation; third, Powers & Sons on litter of Sensation's Giantess; fourth, Davis Jr. on litter of Woodland's Model 4th; fifth Marjorie Jones on litter of Latah Beauty.

Startling New Facts About Hog Feeding Revealed By State Test

Official tests conducted by Department of Agriculture, Iowa and Indiana State Experiment Stations amaze hog raisers. New feeding method finishes out hogs in one-third usual time at one-half the feeding cost. Uses home-grown proteins. Equally amazing results are being obtained by same method with cattle, horses and sheep.

By E. J. ROLLAND

FOR many years feeding and fattening problems of the hog raiser have been left almost entirely in the hands of manufacturers and distributors of various feeds and patented mixtures. Only in the last few years have such reliable investigators as the U. S. Department of Agriculture and the various State Experimental Stations concentrated their efforts upon finding some simple food supplement containing the necessary ingredients to permit the feeding of all home-grown vegetable proteins—such as Alfalfa, Soy Beans, Cow Peas, Clover, etc., with corn, eliminating the use of high priced animal proteins such as tankage, milk, milk powders, etc., and at the same time securing equal or better results.

The now famous Iowa Test was made in an attempt to find this supplement; it also uncovered a fact of far greater importance to hog raisers—**that hogs could actually be finished in one-third the time and at one-half the usual feeding cost.**

Had this statement come from an advertiser or from any less reliable and unprejudiced a source it might have been greeted with skepticism, but having so authentic and well recognized substantiation it is of vital importance that every progressive hog raiser should at least know the details. For the benefit of the readers of this magazine the figures are given in a panel on this page.

WHAT was responsible for the extraordinary gain on the part of one group? Did the group of fat hogs have the advantage of pure breeding, better protection, more food or more careful attention? Did they suffer digestive disorders, lack of exercise or other handicaps?

No! The report shows that there was only one reason for this amazing development; a slight and simple modification of the diet, based upon the discovery of W. H. Lambert, formerly of the University of Wisconsin. The results secured by Mr. Lambert's discovery were so unusual that he was invited to address the faculty, county agents and leading Iowa breeders so that they might be informed upon

the physiological reaction of this preparation which made such results possible.

Amazing Results of Iowa Test

Hogs	Averaged Daily Gain	Feed Required per 100 lbs. Gain	Average Cost per 100 lbs. Gain	Profit per Hog over Feed Cost
Corn fed Hogs or Rape Pasture	.67 lbs.	419 lbs.	$8.47	$.33
LICTONIC fed Hogs	1.51 lbs.	330 lbs.	$6.05	$4.93
LICTONIC fed Hogs Make Greater Daily Gain of	.84 lbs.			
Saving of Feed per 100 lbs. of Gain by LICTONIC fed Hogs		89 lbs.		
Saving in Feed Cost per 100 lbs. Gain by LICTONIC Fed Hogs			$2.42	
LICTONIC fed Hogs bring in extra profit of				$4.62
Summary of Advantage of Lictonic Feeding	Additional Gain 84 lbs.	Feed Saved per 100 lbs. 89 lbs.	Money Saved per 100 lbs. Gain $2.42	Additional Profit per Hog $4.62

Simple Reason for Amazing Gain

MR. LAMBERT in his address explained that there is nothing mysterious or new about this discovery—it was so simple that it had been overlooked by many other experimentors in their search for something new. Mr. Lambert called particular attention to the fact that his discovery was not to be classed with salt bricks, condition powders, cure-alls, or mineral feeds. He brought out the fact that his Lictonic was nothing more nor less than a 100% pure, concentrated preparation that automatically supplies hogs and all live stock with the ingredients that nature dictates they should have if they are to be the biggest profit makers. It is a preparation containing practically all of the minerals, proteins, drugs, herbs, and medicinal elements recommended by the United States Department of Agriculture, which permit the feeding of home-grown vegetable proteins with corn, as a balanced ration.

While Mr. Lambert placed particular emphasis upon the fact that Lictonic was no cure-all, he did show physiologically why it was an upbuilder, strengthener, fattener and food supplement which would build bigger-boned hogs, cause cheaper and faster gains by enabling the hogs to get full assimilation of their food, would make larger litters, keep stock fit, and prevent pig-eating sows.

IF the day has come when hogs can be fattened ready for market in one-third the time and at one-half the feeding cost—and the tests conducted by the Iowa State College and hundreds of individual farmers show that it has come—then the hog raisers of America are facing a new era of profits greater even than any one has ever dared dream of. It actually means a profit increase of 400% to 500%.

Not only does Lictonic bring a quicker turnover-and increased profits, but it also does away with tankage, medicines, tonics, mineral mixtures, condition powders, torpedoes, worm medicines, and dopes, for it keeps stock in tip-top physical condition and free of worms, etc. When fed to sows before farrowing the litter will be healthier, thriftier, and bigger-boned.

Because it supplies these ingredients nature dictates hogs should have, it builds up the animal's resistance against such things as paralysis, soft or spongy bone, breaking down in the back, hairless, off colored and dead litters, non-breeders, rickets, soft pork, many forms of abortion, thumps, weak pasterns and general malnutrition.

Farmers Report Unheard-Of Gains

Equally amazing results are being secured every day by leading breeders and farmers by using Lictonic for their cattle, dairy cows, horses, sheep, etc. It has been unquestionably proven that practically the same methods of feeding will increase a cow's milk production. Such leading breeding establishments as Carnation Stock Farms, owners of Segis Pieterje Prospect, World's Champion dairy cow that produced as much milk as 10 average cows in one year, have found Lictonic is most beneficial not only for their matured cows, but also for their calves. The leading circuses, such as Ringling Brothers, Sels-Floto, have found Lictonic very beneficial for their horses, keeping them in perfect shape even under the unusual conditions to which such horses are subjected. Lictonic is very beneficial for sheep because it supplies those mineral ingredients that they desire and frees sheep from worms and keeps them free.

Free Sample Feeding

THE complete story of Lictonic, what it contains, how it acts and how it can be used to make these unusual gains and big savings has been printed by Mr. Lambert to be sent free to all stock raisers. Mr. Lambert is so anxious to give stock raisers everywhere the immediate benefit of his discovery that, for a limited time only, a free feeding offer will make it possible for every farmer to try LICTONIC on his own farm at no cost to himself.

You will wish to find out just what LICTONIC will do for your live stock on your own farm. The coupon below is for your convenience—simply write your name and address, and you will receive the free sample feeding and full information by return mail. But mail it at once before you lay down this magazine, as this offer is made for a limited time only.

W. H. LAMBERT,
Dept. 1310, St. Louis, Mo.

Send me without obligation the Free Sample Feeding and the full facts about Lictonic, also official formulas so I can make my own mineral mixtures and conditioners and save money.

Bigger Western Washington Fair

"The Vision," an Early Pioneer Pageant, Draws an Immense Crowd to the Puyallup Grounds

By RALPH ERSKINE

At "The Vision," a pageant given at the Western Washington fair at Puyallup October 1 to 7, an immense audience saw the rickety wagons of the early pioneers come around the side of an improvised mountain down into the fertile Puyallup valley, and watched the efforts toward building homes and the struggles with the Indians. As the pageant progressed not a few in the audience found themselves wishing that the brave men and women who fought their way over the Naches pass in those early days might really visit the Western Washington fair in 1923.

What a treat it would have been to the men, who first attempted to clear the land in order to try some simple crops, to spend a few hours in the agricultural products building and see the vast variety and excellent quality of the fruits, vegetables and grains displayed. How they would have enjoyed a visit to the live stock building, where there were some of the finest animals in the northwest. Suppose the women who struggled with sick babies, often without a doctor within hundreds of miles, who might have taken their children to the clinic in the better babies building, might have attended the fair on Monday, when 20,000 little folks were the guests of President Paulhamus, or again, might visit the women's building, where row upon row of shining glass containers held western Washington fruit and vegetables.

The pageant was indeed a unique way of bringing home to the people of western Washington the development their district has enjoyed, and the 1923 fair was the last word in the agricultural progress of the northwest. The attendance throughout the entire week was excellent. A conservative estimate of the attendance Monday, children's day, was 40,000, and the rest of the week averaged about 30,000. There were only a few hours of rain and these were hardly noticed by the visitors on account of the covered passageways and buildings.

Aside from the educational features of the fair, there was every opportunity for a day of entertainment. There were horse races every afternoon, rain or shine, and good band music with an occasional vocal solo. There were also some splendid trapeze performances. Unscrupulous concessions and solicitors were barred, but there was ample opportunity for entertainment about the grounds.

Fruits and Vegetables.

The fruits and vegetables were shown in a larger building this year, the one adjoining the automobile building. This has more room and better light for the entries and it made a better showing than has ever been seen at Puyallup at any past fair. There were more county and community exhibits and a goodly number of individual displays both in fruits and vegetables.

The Skagit county booth won first prize with its splendid collection of farm produce of all kinds as well as a few of the industrial products that are manufactured in that district. In the community displays Oakville community of Grays Harbor county won first place, with Enumclaw a close second. The individual fruit exhibit was won by R. T. Reid of Bellvue, who showed a variety of grapes as well as other orchard fruits in an attractive booth. The best general exhibit by a farmer was won by Chris Turner of Spanaway.

The bee and honey display was put on largely by individual apairy exhibits and also with single entries. It was a very striking exhibit of extracted and comb honey, with the usual amount of candy, wax and fruit canned in honey. Helen Steiner, owner of the Olympian Bee farm at Elma, won the sweepstake prize on extracted honey. The same award for the comb honey was given to F. A. Ross of Puyallup. A very attractive display of white extracted honey was shown by the Superb aparies of Elma, most of which was made from fire weed.

School Exhibit Building.

The school exhibit building was filled to capacity. Each school in the county that turned out had their class work displays arranged in a booth and the articles were judged in separate classes. Almost all of the booths had manual training work and many of the pieces were as good as could have been purchased at the stores. Some of them emphasized cooking and baking, with the girls of the classes doing the actual work. The Tacoma city schools did not compete.

The state college extension service had eight of their booths on display, including bees and honey, poultry, dairy, curtains, clothes closet arrangement, the club demonstration booth and drainage exhibit. The information booth had an enlarged photograph of the campus and buildings at Pullman, which brought many graduates back to their college days as they stopped to look at the view.

The boys' and girls' club exhibits were not as large as they have been in past years, due to the fact that the state club contests were held at two other fairs this year. The clubs that came out had some fine displays of vegetables, canned fruits and sewing. Those who showed were Connell's Prairie, Spanaway Sewing club, Edgewood sewing, Edgewood and Alderwood Bee club, Alderton and Kelley Lake clubs and the Nisqually Sewing club.

The western Washington experiment station at Puyallup was given one entire side of the same building for their displays of root and silage crops, grains and grasses, fertilizer demonstration figures that showed the value of potash on potatoes, varieties of grapes and grading of berries to obtain a better price and diseases of plants, poultry and cattle. All of these exhibits were educational and are only omitted from this report because of a lack of space.

Fine Flower Show.

The flower show, arranged in a large four-pole tent, had some gorgeous dahlias, asters and gladioli and other flowers that are blooming at this time of the year. There were also some fine showings of house plants and shrubs as well as individual displays of cut flowers from bulb gardens and nurseries. It was a beautiful sight to see and it was a big asset to the fair.

The women's department occupied the same space as heretofore, but there seemed to be a better class of entries, especially in the fancywork division. There were all manner of articles that are used about the house shown and many and many were unusually clever in their design. The display of quilts, rugs and table covers were all very interesting. There was an excellent exhibit of china painting; the baking canned goods were very complete and the curio display was in a class by itself.

The fine arts division included many entries of home paintings, both in oil and water color, by professionals and amateurs. A special room was given over to a collection of rare oil paintings from the Metropolitan Museum of Art at New York city. The 39 paintings are said to be valued at $60,000 and it gave the art lovers an opportunity to see rare paintings which are seldom shown outside of the museums in large cities.

Although the live stock department is not considered a real competitive show, Mr. Paulhamus has for many years made it a point to have representative herds from as many breeds as possible. Competition, however, is welcomed, but the shortage of space has kept the numbers down until this year. Some day the fair may be able to buy more land and build more buildings

(Continued on page twenty-two.)

Northwest Hay Growers' Association a Going Concern

By ELIAS NELSON

The Northwest Hay Growers' association, which has been in process of organization for over two months, is now established and ready to function. On July 7 the first draft of the contract was submitted to a conference of representative growers of the four counties of Kittitas, Yakima, Benton and Walla Walla and the contract approved and an organization campaign launched. By September 15 there had been signed 80 per cent of the tonnage of those four counties, with 1000 growers supporting the movement.

On September 29 the organization meeting was held at Yakima with 105 delegates from the 10 districts covered by the association in attendance. At this meeting the mail ballots for directors of the association were counted and the election as it appeared ratified. The board of directors, thus elected, met at once, organized, and continued in session for several days working out the details of the immediate activities of the association.

The directors of the association, with their addresses and the districts which they represent, are as follows: W. L. Dimmick, Yakima, Bench district; J. F. Schreiner, Yakima, Yakima district; Lee M. Lampson, Kennewick, Benton district; E. C. Houston, Prosser, Mabton district; R. B. Dwinnell, Outlook, Outlook district; C. O. Lovell, Toppenish, Toppenish district; Harry Jones, Wapato, Wapato district; J. G. Sorenson and H. W. Brown, Ellensburg, Ellensburg district; Clifford C. Riggs, Walla Walla, Walla Walla district. H. C. Lucas, president of the Yakima Trust company, is the 11th director on the board. He was appointed by Director of Agriculture E. L. French to represent the general public on the board, as required by law.

W. L. Dimmick was elected president of the board and of the association; J. F. Schreiner, first vice president; H. W. Brown, second vice president, and Lee M. Lampson, secretary-treasurer. President Dimmick served as county commissioner of Yakima county for two terms and produces hay on an extensive scale on the Yakima Indian reservation. Mr. Schreiner was the receiver for the Washington Hay Growers' association and is a substantial farmer. Mr. Lampson has had wide experience in cooperative marketing and is at present the sales manager for the Three Rivers Growers of the Kennewick district, producers of strawberries and early garden truck.

L. A. Hunt of Hermiston, Ore., manager of the Oregon Cooperative Hay Growers, was chosen manager of the association. Mr. Hunt has been the leading spirit in the organization campaign and his experience in the management of the Oregon association and the sale of its product made him the logical man, in the minds of the growers, to place at the head of the new association, which is to operate in conjunction with the Oregon concern.

Mr. Hunt has been the manager of the Oregon Cooperative Hay Growers since its organization in the winter of 1920-21. He was county agent of Morrow county, Ore., for two years and previously had a farming experience of 15 years. This is the fifth cooperative organization which he has helped to form.

Few, if any, other cooperative marketing organizations among farmers in the northwest have controlled such a large percentage of the product as does the Northwest Hay Growers' association. It embraces the potential hay growing districts of Washington and contains in its membership the producers of 80 per cent of the tonnage of those districts.

The hay association has been organized with a great deal of care and those in charge believe every reasonable precaution has been taken to build it upon a permanent and enduring basis. The movement was initiated by the Yakima County Farm bureau and supported by the farm bureaus of the other counties included within the scope of the organization. The project has had the support and approval of the state department of agriculture from the first.

The contract with the growers was drawn up by the law firm of Aaron Sapiro of San Francisco, cooperative marketing attorneys, and Boyd Oliver of that firm directed the organization work at the outset. The completion of the organization was under the direction of L. A. Hunt, working with a committee of growers, with all the districts in the four counties represented.

Each district has elected its own director, and according to the by-laws it can remove its director at any time. Many district meetings were held, at which the matter of choosing the right man was thoroughly discussed and every precaution was taken to permit the growers themselves to decide on all issues at stake.

While the association was primarily organized to stabilize the hay market and in a measure assure the producers of hay better returns on their product, the directors are taking a broad view of the aims of the concern, according to Manager L. A. Hunt.

Serve the Consumer, Also.

"The sales policy of the association will be on a basis of service to the consumer," said Manager Hunt. "There has been too great a fluctuation in the price to the consumer. The spread between the farm price of hay and the price which the dairymen on the west side have had to pay has in the last several years averaged $7 a ton, net, including the cost for freight. This is entirely too great and is not fair to the grower or the consumer.

"Also, there has been difficulty of the dairymen buying the product at a reasonable price and being assured of getting the quality desired. The dairymen have found it mostly impracticable to get the hay direct from the producer as they could not be sure of the quality. They have, therefore, preferred to pay a premium by buying from the dealers where they could see the hay and satisfy themselves of the grade.

"Under such conditions there could hardly be an expansion of the dairy industry. The aim of the association is to stabilize the market and thus in a measure assist in placing the dairy industry on a more sound basis and thus improve the market for hay.

The expansion of no other line of farming is calculated to improve the agricultural situation to so great an extent as is that of dairying. We are at this time shipping dairy products into the northwest, thus showing that there are possibilities of expansion and that the growers of hay may profit by increased dairy production.

"Growing hay is the primary basis of fertility on the irrigated lands of central Washington. The farmers will therefore continue to grow hay on a considerable scale. In the past they have produced it often at a loss. For the last several years the average cost of producing hay has been calculated at $13.50 a ton. In 1922 the highest price reached to the producers was $12.50, which was the highest price in several years, and in 1921 the hay sold at $7 to $7.50 a ton.

The sales policy of the new organization will be to sell to the trade and to the consumers direct where such arrangements can be made. Sales will be made on state grades and weights with certificates of inspection at shipping point so that the dairymen on the west side may be assured of getting the quality which they desire. The directors are thoroughly sold on the idea of keeping the price to the consumer from going too high, as the aim is to furnish the hay to the dairymen at a price which will make it possible for them to expand their industry."

With the association functioning, the financing of the growers should be more easily handled. It has been more or less of a vexing problem in the past. The recent decision of the farm loan board at Washington, D. C., that the intermediate credit bank may loan money on hay in the stack has opened the way for credit to the growers. To what extent it may be necessary to use those credit facilities remains to be seen.

The association will, in accordance with its policy, place itself in a position to advance money to the farmers for the growing of hay and when the hay is in the stack to make other advances, the total of such credit extended to be on a basis of the loan value of the hay, said Mr. Hunt. This fall the credit may be restricted due to the fact of the association starting to function so late in the season and because the financing of the growers has been taken care of quite generally.

Yakima is the headquarters of the association at present and though the board has not definitely determined where the offices of the association will be, indications are that they will be at Yakima.

There will be community organization in about 30 districts, with a district committeeman or manager in charge, the idea being to bring the association as close to the growers as possible. The duties of the district committeemen will be determined by the board of directors. Each district will have its own pools. Contracts with the growers are for five years and are thoroughly binding.

W. L. Dimmick, Yakima; J. O. Sorenson, Ellensburg, and J. F. Schreiner, Yakima, constitute the executive committee, while H. C. Lucas, Yakima, is the chairman of the finance committee, with the whole board constituting that committee.

The association controls 150,000 tons of hay in the four counties and the Oregon association, which is expected to come under the same sales management, controls 50,000 tons.

President Coolidge

sends envoys west to study wheat farmers' problems and encourage cooperative marketing of grain. He has also ordered the tariff commission to investigate the desirability of increasing the tariff on wheat.

Canadian Wheat

comes across the line notwithstanding the 30 cents a bushel tariff on it.

The Farm Bureau

last week laid before President Coolidge a definite program of accomplishments toward which it desires his assistance.

Friends of Prohibition Must Be on the Alert

As our readers will recall, the New York legislature at the recent session repealed the state's prohibition enforcement law and Governor Smith approved the repeal. The purpose was to throw upon the already overburdened enforcement officers of the United States government the tremendously difficult job of upholding the Constitution and the Volstead law in a great city where opposition to law enforcement is notoriously brazen. The effect of that repeal practically put New York on the side of nullification of the Constitution. The deliberate purpose was to discredit the Volstead law and help along the agitation for congressional legalization of the traffic in wine and beer.

But it now transpires that the enemies of prohibition are not confining their attack to New York, Wisconsin, Illinois and like states, but are planning to carry their campaign into Washington and other states of the Pacific northwest. Louis Ludlow, a well-advised Washington, D. C., correspondent, reports that "the candidates for the legislature in Washington state next year will be grilled by the national wet forces for the purpose of ascertaining whether or not Washington will be in a mood to follow the example of New York and withdraw from the Union, as far as enforcement of national prohibition is concerned."

That timely warning should not be overlooked by the friends of prohibition in the northwest. They should do a little "grilling" themselves with the candidates for the legislatures of Washington, Oregon, Idaho and Montana. They should find out well in advance whether a candidate is stiff-backed for the Constitution and law enforcement, wobbly on that great issue, or downright wrong.

Do Good Cows Pay? They Do

The average cow in the 10 best herds in the Clallam County Cow Testing association last year produced 400.6 pounds of butterfat, while the average cow in the 10 poorest herds produced 297.9 pounds. County Agent A. W. Holland found that the first cow ate more feed than the average of the lowest, but returned $89.80 above her feed cost, while the second one returned only $51.55 above her feed cost.

It is probably fortunate for the looks of the record that no figures are available on the cows that were not in the testing association. While there are many good cows that are not being tested, many a non-testing dairyman thinks his cows are much better than they are.

At any rate, it is interesting to note the difference in the profit of a first class cow over a fairly good cow. The difference between the income from a fairly good cow and that of a poor cow, of which the dairymen of the state unknowingly have many, is probably just as great. The moral is to get into the testing association, if there is one in your community, and, if not, to take the necessary steps to learn in some way how many cows in your herd are paying a profit and how many are merely boarding with you at your expense.

Western Washington Fair

Substantial and progressive growth is characteristic of the Western Washington fair at Puyallup. Clean shavings as flooring is being supplemented rapidly by cleaner and more enduring cement.

At the Western Washington fair the women especially see lots of things they would like to have in their own homes. Here are abundant exhibits of things that amuse the children, of things to make kitchen work easier, of things to make the living room prettier, of appetizing things to eat and comely things to wear.

This fair is eminently a household fair and the households are turning out by the tens of thousands to see and hear what is going on at the grounds.

Even in the agricultural and live stock exhibits, the big poultry department is an outstanding feature. Here again an appeal is made, especially to the women folks who largely have charge of family poultry keeping.

The Western Washington fair is unique in its methods of "introducing" prize winning animals to the thousands of people on the grandstand. Horses and cattle that have won the ribbons are brought up onto a substantial platform in front of the grandstand. Here they are presented to the people by Mr. Paulhamus. The names, the breed, the owners and other interesting facts are told in an inimitable way by the president of the fair. These are interesting episodes between the afternoon races.

W. H. Paulhamus, president and manager of the Western Washington fair, is the same well-poised and unfrettable man that he has always been. This enables him to attend to the thousand and one details which he has been urged time and again to deputize to others. Perhaps this of itself helps to explain the big fact that Mr. Paulhamus himself is the master key that unlocks the secret of the remarkable success of the Western Washington fair, and that is making each year's fair better and more successful than the previous one.

Here is a fair that started practically without any funds to speak of, and has built up its wonderful plant year by year out of its own profits. Without any aid from the taxable wealth of the state, the loyalty of friends and good business management show what can be done in building up an annual fair which has become one of the big assets of the commonwealth.

Demand for Food Increases

Department of agriculture figures recently announced on the consumption of pork in the United States this year are interesting. The results of two previous pig surveys have indicated that there was an increase in the production of pigs, but pork prices have remained reasonably strong. Most of this is now explained, as figures from the meat inspection service of the bureau of animal industry show that 800,000,000 pounds more carcass pork were consumed the first seven months of 1923 than the same seven months of 1922. The department of agriculture says that industrial conditions presage a continued increase in demand for food products.

Distance Lends Enchantment

Many a live stock man has paid a good price for an animal in the middle west or east and paid an excessive railroad rate on him, when he might better have taken from his neighbor's herd or the herd of a breeder in a neighboring county. Sometimes the animals in a distant herd are better than those closer home. Frequently the reverse is true. At any rate, the farmer or breeder who wants to add new blood to his herd or flock should look around the home territory before sending great distances.

Washington State Gleanings

A span of young horses brought $325 under the hammer at the C. O. Slusser and John Klemgard joint farm auction sale September 25.

SELLS 320 ACRES.

Heinrich Burghardt has sold a half section 20 miles northwest of Ritzville to F. J. Geissler for a reported price of $10,500.

TEN PIGS WEIGH TON.

Ten pigs, 180 days old, weighed 2288 1-2 pounds when weighed in the ton litter contest for club workers at Walla Walla September 21. The animals are owned by Kay Cochran of Dixie.

JOINS COLLEGE FACULTY.

Fred S. Rounds, graduate of the University of Illinois, a commercial architect of Minneapolis, comes to the state college at Pullman to become assistant professor in the department of architecture.

NEED HELP IN ORCHARDS.

From now until the apple crop is boxed there will be a great demand for pickers, packers and other warehouse workers, according to Francis Million, deputy superintendent of the federal employment office at Yakima.

ESTIMATES POTATO YIELD.

The potato yield of Washington was estimated by the United States department of agriculture on September 1 to be 8,467,000 bushels. In 1922 the crop was 9,425,000 bushels, while the five-year average, 1917-1921, was 8,276,000 bushels.

THEY TOPPED THEIR PLANTS.

A check was made among the strawberry growers of South Bend who have topped their plants this season and in one demonstration there had been an increase of 33 per cent in the yield on the rows topped over those not topped.

GREAT YIELD OF SILAGE CORN.

New world's record for silage corn was shown at Grandview when County Agent A. E. Lovett weighed an acre of corn raised by S. D. Cornell. The final check showed a little more than 28 tons to the acre. The best previous record was 24 tons.

OLD TREES BEAR HEAVILY.

What is claimed to be record apple production is that of 63 Grimes Golden apple trees in the J. D. Taggard orchard at Waitsburg. These trees, which were planted 27 years ago, averaged 51 loose boxes, or 39 packed, this year, the highest yielding tree producing 70 boxes. Seventy-five per cent went extra fancy, 13 per cent fancy and 12 per cent C grade, under federal inspection.

FAIR WEATHER WAS FAIR.

The Clallam county fair was favored with excellent weather, was in many respects larger and better than ever before and the attendance showed a considerable increase over previous years. One of the outstanding features was the group of community exhibits. Six most excellent community exhibits gave proof of the fact that the fair has the active support of all sections of Clallam county.

DRAINAGE PAID WELL.

That drainage pays good dividends to the farmer who needs it for his lands was shown in a demonstration near Skamokawa by County Agent F. S. Martin on the farm of William Dawson. A field of seven and one-half acres yielded 36 tons of good mixed hay, which before drainage yielded only poor pasture. Oats estimated to yield 100 bushels per acre were growing on part of the farm drained. Mr. Dawson stated that it had made his farm and that he had increased the value of his place by $3000, with an investment of less than $800.

WILL SHOW CLUB COLTS.

The members of the Adams County Colt club and their colts will make a trip to the Pacific International Live Stock exposition at Portland next month. This club was organized three years ago by County Agent Donaldson and has the distinction of being the only colt club in the state. The purposes of the club are to give the boys training in the feeding and care of colts and horses. The charter members of the club are Willie Buscher, Walter Thom, Donald Danekas, Casl Benzel, Lawrence Gillispie, Jesse Gillispie, Dean Scheel, Raymond Telecky, LeRoy Schaffer and Ralph Meyer.

HANNA LEAVES COLLEGE.

Richard Hanna, nine years herdsman on the Washington State college farm, has resigned and leaves early in October for Cottage Grove, Ore., where he will engage in farming with his son. His successor at Pullman will be John Burns, formerly herdsman on the Robert McCroskey farm near Garfield.

During his nine years at the state college Mr. Hanna has groomed many prize-winning animals, and attained his ambition in 1922 when his prize steer, Topsmans Type, won top honors from steers produced by 16 colleges and universities at the Chicago International Live Stock show.

USE NEW DRIER SYSTEM.

The new recirculation type of drier, which was tried this year for the first time in Clarke county, has proved a decided success, according to the growers who used it. It was perfected recently at the Oregon Agricultural college and has been tried out in the orchards in the Willamette valley.

Among the growers who experimented with it here was L. F. Russell, president of the Washington Growers' Packing corporation and an owner of a large Washougal orchard. With an expenditure of about $1500, the ordinary $5000 drier can be remodeled so that it doubles its former capacity, it is claimed.

A SEED GROWING SECTION.

The importance of the Mount Vernon section as a seed-growing community and its rapid growth in acreage and seed products is shown by the reports for this year which are now coming in. The Aabling Seed farms, from acreage owned or controlled by it, produced 130,000 pounds of spinach seed, 120,000 pounds of turnip seed, 60,000 pounds of beet seed and 40,000 pounds of cabbage seed, all of which goes through its Mount Vernon warehouse and represents a value approximating $75,000.

The head of the concern, A. L. Aabling, has been in Mount Vernon looking after his concern's interests and handling the seed crop.

Wheat Exports Are Large

Our Farmers Grow More, but American People Eat Less

Here are some facts on foreign buying of American wheat and flour that will surprise some of our wheat growers in the Pacific northwest. They were made public by the United States department of commerce.

For the last three years we have been exporting nearly three times the quantity of wheat and flour that we exported before the World war.

The average wheat exports during the last three calendar years have been 221,000,000 bushels, and exports of flour have averaged the equivalent of about 77,500,000 bushels—a total yearly foreign demand of 298,500,000 bushels for the last three years.

Contract that with the average yearly export before the war, of wheat and flour combined, of only 105,000,000 bushels, and you have the refuting answer to the widespread erroneous belief that the war knocked out the foreign demand for American wheat and flour.

The fact of the situation is that we are growing more wheat than we grew before the war, but the American people are eating less wheat per capita than they were eating before the war.

To what extent this reduced consumption of wheat food comes from the increased consumption of "breakfast cereals" made from corn, oats and rye it is impossible to determine; but undoubtedly that change in the American diet is one of the causes of the low price of wheat.

We use the term "low price of wheat," but that, too, is comparative. The price of wheat here in the Pacific northwest certainly is not below the pre-war average; but it costs the producers much more to grow a bushel of wheat than it formerly cost.

And then, when the wheat grower spends his dollar coming from the sale of his wheat, he finds that it will not buy as much as the dollar bought before the war.

What is the remedy to be? We hesitate to return a confident answer, in competition with the cocksure solutions and free advice that the farmer is getting from so many sources, but it does seem that our growers can not reasonably look for a much greater foreign demand than they had for the last three years, and that the solution would better be sought in—

1. Reduction of the acreage sown to wheat.
2. Cooperative marketing of the crop.
3. Educational campaign to induce the American people to eat more wheat foods.

Dealing in Bulk

Theodore Roosevelt, assistant secretary of the navy, speaking at the New York fair as the guest of the state federation of county farm bureaus, expressed thought and counsel that is a reminder of the clear vision and sound judgment of his illustrious father. Mr. Roosevelt truly said, "Now, as never before, economy and efficiency are vital to success, and it is axiomatic that, either in buying or selling, if you deal in bulk you can deal to your advantage." He urged the farmers to deal in bulk, to organize, to combine, to carry on their own marketing. He went to the heart of this problem when he said, "Cooperation is necessary for the salvation of the farmer and the salvation of the farmer is necessary for the salvation of the general public."

That is the doctrine we long have been advocating to the farm producers of the Pacific northwest. There is no other lasting and dependable solution. Even the advocates of government price-fixing for wheat are not asking for that support permanently.

SETS BAD PRECEDENT.

Enos Lee, president of the New York State Farm Bureau federation, referring to the proposition of the government's buying up the surplus wheat, says: "We are opposed to that, absolutely. It sets a bad precedent. If the government buys the surplus wheat it should take over the overproduction of other crops." Mr. Lee adds: "No merchant can sell more than his customers will buy. If the American farmer can not sell the surplus to Europe, why should he produce it?"

The Difficult Task

It Is an Inspiration and a Spur to the Man or Woman of Character

The sluggard will not plow by reason of the cold; therefore shall he beg in harvest and have nothing.—Proverbs 20:4.

The surmounting of difficulties, the overcoming of obstacles, the doing of tasks that in themselves are distasteful are evidences of sturdy character. To yield to these make-believe enemies is to admit weakness; it leads inevitably to failure.

The agricultural figure used by the scriptural writer as quoted above applies to all walks of life as well as to the farm family. It invites all men and women, all boys and girls, to partake of the joys of accomplishment, and warns them of the dangers of being easily discouraged or turned back. The consciousness of having won a battle against odds is more than sufficient compensation for all the effort that was put forth. The greater the odds, the more interesting the task and the more gratifying the success. Every one deserves a chance to succeed. Given that, one should not complain about the difficulty of the undertaking. The greater the problem the greater must be the character and ability of the one who tackles it and the greater the satisfaction when it is solved. It is no satisfaction to a true sportsman to win a sure race. Neither is it gratifying to a big man or a strong woman to succeed in an undertaking that requires little ability.

Worthwhile characters do not seek easy tasks. They are attracted by the hard work that the hard job requires.

The person who yields to the little difficulties or the little discomforts and inconveniences of his or her duties is a little man or woman as character is measured. He or she who defies hardships and despises temporary adversities, but who sees beyond the hour the fruits of accomplishment and strives for their attainment, possesses a worthwhile element of greatness even though the sought for goal be never actually reached.

FARM BUSINESS AND MARKETS OUTLOOK

An avalanche of cattle descended upon the market a week ago, combined receipts at leading markets being the heaviest since October, 1922. The run included a high percentage of short-fed and western grass steers, and eastern dressed beef markets were sluggish, so that a decline on killing classes was logical. Under the array of depressing influences, values on steers, heifers and cows registered a 50 to 75 cent loss at Chicago. The country promptly shut off the supply, however, and most of last week's loss on fed steers has been regained. Prime steers are still quotable near the $13 level, but plainer, long-fed, weighty steers show a decline of $1 from the high point a few weeks ago.

Veal calves declined but have recovered in part. Receipts in this division are due for a substantial increase in the next two months. Calf slaughter under federal inspection in 1922 was the largest on record. Thus far in 1923, last year's figures have been outdistanced.

Hog Market Slumpy.

New crop hogs have showed up in profusion in the last ten days and total receipts at eleven markets were the heaviest in eight weeks. Packers were enabled to start the usual fall raid and prices dropped back to the June level. The break checked the run, however, and the market has had a small upturn. Pigs and light hogs have been severely penalized because of a lack of finish.

Normally, hog receipts expand about seventy-five per cent from the end of September to the end of November, so that a further decline in prices is in store. How severe it will be this year depends on the extent of the increase in arrivals. It is generally believed that the number of spring pigs on farms is slightly greater than a year ago. The government's estimate as of June 1 indicated a gain of 6 per cent in the corn belt.

In spite of near insolvency in Europe, clearances of hog products continue to show a substantial gain over last year. Exports in the first eight months of 1923 shows an increase of more than 20 per cent over the same period in 1922. Foreign countries have sent $172,142,466 to us for pork products against $136,957,622 last year. Even Germany had bought nearly twice as many dollars worth of pork and lard up to the end of July as in the same period of 1922. Hog stocks in storage are fading away at a normal rate in spite of constant heavy receipts and remaining holdings are only about equal to the average.

Break in Lambs Halted.

Lamb prices declined further early last week but the market developed stability at the close. This is probably the last severe decline of the season as receipts usually begin to taper off during October. Feeder buyers have been a constant support as purchases at twelve leading markets in the five weeks ending September 29 totaled 557,879 head compared with 297,989 head last year, so that there is some uncertainty about prospects for the winter fed lamb market. October usually is the month in which the movement to the country reaches high tide.

Wool Markets Firm.

Domestic wool markets have turned firm in the last two weeks and price changes have been slightly in favor of holders. The London auction maintained the initial advance till the close, a strong tone prevails at the Australian auctions of the new clip and South African and Argentine markets are quoted higher. Since prices in this country are below the outside level plus the duty and mills are still using up wool at a fairly high rate, there is no justification for a lower market in the early future.

The Boston market is quoted as follows: Scoured basis: Oregon—Eastern No. 1 staple, $1.28@1.30; fine and fine medium combing, $1.23@1.27; eastern clothing, $1.10@1.15; Valley No. 1, $1.15@1.18. Territory—Montana—Fine staple, choice, $130@1.33; 1-2 blood combing, $1.15@1.20; 3-8 blood combing, $1.00@1.05; 1-4 blood combing, 80@82c.

Wheat Advances.

Talk of governmental aid to the wheat farmer furnished the motive power for an advance in prices last week to the highest point since last June. Lower freight rates on wheat for export and financial aid to cooperative export organizations appear to be the most likely measures if any action is taken.

Flour mills are operating at the highest rate this year, about 3,500,000 bushels are being cleared for export each week, primary receipts show a progressive decline and the visible supply is not mounting as rapidly as in the past two months.

Canadian wheat is not exerting a great deal of pressure as much of it is being placed in storage by growers and exporters appear to be buying rather freely.

The U. S. Department of Agriculture places world production of wheat in the northern hemisphere in 1923 at 3,000,397,000 bushels against 2,755,987,000 bushels last year and 2,655,930,000 bushels in 1921. Prospects in the southern hemisphere remain favorable, also, so that there appears to be plenty of wheat in sight for importing countries.

The United States has exported about 55,000,000 bushels since July 1, most of it from east of the Rockies although it is calculated that there is but little surplus above domestic needs in that section with the exception of durum wheat in the Northwest. This situation has been a factor in the strength of the market in the last ten days.

Seeding conditions in the main winter wheat belt are favorable but reports still point to some decrease in acreage as compared with last year.

Corn Passes Dollar Mark.

Cash corn remains extremely scarce and demand from industries and distributors is keen. Prices advanced last week to above the dollar mark at Chicago for the first time since October, 1920. Bids of around 75 cents for new No. 4 corn to be shipped in the next thirty days are being made in the middlewest.

Damage by frost was greater that at first expected and estimates upon the crop are being reduced to slightly below three billion bushels. Its actual feeding value probably shows still greater loss. Weather conditions have been unfavorable for curing and mold and rot will probably take additional toll. All signs point to a tremendous feeding demand during the fall and winter.

Oats and Barley.

Demand for oats has broadened as this grain has not been on a par with other feed grains. Primary receipts are falling off so that the visible supply is not gaining rapidly. World production of oats, twenty-five countries reporting, is estimated at 3,070,331,000 bushels against 2,791,429,000 bushels last year. The barley crop, twenty countries reporting, is estimated at 968,715,000 bushels against 858,281,000 bushels last year. The total rye crop in twenty-two countries is estimated at 932,642,000 bushels against 802,589,000 bushels last year.

The range of cash grain prices for the week ending October 3 was as follows: Chicago—Wheat: No. 3 red, $1.04@1.08; No. 2 hard, $1.09@1.18; No. 3 hard, $1.05@1.09 1-2. Corn: No. 2 mixed, 91 1-2c@$1.01; No. 2 yellow, 91 1-2c@1.01 1-2; No. 3 yellow, 92 1-2c@$1.01 1-4. Oats: No. 2 white, 43@46c; No. 3 white, 41 1-4@44 1-4c; No. 4 white, 41 1-4@44c. Rye: 71@73c. Barley: 57@73c.

Clover Seed Holds Gains.

Clover seed prices are holding most of their gains amounting to around $4 per bushel on red clover above the low point of the season. The market outlook is strong as a result of the small crop but higher prices will result in the use of substitutes such as soy beans, in larger imports and in more economical use of seed by farmers. In addition, the large carryover partly offsets the small crop. Quotations: Toledo, per bu.—prime red clover, $14.25; prime alsike, $10.50; prime timothy, $3.70. Chicago, per 100 pounds—clover, $19.00@23.00; timothy, $7.00@8.00.

Feed Markets Dull.

The feed market is dull and prices are weak. Neither jobbing nor consuming demand shows improvement. Flour mills are operating at a fairly high rate and stocks of wheat feeds are still accumulating at lake ports and Buffalo.

Prices per ton (100 pound bags) in carlots: Chicago—Bran, $31; standard middlings, $33; flour middlings, $36; cottonseed meal, 36 per cent, $49; 43 per cent, $55; hominy feed, $40; gluten feed, $40; old process oil meal, $53; tankage, $60.

Hay Market Turns Firm Again.

The hay market is again firm as a result of light receipts. Prices, however, show but little change. Prices per ton in carlots: Chicago—No. 1 timothy, $27@28; No. 2, $24@26; No. 1 light clover mixed, $24@26; No. 1 clover, $22@24; No. 1 to choice alfalfa, $18@28; upland prairie, $18@21; rye straw, 11.50@12.50; oat and wheat straw, $9@10.50.

Decline in Eggs Halted.

Unusually heavy receipts of fresh gegs for this season of the year have caused a temporary downturn in the market, but the market is regaining strength. Arrivals at the four leading markets since September 1 have totaled about 25 per cent more than in the same period last year when dry weather curtailed fall production. The increase in the rate at which eggs are disappearing into consumptive channels is much less than the increase in receipts. Better grades of fresh eggs undoubtedly will advance further during November and December when receipts are sure to be much lighter but lower grades are in uncertain position owing to the large stock of storage eggs.

Receipts of poultry are gradually increasing and are due to mount much higher in the next sixty days. As in the egg market, arrivals are the heaviest on record for this time of year, reflecting the tendency to expand production. The rate of consumption likewise is larger than ever. The enormous accumulation of poultry in storage from last winter will be reduced to about the same size as a year ago by the time fresh receipts are heavy enough to begin storing again. Latest quotations: Chicago Eggs extras, 40@41c; miscellaneous, 29@30c; dirties, 22@24c; checks, 19@21c; fresh firsts, 30@34c; ordinary firsts, 25@26c. Live poultry: Hens, 17@22 1-2c; springers, 19c; roosters, 14c; ducks, 23c; geese, 21c; turkeys, 20c.

Butter Turns Upward Again.

Butter prices have turned upward again and have recovered most of the recent losses. Statistically, the market is rather strong, owing to the small stocks in storage compared with last year, and broad consumptive demand. Production also is declining from week to week. On the other hand, the make is running larger than last year, receipts at the leading markets in September were about 17 per cent larger than a year ago and withdrawals from storage at those cities during the month were much smaller than in September, 1922. Some foreign butter is coming in, but not in sufficient quantities or at great enough discount below domestic prices to exert much influence. Receipts will probably decline during the next two months and start prices of fresh butter on an upward trend once more.

Prices on October 3 were as follows: 92 score fresh creamery—Chicago, 46 1-2c; New York, 47c; Boston, 47 1-2c; Philadelphia, 48c. 90 score centralized carlots—Chicago, 45 1-2c; New York, 45@45 1-2c; Boston, 46c.

Mosaic Menaces Potato Crop

Mosaic is the worst enemy that has ever confronted the potato growing industry, says George L. Zundel, extension specialist in plant pathology of the state college, in a recent bulletin.

The methods of control are, in the main, two: First, the planting of seed from healthy plants only, and, second, the use of a seed plot isolated from any commercial field and vigorously rogued for all mosaic or other objectionable plants every week or ten days during the growing season.

Mosaic is distinguishable only by certain specific symptoms appearing on the leaves, says Mr. Zundel. It is characterized by mottling of the leaves with dark green and light green areas. The light green areas grow more slowly than the dark green, thus causing an uneven expansion of the leaf, which results in a crinkling. In the early stages of the disease, the mottling is not well marked but becomes more pronounced in later stages. At first, the plants assume natural growth but soon a dwarfing takes place which in time terminates in typical curly dwarf. The symptoms are not uniform in all varieties so one must become familiar with the disease as it appears on different varieties and under different climatic conditions. To illustrate, typical mosaic appears on the Green Mountain variety, while usually very little mottling appears on the Netted Gem.

The tubers produced on a mosaic plant are either very poorly shaped or they are the most perfect tubers in the field and since the disease may be transmitted through the tubers it makes bin selection of seed a very hazardous proposition.

Potato mosaic is transmitted in two ways, first, by planting tubers from diseased plants; second by means of insects. Experimental work has demonstrated that the virus causing the disease is carried in the sap of the plant. The principal insect carrier is the potato aphis. When an aphid feeds on a mosaic plant and then feeds on a healthy plant the virus is carried with the insect and transmitted to the healthy plant. Furthermore, if an aphid once gets the mosaic virus in its system it can transmit it to its offspring for several generations so that they can infect healthy plants without feeding on mosaic plants themselves. No doubt, there are other sucking insects that can also transmit the virus but this remains for future experiments to demonstrate. Recent experiments seem to indicate that mosaic can winter over on certain weeds and act as centers of infection in the spring.

The nature of the mosaic virus has not been understood in the past and even now the knowledge of it is incomplete. The most recent developments seem to indicate that some type of protozoa or amoeba (very low microscopic forms of animal life) are responsible for mosaic. Experimenters in the various states, Hawaii, Java and elsewhere have located and seen these low forms of animal life in the mosaic diseased areas of various plants. It is very probable then that we are on the verge of a more complete understanding of another type of plant disease hitherto unknown and the scope of plant pathology will be greatly enlarged.

There is a disease of the potato foliage in which deep yellow spots appear which later turn white and finally may disappear. This is "chlorosis" or "calico" and is distinct from mosaic.

No spray or seed treatment has been successful in controlling mosaic except so far as it might control the insects that transmit the disease. We must, therefore, resort to other means of control.

Kitsap County Fair

A new name has been written on the list of annual county fairs in Washington. The Kitsap county populace has gotten together in Port Orchard and put on a fair that is little short of remarkable for a first attempt.

The town of Port Orchard dug into its pockets far enough to provide a convenient, attractive and debt-free site within easy reach of its business section. The hastily-formed association worked overtime to make the fair complete in every detail, and the many visitors found a wide variety of interesting exhibits ranging from all the usual fair displays to a herd of elk and fancy game birds, shown by the county game warden.

In the poultry displays the exhibitors outdid themselves and the showing would stand up well alongside of many of the older shows of the state.

The herd of Holsteins from Minterbrook farms, including the big bull, King Minterbrook Sylvia Matador, was the mainstay of the live stock show. There was only one entry in each of the other classes and consequently no competition, but all the animals shown were good individuals. Just outside the live stock barn was Charles Gaskill of Port Orchard and his string of milk goats, satisfying the inquisitiveness of many visitors as to the quality and taste of the milk.

The room provided for the various exhibits proved to be inadequate and on the opening day carpenters were busy making temporary shelter for the ever increasing entries. The productiveness of Kitsap county was well illustrated by the many fine booth displays. The boys and girls' club work booth was very complete and interesting.

The crowds were fair in size for both the afternoon and evening, there being a moving picture show and dance at the close of the day to furnish recreation for the tired but happy crowds.

Halt Eelworm Embargo

Producers of clover and alfalfa seed in the Pacific Northwest will breathe easier now that the Federal Horticultural Board announces that scattered occurrence of the stem and bulb eelworm, a serious pest of alfalfa and clover, in the United States as well as its prevalence in foreign countries makes control of this pest by federal quarantine impracticable. This conclusion was reached at a hearing today by the federal horticultural board of the United States department of agriculture, and as a result no quarantine action will be recommended.

The hearing indicated that serious damage by this nematode or eelworm to alfalfa and clover has occurred only in the Pacific northwest in moist sections or under irrigation conditions, and there was no evidence to indicate that it was likely to become a menace under other conditions in the United States. The board, it is said, does not believe that products from the areas in which infestation is reported convey a greater risk to other portions of the country than do seeds or plants from foreign countries, the imports from which for the last hundred years have been undoubtedly bringing this pest into the United States.

Failure of the pest to occasion injury in the United States as a whole is apparently due to the generally less favorable climatic conditions. Desirability of local control under state authority was indicated at the hearing for the protection of new irrigation projects.

Washington's Wool Crop

Washington's 1923 wool crop will return about $1,500,000 to sheep men throughout the state, T. J. Drumheller, president of the Washington Wool Growers' association, says.

Mr. Drumheller declared that about 4,000,000 pounds of wool had been clipped and shipped in the state this year.

"Washington wool went into the market when there was a shortage of wool," said Mr. Drumheller, "and ran between 36 and 40 cents per pound. Because of the shortage at the time our wool was sold most of it was shipped by rail at a half cent differential over water rates. There are about 400,000 head of sheep in the state."

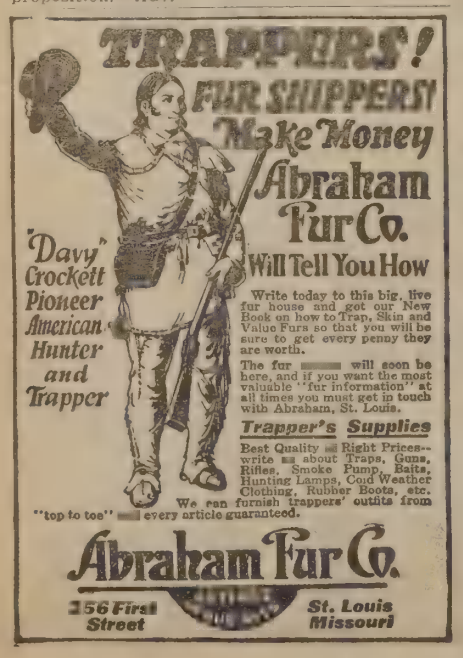
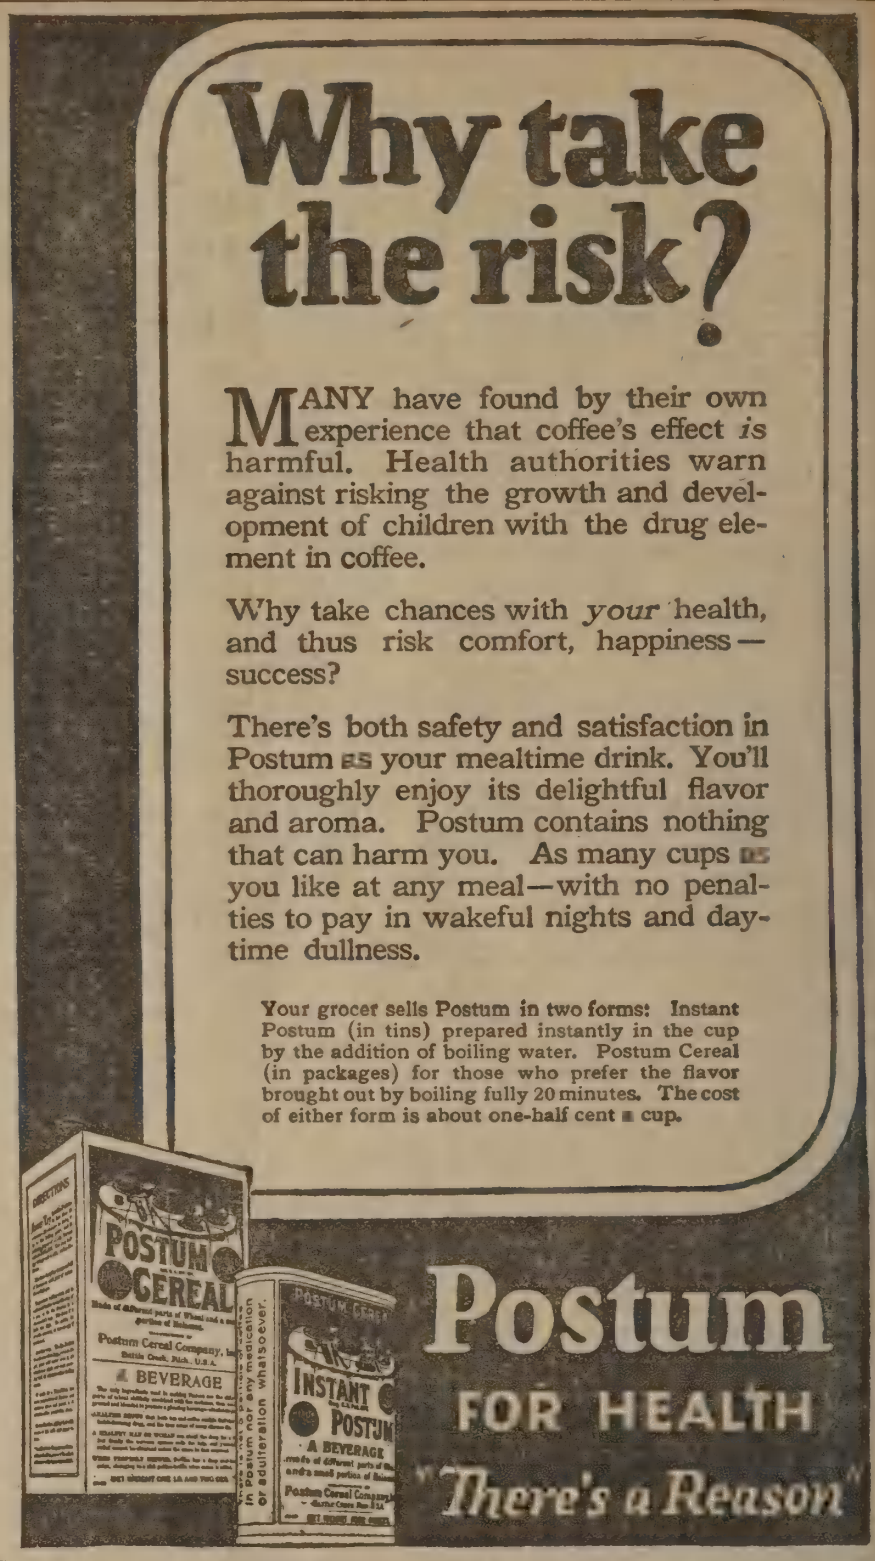
WHITE LIGHT FROM OIL LAMP NOW

Government Tests Prove New Light Beats Electric—Sensational Invention.

A new lamp has recently been invented which burns common kerosene oil and produces a soft, white light said to be even better than electric or gas. Tests by the government and leading universities prove this new light is superior to ten ordinary oil lamps. It burns without odor, smoke or noise, is simple and economical, requires no pumping up and has been approved by the underwriters for insurance.

The inventor, W. T. Johnson, 161 Union ave., Portland, Ore., is offering to send one of these new lamps on ten days' free trial, or even give one to the first user in each locality who will help him introduce it. Write him today for particulars. Also ask him to explain his agency proposition.—Adv.





The department editors of this paper are anxious to be of service to you Do not fail to write to us if they can be of help to you.

Hog Men Organize

When 40 or 50 swine breeders meet to discuss their various problems, it is almost certain that some interesting viewpoints will be uncovered that would be valuable information to other breeders if they could have been present. The following is a brief review of the points that were discussed at the Washington State Swine Breeders' association banquet at Yakima during the week of the state fair.

"There are better prospects ahead for the hog breeders of the northwest than they have ever before experienced," began Ray J. Fox of Oregon, who judged all the breeds shown at the state fair this year. "There is a good demand for market hogs and the Portland markets are spending several millions each year for pork shipped from the corn belt. As I see it, the western swine breeders will not be able to fill the supply for a number of years."

"It is hard to estimate the value of purebred sales to hog breeders of any community," remarked J. Alva Bull of Ellensburg. "I am a strong believer of combination sales, which allows animals of different breeds to be entered and sold at auction. This gives the farmers a good chance to pick up a good purebred sow or boar, and they know they are getting good animals since the guarantee is usually supplied at such sales. As a general rule he is not so particular what breed he buys, but many of them are anxious to get a purebred sow of some kind. A good auctioneer is an asset to any sale, since he must know when to sell an animal, and not sell at a disadvantage to the buyer or to the consigner."

Earl Harper of Johnson, Whitman county, said that he had known of good results from local sales even where the small breeder was forced to go in with a neighbor who was holding the sale. He suggested, however, that the conditions of the sale should be attractive to all buyers, and that the visitors should be made comfortable during the sale. Proper guarantees should be given so that the cautious buyer would not hesitate to buy an animal that suited his needs.

C. M. Hubbard, live stock specialist of the state college, urged the value of having registration papers ready at the time of the sale. He told of a plan that had been worked out which gave the buyer's name on a change of ownership blank, which is sent immediately to the breed association, asking that papers which have been applied for be mailed to the purchaser. This, he said, avoids much trouble and confusion after the sale and is more of an inducement to purchase young purebred, but as yet unregistered, animals.

"I am coming to believe more and more that there is no best breed," said Steve Woodhouse of Ellensburg. "I am only a beginner with hogs, but find that it pays to follow out the advice of more experienced breeders, and also the suggestions given by the state college. I tried out the ton-litter plan and was very well pleased with it. I used to keep my growing pigs in any kind of a pen, and not pay much attention to what kind of feed I gave the sows. I find, however, that by putting the young pigs on alfalfa pasture and the self-feeder as soon as they are weaned they will make rapid gains until they have reached the right age to butcher. When I began feeding I let the pigs have too much feed and gave them a ration that was too fattening. Hereafter I am going to feed more oats and barley in the mixture and put the feeders out in the pasture, where they will get plenty of exercise going to and from feed and water."

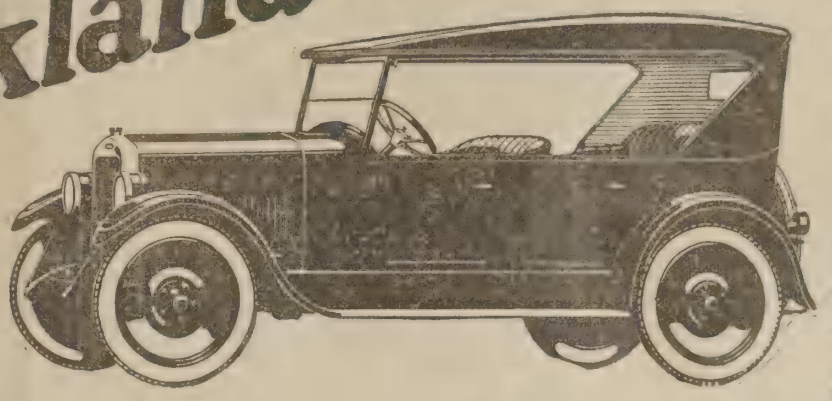
George Varnum of Mabton emphasized the value of boys' and girls' club work and said that in many cases a boy can be encouraged to stay on the farm by giving him a good pig for his own. In the pig club he is required to keep a cost account, and he knows exactly whether his pig is paying its own expense or not. In many cases the boy's father is induced to buy purebreds, and often gets some valuable pointers from the boy in the way of care and management. Whenever it is possible, such boys should be encouraged to show their animals in the open class; not always for the purpose of winning first prize, but rather to see how their animals compare with the pigs that are getting the money. Boys and girls who take up club work of any kind are usually the better type of youngsters in any community and the club experience helps them to become successful farmers or business men. In fact, it is a training that is an asset to any youngster, no matter what he is going to take up as a life work, said Mr. Varnum.

Before the meeting adjourned the members organized the Washington State Swine Breeders' association for the purpose of promoting the interests of all breeds of purebred swine in all parts of the state. J. P. Paddison of Yakima was elected president and given power to appoint a committee to go before the state fair secretary next year and agree on certain days for judging the different breeds and to discuss any other problems that might be vital to those who expect to show next year.

FIX THE ROOF NOW.

It is easy now, but hard after the rains begin to fall.

The Brand New Oakland "6" is here!



—and prices are lower

Think of it! A brand new, finer looking and even better performing Oakland at lower prices—prices never before associated with such a thoroughly fine car.

Note these new features—many of them exclusive:

Brand new L-head engine. Smoother, quieter, more powerful;

Four-wheel brakes for safety. Simple—practical—proved;

Beautiful new blue bodies built by Fisher;

Hand controls centralized on steering wheel;

Full automatic spark control at all speeds;

Permanent top and new type, close fitting curtains;

Disc steel wheels standard at no added cost;

Disc clutch and new easy shifting gear set.

LIVESTOCK AND DAIRY

Feed for Cows

By E. V. ELLINGTON,
Head of Department of Dairy Husbandry, State College of Washington.

I would like some information regarding feed for cows. In feeding the following, how much linseed meal should be allowed: Two and one-half pounds ground barley; two and one-half pounds feed meal (corn meal); 10 pounds mill run? F. B.
Port Blakley, Wash.

A grain mixture which has been found to be very efficient consists of four parts, by weight, of mill run, two parts rolled barley and one part of linseed oil meal. This is the standard mixture that we have used very effectively with the state college dairy herd. We mix together 400 pounds of mill run, 200 pounds of rolled barley and 100 pounds of linseed oil meal. This is fed at the rate of one pound for every three to four pounds of milk the cow produces daily. The amount depends upon the breed of cattle. The Jerseys and Guernseys are fed one pound for every three pounds of milk and the Holsteins and Ayrshires one pound for every four pounds of milk produced daily.

If both corn meal and barley are at hand, you can feed the same mixture that you are now using, that is, 10 pounds of mill run, two and one-half pounds ground barley, two and one-half pounds corn meal and add to this one and one-half pounds of linseed oil meal. You should secure excellent results with such a grain mixture when fed to your cows in the above stated amounts.

I take it that you are using some leguminous hay, such as alfalfa and clover, for your roughage. These hays form the best and cheapest sources of protein and the grain ration suggested will supplement such roughage.

Please tell me what kind of feed to buy to make a balanced ration with alfalfa hay to start for winter? J. R.
Richland, Wash.

In figuring a grain ration, cost is one of the most important factors. With this in mind, the separate grains should be selected to supply the necessary nutrients at the lowest possible cost. Where leguminous hays, such as alfalfa or clover, are available, they form one of the best and cheapest sources of protein.

It has been the practice in the management of the state college dairy herd to select the cheapest possible grain ration and yet one that will supply the necessary nutrients for milk production and body maintenance. Alfalfa hay is used as the main roughage, together with silage or roots to supply succulence. Either corn or sunflowers may be used for silage. The grain ration consists of four parts, by weight, of mill run, two parts rolled barley and one part linseed oil meal. When corn or wheat is cheaper than barley, either may be substituted in equal amounts, as the feeding value of these three cereals is practically the same. Cotton seed meal or soy bean meal can be similarly supplied in the place of linseed oil meal when the price is right.

Ground oats are well adapted for feeding dairy cattle. They are a very palatable cereal and are slightly laxative. Because of the high market price it is usually more economical to sell oats and purchase other feeds which furnish nutrients at a cheaper price. When oats can be secured as cheaply as barley or corn the following grain mixture is recommended: Four parts of mill run, two parts of ground oats, two parts of rolled barley and one part of oil meal. These mixtures may be fed at the rate of one pound for every three or four pounds of milk the cow produces daily, the amount depending upon the breed.

VETERINARY

By DR. S. B. NELSON.

Warts—I have a calf about a year old that has warts all over its neck and head as big as a large egg. Is there a cure for them? MRS. J. F. P.
Hiesson, Wash.

Give the calf a teaspoonful of Fowler's solution of arsenic for a week or 10 days. Then stop and let her rest for a week or 10 days, and then repeat. This may stimulate the skin growth and the growing of healthy skin tissue.

Spavin—I have a horse that is lame in the left hind foot. After going a little while she gets better, but when she falls a little she is worse and does not want to back up. She walks on her toe. E. M. S.
Colbert, Wash.

The story that you give about your horse would indicate that she was spavined. If that is the case, the best thing for you to do is to consult your veterinarian in Spokane and see if he will confirm the diagnosis. If so, he will either severely blister or fire the spavin, very likely the latter.

Cribber—I have a horse 13 years old that is a confirmed cribber. At this time of year when he is pastured at night and fed hay in the morning he will be bloated within half an hour. Is this caused by his wind sucking? I have had his teeth filed, but not by a veterinarian, as there is none in our vicinity. This bloating has resulted in colic in the past. J. G.
East Sound, Wash.

The bloating is caused partially by his wind sucking and partly through his indigestion because of a distention of the stomach filled with the sucked air. You might try filing between his front teeth with a very, very narrow file. I think it would be better if this horse was kept in a box stall constantly when he is not working, or if he is turned to pasture he should have a good, broad strap fastened tightly about his neck. When you feed him his hay and grain you should feed it to him on the floor and let him pick it up. Do not leave any place in the box stall where he can get his teeth on an edge. Cribbers or wind sucking horses are always subject to colic.

Milk Fever—I have a cow that was subject to milk fever when her last calf came. Is she apt to have it again? Also I have a horse sweenied. What will cure sweeny?
Springdale, Wash. J. T. B.

A very good preventive for milk fever is to take the animal off from good feed before she is expected to freshen. Feed her the driest, poorest feed that you have for about 10 days. In order to keep her bowels normal give her, if necessary, a handful of epsom salts in a quart of water once daily.

When she freshens change her to better feed. Of course, both changes should be gradual, taking four or five feedings to do this.

Regarding the horse sweenied: If it is a bad sweeny you may get good results from the following blister: Red iodide of mercury, one drachm; powdered cantharides, one drachm; lard, 10 ounces. Mix. Apply this, with rubbing, to the sweenied part. Repeat in two or three weeks as necessary. Work the animal gently; tie her up so that she can not rub it or get at it with her lips for a few hours after you have applied the blister.

General Motors Trucks

Make 1924 Another Profitable Year Haul With a GMC

With this year's bountiful harvest gathered, now is the time for you to consider how you can better your yield another year, both in bushels and in dollars

Consider, from what happened this fall, if an economical, dependable motor truck would not make money for you!

Then consider carefully the GMC Model K 16 one ton truck —its value as a transportation unit.

You will find it a powerful, dependable motor truck. You will find its economical engine, built exclusively for motor truck use and embodying many distinctive features, easier to care for, longer lived, and better fitted for heavy hauling.

Wheat Prices

Vary With the Seasons of the Year

Herewith is given a table of the extreme prices of wheat in Chicago over a reports of the Chicago Board of Trade. There are numerous interesting facts that can be figured out from this table. For instance, it is seen that the lowest price occurred 12 times during the month of August and never in the month of May. On the other hand, the highest price occurred 12 times in the month of May, 10 times in the month of April and only five times in the month of August. The lowest price occurred 13 times during the months of January, February and March, while the highest price occurred only 10 times in these three months. In the next three months -April, May and June—the lowest price occured eight times, while the highest price occurred 27 times. During July, August and September the lowest price occurred 22 times and the highest price 15 times, while in October, November and December the lowest price occurred 20 times and the highest price 14 times.

Taking it by half-years, it is seen that during the first six months of the year the lowest price occurred 21 times and the highest price 37 times. In reverse order, during the second half of the year the lowest price occurred 42 times and the highest price 29 times.

These figures indicate the tendency throughout these 60 years for the price to be lower during the fall following the American harvest, than during the spring and early summer, when the wheat supply has been reduced and is largely out of the farmers' hands.

Alphabet of Marketing

At a farmer picnic in Illinois Sydney Anderson in his speech gave some helpful hints on the "Fundamental Principles of Marketing" as follows:

It costs more:

A—To sell at long distances than at short.

B—To sell unstandard than standard products.

C—To sell perishable than unperishable.

D—To sell small quantities than large quantities.

E—To sell many varieties than few varieties.

F—To sell products with a seasonable demand than with an unseasonable demand.

G—To sell products not widely known than those widely known.

"If the farmers form their organizations and place good men at the head of them, they will succeed," he said.

"After you have organized do not withdraw from your association because you can momentarily get a better price for your products elsewhere. Stick to your association and it will prosper."

BERKSHIRE MEN ELECT.

The Berkshire swine breeders who attended the state fair at Yakima held a short business meeting September 18. The following officers were elected: Dr. W. J. Keyes, Spokane, president; J. A. Simonson, secretary-treasurer; J. Alva Bull, D. C. Bunn, Prosser, and L. D. Green of Grandview were appointed to arrange for a futurity show at the fair next year.

Clear More Land THIS FALL— Large Profits Next Year

IF you are after bigger crops and bigger profits next year, there is no more valuable work you can do following harvest than to clear more of your stump land.

The easiest, quickest and most economical way is with Pacific Stumping, the new du Pont explosive. Pacific Stumping has approximately the same strength as any standard stumping powder, stick for stick, yet leaves no larger hole in the ground than a "20%"—and you get ½ more sticks for your dollar. It won't freeze. Get it from your local dealer.

Write for free booklet, "Clearing Logged-off Lands." It gives full information on the use of explosives for land-clearing, ditching and tree-planting.

POULTRY AND RABBITS

Unclean Sour Milk

Cause of Disease in the Flock

An interesting experience with a commercial flock of White Leghorns was told by J. D. McClain of Marysville, who has 960 pullets and over 600 old birds, which he is raising in a double-decked house. Late this summer he had been having trouble with occasional blow-outs, and at first thought the trouble was due only to the heavy egg production of the flock. The number increased gradually and W. D. Buchanan, poultry specialist of the state college, was called upon for advice.

Upon examination of the flock, Mr. Buchanan said that there seemed to be no reason for trouble of this kind unless there were impurities in the feed. Mr. McClain said that he was feeding skimmed milk, which was delivered to his farm daily, but that it was always clabbered when received. This was found to be the source of the whole trouble, since the milk had been kept in a wooden barrel which had not been thoroughly cleansed while in use.

"I frequently find cases of this kind," said Mr. Buchanan, "and in most cases they trace directly to the source of milk supply. It is not always the fault of the poultryman, but in many cases the milk cans in which the skim milk is carried are not thoroughly washed and scalded at the creamery. If the same cans are used every day they should be scalded before being used again for milk, even though sour milk is used, because when the bacteria accumulates for a number of days they increase so rapidly that they cause serious indigestion in the flock.

"This is also true with the containers which are used on the farm, and it is important that these should be cleansed and scalded if possible at frequent intervals. Sour milk should never be allowed to dry and crumble along the edges of any container without being thoroughly cleaned out before the vessel is used again for milk. Many do not realize that such material contains millions of bacteria and causes fresh milk to sour very rapidly. Cleanliness always pays and more especially where disease and death of birds result from the lack of sanitation."

Mr. McClain's trouble was not considered serious, since he was advised to continue feeding the same rations he had been feeding for maximum egg production. Any change in feed would have had a tendency to throw the birds into a molt and not materially effect the trouble caused from the sour milk. By changing the vessels and using only sterilized containers for the milk supply and insisting that the delivery of skim milk be made only in steamed milk cans, a greater part, if not all, of the trouble could have been avoided, according to Mr. Buchanan.

Mr. McClain was cautioned not to let this experience discourage him from using skim milk because when used properly, it is one of the best egg producers obtainable, and should not be omitted from the ration of the laying hen if it can be obtained at a reasonable price. Mr. McClain was feeding both kale and carrots as green feed and the grain ration was considered a good one for that time of the year.

Not Always a Cull

Molting is only one of the many points that should be taken into consideration in culling the poultry flock and it should be applied "last and least, rather than first and the total reason for basing judgment," in the opinion of Hubert E. Cosby, poultry specialist in the Oregon extension service. He declares that too many producers have the idea that culling is the simple process of selling off the hens that molt early, while the mere fact that a hen begins to molt in July or August does not necessarily indicate that she is an inferior producer.

"One characteristic of a low-producing hen is a slow, early molt with an early cessation of lay. This does not mean, however, that every individual hen that molts early is a cull hen," says Mr. Cosby. "Occasionally a very low-producing hen will not molt early because her vitality is so low she can't stand the strain of growing feathers.

"The yellow color in the shank, vent and beak is a valuable aid in culling, but, like the molt, it has been abused and used as the single weapon in the culling battle. How frequently have we heard the statement, "Sell all hens that have yellow shanks in July and August." This is true a full 100 per cent when the flock has been given regular balanced care with no acts of mismanagement to upset their regular lay. The molt and yellow color have a direct relationship of the care the flock has received.

"When a hen stops laying she usually starts molting regardless of the time of year. The cull hens will stop laying early, even under good, regular care; they start to molt and the yellow color starts to return. This condition, however, will affect only a small number of birds in a well-managed flock and suspicion will be directed against them, and when all other characteristics are applied they usually are sent to market.

"If a whole flock is upset by moving, mismanagement, change of feeding habit, etc., the entire flock will go down in production, a molt will start and, due to nonlaying, the yellow color returns.

"The molt and yellow color have a value with the few cull hens in a well-managed flock; it is a different story when a flock, through mismanagement, shows the characteristic that rightfully belong to the natural low per cent of the flock commonly called culls.

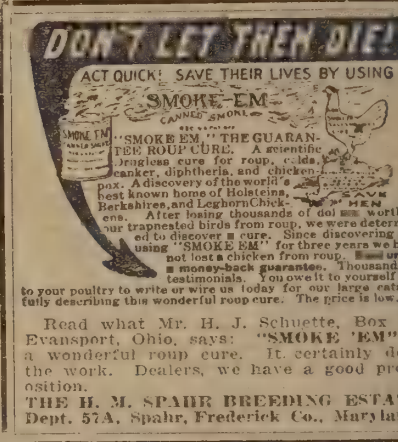
"Recently a farm meeting was held in a flock of 450 birds in their first or pullet-laying year. The production was less than 100 eggs a day. More than 80 per cent of the birds were in a heavy molt and many of them nearly through. The vent, earlocks, beak and shanks were extremely yellow. The flock in this condition showed unmistakable evidence of having been upset nearly three months previous. Investigation disclosed the fact that the owner employed a 'self-confessed experienced poultryman' early in May. Not knowing his work, the flock was thrown into a molt. During the molt of course the yellow color returned to all parts of the body. The poultry producers in attendance recognized the fact that we would have to practically ignore both the molt and yellow color in culling the flock. The entire flock was culled and only 64 hens were rejected as undesirables. An amateur believing the positive statements relative to molt and yellow color would have wrecked this flock, instead of culling it. In addition to the above example, flocks having the egg mash taken away from them when eggs get cheap; hens that have sat on eggs and brooded chicks; grain-fed flocks. etc., will present some interesting problems. The molt has its place and so has the yellow pigment, but they must be considered intelligently and this can only be done when flock management is known. Culling is one of the hardest phases of poultry culture. It has been abused by people who thought they had mastered the subject by a culling book."

Opposes Investigation

The Rockefeller foundation has a plan under consideration to investigate Japanese inroads on the Pacific coast. This has met with a vigorous protest from Miller Freeman at Seattle, who declares in a letter to a representative of the Rockefeller foundation:

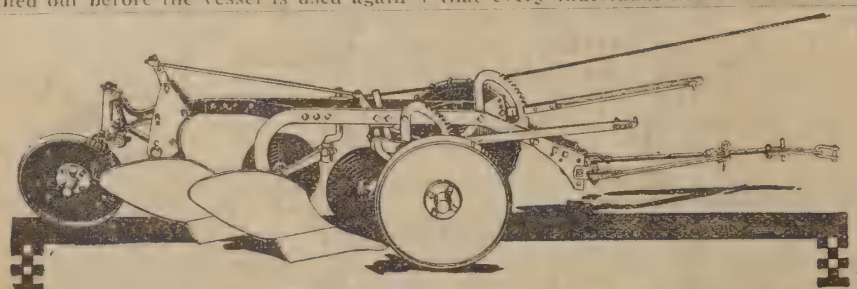
"What the people out here want, and have a right to expect, is the protection of the federal government, with prompt and definite action on the simple problem that we have a right to say who shall come and dwell among us and form a part of our population."

Moreover, Mr. Miller believes that the proposed new investigation is likely to delay a settlement of the trouble, and that there have been enough of such investigations already.



Read what Mr. H. J. Schuette, Box 47, Evansport, Ohio, says: "SMOKE 'EM" is a wonderful roup cure. It certainly does the work. Dealers, we have a good proposition.

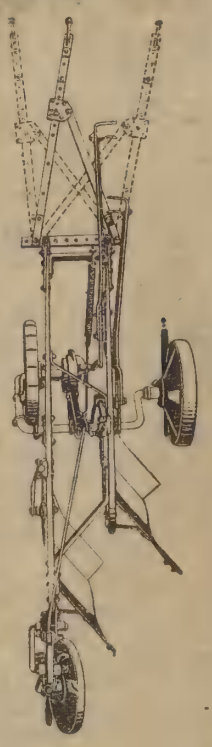
THE H. M. SPAHR BREEDING ESTATE
Dept. 57A, Spahr, Frederick Co., Maryland.



Only 26 Inches High —37 Inches Wide

You can plow under those low, overhanging limbs, up close to the row—deep or shallow as desired, when you use the low, narrow

John Deere No. 45-A
For Small Tractors



Only 26 inches high over all when plowing 6 inches deep. Levers set low when plow is working and are lowered as depth is increased.

Only 37 inches wide —gets up close to row, throwing either to or from the trees; no projections outside of narrow wheel base to interfere with trees.

Wide offset of plow to right or left of tractor for work close to row is permitted by adjustable reversible hitch. (Note this hitch in illustration at right.)

Good clearance — 21 inches from beam to share point; lots of clearance at other points. A big advantage when plowing deep or turning under cover crops.

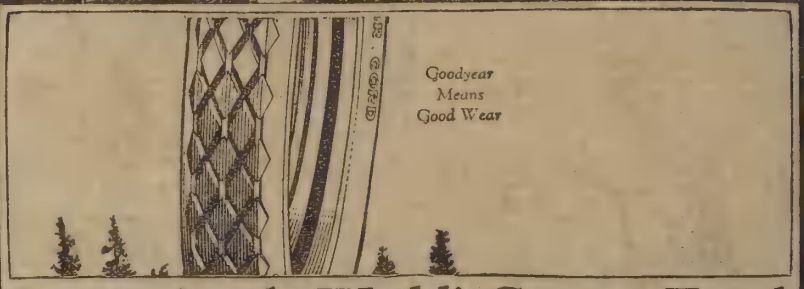
Mighty strong — beams, braces and axles made of special hard and tough John Deere steel. Braces hot-riveted to beams—frame has lasting rigidity.

Pulls light—a real fuel-saver. Simple, positive power lift.

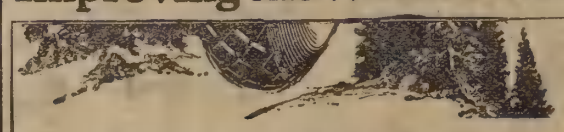
See this plow at your John Deere dealer's. Complete stocks of plows and repairs at San Francisco, Los Angeles, Portland, Seattle, Spokane and Boise.

FREE FOLDER—write today for your copy. Address John Deere, Moline, Illinois; ask for Folder CA-447

JOHN DEERE
THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS



Improving the World's Greatest Tread



There is scarcely a motorist anywhere today who does not recognize the familiar pattern of the Goodyear All-Weather Tread.

For many years, to millions of people, this famous tread has been the mark of a tire of superior quality and worth.

Imprinted on the roads of the world, its clean-cut outlines unmistakably evidence its efficiency and popularity.

In the *new* Goodyear Cord Tire the celebrated All-Weather Tread has been importantly improved.

The extraordinarily dense and tough rubber compound now used in its making assures even longer wear than before.

The powerful rugged blocks of this tread are now reinforced at the base by heavy rubber ribs, knitting the whole tread design into a stronger unit.

The blocks which line the tread on either side are beveled at the outer edge, reducing vibration and strain as wear proceeds.

* * *

Heavier sidewalls, stouter ply unions, and other improvements, make the new Goodyear Cord with the beveled All-Weather Tread the best tire Goodyear ever made.

It runs more smoothly and quietly; it piles up bigger mileages; it preserves without sacrifice the digging, clinging, road-gripping power of the long-wearing All-Weather Tread.

Despite its advantages this *improved* Goodyear Cord costs no more to buy than ordinary tires.

You can get your size from your Goodyear Service Station Dealer, who is pledged to help you get from your tires all the mileage built into them at the factory.

Made in all sizes for Passenger Cars and Trucks

ORCHARD AND GARDEN

Honey Drippings

By GEORGE W. YORK.

I suppose there are many of the breeders of THE FARMER who are often troubled about getting a paste that will hold labels to tin or glass. Well, here are directions for making such paste yourself:

Use one part honey, three parts flour, and water sufficient to cook thoroughly into a smooth paste.

This recipe appeared in the British Bee Journal and was conrtibuted by H. H. Brown, who says "It will keep sweet a long time and will stick labels to tin or glass cheaper and better than any other paste I have seen."

Short Honey Crop.

Not only the government reports show the shortest honey crop this year since 1917, but reports from beekeepers all over the United States all agree that the 1923 honey crop is the shortest in years. Very few of the states claim a normal crop. Outside of the states of Montana and New Mexico, which have only certain sections producing honey, there are no large producing sections that report a heavy crop.

Usually the best states for honey are Texas, California, Idaho and some other intermountain territory, but all these report a small crop. The intermountain territory may have 75 per cent of a normal crop, while Texas and California will likely have not over 25 per cent.

Sweet Clover for Honey.

It has taken at least a third of a century for many farmers to learn that sweet clover is one of their best friends. But beekeepers have known its value as a honey producer for half a century or more.

Dr. R. A. Morgan was a beekeeper in Wisconsin 40 or more years ago. But for many years he has been in South Dakota. As an indication of what he can do in his present location, he secured 650 pounds of comb honey from two colonies of bees in one season, and all gathered from sweet clover blossoms.

When Dr. Morgan came to South Dakota he began at once to talk up sweet clover among the farmers. He not only talked it, but he actually scattered the seed of sweet clover far and near. Of course, he didn't advertise his procedure. He kept quiet, and the sweet clover grew, and soon the farmers began to realize its great possibilities both as a forage plant and as a soil builder.

Farmers everywhere should grow sweet clover, not alone for its honey-yielding value or quality, but because it is one of the best forage and hay crops that can be grown.

How Long Will Honey Keep?

Honey is almost a non-perishable food. If properly stored it will keep almost indefinitely. In Chatterbox for 1920, page 70, is an article about "buried cities" this appeared:

"When a royal tomb was opened in 1906 the bees flew into the cave from the sunshine outside and settled on 5090-year-old honey which trickled from a shattered jar."

Of course, very few people in the present fast age would want to keep honey 5000 years, but if it is put in a warm and dry place, it will keep in perfect condition for almost any length of time. But never try to keep honey in a damp, cool place—like a refrigerator, or in a damp basement, for honey attracts or absorbs moisture very readily, and this causes it to sour or ferment.

Pure honey, of course, may soon become granulated if kept in the very best place, but it is very little trouble to reliquefy it by heating it on the stove or in the oven. But be very careful not to heat it any more than is necessary merely to restore it to its original liquid state. If overheated it will spoil both its color and delicate and delicious flavor.

Golden Words for Golden Apples

Nearly a score of years ago Herbert W. Collingwood, editor of the Rural New Yorker, delivered a eulogy to the original Grimes Golden apple tree, which is remembered and now and then quoted in the press ever since. This eulogy was given at the annual meeting of the West Virginia Horticultural society at Martinsburg. Here is an extract:

"West Virginia has developed some great men and has given great wealth to the world, but it is doubtful if any other product of her soil is more worthy to be given to the world than the Grimes Golden apple. Its origin was humble enough. Over 150 years ago an apple seed was dropped on a West Virginia farm. We do not know whether it was planted intentionally, whether it was dropped by some wandering bird or whether it fell from some tree by chance. That does not matter, for the divine instinct and purpose, which, from the beginning has willed that the good shall survive, guarded the seed and nursed the seedling. The little tree grew unmolested to fruitage. There was that within it which corresponds to genius and unquenchable ambition born in the heart of man. It could not be destroyed.

"We can imagine the scene of its first fruitage, when men first found that a new expression of the beauty and value of horticulture had come upon earth. Thomas Grimes, the owner of the farm, had no doubt watched the tree and had perhaps debated as to whether he should cut it down. When the golden fruit appeared, that question was settled, for nature had touched the tree with life and hope and packed her choicest flavors inside the golden skin. We know little of Thomas Grimes. He did his duty in his humble way, but had it not been for the apple, it is doubtful if today we should give him even a passing thought. The apple holds him back from obscurity and will carry his name along through the years as long as men live and care for good fruit."

ENEMIES OF MOTH IMPORTED.

As a result of the search made this spring in foreign countries by entomologists of the United States department of agriculture for natural enemies of the gipsy moth, 36,978 tachinid fly puparia were sent or brought to this country. France, Spain, Italy, Germany, Austria, Hungary, Rumania, Poland and Japan were visited. Rearing work is in progress with adult parasites received from Europe and Japan. About 7000 Apanteles fulvipes have been liberated this season.

RAINIER Apples

Better Trees!

All stock grown on new soil on the Yakima Indian Reservation. Abundant sunshine, good soil, continuous cultivation, and moisture under control enable us to produce splendidly rooted trees that are thoroughly matured, healthy and hardy. That means bigger yields and more profitable crops for you—the planter.

From our 1,000-acre nursery you may secure nearly every variety of deciduous fruit trees, shade trees, shrubs, vines, roses, etc.

The Dessert Apple Supreme!

The Rainier apple is tried and proven. Bearing trees in the Yakima Valley demonstrate it to be one of the most profitable apples produced.

The Rainier is unexcelled for dessert purposes. The fruit is mild, crisp, fine grained, and delightful. The flavor appeals to all. It is the one apple you will enjoy eating any month of the year.

Rainier trees are very hardy, heavy and continuous bearers, and commence bearing at an early age. Its keeping qualities are remarkable. U. S. Government Bulletin No. 587 says: "The keeping qualities of the Rainier apple are unsurpassed by those of any other variety of the Pacific Northwest that has yet come to the attention of the U. S. Dept. of Agriculture."

The Rainier apple is propagated exclusively by us, from the original genuine Scott Rainier trees.

Write for this Book

Shows the Rainier apple in colors, and gives complete history and description of it. Also describes hundreds of other fruits and flowers.

Export Market

Would Introduce North Central Washington to South America

A $10,000,000 corporation, including Seattle, Portland, San Francisco and Oakland capitalists, formed for the purpose of marketing Pacific northwest products in South America, is being promoted by David B. McGinnis, a pioneer wheat and apple grower of north central Washington, now living in Oakland, Cal. The inauguration of regular service from all the principal Pacific coast ports of this country to the east coast of South America by 20,000-ton refrigerated ships of the United States shipping board is what determined Mr. McGinnis to take this course. Already the first shipment of apples has been booked for a steamer sailing from Seattle September 17, and others will be made later.

Mr. McGinnis is intensely interested in the question of introducing north central Washington apples to the South American markets. He spent several months there in 1922 and is now preparing to take this matter up with the idea of forming an apple export corporation.

"The one obstacle that has always stood in the way of shipping boxed apples from the Pacific northwest to the markets of South America has been transportation," said Mr. McGinnis. "It was absolutely out of the question to get apples through the Bottle Neck of New York. In order to get them loaded onto a South American steamer they had to be transferred by truck and barge four or five times. First from the train into a warehouse in Jersey City, then out of the warehouse by truck to a barge which carried them to the East river, then out of that warehouse to another barge, which loaded them onto another barge and finally to the poorly-equipped vessels. All of this meant expense, stealage, wearage and possible decay.

"The establishment of a line of modern 20,000-ton refrigerator steamships from Pacific coast ports to the east coast of South America by the United States shipping board has solved our problem of getting into South American markets. There is no question but what the South American people want our apples. They raise practically none and are great lovers of a good apple, which they call "manzanas buenos." When South Americans wish to pay a compliment to a beautiful girl they call her "manzana," meaning "apple" in the same sense as we use the name "peach."

"I received an offer of $7.50 a box for some of our extra fancy varieties if delivered after Christmas and $10 a box if delivered before Christmas. Of course, I would not want to guarantee that these prices would prevail if large quantities of our fruit were on the market there.

"Some idea of the market possibilities may be gained from the fact that Buenos Aires is the largest city south of the equator, with nearly 3,000,000 population, while Rio de Janerio has 1,250,000 and Montevideo has 400,000. People in all of the cities seem to have plenty of money and live well. They are noted for being high livers and consumers of luxuries.

"As to the apple industry of north central Washington, I am convinced that it will never attain to its fullest measure of prosperity and achieve the best returns to the growers until the producers control the distribution of their products. If it were not for the fact that you have some of the most capable and honorable men to be found anywhere in charge of the distribution here you would not have achieved such results as you have."

Eradicate the Mice

By LEO K. COUCH.
United States Biological Survey.

What can I do to get rid of mice that destroy my grain in the barn? Is there anything that I can mix poison with that they will eat when they feed on oats and hay? J. C. G.
Dixie, Wash.

From your description of the damage done to grain and hay in the barn, there is little doubt that the ordinary house mouse is responsible. The following method will help in eradicating them.

Secure one-eighth ounce strychnine alkaloid (powdered) and dust this quantity over about two pounds breakfast rolled oats or a heavy recleaned steam-rolled oats. This should be mixed thoroughly dry. Place the poison along the sills and beams in the hay mow, in small baits of not more than one teaspoonful to a place. Such small baits, accidentally mixed in with the hay, would not be injurious to live stock. The poison baits should also be distributed in other locations where the mice are shown to be present.

It would probably be better to poison the mice around the barn before the hay and grain have been put in.

HAUL OFF THE TOP SOIL.

Your garden or fields need the top soil from your chicken yard and your flock needs to get rid of it. It is good fertility for the garden, and equally good for the poultry diseases.

Come out of your shell!

ALMOST every day, some question crops up that puzzles you. "Should I do this or that or the other thing?" It happens to every poultryman—no matter how long he's been in the business. Sometimes your neighbor knows the answer. Sometimes he doesn't. More often than not, it's apt to be guess-work anyway!

So, whenever a poultry problem starts a-hatching in your head—come out of your shell! Ask questions—as many as you like. That's what the Sperry Poultry and Dairy Service Bureau is for. We realize that, in helping you, we are helping ourselves.

To this end, we maintain numerous service headquarters. We answer many thousands of questions by mail. This service is always personal, always individual, always free! Years of practical, hard-pan poultry experience, together with our laboratory and research work, make our answers authoritative and worthwhile.

Whether you are a beginner or a veteran, please feel free to write us about your problems. There are no strings to this offer. It holds good whether you use Sperry Feeds or not. There's a handy coupon below—use it!

Have you ever wanted to know—

- Whether you are feeding the right proportion of grain and mash for most profitable results?
- What is the life of profitable production of a hen?
- How many eggs is it possible for a hen to lay?
- Whether electric lights can be used harmfully on a flock?
- How to recognize the symptoms of coccidiosis (bloody diarrhea) in young chicks?
- Why greenstuff is as valuable as "greenbacks" to the flock?
- Which is best for round worm treatment—continuous feeding or periodic feeding of tobacco dust?
- Whether the lack of shell-making material causes soft-shelled eggs or shell-less eggs?

Check the questions you want answered, cut out and mail to us. We will answer them fully and without charge or obligation. See coupon below.

Rejoins Land Bank

Jewett to Leave Wheat Growers

Announcement is made at the headquarters of the federal land bank at Spokane that George C. Jewett, former secretary of the bank, but for the past two years active in the building up of cooperative wheat-marketing organizations, will resume his position as secretary of the land bank January 1.

Mr. Jewett became secretary of the bank when it was first organized in the northwest five years ago, coming to it after considerable banking experience in the Palouse country. He severed his connection with it later to become general manager of the Washington Wheat-Growers' association and later of the Northwest Wheat-Growers, Associated. For several months he has been general manager of the American Wheat-Growers, Associated, the national organization coordinating the several state wheat-growers' pooling associations throughout the northwest and the middle west.

The election of Mr. Jewett to be secretary of the land bank follows the resignation of George Dreher, its treasurer, and the election of A. B. Thomson, who has been secretary, to succeed Mr. Dreher.

The Oakesdale Fair

Mules came near being the feature of the Oakesdale Farm Products and Live Stock show in that little pioneer Whitman county town last week. The presence of half a dozen good draft mares with rangy, heavy-boned mule colts added a touch of farm-power interest that is seldom noted in present-day fairs. In addition, a few first-class mule teams were on the ground. The horse and mule show was not of the flashy type found at the larger live stock shows, but was composed entirely of horses whose object in life is handling farm loads on the road or in the field.

The horse and mule show outshone any other feature of the live stock show, though dairy cattle, beef cattle and hogs were represented. In the beef breeds, J. Houston McCroskey showed some first-class Shorthorns. In the purebred dairy cattle J. M. Crow showed Holsteins and A. Patterson a few head of Guernseys. Grade dairy cattle were shown by R. O. Stanke, A. Griffin, W. R. Walker, G. W. Willoughby, John Salmon, G. W. Sumpter, T. F. Cokely Jr. and Charles Komenda. Six head of Brown Swiss, including two husky calves, were shown by Peringer and Salzman, who are trying to solve the big wheat farm problem by the operation of a dairy farm in connection with wheat, using the dual-purpose breed as their milk stock.

Horses or mules were shown by Lloyd Frantz, T. F. Cokely Jr., S. R. Warwick, Sam Ransier, E. J. Frantz, Fred M. Crow, H. E. Elmer, Ben Ellis, S. S. Ellis, Charles Elliott, Marion Montgomery and Claude Comegys. In addition, saddle horses were shown by Glenn Jones, A. Patterson and Claude Eisenbee, while boys' and girls' saddle ponies were shown by Helen Nance, Lee Ellis Kenneth Alexander, Betty Ellis and Ralph Stratton.

Chester White hogs were shown by Louis Emert, E. A. Poe and J. M. Crow. Poland China entrymen included Guy Hughes and Mr. Crow. Claude A. Jones had entered O. I. C.'s, while S. L. Banks of Tekoa showed Duroc Jerseys and A. P. Johnson showed Hampshires.

There was a good little poultry show, with heavy breeds and light breeds represented, together with turkeys, geese, ducks and rabbits. Those showing chickens were Mrs. William Bernard, J. C. Morelock, Mrs. F. Brown, David Willoughby, C. J. Oberst, Joseph Brown, Mrs. Louis Emert, N. B. Land Jr., J. E. Mustard, Mrs. R. V. Peringer, C. A Whaley, Jack McCabe, Mrs. Ira F. Kerns, Lawrence Grayson, Mrs. T. F. Kelly and Fred Boyd. Mrs. King Mustard showed turkeys. Geese were shown by Morris Silzell and Carl Brand, while the duck exhibitors were J. B. McGary, Carl Brand and Mrs. F. L. Horn. The rabbits were shown by Elbert Stoecker and Luther Salmon.

Nearly two score of exhibitors competed in the agricultural and horticultural sections. Exhibitors of grains included Hodges Brothers, R. M. Engelhardt, A. G. Woodward, Morris Silzell, C. J. Oberst, Frank Clement, J. S. Harris and Ben Ellis. Those showing vegetables, fruit, corn, potatoes, etc., included J. H. Sienknecht, R. O. Stanke, Mrs. William Bernard, Mrs. King Mustard, C. F. Zimmerman, Ben Richter, C. W. Richard, Mrs. Claude McCoy, Mrs. Ed Wolfe, J. E. Fox, A. G. Woodward, W. M. Ellis, John Salmon, James Willoughby, Morris Silzell, J. W. Peringer, Ronald James, J. Southard, Robert Mustard, C. J. Oberst, Lawrence Taylor, W. A. Siler, Joseph Waller, Mrs. R. V. Peringer, C. A. Whaley, T. N. Durham, Verne Corlett, J. C. Morelock, Mrs. Tom Kelly, A. D. Blevins, Mrs. E. Wolfe and Mrs. MacCrow. A collection of legumes were entered by E. J. Dineen and Mrs. W. E. Wilson and Mrs. Joe Johnson showed collections of floral plants.

One of the features in the agricultural building were two booths of the state college extension service, one showing the increased profit from a high-producing flock of hens over a low-producing flock and one containing valuable suggestions with reference to live stock breeding and feeding.

A culinary department included a large number of kitchen products from simple canned meats and vegetables to elaborate cakes and pastry. Another section that attracted much interest was the fancywork division, in which much needlework, of which professionals might be proud, was exhibited.

The fair was under the general supervision and management of R. V. Peringer, president, and A. G. Woodward, secretary-manager.

Avoid Sheet Writers

The fair season is almost at an end. It has been very gratifying to The Washington Farmer to note that a comparatively large number of fair managements throughout the state have excluded from their grounds that class of solicitors commonly referred to as sheet writers. By sheet writer is meant the solicitor who uses almost any kind of method to induce his victims to subscribe for a publication which he claims to represent. He frequently does it by high-handed, strong-arm methods and in most instances makes most of his talk upon the worth of some comparatively valueless premium which he is giving away with the paper. In some instances he is actually not authorized to take subscriptions for the paper which he claims to represent

While many fairs excluded this class of solicitor this season, admitting only those representatives who carried the credentials of reputable papers, there were a few who permitted their guests to be annoyed and in some instances virtually robbed by the sheet writers. Even where these pests were excluded from the grounds they, in many cases, worked on the outside or on the street corners near the grounds, where they found the crowd in a more or less spending mood.

The Washington Farmer has been for a long time carrying on a campaign of education against this class of solicitor. We want our readers to be always on the alert to avoid being mulcted. The bona fide agent of a reputable farm magazine can always prove his identity and his relationship to the paper. Representatives of THE FARMER never offer premiums of any kind; they never offer to send this paper to any one who will "merely pay the postage"; they always have samples of the paper with them and they always write receipts for subscribers on pads bearing clearly the name of this paper; they always quote the same subscription price, $1 for five years. As a further test, if any one is in doubt when approached by some one claiming to represent this paper, one should require him to show a button about one and one-half inches in diameter bearing an actual photograph of himself with the words around it, "Representing The Washington Farmer." If he can not produce this identification button he is not our representative.

Many Good Reasons for Sending Your Subscription Order NOW

If you count over the advantages offered by The Washington Farmer, we are confident that you will agree with a host of others who have written us that they don't want to miss a single issue.

Through this magazine you are kept posted regarding all phases of agricultural life and interests, not in some distant locality, where conditions are radically different, but right in the state whose soil you are cultivating. You benefit from the experiences and opinions of others who are grappling with the very same problems which confront you. In addition you are entertained by well-known fiction writers; instructed by leading agricultural authorities, and kept in touch with market quotations and world events by means of telegraphic dispatches.

All of this wealth of fact, fiction and features comes to you at a low rate on account of our cooperative subscription plan:

We say to our friends: "Send your subscription orders direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, help us make our plan an even greater success during the coming year than it has been in the past. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

Subscription Rates of The Washington Farmer.

$1.00 for Five Years — 25 Cents for 1 Year. 50 Cents for 3 Years.

In Canada add 1 cent a copy for extra postage.

Joins State College

Herewith is a picture of Thorland R. Hall, new assistant horticulturist at the State College of Washington experiment station at Pullman. He comes to Washington from the faculty of the Iowa agricultural college, where he has done commendablee work in his chosen line. He joins a branch of the Washington institution that has great problems before it for solution as the fruit industry of this state develops.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising, 10 cents per word per insertion. Open also to nonsubscribers.

In using these columns advertisers must observe (1) No advertisement will be accepted for less than $1.00 per insertion. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review building, Spokane, Wash.

CHAPTER XV.

"Range Riding."

"Hello, kid! Who you lookin' for?" The voice was deep and full and had a cheerful, confident ring in it.

John looked up quickly and saw standing in the narrow doorway a man whom he rightly guessed to be Barney Madden. He was a man over 30, of medium height, rather slight, wiry build, showing good, hard condition; his face, decorated with a brown mustache, was a good one—determination, courage and an abundant sense of humor could be seen there. He had deep-set, blue-gray eyes, which could be both stern and merry.

"I'm looking for you, I guess," the youngster answered, after a moment's pause, "if you're Barney Madden. My name's Worth, John Worth, and Mr. Baker sent me out here to help you range-ridin'."

"Sure, I'm Barney Madden. I'm plumb glad to see yer; you look like a good, husky kid, and will help me a lot, I hope. Put your horse in the dug-out yonder, then come back and help me get supper," and he pointed to a little, cave-like house built to shelter the horses of the range riders in winter.

Soon the sorrel was contentedly munching hay in the warm stables with three or four other horses.

Returning to the shack, John found Barney on his knees blowing the fire vigorously.

"Well, kid, you'd better go down to the creek for some water." Barney spoke in a disjointed fashion, between puffs. "Can you cook?"

The youngster said he could a little.

"Well, suppose you try on this supper. I ain't no cook, never was; don't like it. If you'll take care of the eatin' outfit I'll be satisfied all right."

The supper over, Madden expressed his complete satisfaction, and so John was installed chief cook and head (also foot) of the commissary department.

The following morning his work as a cowpuncher began. At mining, sheep-ranching and horse and mule herding he had served a full apprenticeship, and he now became a full-fledged cowboy. Each of his previous occupations had helped to fit him for the present undertaking. Almost from his babyhood he could ride, and about the same time he learned to "throw the rope," as the act of casting the lariat is called, and by constant practice had grown more and more proficient.

The duties of the range-rider, as he soon learned, were to cover a certain territory (which in this case was that section which lay between Saffron and Buffalo creeks) to see that the different bunches of cattle did not get into trouble, or, in case they did get into difficulties, to rescue them. Each morning the two rose with the sun, and after a very simple toilet—to put on a hat and a pair of spurs sufficed sometimes—a breakfast of bacon, bread and coffee was dispatched. Saddling their mounts was the next thing in order, and each day the horse that had been idle the day before was selected. This operation is easier to describe than to accomplish, for, as a rule, the cow pony has a strong dislike for the clinging saddle, and especially for the hind cinch—it interferes with his free breathing and grips him at a tender spot. When the horse has been led out and the 50-pound (or more) saddle is thrown over his back, the fun begins; he prances around as if on hot iron, and a keen eye and quick foot are needed to keep out of reach of hoofs or teeth; at length, during an unguarded second, the flapping cinch is captured and brought under his belly in the twinkling of an eye; the strap on the other side is rove through the ring, and with a quick pull tightened; but the pony, who has been expecting this, takes a deep breath, and at the same time humps his back. If the rider is inexperienced and secures the strap when the pony is thus puffed up he will come to grief when he tries to mount, the saddle promptly slipping round as soon as he puts his weight on the stirrup, and the knowing horse empties his lungs and straightens his back. John was up to all such tricks, and when "Roany" (the sorrel's companion and the spare horse allotted to the young rider) blew himself up, he simply put his foot up against the pony's side and gave a tremendous and sudden heave. It is a rather inconsiderate and humiliating method—for the horse. Roany grunted protestingly; immediately his girth was reduced several inches and John made the cinch fast.

The horse saddled, the two riders went in opposite directions, visiting the well-known haunt of each bunch of cattle in the section of country committed to their care. In pleasant weather, when the feed was good and water plenty, this was by no means an irksome duty. The horse is fresh and full of life; the rider, exhilarated by the bracing air and swift motion, shouts aloud from pure joy at being alive. The day's circuit completed, he comes back to the shack, somewhat tired, but the possessor of an appetite that would make a dyspeptic toiler in a city office still paler with envy.

But John began range-riding during the hardest season of the year, when keen, searching winds had to be faced, blizzards encountered, and work of the hardest, most depressing kind had to be done.

"By gum! this beats all," said Barney one morning, some months after John joined him. He got out of his bunk, walking over to the single window, looked out. "Snowin' yet. Here this thing's been goin' on fer 10 days steady; grass all covered up, cattle near done, and horses worn out—and it's snowin' yet! Seem's if Providence was down on us," and Barney proceeded with his morning toilet, pulling on his boots and grumbling under his breath.

John had something of the same idea in his mind; he began to think all this terrible weather was punishment meted out to him for running away from home. For two weeks the two riders had been in the saddle 14 hours a day, and the strain was beginning to tell on both men and beasts.

But for all that, he had just bucked off Greaser Tony, as good a rider as could be found in a long day's ride.

This was the terrible winter of 1886-87, when many cattlemen were almost ruined.

"Come, kid; get a move on," said Barney rather wearily. "It's tough, but it's got to be done."

They tramped out into the blinding flurry of flakes and routed out their unwilling horses. There was no frisking, and no tricks to avoid saddling; the poor beasts stood resignedly and allowed their masters to put them into their bonds without a protest.

"So long," shouted John.

"S'long," returned the other.

And so they separated. John followed the frozen Saffron creek. It was lined with brush which afforded some shelter for the half-starved cattle that were collected in compact bunches at different points for the sake of warmth. Six hundred head of cattle were thus scattered along the two creeks. Each of these John visited, and with shouts and blows urged them from the cover where otherwise they would stay—dazed, stupid, gradually growing weaker till they died in their tracks. Once in the open, they moved more briskly, butting and crowding each other till their blood got circulating again, and they took some interest in searching for the scanty grass revealed by their trampling hoofs.

This morning, after riding a half mile or so from the shack, John came upon a bunch of stock. He shouted at them and slapped those nearest with his hat; soon all were moving toward the open. All went well till a big snow bank was encountered; this the shivering cattle, weakened by hunger, refused to tackle, so John drove his horse into the white bank, and by floundering through two or three times a trail was made. Still the stock refused to go through; but at last, with much urging and pushing by Roany, breast to rump, three were forced to the other side and the others reluctantly followed. One old cow still remained, weak, wavering, her last calf sapping her vitality; back went John and Roany; the rope was uncoiled and the noose dropped over her horns. A couple of turns having been taken round the saddle horn, Roany scratched and tugged, the old cow struggled a bit and in a jiffy the brave little horse "snaked" her through.

A little further on the same thing was done with another bunch.

From time to time, as he rode along, John saw queer mounds partly or wholly covered with snow: they were the cattle that had succumbed. Many more then living he knew would give up, try as he might and did to protect them.

Further on he noted a fresh victim, and as he drew near two gray, slinking forms left it.

"Hold on, Roany; we'll have to get a shot at those," and suiting the action to the word he pulled his steed up and drew his six-shooter. The wolves were moving off slowly, licking their bloody chops and snarling at the interruption of their feast, their heads turned back toward the boy, their teeth showing, their yellow eyes gleaming. Crack went John's pistol, and one fell over kicking. The other bolted for cover.

Crack, crack, the shots rang out, and he, too, dropped. In a minute both wolves were skinned by making a cut along each leg and down the belly, and then with a strong pull yanking the pelt off. The legs were tied together and both skins hung over the branch of a near-by tree, the location being carefully noted. Then the boy rode on his melancholy task.

As the daylight began to wane, the effect of the hard day's work was felt by both horse and rider, and John looked forward to the time, but a couple of hours off now, when he would return to the warm shack and satisfy his already ravenous hunger. They were still many miles from shelter and he knew that traveling must be difficult, if not dangerous.

"Come, Roany, old boy, brace up!" he called cheerily to his fagged mount, giving him a friendly pat on the neck at the same time. "We've got to get home." And he touched him lightly with his quirt. The good horse responded bravely and floundered through the deep snow, emerging on a bare, wind-swept spot where he could make much better time. The pace was so good that John could almost feel in imagination the warm glow of the fire and smell the fragrance of frying bacon.

As they went on their way they reached a steep little hill, the sides of which were covered deep with snow; down this they plunged with ever-increasing speed. Suddenly Roany stopped, stopped so short, indeed, that John was thrown over his head into a bank of snow. As soon as might be he picked himself up, dug the snow out of his eyes, ears and mouth, and looked to see what the trouble was. Roany was struggling violently. John soon found that he had stepped into a badger hole, the sides and top of which, frozen hard, were unyielding, and held the poor beast's leg like a vise, twisting and breaking the joint badly. The boy saw at once that Roany would have to be killed; that there was no help for him. It would be a mercy to put him out of his misery, for he could feel him quivering, and his eyes bulged out with pain. It was a hazardous position for himself, but for the moment he forgot it in his distress for his horse.

"Roany, old boy, I've got to kill you," he said, feeling that he must justify his act—really one of mercy. "You'll freeze to death if I don't."

He drew his six-shooter from the holster, put the muzzle against the horse's forehead, then, turning his face away, pulled the trigger. A few convulsive struggles and Roany's sufferings were over.

John loosened the cinch, and with considerable difficulty pulled the saddle from under and hung it to a near-by poplar; the bridle was treated likewise; then he stood up and looked around him, wondering what he should do next.

It was no time for sentiment, so he gave his whole thought to the best way of reaching the shack. He was already tired and hungry; the wind was blowing the still falling snow so that it was blinding, and there were seven miles of rough country to cover before shelter could be reached. John set his teeth, and, after giving a final glance at his faithful horse, he set out. This time, fortunately, he had but himself to think of and look out for, and if he could cover the distance before freezing all would be well. He struck off to the right, and, after floundering through drifts, sliding down steep places, and fighting the biting blast in the open, he came to the creek that ran past the shack; he had but to follow it. Hour after hour he toiled along, his body bathed with sweat, his hands, feet and face icy cold. The snow blown in his eyes blinded him, hidden obstructions tripped him and hunger took away his strength. Late that night he stumbled through the door of the shack into the warmth and light.

Barney was wide awake and watching.

"By God! I'm glad you're in," he said, grabbing him by the arm and dragging him forward; then, as the lamp light shone on him clearly, he turned him round and pushed him out again.

"Your face is white: it's frozen. Get snow on it quick."

John thought he had had enough snow on him that day—face and all—to last him the rest of his life, but he submitted to the rough rubbing that Barney gave him without a word, and soon the chalky look gave way to the glow of red blood circulating freely.

He was thoroughly exhausted, but the food and fire prepared by his partner revived him somewhat, and he turned into his rough, hard bunk and slept like a hibernating bear.

When the sun came out bright and warm and the snow began to melt, the havoc wrought by the storm became manifest. Only the strongest cattle remained alive, and of these most were males. The survivors were weak and their bones almost punctured their worn-looking skins. In the more sheltered spots lay many once sturdy cows and heifers that later became a heap of whitened bones. Though the thaw revealed all these horrors, it also

Bits of Fun for Everyone

Practices on de Seat.

"Aunty, what do you do when your children practice deceit on you?"

"Whut you all call dis here dey practices?"

"Deceit; tell you lies, you know."

"In dat case, Ah practices on de seat."—Capper's Farmer.

A Regular Statesman.

A citizen of Nosepaint Gulch was sounding the praises of Congressman Wombat.

"What did Congressman Wombat ever do for you?" asked another citizen.

"Well, he once sent me a package of turnip seed."

Smiles.

"What is the secret of success?" asked the sphinx.

"Push," said the button.

"Take pains," said the window.

"Always keep cool, said the ice.

"Be up-to-date," said the calendar.

"Never lose your head," said the barrel.

"Make light of everything," said the fire.

"Do a driving business," said the hammer.

"Aspire to greater things," said the nutmeg.

"Find a good thing and stick to it," said the glue.—Exchange.

Appreciate Company.

Two farmers met after church and had this conversation:

"I hear you've sold your pig?"

"Yes, sold him last Thursday."

"What d'ye get?"

"Eight dollars."

"What'd it cost ye to raise it?"

"Paid three dollars for the shote, and five more for the feed."

"Didn't make much, did ye?"

"No, but I had the use of the pig all summer."—Exchange.

Dispr Zachry—This is the dispatcher's office and our trains have not killed any cows lately.—A. C. L. News.

The Only Way.

"The women of today are able to meet any situation," said a clerk in the general manager's office at Detroit.

"If I were to kiss you, how would you meet the situation?" asked her friend.

"Face to face," she replied.—Exchange.

Second Sight.

The young lady palmist of the church bazaar said to one of her girl clients: "I see by your hand you are going to be married."

"Wonderful," said the girl.

"You are engaged to a man named Wilkins," continued the amateur seer.

"How amazing," gasped the girl, "surely the lines on my hand can not reveal the name——"

"Lines," sniffed the palmist. "Who said anything about lines? You are wearing the ring I returned to Mr. Wilkins three weeks ago."—Argonaut.

uncovered the herbage, and little by little the remaining animals began to gain strength and weight.

Now the range riders were kept busy pulling the foolish ones out of big holes. Each day the various bunches of cattle were visited, and with discouraging frequency some of them would be found mired helplessly, weakened by their long fast and rendered crazy by fright; their struggles to get out of the sticky mud only sunk them more deeply. It now became the cowboy's duty to throw his rope over the mired beast's horns, make the other end fast to the saddle horn, then to urge the sturdy little cow-pony forward with whip and spur. The pony tugs, the cow struggles, and soon she is standing on terra firma, exhausted, indeed, but safe. This is hard work for the pony and its rider, to say nothing of the cause of all the trouble—which is looked upon merely as so much beef to be saved.

With steady spring weather came the opportunity to visit the home ranch, and John was glad enough to take advantage of it. It was a long time since he had seen Frank, and, of course, there was much to talk of. It was Sunday, in the forenoon, and work, for the time being, was slack. Eight or 10 cow punchers were at the ranch and were amusing themselves with a little buckskin-colored horse. His viciousness had earned him the title of "Outlaw"—that is, he was considered unbreakable.

He was in the corral, small of stature, and, to the uninitiated, innocent enough in appearance; but for all that he had just bucked off Greaser Tony, as good a rider as one could find in a long day's journey.

The cow punchers sat on the fence and egged each other on to tackle the unconquerable little beast; such an exhibition was great sport to the looker-on, but of doubtful pleasure to the participant.

"Try him, Billy Iron-legs," said one. "You can stick him."

"Try him yourself," responded Iron-legs. "You're lookin" for fun, and that breakfast you put away needs a little shakin' up."

"How'd the earth look from the bird's-eye view you got of it, Tony?" said Frank to Greaser Tony, who was off in a corner counting his bruises and swearing softly.

"Here, Shorty, you ride him; you're always lookin' for somethin' lively."

Shorty's inclination to kick about his mount was well known; he had a way of calling whatever horse was set apart for him to ride "old cow" or "kitten." The proposition to put him on the "Outlaw" and tie him there was hailed with delight, but he dropped from his place on the fance and vanished before any one could lay hands on hm. At this juncture Frank came to where John sat and, pointing to one of the men, said, "That's the horse range boss. I advise you to ride that little buckskin yourself; 'twon't do you any harm and they'll think a lot of you."

Any of these men could ride the horse, but it is never pleasant to ride a bucking broncho, and it is sometimes dangerous.

John accepted his friend's advice, and when Frank shouted, "Here's a chap that'll ride the cayuse," he jumped over the corral and went up to the outlaw. He was already saddled and a hackamore was twisted round his nose. John thought he knew horses pretty well, for his long intimacy with Baldy gave him the inside track of equine character. The little buckskin's unbroken spirit and courage pleased him and he felt friendly. The little fellow had been abused; his sides were cut and barred by quirting, his head and nose were skinned by rough ropes in still rougher hands.

All men were his enemies, and at John's approach he struck out with his fore feet, but the boy avoided them and caught the hackamore close up to the head. He put his left foot in the stirrup. The horse's eye was upon him, but though the pony was quick he was quicker, and was in the saddle and had caught the right stirrup before the first jump was finished.

Round one in favor of the boy, and the on-lookers said "Good!"

Then began some of the "tallest" stiff-legged bucking ever seen in that corral. Head between his legs, back humped, shrilly, the little horse shot up in the air and came down stiff-legged with a jar that made the ground tremble. Every trick known to the cunning breed was tried—jumping sideways, twisting in the air, plunging, rearing front and back—all in vain. John stuck like a leech till the "Outlaw" tired himself out. He lasted 15 minutes with scarcely a pause. Then, with head drooping, nostrils turned out till the red showed, literally drenched with sweat, he stood quiet, his body exhausted, but his spirit unconquered.

John dismounted and pulled off the saddle, patted the little horse's neck and turned him loose.

It was a pretty exhibition of horsemanship, and the spectators appreciated it. It was done fairly, there was no "pulling leather" (holding on) or "hobbling stirrups" (tying them underneath the horse—a great assistance.

A number of the punchers expressed their approbation. "Good work, kid." "That's all right, pardner," said they. The boss said nothing, but a week or two later John got orders to come down to the ranch and bring his bed.

(To be continued.)

Exide
BATTERIES

Now
every car owner
can afford one

AT the present low prices no man need deny himself an Exide Battery.

Experienced drivers have always reckoned Exide the economical battery because it lasts so long. Yet some men, while recognizing Exide as the standard, have held off from buying because of the first cost.

Now, you will find that even the first cost of an Exide is low.

Low first cost—lowest last cost

Long service and short repair bills make the last cost of an Exide so low it will astonish you.

Exide Batteries were standard equipment on the first electrically equipped car (1911). They are standard equipment today on more new cars leaving the factories than any other battery.

Comfort and economy both point the way to the nearest Exide Service Station, where there is a battery the right size for your car.

Before putting a new battery in your car, get the price of the Exide at the nearest Exide Service Station.

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

I know not by what methods rare,
But this I know, God answers prayer.
I know not when he sends the word
That tells us fervent prayer is heard,
I know it cometh soon or late,
Therefore we need to watch and wait.
I know not if the blessing sought
Will come in just the guise I thought;
I leave my prayers with him alone,
Whose will is wiser than my own.
—Selected.

Experience Letters

Dear Mrs. Barland: I wish to thank you for the advice and help of the Family Circle and I am especially grateful for the remedy of oil of peppermint for chilblains. My husband had chilblains so bad that his feet were raw and sore, and the oil of peppermint cured them entirely and he hasn't had them since. I will try to do a little to pay up for the help received.

I make a slip similar to a pillow slip to use over my quilts or comforters and I can take it off and wash it and no trouble waiting for fine weather to get it dry. It can be sewed up everywhere except on one end, which may be tied with tapes or fastened with buttons and buttonholes. This makes it possible to have nice, clean quilts with very little work and it prolongs the life of the quilts and the slips can be quite cheaply replaced and are easily mended at the ends, where the wear comes.

Bedspreads dried on the line without wringing are smoother and whiter than otherwise.

When blankets are too short to tuck in sew on a piece of cloth, outing is good, on one end and it will be easy to tuck it under the mattress.

Pack your furs in several thicknesses of newspaper, as moths will not work in printer's ink.

Mark your linen first with a sharp pencil or other sharp point and the ink will not spread when applied.

Apply a coat of paint to the backs of your worn Brussels or tapestry rugs and use them in front of sinks or commodes, where water is apt to be spilled.

To wash old lace or muslin curtains, fold them many times, then squeeze through several soapy waters and then rinse and they will not get torn in the washing.

For toothache place a lump of salt in the cavity or as near as possible to it and it will relieve the pain.

When nervous and wakeful take a glass of buttermilk or warm sweet milk and it will usually produce sleep.

Stitch insertion over worn-out drawn-work in table or bureau covers, then cut out underneath and finish the edges.

Cut around and around stocking legs which are past use and be careful to cut the same width, and you will have some good material to crochet into rugs or for weaving.

Put a coat of kerosene on the screens, one in the fall to prevent rust and one in the spring to keep off mosquitoes.

Sew a tape on the bottom of the chilren's winter drawers, so it can be slipped under the heel and kept in place when the stocking is put on.

To stop bleeding from a cut bathe in strong salt water; it will stop instantly and prevent soreness.

When fowls have much fat try it out and use as a substitute for butter in making cakes.

I would greatly appreciate any information concerning the raising of goats, such as the kind of fencing needed, how often they have young and if there is sale for their milk.

I very much appreciate your good advice to the young, Mrs. Barland. It is a great help to mothers and to inexperienced girls.

Washington. A HAPPY SISTER.

Family Circle Girls

Dear Mrs. Barland: I have been reading this Circle for some time and now since the boys are included and have become readers also I am going to tell them a few things that it won't hurt them to know.

The boys have told us their thoughts concerning the girls and now they can hear a few things that I know about some boys.

First of all I want to say I don't believe in this kissing business between girls and boys, but I want to say that girls are not always to blame when it happens that boys kiss them. Why are the girls blamed entirely when there are two sides to the question? If the boys are mean enough to coax the kisses from the girl I can't see but what he is more to blame than the girl. I insist that he is. If they think it is a disgrace why are they so willing and even anxious to belittle the girl? It seems to me they are glad of a chance to go around talking about her. I think they should be ashamed of themselves.

There are some nice girls who do give in and who do kiss the boys and are led into wrong ways because they are made to believe there is no harm in it. So you boys, if a girl does kiss you after you have urged her again and again, don't decide that she is a bad girl. Many innocent girls have been led astray by this sort of thing. I call this sort of boys and men rogues and beasts!

If you like and admire respectable girls why don't you help to keep good girls so? But you don't; you say, "Oh, she is the modern girl," and get busy to make her as bad as yourselves.

I am not saying the girls are exempt from blame and disgrace. I know of some very tough ones; they are to be found everywhere, and men, too; the cities are full of them both, but the point I want to make, boys, is this: If a girl refuses once to kiss you, for pity's sake stop at that and don't keep on begging her till you break down her good resolutions. You boys should help the girls to keep respectable and not entice them into wrong. I am considered a rather popular girl and have had many boy friends, but I find it the wisest policy to keep them at a distance, but you boys must do your part. You owe it to us as you have your strength and should help us to keep the most precious thing we possess, namely, our character. Be men and play fair.

SHORTY FROM WASHINGTON.

(Will the writer of the above letter please send her name and address and oblige Mrs. Barland.)

Dear Mrs. Barland: We are constant readers of the Family Circle and would like to defend the girls against the harsh criticism of some of the boys and would like to thank the boys who are defending the girls. Thanks, Bill, we are glad you are with us, even if you do call us the weaker sex. We are sure the girls would be willing to follow suit if the men would reform.

We do not believe in smoking ourselves, but we think girls should be allowed to smoke if they choose without being criticized or ridiculed.

Blanch has asked a question which we have asked ourselves for the last two or three years, but have been unable to have it answered: "Why is it that boys do not go with self-respecting girls if they admire them more than the other kind?" We would be glad if some boy would please answer this question. I. D. AND C. T.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all state and national food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.
Wells & Richardson Co., Burlington, Vt.

COLGATE'S
Helps You Smile Through The Years

"I was only eighteen then, my dear."

"But you've the same smile now, Grandmother—it's hardly a day older."

Beautiful teeth are treasures increasingly precious as the years slip by. To go smiling through *your* years, choose a dentifrice that is *safe*—one that preserves the natural beauty of your teeth.

Colgate's Ribbon Dental Cream is safe because it "washes" and polishes; does not scratch or scour your delicate tooth enamel. It cleans teeth thoroughly and that is all any tooth paste or powder can do.

The Colgate habit is a health habit easily formed, and a safe habit for a lifetime. *Large Tube 25c.*

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

For years and years there has been a great dispute over the effects of salt. Some contend that the system suffers if excessive quantities are sumed. Others say it makes no difference how much is taken.

Dr. Copeland.

Our blood and all the other fluids of the body contain a rather constant salt content. We must take enough salt every day to supply this amount. When an excess is consumed it is eliminated by the kidneys.

When salty food is taken there is great demand for drinking water. This is called for to carry away the excess. Such an unusual supply of water may raise the general blood pressure.

With such unaccustomed consumption of water, greater demands are made on the heart. If this organ is weak there may be harmful results. A healthy kidney and a healthy heart will respond to this extra work. There may be complaint, but no real harm may result. If the individual is on the verge of kidney trouble the continued overwork of this organ by reason of excessive salt consumption may hurry the onset of real disease.

An appetite for salt is frequently associated with excessive indulgence in spices, pepper, relishes and other condiments. These, too, place strain on the kidneys and may raise blood pressure.

It has been estimated that the average person eats fully 10 times as much salt as the body receives. The vegetarian needs more salt than the meat eater, because the potash salts of vegetables drive out the common salt.

There is always a middle path— a sensible course. "Temperance in all things" is a splendid motto. Do not begin your activity at the table by springling salt over everything on your plate. Practice a little self-denial.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4178. Lady's Dress. Cut in 7 sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 3 5-8 yards of 54-inch material. The width of the dress at the foot is 2 3-4 yards. Price 10c.

4101-4368. Lady's Costume for Masquerade, etc. Fichu 4101 cut in 3 sizes: Small, medium and large. Dress, 4368 cut in 3 sizes: 16, 18 and 20 years. To make the costume for an 18-year size requires 4 1-2 yards of material for the dress, and 1 1-2 yard for the fichu 32 inches wide. The width of the skirt at the foot is 2 3-4 yards. Two separate patterns, 10c for each pattern.

4102. Girl's Coat. Cut in 5 sizes: 6, 8, 10, 12 and 14 years. A 10-year size requires 4 yards of 44-inch material. Price 10c.

4525-4541. Lady's Costume. Blouse 4525 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 4541 cut in 4 sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. To make the suit for a medium size requires 8 yards of 36-inch material. Two separate patterns, 10c for each pattern.

4539. Child's Dress. Cut in 4 sizes: 4, 6, 8 and 10 years. A 6-year size requires 2 3-4 yards of 32-inch material. Price 10c.

4305. Misses' Dress. Cut in 4 sizes: 14, 16, 18 and 20 years. An 18-year size requires 4 3-4 yards of 32-inch material. The width at the foot is 2 1-4 yards. Price 10c.

3752. Boy's Suit. Cut in 4 sizes: 6, 8, 10 and 12 years. A 10-year size requires 3 3-4 yards of 36-inch material. Price 10c.

4068. Lady's Apron. Cut in 4 sizes: Small, 34-36; medium, 38-40; large, 42-44, and extra large, 46-48 inches bust measure. A medium size requires 4 1-2 yards of 27-inch material. Price 10c.

4533. Girl's Dress. Cut in 4 sizes: 6, 8, 10 and 12 years. A 10-year size requires 4 1-8 yards of 36-inch material. Price 10c.

4139. Child's Dress. Cut in 4 sizes: 2, 4, 6 and 8 years. A 6-year size requires 3 1-4 yards of 32-inch material. To trim as illustrated requires 5-8 yard of 32-inch contrasting material. Price 10c.

4518. Lady's Morning Dress. Cut in 4 sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4 5-8 yards of one material 32 inches wide. The width at the foot is 2 yards. Price 10c.

4543. Corset Substitute. Cut in 4 sizes: 12, 14, 16 and 18 years. A 16 year size requires 1 1-4 yard of 36-inch material. For gussets of elastic or webbing 1-4 yard 9 inches wide or wider is required. Price 10c.

"Come on and sit down. Kellogg's are all ready to eat"

Kellogg's Corn Flakes are all ready to serve. No trouble for little hands or mother's hands to prepare a meal where Kellogg's have won their way! No bothersome cooking, no pots to soak and scrape!

Make your breakfast of Kellogg's Corn Flakes instead of heavy, greasy foods and mark down how much better you feel; how much better you work or play. Kellogg's are satisfying and sustaining, but they give the stomach a chance to get going right!

Over a million packages of Kellogg's are made and sold every day. This means the daily use of more raw corn than a 450-acre farm can produce in a whole season.

As a special treat serve Kellogg's Corn Flakes with your favorite stewed fruit, or with bananas or other fresh fruit in season. Just great!

Kellogg's Corn Flakes are sold only in the RED and GREEN package that bears the signature of W. K. Kellogg. None are genuine without it.

Kellogg's CORN FLAKES

Also makers of Kellogg's KRUMBLES and Kellogg's BRAN

SEEDS AND NURSERY STOCK—Yes, they are offered in this week's "Want Ad" page.

High Points in News of the Week

Whatever expectation there may have been on the part of wheat-growers in the northwest that President Coolidge would call a special session of congress to consider legislation for the relief of the wheat-growers has been detroyed by the announcement from Washington that the president is sending throughout the wheat-growing sections representatives of the war finance corporation to make a study of the wheat-marketing situation with special reference to the development of cooperative marketing organizations. Among those who will make the tour of investigation are: Managing Director Eugene Meyer and Frank W. Mondell, a member of the board of directors of the war finance corporation. They are holding their first conferences at Chicago and other middle-western points this week. Whether they will come as far west as the Pacific northwestern states is not yet officially announced, but wheat-growers' organizations and individuals interested in the marketing of the wheat crop are laying plans to present northwestern facts to them at conferences either here or elsewhere on their tour.

It is declared that one purpose of this tour is to assist in the formation of cooperative marketing organizations and to convince bankers throughout the wheat-growing sections that they should lend more efficient help to farmers undertaking to form and operate such organizations. Director Meyer emphasizes the point that the war finance board can better function to aid the wheat-growers through organizations than under private marketing methods.

* * *

President Coolidge has instructed the government tariff commission to begin the study of proposals that the tariff on wheat be increased from 30 to perhaps as high as 45 cents a bushel. Under the existing tariff law the president has power to increase or diminish tariffs on particular products when, in his judgment, based upon the commission's investigation, such change is desirable. It is understood that President Coolidge looks with a degree of favor upon an increase in the tariff on wheat.

* * *

From the passage of the emergency tariff law in May, 1921, up to June 30, 1923, a total of over 32,500,000 bushels of wheat had been imported into the United States from Canada. Of this amount 15,450,000 bushels were milled in this country under bond that the flour so manufactured be exported and not placed on the American market. Therefore the tariff duty on wheat imported from Canada was paid on only a little over 17,000,000 bushels. These 17,000,000 bushels competed on the American market directly with wheat grown in the United States.

* * *

The legislative committee of the American Farm Bureau federation last week presented to President Coolidge a program of nine proposals which it hopes to see materialized. These proposals are as follows:

1—Would have government accept Henry Ford's offer for Muscle Shoals with prospect of cheaper fertilizer for farmers.

2—Selective immigation favored, with passports vised at port of embarkation; quota to be limited to 3 per cent of foreign born in this country in 1890, instead of 1910 as at present.

3—Excess profits tax favored if government must raise additional money; irrevocably opposed to general sales tax, consumption tax or expenditure tax.

4—Favor wage increases for farm labor, provided it can be shown labor efficiency has been increased by mechanical devices, but oppose any wage advances unless cost of production can be decreased at same time.

5—As to merchant marine, indorsed cooperation between government and private shipping interests, though criticizing some rulings of shipping board.

6—For crop insurance, but oppose government entering the insurance business.

7—For enactment of truth-in-fabrics law.

8—Oppose government price-fixing on any agricultural commodities.

9—Indorse present federal program of highway construction.

* * *

A new constitution for the Turkish government contains a provision that Turkey shall be proclaimed a republic, with a president elected for four or five years. Other departments of the government will be a national assembly, an executive cabinet and a council of state, the members of this council being appointed by the president and the cabinet being responsible to the assembly.

* * *

According to John J. Leary Jr., labor expert of the New York World, attending the convention in Portland, Ore., of the American Federation of Labor for that paper, the federation will this week adopt resolutions against the Ku Klux Klan, the farmer-labor party and the "one big union" idea. Mr. Leary says that the committees to which these issues have been referred have overwhelmingly decided to make reports against these movements, and that the convention will undoubtedly adopt their reports.

* * *

Railroad executives have summed up what they call the three outstanding menaces to the railroad industry as follows:

1. The forthcoming demands of the big four brotherhoods for a restoration of wages to the war-time peak.
2. The demand of the farmers that railway rates on farm commodities be reduced.
3. The probable attempt of radical senators and representatives to modify the Esch-Cummins law to the detriment of the railroads, repealing all the favorable clauses and stiffening all the unfavorable ones.

Former Premier Lloyd George of England is now visiting the United States and Canada. He will be on the American continent until early in November.

Farm Business and Markets Outlook

(Continued from page five.)

Cheese Market Higher

Wisconsin cheese markets recovered last week from their recent depression, and prices at distributing markets have advanced. Demand is more dull since the advance but is still fairly active even including some speculative purchases. Receipts at the four leading markets in September show a greater increase over last year than does the rate of distribution so that storage holdings have declined only slightly during the month. Prices on fresh No. 1 American cheese on October 3 were:

Chicago—Twins 25@25½c; S. Daisies, 26@26½c; D. Daisies, 25½@26c; Longhorns, 26½@27c; Sq. Prints, 27@27½c.

Fruits and Vegetables.

The potato market has been extremely weak in the last ten days and prices have declined almost to the level reached during the heavy shipping season in the fal of 1922. In spite of the smaller crop, carlot shipments from producing sections in the last five weeks have been about the same as in the corresponding period a year ago. Prices are probably close to bottom as the peak of shipments will be passed in two or three weeks and at prevailing levels both consumers and storage operators are likely to take hold more freely. Northern round whites, U. S. No. 1 are quoted at 90 cents to $1.15 per 100 pounds and Idaho sacked Russets at $1.50 in the Chicago carlot market.

Carlot shipments of apples continue to expand, gaining 50 per cent last week. Exports are becoming heavy. Jonathans and Grimes Golden A 2 1-4 in. are quoted at $4.75 to $6.00 a barrel, with Northwestern extra fancy Jonathans at $2.25 to $3.00 a box in the Chicago market.

The onion market has been irregular under rather heavy receipts, but prices have held most of their gains. Yellows are quoted at $3.00 to $3.25 per 100 pounds in the Chicago carlot market.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Oct. 6.—Cattle: Steers—Good grade, $7.00@7.50; medium grade, $6.00@7.00; common, $4.75@6.00.

Serving the People of Washington

In no part of the world is electricity more truly the servant of mankind than in Washington. Here is approximately one-sixth the potential waterpower of the nation—two and one half times as much as California, the second state in water power resources.

The electric light and power companies have already installed 74 hydro-electric plants generating over 449,860 horsepower, a remarkable development for so young a state.

These companies are constantly seeking new consumers and new uses for this power. They are keeping well ahead of demands, yet avoiding premature and unjustified development which would necessarily cause heavy carrying charges which would be reflected in rates to consumers.

The electric light and power companies of this state want the farmers of Washington, as well as the city dwellers, to know more about this great industry and the many ways it serves the public, adding to your comforts and conveniences; saving you money; making you money.

Each week through the forthcoming year we ask that you read our message in the Washington Farmer. We believe you will find there messages interesting and profitable.

NORTHWEST ELECTRIC LIGHT AND POWER ASSOCIATION

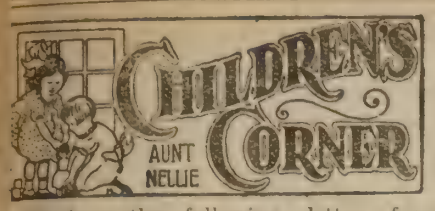
$10 for Opinions

The Washington Farmer will award three cash prizes amounting to $10 to the three best articles on the following subjects:

"What Advertisements in the Four October Issues of The Washington Farmer Appealed to Me Most Strongly and Why?"

Each article must be limited to 100 words.
First prize $5, second prize $3, third prize $2.
All entries must be received by November 1.
Address—

"OPINION" DEPT.
THE WASHINGTON FARMER
SPOKANE, WASH.



We have the following letter from Arthur F. Chess, a Washington boy: "May I enter the Corner? I read the cousins' letters first in THE FARMER and think them very interesting. I was 11 July 6 and will start to school September 4, with Mrs. Nellie Walker as my teacher. I'll be in the sixth grade. We live on an 80-acre ranch and I like the country fine. We have several pets, a Persian cat named Fluffy, also two white kittens, Snowdrop and Snowball. Our three bantams, Snowbird, Cricket and Lady are very tame and will sit on my shoulders or head."

Eleanor Brandt has been busy helping her mother and having a good time this summer. She says she is not big enough to do very much work, but she helps mother with the dishes and picks blackberries. She also goes after the mail. She has had a fine vacation, went to the beach and several other places. The fun will soon be over, and Eleanor is going to study hard when school commences. Her home is near Puget sound, in northwestern Washington. She will be 9 September 24.

We are glad to hear from a new cousin living in Friday Harbor county. She is Selma Peterson, 11 years old August 17. Selma says she has four brothers and two sisters. She had a nice visit with her grandmother this summer, also with her married sister.

Birthday Greetings

THURSDAY, October 11—Sarah Houghton; Melva Hume, 10 years old.

FRIDAY, October 12—Esmer Bohnet, 11 years old; Venice Williams, 10.

SATURDAY, October 13—Helen Tootaker, 11 years old.

SUNDAY, October 14—Maxine Miller, 11 years old; William Steele, 10.

BEDTIME STORIES

By THORNTON W. BURGESS.

WORKERS OF THE NIGHT.

That was a busy day for the little people who were trying to help Farmer Brown's boy by killing all the insects and worms in the old orchard, the berry patch and the garden. But at last jolly, round, red Mr. Sun went to bed behind the purple hills, and then most of those busy little workers went to bed, too. They were tired, but they were happy, for they felt that they had done a great deal. The next day they would continue the good work.

Peter Rabbit, who had faithfully kept watch while the others worked, was almost sorry as he listened to the beautiful evening song of Brownie the thrush. It seemed a pity to stop then. But he knew that Tommy Tit and Drummer the woodpecker, and Chippy the sparrow, and all the other feathered workers needed rest. Besides they could not see in the night as he could.

"It's too bad that the work has to stop," said Peter aloud as he made ready to leave the old orchard.

"What work?" demanded a voice right over his head. There in one of the apple trees sat Timmy the flying squirrel.

Then Peter told Timmy how everybody in the old orchard that day had been trying to help Farmer Brown's boy, and that he meant that it was too bad that the work had to stop at all.

"It doesn't," replied Timmy, suddenly springing on a fat, hard-shelled beetle. "I'm here and I rather think that I shall be

What are you doing?"

rather busy by the looks of things. There are a great many bugs that don't appear in the day time, and there are a few of us that prefer the night in which to work. You can depend on me to do my share to help Farmer Brown's boy. He found my nest a few days ago and took great care not to disturb it. And he chased away that black cat when she came nosing around. I shall be only too glad to do something for him and if catching bugs will help you can count on me. I see Boomer the nighthawk and Flitter the bat are at work already. Excuse me, I see another beetle over yonder."

In a twinkling Timmy was gone. Peter looked up in the air. Sure enough, there was flitter the bat, darting in and out among the trees, and Peter knew that he was catching insects in the air. A second later Boomer the nighthawk swept over his head and he heard the snap of Boomer's bill, which meant that Boomer had caught something. Peter signed happily. He had forgotten all about these little night workers. They could do what the day workers could not do.

"Wouldn't Farmer Brown's boy be glad if he knew," thought Peter as he started for home by way of the garden, for he had a mind to nibble a tender lettuce leaf. When he reached the garden he ate one lettuce leaf and had just begun on another when a voice, a very indignant voice, made him jump guiltily.

"What are you doing?" demanded old Mr. Toad angrily. "Don't you know that everybody is working for Farmer Brown's boy? Of what use is it for us to kill all the bugs and worms so that the green things can grow if you are going to eat them all up? A nice help you are?"

"I—I didn't think," replied Peter, meekly.

"Well, it's time you did think," retorted old Mr. Toad tartly. "There's plenty for you to eat over on the green meadows. I'll have you to know, Peter Rabbit, that I'm not working for you." All the time old Mr. Toad was busily hopping about, snapping up bugs, for he had rested during the heat of the day and loves best to work in the dusk of the evening.

Peter wanted another leaf of lettuce. It seemed to him that he never had wanted a thing more. But he knew that old Mr. Toad was right, it certainly wouldn't be helping Farmer Brown's boy if he ate up his lettuce. So Peter gulped hard once or twice and then bravely turned his back on the garden. After all, sweet clover was very nice and very filling.

Old Mr. Toad's eyes twinkled as he watched Peter hop away. "Peter means all right," said he, and began to hunt bugs harder than ever.—(Copyright.)

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Freeda Klippert, Lois Fisher, Elva Lucille Dyer, Dorothy A. Hutson, Nora Requa, Elsie Stalder, Matilda Anderson, Ernest Toivonen, Bella Havey, Loretta Santo, Lillie Anderson, Astrid Rekdal, Amanda Forsman.

STATEMENT OF THE OWNERSHIP, MANagement, circulation, etc., required by the Act of congress of August 24, 1912, of The Washington Farmer, published weekly at Spokane, Washington, for October 1, 1923.

State of Washington, county of Spokane, ss.

Before me, a notary public, in and for the state and county aforesaid, personally appeared F. Young, who, having been duly sworn according to law, deposes and says that he is the vice president of The Washington Farmer, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation,) etc., of the aforesaid publication for the date shown in the above caption, required by the act of August 24, 1912, embodied in section 443, Postal Laws and Regulations printed on the reverse side of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business managers are:

Publisher, Cowles Publishing Company, Spokane, Washington; editor, ...; managing editor, Edwin A. Smith, Spokane, Washington; business managers, none.

2. That the owner is: (If the publication is owned by an individual, his name and address, or if owned by more than one individual the name and address of each, should be given below; if the publication is owned by a corporation the name of the corporation and the names and addresses of the stockholders owning or holding one per cent or more of the total amount of stock should be given.) Cowles Publishing Company (a corporation), Spokane, Washington; W. H. Cowles, Spokane, Washington; H. C. Cowles, Spokane, Washington; J. F. Young, Spokane, Washington; F. J. Whaley, Spokane, Washington.

3. That the known bondholders, mortgagees and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages or other securities are: (If there are none, so state.) none.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders, who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest, direct or indirect, in the said stock, bonds or other securities than as so stated by him.

COWLES PUBLISHING COMPANY,
By J. F. YOUNG, Vice Pres.

Sworn to and subscribed before me this 24th day of September, 1923.
(Seal.) F. J. WHALEY,
(My commission expires Oct. 17, 1923.)

Multiplying Man-power

To the man with pick and shovel the digging of holes for telephone poles is a slow and arduous task. Under favorable soil conditions three to five holes are for him an average day's work. Under adverse conditions perhaps he can account for only one. When the hole is dug, eight or ten men are required to raise the pole with pikes.

But the hole-borer with derrick attached, operated by only three men, can erect as many as eighty poles in a day—releasing for other telephone work upwards of forty men.

Hundreds of devices to quicken telephone construction, to increase its safety to the employee, and to effect economies are being utilized in the Bell System. Experiments are constantly being made to find the better and the shorter way to do a given job. Each tool invented for the industry must be developed to perfection.

In the aggregate these devices to multiply man-power mean an enormous yearly saving of time, labor and money throughout the whole Bell System. Without them telephone service would be rendered neither as promptly, as efficiently nor as economically as it is to-day.

Bigger Western Washington Fair

(Continued from page three..)

to house a larger live stock show that will draw the breeders from all over the northwest.

The Dairy Cows.

The Holstein show was made up of animals from the state herd at the Western State hospital at Fort Steilacoom. The show animals were headed by Carnation King Matador Mutual, the junior herd sire. There were two mature cows and eight heifers and a number of bull calves. The herd was not shown for competition. This was a part of the herd that Governor Hart is building up for the purpose of supplying the other state institutions with breeding stock.

The Ayrshires were shown by E. W. Tassell of Wenatchee, who brought his entire show herd, which had been shown on the northwest circuit before coming to Puyallup. The herd bull, Queen's Scottish Cavaleer, was placed senior and grand champion, while Empress Lady of Wenatchee was made senior and grand champion female. She was a 3-year-old with a very smooth appearance and a splendid dairy conformation. The bull was a typical Ayrshire bull and was formerly owned by the state college.

The splendid herd of Jerseys from the Midfields farm, owned by Sears & Little of Winlook, Lewis county, Wash., made up the showing for this breed. Their 2-year-old bull, Fussy's Fern Noble 35th, was made senior and grand champion over any of the other bulls in the herd and the female ribbon went to Brighter Dawn, a 4-year-old. She was a splendid type of Jersey and was in fine condition, although a little small for her age.

The showing made by the fawn and whites was one of the best that has ever been displayed on the grounds at Puyallup. There were 60 head in all, or more than all of the other dairy cattle breeds put together. There were four complete herds that showed in competition and two other breeders entered animals. The two herds shown by local breeders were the Ruby Dell herd, owned by H. E. Angel & Son of Mabton and the A. O. Johnson herd from near Buckley, in Pierce county. C. J. Lawson of Puyallup entered two head, while William J. Buckley showed his new herd bull and three other young animals.

The Chicona herd, owned by A. L. Gile of Chinook, Wash., and a show string from Astoria, owned by W. O. Reith, were the two from the Columbia river district. The Gile herd had the senior and grand champion female, Jewel of Rose City, a typical Guernsey, with all the indications of a good producer. She was sired by Glenwood King of Edgemoor and is out of Kate's Princess Jewel of Springcrest. The junior champion female was also in this herd. She was a senior yearling, Patience of Chicona, who was sired by Chicona Buster and out of Phyliss of Chicona.

The junior and grand champion bull was Ruby Dell Foxy, a senior yearling owned by H. E. Angel. He is a son of the herd bull, France's May King. His masculinity and type placed him above the senior champion, Chicona Hudson of the Reith herd, in the eyes of William Bishop of Chimacum, who judged the classes.

The Beef Cattle.

The herd of Shorthorns entered by F. M. Rothrock company of Spokane were met in competition by the J. D. McGuire herd from Tenino, Thurston county. Hercules Emblem, from the Rothrock herd, was made the junior and grand champion bull and Hercules Sylvia 3d, a junior yearling in the same herd, was made junior and grand champion female. The McGuire herd was showing stronger this year, even with the loss of Hercules Model, the herd sire, which died during the summer.

The Herefords were from Shadeland Stock farm at Daysland, Alberta. The 13 head shown were owned by O. A. Boggs & Sons, who filled all of the classes except junior bull calf class. Albert Panama, the 4-year-old herd bull, was made senior and grand champion bull, while Miss Panama was given the senior and grand champion female honors.

There were 14 head of Aberdeen Angus from the Congdon & Battles herd at Yakima. These animals made a very good showing and took all of the awards. Queenmere 14th, the 2-year-old bull, was made senior and grand champion, while the grand champion female was Barbarba C. B. 2d.

The Horses.

There were three breeds of horses shown by as many breeders. H. W. Merritt of Rosalia brought out 15 head of Shires, including three stallions and three colts. Forrester Prince, the 3-year-old black stallion, was given the senior and grand championship ribbon. Martha Washington, the 6-year-old dark bay mare, was placed at the top of the female classes. A small Shetland pony has been adopted by the attendants of this herd as their mascot.

The Clydesdales were shown by R. C. McCroskey of Garfield, and C. M. Hubbard, who judged the classes, placed Oaks Pride, the splendid bay stallion, at the top of the list. The senior and grand champion mare was Fairholm maiden.

There were nine Percherons and one stallion in the A. C. Ruby company, showing from Portland, and their champion mare, Ethel, was one of the six steel-gray mares in the six-horse hitch that won first place in competition with the other two breeds. The senior and grand champion stallion was Omega Jr., a 3-year-old.

C. M. Hubbard of Pullman judged.

The Swine Breeds.

The showing of hogs was very good and it brought out a number of local breeders as well as one herd from Yakima. This was I. J. Oder, who showed 27 head of Tamworths and 11 Polands. He was the heaviest exhibitor and won both of the sweepstake champion ribbons with King of the Mastodons, a junior yearling Poland boar, and Prospect Lass, a senior sow pig of the same breed.

G. W. Bradshaw of Sumner entered a Duroc boar and a sow with litter and A. J. Kissick of Graham showed four Duroc pigs. Fifteen head of Hampshires were shown by J. H. Stewart of Seattle and Henry Kane of Puyallup had four Berkshires. The other exhibitors were Emory Voss of Auburn, Charles Asbury of Puyallup, S. G. Anderson of Puyallup, A. W. Rhodes of Renton and two club entries shown by Elizabeth Cowan and Raymond Thieman of Puyallup.

Largest Poultry Show.

"The poultry show was the largest and best that has ever been shown in the state of Washington," according to Harry Collier of Tacoma, who helped William Coats judge the classes. "There was a larger number of birds shown and the quality was all first class. The dark Barred Plymouth Rocks had the heaviest entries, while the number shown in the Rhode Island Red classes were a close second, with the White Leghorns ranking third. There were birds from all over the northwest and one showing with several breeds from Vancouver, B. C. There was an excellent showing of pigeons from two local breeders and the turnout of ducks, geese and turkeys was much better than any one had anticipated.

The rabbit show brought out an improvement in color, weight and condition of all breeds," according to John Needham of Seattle, who judged the entries. "The show was put in readiness in much better time this year and the judging was finished at the end of the second day." There were more breeds than have ever been shown at Puyallup and the fur breeds were better represented, which shows that the rabbit is being used as a fur animal as well as for meat.

The new arrangement of the buildings gave the old agricultural building over to the horses and beef cattle. The horse stalls, which occupied half of the building, were filled by 22 head of jumping and performing horses owned by J. McCleave of Victoria, B. C., who put on a horse show three nights during the fair. In the same department were 18 Shetland ponys owned by F. H. Divan & Son of Monroe, Wis. The ponies were also used in the night show and in parades.

The Sheep and Goats.

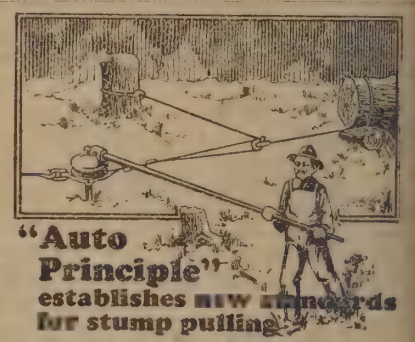
There were a few of the local sheep that were entered, but the main part of the show was made up from the Canadian breeders. A. C. Stewart of Aldergrove, B. C., showed Southdowns and G. F. Brown of the same town had the Romneys, H. V. Harmon of Orting entered six head of Hampshires.

The milk goats made a fine showing and were brought from local herds. M. P. Eggers of Woodinville, the Westwold farm at Edmonds, S. B. Davidson of Tacoma, A. M. Longhney of Seattle and Mrs. O. L. Williams of Sunnyside had the Toggenburgs. The goats were placed in pens built at the side of the poultry building and were separate from the hog division, but were in a good location on the grounds.

The state department of agriculture had four different divisions represented in as many booths next to the poultry building. The food division showed the kinds of meats and canned foods condemned by the inspectors. The dairy and live stock division had a display of milk utensils and machinery that are used by the milk inspectors in their work about the state and there were also some charts which showed the value of milk and its products. The horticultural division showed a few of the most common fruit diseases and demonstrated the value of grading potatoes for the market. The weights and measures department showed a number of weights that had been discarded and different kinds of scales and testing devises.

The Automobile Show.

The automobile show was housed in a separate building and there were many different makes of cars that appealed to a large number of the fair visitors. The space for this department was cut down from that allowed last year, which gave the extra building to the agricultural and horticultural products.



"Auto Principle" establishes new records for stump pulling

Internal gear develops more power — requires fewer parts — costs less

In the world war, internal geared trucks got through with the biggest loads, stood up best, gave the least trouble. In stump pulling, the internal gear is duplicating the wonderful records made by it in the automotive line. Only one stump puller incorporates this ADVANCED principle — the DOW — basic patents preclude its being copied. Fewer parts bring its cost down to bed-rock — NO other stump puller offers equal dollar for dollar value. Comparisons will quickly establish to the absolute satisfaction of the most skeptical that this wonderful machine is in a class by itself. Full particulars on request. Buy no stump puller until you get the complete story of the internal geared DOW. Write today for prices and details. David Dow & Son, 1258 1st Ave. So., Seattle, Washington.

DOW

Stump Puller

8 to 12 hours a day for 8 years

'Z' engine

Says J. B. Snider, Senatobia, Miss. . . . "Eight years ago we installed a "Z" engine. It has run eight to twelve hours a day, every day of the year since and is still giving wonderful service. Our repair bill has been less than ten dollars. We would not exchange it for any other engine we have ever seen or heard of."

Over 350,000 users have approved the "Z" Engine. No matter what your power requirements, there is a "Z" Engine to exactly suit your needs. Over 5,000 dealers carry these engines in stock and will save you money on freight.

1½ H. P. "Z"	(Battery Equipt)	$ 54.00
1½ H. P. "Z"	(Magneto Equipt)	74.00
3 H. P. "Z"	(Battery Equipt)	90.00
3 H. P. "Z"	(Magneto Equipt)	110.00

Orchardist Chooses Cletracs

The above are two of the twenty-four Cletracs now standard equipment in the Bert Johnson, Orchards, Nashville, Ark.

The illustration might be correctly named, "any place where fruit is grown," so general is the use of Cletrac among fruit growers.

These are some of the reasons why fruit growers select Cletracs:

Cletracs are easy to operate in and out among trees.

They are compact and low set which makes it possible to cultivate close up to trees and without damaging the low-hanging limbs.

Cletracs, because of their broad crawler tracks, ***do not pack the soil.***

Cletracs are "iron horses" that never tire. Good for twenty-four hour day, if necessary.

Cletrac's short turning radius is a big advantage in swinging from one row into the next.

Write for booklet and let us tell you the whole story of Cletrac's popularity among orchardists and grove owners.

News for Breeders

One of the best ways to solve the marketing problem is feed as much of the farm produce as possible to the live stock and then sell it in the finished form, declared Joe Tornay, a Jersey breeder and general farmer of Ellensburg, Kittitas county, Wash. Tornay has 16 head of purebred animals and eight grades and feeds a big part of the hay and grain that is raised on the 38 acres to his cows after either grinding the grain or trading it at the local mill for millrun or bran.

This is one of the first Jersey herds to be started in the valley and the start was made with a registered cow of the Stoke Pogis breeding. She is now 9 years old and has four daughters and five granddaughters in the herd at the present time.

The first herd bull, Pansey's Colonel Jack is an animal from the Nichols & Plunket herd and is a grandson of Pogis 75th of Hood farm. As yet there has not been enough improvement in the herd to make any appreciable difference, but the grade calves are all good, strong youngsters and promise to be profitable milkers.

The present herd bull is a son of the well-known Cowslip's Oxford, who was a grandson of Oxford You'll Do. There are five of his purebred heifers in the herd at the present time and one of them freshened too early, but produced 150 pounds of fat in four months.

Although Mr. Tornay does not have the privilege of a cow testing association he weighs the milk from each cow daily and makes his own tests at the end of each month in order to get a check on each cow and be able to weed out any that proves to be unprofitable. All the results so far obtained have been made on alfalfa hay and grains without the aid of silage or root crops.

HIGH TESTING HOLSTEINS.

It is not the amount of butter produced by the first cow of his Holstein herd to be officially tested that pleases John Hagloff, of Oakville, Wash., so much as the high fat test. For Mr. Hagloff recognizes the fact that a high percentage of fat is the goal of every breeder. He has been breeding Holsteins in a small way for four years. He now has 12 registered animals. He has made two official records. The first one, just referred to, was by Iris Cynthis Jewel, a daughter of Hollywood Iris Wit. Her seven days' production was 405 pounds of milk and 18.42 pounds of butter, or 14.74 of butterfat. Her average test was 4.9 per cent. Eight of his herd are in the Thurston and Grays Harbor Cow Testing association and they average from 4.1 to 4.2 per cent, which is the highest of any Holsteins in the association, and "Jewel" has produced as high as 79 pounds of fat in a month. Mr. Hagloff plans to put most of the herd on semi-official year test in the near future. His herd sire, Sir Tacoma Pontiac Violet, is a grandson of Sir Johanna Ruth Fayne on the dam's side and on the sire's side he is a grandson of King of the Pontiacs.

THE COLUMBIA SHEEP.

The federal government's sheep experiment station at Dubois, Idaho, has developed a breed of sheep known as the Columbia. The breed was developed by mating rams and ewes that were originally produced by crossbreeding with Lincolns and Rambouillets. The station reports that the mature weight of the Columbia ram is from 200 to 250 pounds and of the ewe, 125 to 150 pounds. The average fleece is reported as 10 pounds, with a shrinkage of 48 per cent and grading three-eighths and one-fourth blood combing. In 1922 the rate of increase in this breed under the supervision of the experiment station was 103 lambs to each 100 ewes and the lambs averaged 72 pounds each on the range at the age of 110 days.

REPRESENT THE WEST.

Interest is being expressed by breeders of Duroc Jersey hogs in the possible creation of a district comprising Washington, Oregon, Idaho, Montana, California and possibly Colorado to be represented on the board of directors of the national association of that breed. J. R. Pfander, secretary of the organization, who recently visited the northwest, indicated that he might make such recommendation upon his return to headquarters in Illinois. Should this be done it would possibly lead to the setting aside of an appropriation for the maintenance of a Duroc Jersey field man in this western district.

PUREBREDS FOR PORK.

J. R. Pfander, secretary of the National Duroc Jersey association, reports that the sentiment in favor of the use of purebred hogs rather than grades or crossbreds for pork production is increasing. He believes this applies not only to the Duroc Jerseys, but to other breeds as well.

All over America

This Book is Now Saving Millions of Dollars for the American People

The opportunity is now yours to Save Money on nearly everything you buy — for the Farm, the Home and the Family.

You have a copy of this book—or a neighbor has one. Because into every state, into every city, into every county all over America the Montgomery Ward & Co. Catalogue has gone, bringing its opportunity for money saving this Fall.

Montgomery Ward & Co. Is Working Constantly to Keep Prices Down

Over Forty Million dollars' worth of merchandise has been bought and manufactured especially for this Catalogue, bought when prices were the lowest—articles of steel were manufactured when steel prices were down, leather goods when hide prices were low.

Our buyers have actually searched the important markets of the world in their determination to secure these bargains for you—*to help hold prices down, to make your savings larger.*

Are You Using This Book?

Are you taking full advantage of your money-saving opportunity? Is your family buying from this book?

You can save many dollars this season *if you use this Catalogue*, if you buy from it regularly, if you study this book and see for yourself the saving it brings to you.

Ward Quality—*And* low prices

Never, in over fifty years, have we intentionally sacrificed quality to make a low price. We offer no price baits on unserviceable merchandise.

It is our policy to sell only goods of Ward Quality—the kind of goods that stand inspection *and use*. So a low price at Montgomery Ward & Co. is always a low price on reliable goods of standard quality.

We believe it takes both standard quality *and low price* to make a bargain. And every bargain we offer is a reliable, serviceable article that will give you entire satisfaction.

Begin today saving money by using this book. Begin today sending all your orders to Ward's—where your patronage is always appreciated, where for over fifty years every customer has always been given a square deal.

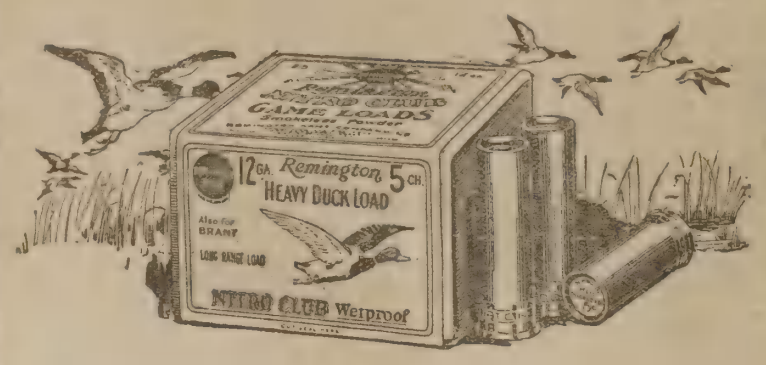
Before Buying Oil Stocks Ask Your Banker About Their Loan Value—Page 4



If you want to bring home the big Ducks— *here are the shells for the job.*

HERE'S the right load for big ducks and long range shooting. In 12-gauge, your choice of No. 4, 5, or 6 shot. In 20-gauge, with No. 6, 7, or 7½ shot. The 20-gauge is loaded in the 2¾ inch shell for the Remington 20-gauge Pump Gun, making the range and power equal to that of a larger bore.

In either gauge you are sure of a load that is not only powerful, fast and hard-hitting but *safe* as well.

The Remington Heavy Duck load is one of the new Remington Game Loads—made to give *uniform* shooting quality—the right velocity, pattern and penetration for the particular game you are going out after. Loaded in Nitro Club *Wetproof* Shells.

Here are the Remington Game Loads:

Heavy Duck Load
12-gauge recommended for Duck, Brant, and Jack Rabbit. No. 4, 5 or 6 Chilled or Soft Shot. 20-gauge recommended for Duck, Pheasant, Rabbit, Partridge, Prairie Chicken and Grouse. Loaded only in 2¾ inch shells—No. 6, 7 or 7½ Chilled or Soft Shot.

Grouse Load
Recommended for Grouse, Prairie Chicken, Pheasant, Partridge, Dove, Rabbit, Duck and Squirrel. 12, 16 and 20-gauge; No. 7 Chilled or Soft Shot.

Snipe Load
Recommended for Snipe, Rail, Plover, Woodcock and Quail. 12, 16 and 20-gauge; No. 9 Chilled or Soft Shot.

Quail Load
Recommended for Quail, Dove, Woodcock, Rail, Plover and Snipe. 12, 16 and 20-gauge; No. 8 Chilled or Soft Shot.

Dove Load
Recommended for Dove, Quail, Rabbit, Partridge, Plover, Grouse and Woodcock. 12, 16 and 20-gauge; No. 7½ Chilled or Soft Shot.

Squirrel Load
Recommended for Squirrel and Rabbit. 12, 16 and 20-gauge; No. 6 Chilled or Soft Shot.

Trap Load
12-gauge only; regulation charge of 1¼ ounces of No. 7½ Chilled Shot and special wadding.

Duck Load
Recommended for Duck, Pheasant, Hawk, Crow, Rabbit, Partridge, Prairie Chicken and Grouse. 12, 16 and 20-gauge; No. 5, 6 or 7 Chilled or Soft Shot.

Buck Shot Load
Recommended for Deer, Black Bear and Wolf. 12-gauge; loaded with 12 pellets of No. 0 Eastern Shot.

Goose Load
Recommended for Goose, Fox, Turkey and Raccoon. 12-gauge; No. 2 Chilled or Soft Shot.

Rabbit Load
Recommended for Rabbit and Squirrel. 12, 16 and 20-gauge; No. 6 Chilled or Soft Shot.

Everything that's in them is selected and backed by Remington—including the powder. Powder varies—*Remington Game Loads do not.*

Write for Booklet A—*"The Complete Story of Remington Game Loads."*

THE AUTHORITY IN FIRE ARMS, AMMUNITION AND CUTLERY

Why Freight Rates Cannot Be Reduced

Freight rates are still higher than before the war.

Many farmers repeatedly have heard it said this is because the Esch-Cummins Transportation Act "guarantees" the railways a net return of 5¾ or 6 per cent upon the valuation made by the Interstate Commerce Commission.

No "Guarantees" to the Railways

The railways are not "guaranteed" any specified net return by the Transportation Act.

The railways of western territory never have earned or received a return of either 6 or 5¾ per cent since the Transportation Act was passed. They earned and received an average of only 3.54 per cent on their valuation in 1921; only 4 per cent in 1922, and at the annual rate of only 4.2 per cent in the first six months of 1923.

Their net return in the first six months of 1923 was almost 45 million dollars LESS than in the first six months of 1916, before the Transportation Act was passed.

The last advance in railway rates was in 1920. Western railways in 1921 earned an average of only 3.54 per cent. If they had been guaranteed 6 per cent, their rates would have had to be increased. But in 1922 the Interstate Commerce commission **reduced** their freight rates an average of 16 per cent. This is now saving the shippers and costing the western railways about 300 million dollars a year.

Great Increases in Operating Expenses and Taxes

But freight rates are still higher than before the war. Why is this so? Why can they not be reduced? The answer—the only true answer—is—because railway operating expenses and taxes are still much higher than before the war.

Study the figures in the table below. They show what the western railways earned and what it cost them to do business in the first six months of 1916, and in the first six months of 1923.

Do not be misled by reports that railways are earning much better profits than in 1921 and 1922. This is true of the eastern and southern lines. **It is not true of the western lines.** Few railways in this territory are earning enough to pay any dividends on their stock. Thirty-seven railways, which operate almost one-third of the mileage in the west, have failed throughout the last two and one-half years to earn enough **to pay the interest on their bonds.**

The taxes of western railways are double what they were seven years ago because government authorities have increased them.

Why are their operating expenses almost double what they were then?

The Wages of Employees

Of every $100 of operating expenses of the railways, $61 consists of wages. Some employees are paid by the day, but a large majority by the hour. The following shows the average wages paid to railway employees in 1916 and at present:

Average Wages of Railway Employees

	Hourly	Daily
1923	59.5¢	$7.71
1916	27.5¢	4.41
Increase	32.0¢	$3.30
Per cent increase	116	75

The railways of western territory are paying their employees about $550,000,000 more wages a year than in 1916.

High Prices for Fuel and Materials

The average cost of coal burned by the railways in 1916 was $1.82 per ton. Thus far in 1923 it has been $3.64, or 100 per cent more. Owing mainly to this western railways are spending over $100,000,000 a year more for fuel than in 1916.

The prices of materials and supplies used in the operation and maintenance of railways average more than twice as high as seven years ago. The western railways are spending almost $200,000,000 a year more for materials and supplies than in 1916.

While the operating expenses and taxes of the western railways are **double** what they were in 1916, their average freight rate is only 45 per cent, or less than **one-half**, more than it was then. **It is only 38 per cent more than it was in 1913,** before the war.

Is it any wonder that with their operating expenses and taxes **doubled,** and their average freight rate increased **less than one-half,** they are earning a much smaller net return than before the war? Is it any wonder, in view of these facts, that they cannot reduce their rates any more?

West Needs Prosperous Railways

The west needs prosperous railways. Only prosperous railways can raise capital to increase their facilities and render more and better service to the public. A majority of the railways in western territory are suffering as great adversity as any class of people in this territory, not excepting the farmers. No reduction of rates can reasonably be demanded or considered while this is true.

Earnings and Expenses of Western Railroads for First Six Months of 1916 and 1923:

	1916	1923	Increase	Increase Per Cent
Total Earnings	$658,000,000	$1,089,000,000	$431,000,000	65 per cent
Operating Expenses	441,000,000	878,000,000	437,000,000	99 per cent
Taxes	34,000,000	68,000,000	34,000,000	100 per cent
			Decrease	Decrease
Net Operating Income	177,700,000	133,000,000	44,700,000	25 per cent

This is one of a series of advertisements published to give the farmer authentic information about railroad matters. Any questions that you would like to ask will be cheerfully answered. Address:

SEEDS AND NURSERY STOCK—Yes, they are offered on this week's "Want Ad" page.

What Nurse Crop Gives Legumes Best Start?

By F. J. SIEVERS

Head Department of Soils, State College of Washington

With the increasing interest in diversified farming in the Palouse region of eastern Washington and the gradual attempts at continuous cropping involving the introduction of legumes like clover, alfalfa and sweet clover in a crop rotation system, the matter of a proper nurse crop for these legumes is receiving considerable attention.

There is much misunderstanding concerning the merits of any nurse crop largely because the name "nurse crop" naturally leaves the impression that a crop grown for such purpose will have a beneficial effect on the legume crop with which it is grown. The fact of the matter is that all nurse crops are a handicap to the legume and the only justification for their growth is to give the farmer a profitable crop on his land for the year during which the legume is being started. In all cases, provided weeds are not permitted to interfere and serve as a volunteer nurse crop, all legumes will produce the best stand when grown alone, and if this is the only factor under consideration, nurse crops should never be used.

The farmer, in selecting a nurse crop, should, therefore, give first consideration to such as produce a fairly profitable crop and do the least harm instead of expecting to derive any benefit. To make an intelligent selection, let us see what the requirements of various crops are and in just what respect a nurse crop is a handicap. Wheat is so commonly grown it will serve as a good illustration of a cereal. This crop is seeded either in the fall or early spring and has an opportunity to utilize much of the soil moisture and to make considerable growth before the legume (clover, alfalfa, etc.) makes its appearance. The new legume plant soon learns that it has to compete under conditions of shade and a limited moisture supply and adjusts itself accordingly. This condition continues until harvest time, and harvest time in the Palouse country comes when the wheat has taken out of the soil about all the moisture within its reach. The fact of the matter is that crop maturity and moisture supply are so closely associated here that it frequently happens that the soil moisture gives out before the growth is completed and the crop "burns" or ripens prematurely. When this wheat crop is removed the young legume, assuming that it is still alive, is exposed to the direct sunlight and the hottest winds that are experienced at any time of the year, and both of these factors have a pronounced effect on increasing the water requirements of the plant. This all happens when the soil moisture supply, the only source from which the plant can draw its required water, has been exhausted, at least as far as the wheat plant is concerned. The expected naturally happens; the plant dries up and is dead before the fall rains come. Cereals as a nurse crop for legumes, under soil and climatic conditions, fail so frequently in this region that their recommendation for this purpose is not justified.

Different crops, however, show a wide variation in the amount of water they take from the soil during the growing season. In the extensive investigational work conducted by the soils department of the State College of Washington in an attempt to develop a system of farming for the Palouse region which is not only profitable, but permanent as well, a large number of soil moisture determinations extending over several years were made. The soil samples were taken after harvest in units of one foot to a total depth of 10 feet on field plots grown to a number of different crops and also on plots that were summer fallowed. The table below gives detailed data in percentage of moisture present in each foot of soil to a depth of 10 feet after harvest of wheat, oats, barley, corn, peas, alfalfa and on summer fallow. It was found there is a wide variation here, not only in the total amount of water used, but also in depth from which the different crops draw the soil moisture.

	—Per cent moisture in soil after Harvest of—					
Depth.	Wheat.	Oats.	Barley.	Corn.	Peas.	Alfalfa.	Summer fallow.
First Ft.	9.21	8.23	10.30	12.11	9.85	7.18	23.61
Second Ft.	9.81	9.83	11.32	13.59	10.46	9.47	23.05
Third Ft.	9.83	9.34	11.92	15.25	10.25	8.70	22.45
Fourth Ft.	9.83	9.61	13 09	17.40	15.40	8.93	22.53
Fifth Ft.	11.32	11.76	16.21	20.62	20.23	9.70	22.34
Sixth Ft.	13.56	16.69	18.81	22.13	21.29	11.12	21.93
Seventh Ft.	17.23	19.28	21.41	22.68	21.31	15.34	22.28
Eighth Ft.	19.61	21.47	21.75	23.13	21.40	14.03	23.57
Ninth Ft.	22.79	20.96	21.65	21.42	21.57	16.82	23.13
Tenth Ft.	22.86	21.26	21.67	21.46	21.59	16.70	23.83
Yield in bushels per acre	42.3	76.6	41.1	31.8	31.1	....	None
Moisture loss in T. per A.	155.9	103.8	105.1	64.1	83.9	?	21.7

Wheat, due to its long-root system, which has been found to extend to a depth of eight feet or more in the deep Palouse soils, shows its influence on the moisture down to the ninth foot, oats to the eighth, barley to the seventh, corn and peas to about the fifth, alfalfa beyond the 10th foot and summer fallow shows practically the same moisture content throughout the entire 10 feet. It is very evident here that the small grains utilize moisture more complete than corn or peas, and that alfalfa has them all beaten in this respect.

The results show that a 42.3-bushel crop of wheat removed 155.9 tons of water from the soil, while a 31.1-bushel crop of peas removed only 83.9 tons. All of this loss, however, should not be charged to the crop, because the summer fallow field that grew no crop at all lost 21.7 tons of water. By subtracting this loss of water from the fields cropped to wheat and peas it may be assumed that the remainder represents more nearly the water removed by the crop. This shows a loss of 134.2 tons for wheat and of 62.2 tons per acre for peas—or, in other words, the former crop has taken over twice as much water from the soil as the latter.

If we concede that the moisture content of the soil is an important factor in the establishment of a legume crop, then the fact that a pea field after harvest contains per acre more water by 72 tons than is found in a wheat field at that time of the year should give peas a decided preference as a nurse crop.

Besides this, peas are seeded early in the spring, necessitating the preparation of a seed bed at the time when most legumes can be seeded to best advantage. The crop can be profitably grown either for hay or grain, the decision depending upon the farmer's choice as influenced by the effect that the nurse crop is having on the young seeding. If it becomes evident that the young seedling is beginning to suffer from drought the peas may be harvested for hay and thus, through their early removal, more soil moisture is left available for the young seedling.

Everything taken into consideration, peas have proven more satisfactory as a nurse crop in the Palouse region than any other crop and results from their use are comparable to those obtained where the legume was started without a nurse crop.

The young seedling and the pea nurse crop are seeded together in the spring as early as soil and climatic conditions will permit. The rate of seeding for peas when used as a nurse crop should be about two-thirds as heavy as otherwise recommended and then the crop should be watched during the growing season, so that in case the summer drought appears sufficiently severe to endanger the development of the young seedling, the nurse crop may be removed and harvested as hay.

Regarding Water as an Investment in Irrigation

By E. C. McCLELLAN, C. E.

Tracing the development of plant life from early geologic times to the present, Mr. McClellan, in the following article, comes to the conclusion:

That the biggest plants, encouraged by maximum water supply, do not produce the most or the best food supplies.

That the minimum water supply may produce the best quality, but only a negligible quantity.

That combining quality and quantity the medium-size plant, encouraged by the mean supply of water, produces the largest amount of food supply at the least relative cost.

That the mean supply of water is measured by the quantity of precipitation of from 18 to 22 inches found in the best agricultural sections of the country.

That the mean water supply, given to arid lands by irrigation, will double the food production of the best nonirrigated agricultural lands.

Plants originated in water. Migrating to the land, following the elements they needed for their growth, as the water supply by precipitation decreased they were unable to secure as much as when surrounded by water, and they decreased in size.

When the period arrived when the water, upon being delivered into the ground, changed into a vapor, or fog (as it does at present), they were forced to evolve a new method for securing it. At that period in their evolution they reached their minimum size, but as soon as they were able to evolve and perfect the new method they increased in size again to a maximum a trifle above their present size—as the precipitation has continued to decrease since that new method was perfected—and the size of the plant is again decreasing.

The food products are primarily stored by the plants for purposes of propagation—or feeding their young until they have attained a size and strength sufficient for them to secure their own food.

In attempting to discover how these food products were produced, scientists discovered that these products were not manufactured by the plants at all, but manufactured, or combined in the ground; and that the plants only created the necessary cells, or store rooms, and then took them up after being manufactured and stored them for use.

They also discovered that such food products were only combined when there was a certain proportionate quantity of each element contained in the ground at that point, and when there was any great difference in such proportions they would not be combined.

As about 10 per cent of the food products consists of the two elements entering into water, that means that there must be about that proportion between water and the other elements.

It was also reported that with any great increase in water supply these food products could not be combined; and that should the proportion be right, and the food products manufactured, but an increase in water in the ground—by precipitation or irrigation—destroy that proportion before the plants could take the substances up, they would be dissolved into their original elements.

The result is that when a greater quantity of water is placed into the ground than the plants are accustomed to find there, as they use nearly 90 per cent of water in their structural growth, they will respond with a large-sized plant, and will create large cells or store rooms for food products; but those products not being able to be manufactured the plant can not find them, and will be forced to fill the cells or store rooms with other substances.

In considering water as a medium of exchange for food products, we must take the same viewpoint we do when considering money as a medium of exchange for articles we wish to secure, and figure upon the greatest return in food products we can secure with the spending of any given quantity of water we have to dispose of.

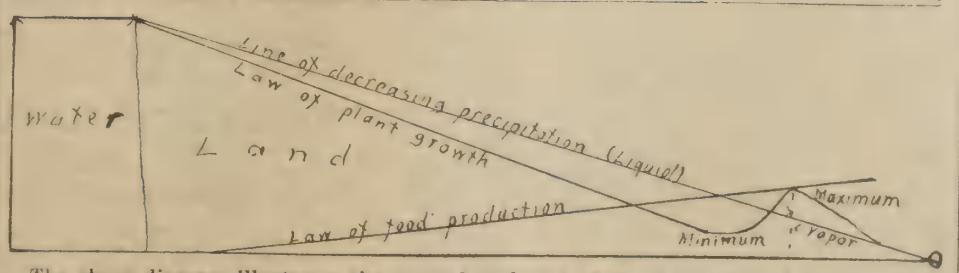
Experiments have been conducted for many years under supervision of competent men to determine just what the return will be for about every food plant cultivated, and table No. 1, made from the returns of 10 years' experiments, shows just what we can expect to secure (or rather what the plants will secure for us), when different plants are provided with different quantities of water.

TABLE NO. 1.

Plant.	Crop per acre.	—Inches in depth of water— furnished. 20	25	40
Alfalfa	Tons	4.80	4.94	4.68
Timothy	Tons	1.90	1.90	3.00
Sugar beets	Tons	13.78	18.63	20.82
Carrots	Tons	17.29	16.80	23.48
Corn	Bushels	79.00	89.52	99.16
Wheat	Bushels	37.81	43.33	46.46
Oats	Bushels	62.28	54.76	80.70
Potatoes	Bushels	154.00	195.00	250.00

TABLE NO. 2.

Acres of land.		One acre	Two acres	Three acres	Average returns on nonirrigated land.
Irrigation per acre.		30 inches	15 inches	10 inches	
Total water supplied.		40 inches	50 inches	60 inches	
Cost of water supply.		$135.00.	$67.50	$45.00	
Plant.	Return.				
Alfalfa	Tons	4.68	9.33	14.40	
Timothy	Tons	2.00	3.00	4.00	1.25
Carrots	Tons	23.43	48.00	51.00	
Sugar beets	Tons	21.00	39.00	41.30	
Corn	Bushels	99.00	179.00	225.00	40.00
Wheat	Bushels	46.50	86.60	113.50	18.00
Oats	Bushels	80.00	143.00	186.80	35.00
Potatoes	Bushels	250.00	390.00	462.00	90.00



The above diagram illustrates the general evolution of plant growth and food production.

Starting in water and surrounded by all the elements a plant needed, its methods for securing them were simple and it attained a large growth. Then, forced to follow the elements to land, it had to evolve methods to secure those elements by sending roots into the ground, and also provide a supply of food for its young to live upon until they were able to forage for themselves. This was done by creating cells into which they stored the food and placed in each cell one of its young.

These cells are the seeds or grains of our cereals. At first the young did not need much food, but as the elements hid themselves deeper in the ground the plant had to secure more food to last the young until they attained a greater strength.

At this present period the water supplied by precipitation in the best agricultural sections of the United States is from 18 to 22 inches in depth annually.

Applying the same law of financing we do in working out any business enterprise to water supply, and adapting it to irrigation as a legitimate business industry, we have table No. 2, showing as a basis 30 acre inches of water for our capital in water and a value of $4.50 in money value for it, and irrigating lands having an annual precipitation of 10 inches.

Raising plants is a distinctly manufacturing enterprise, in which the farmer assists the industry by attending to placing the plant in the ground, providing it with the necessary elements that the soil lacks and by systematic cultivation surrounding it with the environment best suited to the plant.

The necessary elements being in the ground in their proper proportion the plant will respond to the treatment with the best plant growth, and, the necessary food products being manufactured in nature's laboratory, they will be taken up by the plant and stored for man's use.

The most dangerous fallacy circulated regarding irrigation is that different soils require different quantities of water in irrigation. The answer to that false doctrine is that irrigation is carried on for the purpose of supplying plants with the quantity of water they need, and they need exactly the same quantity of water in a loose, porous soil as they do in a fine loam or clay soil—and no more. They need that water delivered into the ground in the same manner—as closely as possible—as it is delivered into the ground by precipitation, so it will immediately turn into a vapor, or fog, and remain within reach of the plant, and that can be done at reasonable cost.

The claim that this can not be done is met by the answer that it is being done in many places. But, if there is a sand bank, or gravel pit, in which the vapor can not be held a reasonable length of time, it should never be irrigated as long as there are any other tracts of good land the water can be carried upon. (Copyright, 1923, by E. C. McClellan.)

FROM A SMALL BEGINNING.

Glenwood farm, near Buckeye, north of Spokane, got its start in Jerseys at the Glen Tana farm sale five years ago, when Mr. Hamann, proprietor, bought two head of cows. Now Glenwood has 13 head of good Jerseys on the farm and has two bulls leased out. Dairying was just a sideline on the farm at first, but is rapidly becoming a leader. Mr. Hamann and his son are now milking seven cows and selling cream in Spokane.

What Are Oil Stocks Worth?

There are about 283,000 oil wells in the United States, and W. H. Gray, president of the National Independent Producers' association, affirms that 260,000 of them are operated at a loss. Mr. Gray emphatically denies a persistent assertion of overproduction. On the contrary, he declares, production is dropping off rapidly, and unless the refiners and distributors will pay the producers a price that will cover the cost of production, the second largest industry in the United States will be killed.

Mr. Gray says the oil producers are not getting a square deal from the refiners and distributors, and that if existing treatment continues much longer the American people will awaken to a realization that they must pay abnormally high prices for gasoline.

If the head of the independent oil producers understands the facts, as it seems he should, and is not presenting them in the light of misrepresentation, ownership of a producing oil well is far from assuring the owner a fortune, or even a profit. According to his statistics only one well in 12 is paying, a ratio of loss to profit that should put wheat growers and other farm producers on guard against the glib salesmen of oil stock who hold out the delusive expectation that big and easy profits follow the striking of oil. Discontented grain growers who sell or mortgage good wheat land and buy stocks in oil wells 2000 or 3000 miles away are engaging in a mighty poor trade.

In the Land of Wheat

The other day the electric train from Moscow to Spokane was speeding along through the wheat lands of Whitman county about midway between Oakesdale and Spring Valley. The writer was looking out the window for things of interest when a herd of 50 or so good red hogs, including three or four litters of fall pigs, caught his eye. The 30-mile-an-hour speed of the train gave not a fraction of the time necessary to an adequate appraisal of the prosperous-looking scene. As the observer turned away, his eyes were greeted in the other end of the same pasture by a flock of black-faced sheep that showed every evidence of being equal if not superior to the red hogs from the standpoint of quality. There were probably 30 or 40 of these good sheep in the flock. Again the time for observation was inadequate and the writer is not sure today whether or not they were grazing in an alfalfa stubble pasture, but he believes they were.

This was right in the heart of the great Palouse country that some people think yet can produce nothing but wheat. Wheat is and always will be the leading crop of the Palouse country, but scenes like this indicate that balanced farming even in the Palouse country, is practical. Some fear is expressed that the wheat-growing section will go too rapidly and too far in its change from a strictly one-crop to a balanced farming program, but scenes like the one described are too few up to this time to warrant such fear. Every 640-acre section of the farming land of the great Paulouse should be able to show the equivalent of this herd and this flock in similar herds and flocks, or dairy cattle, beef cattle or poultry.

We Need More Farm Flocks

The woolen mills of the United States make up into various forms of woolen goods twice as much wool each year, under normal conditions, as is produced in this country. That should give us something to think about. For the past several years sheep production, from the standpoint of numbers of sheep and pounds of wool, has been on the decline. Last year there were 37,000,000 sheep in the United States, according to census figures. Ten years ago there were over 50,000,000 and 20 years ago over 60,000,000. In 1921 the wool production of the United States was about 225,000,000 pounds, a reduction of approximately 25,000,000 pounds in two years.

While a number of conditions and influences have brought about these results, at least one of the reasons is the reduction in range area. To offset this, there should be increased numbers of sheep on the general farms of the country. Too few farms in the Pacific northwest carry any sheep as a sideline, notwithstanding the fact that sheep, in a great many cases, will pay their keep by soil improvement and eradication of noxious weeds.

The general farms of Ohio have almost 2,000,000 sheep on them in the form of farm flocks. This is above the average per state of all sheep, both range and farm flock, in the states of the northwest. If it is profitable there it should be here.

There is no get-rich-quick possibility in sheep production on the farms of the northwest, but there is a great opportunity to improve the quality of agriculture in this territory and at the same time add to the farm a very real and dependable source of income.

Quality Should Affect Price

Potatoes are sometimes just spuds. George J. Cannon, a grower of commercial and seed potatoes in Spokane county, believes that the time has arrived when spuds should be kept off of the market and potatoes of real quality offered in their place. He believes that potatoes should be sold on the wholesale and retail markets on the basis of their quality rather than the fact that they are just potatoes.

It would be quite a task to educate the potato-buying public as to the real qualities of potatoes, but the results should be worth the effort. Purchasers in the city markets would be glad to secure superior potatoes if they could, and, if a system of grading and marketing were established which would enable the housewife to order her potatoes by variety and grade, it would be a great advancement not only for the consumer, but for the producer who strives for a high-grade product.

Hard on the Scrub Hen

County Agent Fred Martin of Wahkiakum county played a shabby trick on a lot of unsuspecting hens in the flock of F. V. Grimes the other day. Mr. Martin looked over the flock carefully, one bird at a time, placing the unsuspecting ones in a coop by themselves. What he did it for was revealed a week later when the figures which Mr. Grimes had kept during the week showed that the 134 unsuspecting biddies had produced only seven eggs during the week, while the 411 which Mr. Martin had placed in other quarters had produced 743.

It takes a heartless man to treat hens that way, but the faster we become heartless the better for our bank accounts.

IOWA'S FARM LANDS.

Wallace's Farmer: The fact that the average farm has jumped in value over $21,000 in 10 years is given as satisfactory evidence of the state's prosperity. It might be well to ask who got the benefit of that increase.

Washington State Gleanings

HARRINGTON SHIPS MUCH WHEAT.

Seventy-four cars of wheat have been shipped from Harrington this fall, 12 in August and 62 in September. They contained 96,000 bushels. Wheat is pouring into the warehouses at the rate of 30,000 bushels a day.

CLUB RECORDS COMPLETE.

Mrs. Mabel Gould, boys and girls' club leader of Eden valley, was the first of the club leaders to succeed in collecting and turning in the completed club record books which determine who is eligible to attend the annual Clallam county club banquet at Port Angeles.

PLANS MODEL POULTRY PLANT.

Frank W. Schultz, president of the Commercial National bank of Wenatchee, recently visited the Henacres poultry plant and hatchery at Prosser to get ideas for a poultry plant at Wenatchee. Agricultural conditions around Wenatchee are very much similar to those in the Prosser district, where the poultry industry has been successfully developed, he says.

RED CLOVER SEED PRODUCTION.

Production of red clover seed on a commercial basis in the vicinity of Chehalis is assuming considerable proportions, according to announcement made recently, when a large sale was made by the Elston Seed company to the Portland Seed company. The seed sold for $25,000, and growers netted 20c per pound. Mr. Elston, head of the concern, states that his estimate of the local crop here is from 60,000 to 100,000 pounds of seed.

RUNS THIRTEEN-ACRE RANCH.

Nothing but finished products go off the place of R. P. Rockett of the Cowiche district in Yakima county. He has 13 acres of land and he keeps four dairy cows and nearly 500 chickens. The cows and chickens give him a better income than could be secured from any crop he might grow on the place and sell, he said. The hay he grows is fed to the dairy cows and to the chickens as well.

He is now keeping 480 White Leghorn hens and all the feed which they consume, except green feed and skim milk, is bought. Alfalfa hay is fed to the chickens in racks and they eat all the leaves and even some of the stems, he said. All the ground occupied by the poultry is that on which the house stands, which is 22 by 100 feet, and a yard space of equal size. He does not let the chickens out of this enclosure at all.

Mr. Rockett got his foundation stock in the first instance from the east, both the D. W. Young and the Tom Baron strains being represented. This stock he has crossed with Tancred strain and more recently with the Hollywood strain.

WASHINGTON'S CRANBERRY CROP.

With the doubling this year of the cranberry crop in the Ilwaco district, Washington takes fourth place in the production of these berries. This is the statement of W. E. Schimpff of Astoria, Ore., sales manager for the Pacific Cranberry exchange. "While the growing of cranberries began several years ago, it has only recently settled down to be one of the stable fruit industries of the state," said Mr. Schimpff.

"The appropriation of the last legislature for putting an expert in the field at Ilwaco experiment station has resulted not only in doubling the crop of that section, but the quality of fruit this year is better than it has been.

"The acreage in the Ilwaco district is between 400 and 500 acres, all under intensive cultivation, and there is a small area near Aberdeen now in bearing. There is still in Washington a potential cranberry area of about 3000 acres. The crop is one of the most expensive to bring to bearing. It costs around $1000 an acre to clear, prepare the ground and plant the vines, and four years are required to develop the vines to produce a marketable crop.

"All the sod has to be removed from the bog, and the surface is covered with three inches of sand. The plants are set 10 inches apart, and about 60,000 are set to the acre. All work, as a rule, has to be done by hand, as the bog will not bear the weight of a horse. The total crop in the United States this year is one of the largest ever produced."

RECORD YEAR FOR BERRIES.

With the berry season practically at an end, 1923 will be recorded as undoubtedly the greatest year in the history of the industry in the Puyallup valley, according to reports compiled at Puyallup.

While the season has not been, perhaps, the most profitable one ever enjoyed by growers, owing to market conditions which could not be overcome, the yield has been the heaviest and more berries have been shipped from the valley than during any previous year.

Undoubtedly the most encouraging fact about the industry—the one that will redound to the benefit of the growers and the valley in general—is the exceptionally high quality of the berries produced this year. Especially is this true of the Evergreen blackberries. Growers, canners and shippers point with pride to the fact that the Puyallup valley's blackberry crop of 1923 was remarkable for its large-size berries, their delicious flavor and firmness of texture.

The Pacific Northwest Canning company completed its heavy blackberry run September 29. The canning of Bartlett pears also came to a close the same day. According to W. J. Vary, general manager, the company handled more than 1,500,000 pounds of berries and 100 carloads of pears during the season.

W. H. Paulhamus, president of the Puyallup and Sumner Fruit Growers' association, says 1923 has been a most remarkable year for the berry industry. "We have had to cope with serious situations, such as the three days' heavy rain, shortage of pickers and a none-too-brisk market," said Mr. Paulhamus, "but we have had splendid success in marketing our berries, and I believe the growers are quite satisfied with the results. The association hopes to be in shape next year to render a still greater service to its members."

"Our first berry season, under the present management, has been better than anticipated," said B. F. Emery, manager of the Puyallup Packing company at North Puyallup. "Our pack has been large, considering the limited capacity of our plant. We expect to install additional machinery and double the capacity of the cannery next year."

Those Foreign Debts

President Coolidge Stands Firm for Their Payment in Full

Propaganda has been renewed for cancellation of the war debts owed by allied countries to the United States, the agitation is so vigorous that President Coolidge deemed it advisable to give out a statement from the White House last Friday that he is unalterably opposed to cancellation.

The president takes the reasonable position that we should not unduly press any of or debtors and should be liberal in the terms of settlement. His idéa of liberality is the basis of settlement already reached with Great Britain.

The newly chosen head of the American Bankers' association, elected a few days ago, was quoted in one widely published interview as favoring complete cancellation of these debts. He denies the authenticity of that interview, but says he "is in favor of a recasting of amounts due the United States from foreign governments as a means of making available money to purchase America's excess products."

We doubt if any of our readerss will be caught with that chaff. Borrowing countries owe the United States nearly $12,000,000,000. If they pay back that $12,000,000,000 Uncle Sam can cancel $12,000,000,000 worth of Liberty bonds. But if the borrowing countries do not pay their debts to us Uncle Sam will have to tax his own citizenss $12,000,000,000, for the retirement of the quantity of Liberty bonds. The upshot of all this agitation for cancellation of debts is an effort to take the load off the people of Europe and put it still more heavily on the people of the United States.

But the agitation for cancellation is not confined to the newly-elected president of the bankersss' association. The International Chamber of Commerce has a committee on "economic restoration," and its chairman, Fred I. Kent, is an American. He is back from a tour through the European countries with a recommendation that "some fair way" of cancelling interallied indebtedness be worked out as a means of securing world economic restoration.

President Coolidge's statement followed the renewed agitation started by the president of the bankers' association and the recommendations of Chairman Kent. We are glad that the president is on guard against this dangerous propaganda, and that he is knocking it without delay.

World Farming--Italy

Of the 71,653,000 acres, in round numbers, comprising the area of Italy, 70 per cent is returned as productive; nearly half of this amount is under cultivation. About 60 per cent of the working classes are engaged in agricultural pursuits.

In 1921 Italy produced 102,400,600 cwts. of wheat, 48,000,000 cwts. of maize or corn, 28,000,000 cwts. of potatoes and 30,000,000 cwts. of sugar beets. Other productions include 11,000,000 cwts. of oats, 9,000,000 cwts. of rice and 8,000,000 cwts. of beans. The vines conributed 726,000 gallons of wine and the olive trees 352,000 gallons of oil.

In 1921 the silk cocoon crop was 3000 tons.

In 1918 Italy had 989,786 horses, 949,162 asses, 496,743 mules, 6,239,741 cattle, 24,026 buffaloes, 2,339,926 pigs, 11,753,910 sheep and 3,082,558 goats.

The forests of Italy cover over 11,000,000 acres, with the value of their yields in 1915 about $134,000,000, exclusive of secondary products. Large areas are devoted to hay and grass. Northern Italy is famous for its dairy districts and large cooperative dairies have been established.

Italy has a population of about 36,000,000.

The Great Millstone

Selfishness Lies at the Root of Much of the World's Ills

And the second is like unto it, namely this: Thou shalt love thy neighbor as thyself.—Mark 12:31.

There is a funny song going the rounds, the leading idea of which is that "I love me." It has produced many a laugh, but back of the thought that it contains lies one of the lamentable frailties of humanity, selfishness.

This would be a happy world for everybody if just plain, contemptible selfishness were wiped out of it. What ill known to humanity is not more or less traceable to that trait of the human heart? The thief is in jail because of selfishness. The children of the poor man are hungry, all to often, because of the selfishness of those whose plenty was secure and is withheld because of plenty. Capital and labor are at one another's throat because of selfishness. The world was recently torn asunder by a terrible war that had its source in selfishness and its wounds are healing with snaillike peace because of continued selfishness.

The master religionist knew the fundamental truth when he set forth the two great, basic commandments. The second is great because of the greatness of the first and the second will be obeyed only when mankind has learned to understand and honor the first. "Thou shalt love the Lord thy God with all thy heart and with all thy soul and with all thy mind and with all thy strength." This means inevitably that one must love the good, the pure, the holy, the true, the honorable, the just with complete devotion. And so doing, how can one but love his neighbor as himself? And, loving one's neighbor, how can one be selfish and seek for his own good alone that which is common good and indivisible?

FARM BUSINESS AND MARKETS OUTLOOK

FALL improvement in industry and trade has not been so marked as expected by the extreme optimists, but some expansion has occurred and prospects for the fall and early winter appear favorable. Since the business tide has not moved as the pessimists predicted, many of the latter have become convalescent.

General commodity prices started downward last March, but have pursued an upward course in the last 60 days and there is much more strength and stability apparent in the price structure than a month ago.

Owing to the approach of cold weather, the building industry is not placing orders for materials in such large volume as earlier in the year, railroads have filled their most pressing wants and auto makers, although keeping up a relatively high output, are passing through a seasonal slackening. The steel and iron industries are busy on old contracts, but new orders are not being booked fast enough to continue the present rate of operations. Both woolen and cotton mills are less active than in the boom days of last spring.

In general, buyers are indisposed to make purchases for the distant future, as there is little fear that prices will move up rapidly or that deliveries will not be prompt.

While employment is not so complete as it was five or six months ago, there is little real unemployment, and the income of the industrial classes is high enough to maintain a broad and vigorous demand for the products of the farm and factory. Distribution of goods is active according to reports from retailers and wholesalers. Dollar sales of the two leading mail order houses in September showed gains of 18 and 19 per cent, respectively, over the preceding month, and 25 and 40 per cent over September, 1922.

Foreign conditions are fraught with uncertainty, but unfavorable events abroad have not caused as serious results in this country as expected, so that no reason for increased alarm is apparent. Political dictatorship may be the prelude to more efficient production and an industrial revival abroad, which would mean increased competition for American manufacturers and industrial classes, but should broaden the market for our surpluses of wheat, cotton, pork and lard, and at the same time reduce the cost to farmers of the things they must buy.

Slightly tighter money is incidental to the crop-moving season. Most sections report that farmers are reducing their debts this fall. None of the credit stringency of three years ago exists. This is an important matter in view of the large part which interest rates and credit conditions play in business expansion and contraction. High wages, high taxes and high freight rates are retarding influences, however, and, since heavy production in the last year has filled up the shortage in goods and the acute shortage in new building, demand henceforth is likely to continue on a more normal scale paralleling the growth of the country instead of at the feverish rate of early last spring.

Erratic Trend in Cattle Market.

Recent fluctuations in cattle prices have been violent as a result of sharp changes in receipts. Last week a sharp upturn occurred, but the market is headed the other way at present and is down to the low point of the season. The dressed beef market has been a factor in the price trend, but shows more absorbing ability at present.

Cattle feeders are displaying caution, both in volume and kind of purchases.

Hog Market Sagging.

The hog market shows occasional upturns when receipts decline, but is gradually drifting lower. Well-finished hogs are at a substantial premium. Combined receipts at 10 markets during the current week are running about 30 per cent larger than last year, but average weights are lower.

Are Lamb Feeders Overdoing?

Lamb feeders seem to be throwing caution to the winds this year, although the sheep industry has been so thoroughly liquidated that their operations may still come out on the right side of the ledger. Total shipments to the country have been heavy for several weeks and in the week ended September 28 were 263,827 head, the largest for any like period as far back as records are available. This is more than double the number in the corresponding week last year and two years ago. If the same rate of gain is maintained during the next six weeks there is some likelihood that the fed-lamb market this winter will be oversupplied. Feed costs promise to be higher than last year and a larger feeding margin will be necessary. Most of the increase in feeding is in the corn belt states, as the western irrigated sections have taken only about the same number as last year.

Combined receipts of sheep and lambs at leading markets declined slightly last week and prices strengthened decidedly.

Wool Prices Firm.

Wool prices are firm, although seaboard markets report a smaller volume of buying last week. Mills have fairly large stocks on hand and new orders for goods are not coming in rapidly enough to stimulate heavy purchases of raw material.

Wheat Market Holds Advance.

Wheat prices show stubborn strength and are slightly higher than a week ago. Expectations of government aid were a factor, but trade conditions also are more favorable for higher prices and the advance in corn to practically the same price as wheat was helpful.

The government's October estimate reduced the spring wheat crop 8,000,000 bushels, so that the total of all wheat is placed at only 782,000,000 bushels, against 862,000,000 bushels last year. Of the spring wheat crop 45,779,000 bushels is durum and unsuited for use in American mills, leaving only 168,000,000 bushels of bread spring wheat, compared with 190,000,000 bushels last year. Minnesota, the Dakotas and Montana together have only 97,000,000 bushels other than durums, which is much less than the probable milling needs of the northwestern milling centers and gives ground for the belief that prices in that section will rise to a level at which Canadian wheat can be imported over the 30-cent tariff wall and also will attract wheat from the Pacific coast, thus helping prices in that section.

The rye market has not advanced as rapidly as wheat in the last month, but demand for rye flour has expanded greatly in the last few days and prices are more buoyant.

Advance in Corn Continues.

Corn prices continued to advance last week and are only slightly below wheat at the present time. Old corn is extremely scarce, as the upturn has not attracted an increase in offerings.

The October oat crop estimate was reduced 9,000,000 bushels to a total of 1,302,000,000 bushels, compared with 1,201,000,000 last year. The barley crop estimate was practically unchanged at about 7 per cent larger than in 1922. The flax seed estimate was raised to 19,623,000 bushels, compared with 11,668,000 bushels harvested a year ago.

Cash Grain Markets.

The range of cash grain prices for the week ended October 10 was as follows:

CHICAGO—Wheat—No. 2 red, $1.09 1-2@1.12 3-4; No. 3, $1.08 1-2; No. 2 hard, $1.10@1.14 3-4; No. 3, $1.08@1.11 3-4; No. 4, $1.07 1-4. Corn—No. 2 mixed, $1.04 3-4@1.09; No. 3, $1.03 3-4@1.07 1-4; No. 2 yellow, $1.04@1.10; No. 3, $1.04@1.07; No. 2 white, $1.04@1.09; No. 3, $1.04 1-2. Oats—No. 2 white, 43 1-4@47 1-2c; No. 3, 42 3-4@44 3-4c; No. 4, 42@43 3-4c. Rye—71 1-2@73 1-2c. Barley—62@75c.

Seed and Feed.

Clover seed prices advanced again last week.

CHICAGO, per 100 pounds—Clover, $19@23; timothy, $7@8.

Storage stocks of wheat feeds at lake ports are more strongly held by jobbers and prices are firmer. Argentine bran is being offered in the east below domestic prices.

Firmness Rules in Hay Markets.

Hay markets remain firm as a result of light receipts. Demand for good timothy is excellent and stockyards interests and the southern trade are good buyers of alfalfa. The crop estimate was raised nearly 5,000,000 tons in the October returns, but is still 10,000,000 tons less than last year.

Prices per ton in carlots: Chicago—No. 1 timothy, $27@28; No. 2, $24@26; No. 1 light clover mixed, $24@26; No. 1 clover, $22@24; No. 2 clover, $16@18; midland prairie, $18@21; rye straw, $11.50@12.50; oat and wheat straw, $9@10.50.

Eggs, Butter and Cheese.

Egg prices have held relatively steady during the last week, although fine quality eggs advanced to a new high for the season.

Butter prices declined sharply after issuance of the government's storage report, but have recovered part of the loss. Receipts of butter at leading markets continue to run ahead of last year and creamery reports indicate a moderate gain in production over the fall of 1922. Consumptive demand for fresh butter is excellent, but storage butter is not being distributed quite as rapidly as last year and the statistical position is gradually losing its strength.

Demand for cheese has slackened in the last few days, as buyers are disposed to go slow at the higher quotations.

Fruits and Vegetables.

Carlot shipments of potatoes from producing sections declined last week and consuming markets strengthened. The movement last week was the smallest in a month and below the average of the corresponding week in the last four years. For the season up to September 29 leading late-crop sections have shipped 30,157 cars, compared with 28,514 cars to the same date late year. The minor late-crop states, however, have shipped only 11,884 cars, against 21,045 cars last year, most of the production being in New Jersey. Northern round whites are quoted at $1.05 to $1.35 per 100 pounds in the Chicago market.

Apple markets were irregular, but with the main trend slightly lower last week. Carlot shipments have averaged about 1100 cars daily during the last 10 days. The carlot movement from the barrel areas has been the heaviest ever known at this season. Midwestern Jonathans and Grimes Golden are quoted at $4.50 to $6.25 per barrel in the Chicago market. Extra fancy Washington Jonathans, medium to large, are quoted at $2.25 to $2.75 per box, with very large Delicious at $3.50 to $3.75 and large Bananas at $2.75 to $3.

Onion prices have declined slightly under heavy shipments from producing sections. Midwest yellows are quoted at $3 per 100 pounds at Chicago.

FOR THE FIFTIETH TIME.

Rural New Yorker: We say it again for the fiftieth time, and to make it emphatic we say it in rhyme. Anonymous letters still come every day, although we have said, till the words are quite gray, that we pay no attention to letters unsigned; right into the waste-basket they are aligned. We welcome your questions and try to be fair, and provide for your wants with the greatest of care. You may hand out your confidence safely to us; we will keep and respect it without any fuss. But we must have your name and your right address, too, as a mark of good faith in our dealings with you. Don't sign your initials, or some fancy name, and when you're not answered come back with the blame. We are here at your service—we'll do our full part—but sign your name, boys, spell it out—have a heart. Sign your name! Sign your name! Sign your name, boys, for we can not answer your call till we know who you be.

American Farm Bureau Methods and Finances

Committee Reports Need of Greater Cooperation, More Funds and Membership Campaigns

The report of the committee appointed by the executive committee to investigate the offices, methods, practices and functions of the departments of the American Farm Bureau federation is published in the American Farm Bureau News Letter. The committee met in the executive offices of the American Farm Bureau federation September 17, 1923. There were present F. M. Smith, J. F. Reid and W. H. Walker.

In the accompanying table the $69,250 estimated to be paid before the end of the year probably includes sums by state federations which had not contributed during the year up to September 1.

Liberal extracts from the report of the investigating committee follow:

In reviewing the work of the American Farm Bureau federation it has been the policy since the beginning to fix the authority in the executive officer, or the president, who is held responsible for the conduct and the direction of the policies of the federation. Such executive powers he may temporarily delegate to others, giving them the right to act, but the responsibility and consequences of their action still is vested in the president of the organization. Each department has certain activities which are approved by the executive committee, and this executive committee—in their inability to be constantly on the ground or to be always familiar with the work—have instructed the president to supervise, and hold him responsible for, the department carrying out the policies of the federation.

The various committees of the executive committee have been appointed to expedite time of the executive committee. This subcommittee is supposed to take up the activities and map out a program of work and recommend policies for the work assigned this committee, which report is brought to the executive committee by the subcommittee, and when adopted by the executive committee it becomes the official policy of the department for the year. From time to time the committee is supposed to be familiar (as much as is possible) with the activities of their department, and at the end of the year make a careful investigation of the accomplishments of their department and make a report to the executive committee for their department.

In making our investigation with the above understanding in mind, we find that many expenditures are made for traveling without any apparent authorization from the central executive head. The committee recommend and have had prepared a travel request form for all travel, stating the place desired to go, the reasons for going and what was purpose of meeting. This is to be approved by the executive officer before any voucher of expense can be presented and authorized payment made. While the various departments are expected to map out their work, their work must be correlated, directed and approved by the executive officer. The requisition and rules of conducting the office have been very satisfactory. All requisitions for supplies have required the approval of the executive officer before purchases were made.

In reviewing the statements made by the various departments and on a careful investigation and questioning of the department heads, it appears to the committee that there is a lack of coordination of the departments and lack of cooperation, due largely to the one department being unfamilar with the work attempted by the other department. * * * It is not enough to adopt a policy and then leave each department the choice of method of carrying out that work, but they should keep in mind the work and activities of the other departments, that the whole project may be carefully carried to completion.

The source of strength of all farm bureau activity is service. As the demand for this service is constantly increasing, we believe that as opportunities are created to render service, plans should at the same time be made with those who are to receive the service, either as individuals or through their cooperative organization, to tie themselves in with the farm bureau that the farm bureau can be compensated for the service they are rendering. It is our belief that in some of the departments' desire to serve, they are rendering service and giving strength to organizations which are not paying the farm bureau for the services rendered, but are withdrawing their support and loyalty from the farm bureau in their eagerness to perfect this secondary organization.

We have found throughout the entire organization a handicap due to the lack of sufficient funds to inspire confidence and aggressiveness on the parts of those who are undertaking the work. In going carefully over the budget which was prepared for and approved by the executive committee we find that the authorized expenditures on the budget for 1923 were $208,000. We find that the receipts up to September 1, 1923, were $139,540.21. The best estimate that can be made as to what can be reasonably expected between now and the first of the year, will amount to $69,250. This will come within about $790 of keeping within the budget during the year.

Arrangements should be made with the states, whereby effective membership campaigns can be carried on throughout the states, through the advice and with the assistance of the American Farm Bureau federation.

We believe that the bonding plan suggested by the collecting department would have a beneficial effect upon securing the moneys collected in the various counties for the state and the American Farm Bureau federation, and recommend its adoption.

There never was a time in the history of the farm bureau movement when we have established confidential relations with as many helpful sources as at present.

				$208,790.21

Note: The executive board further increased the secretary's estimated income to $75,000.

Higher Production Follows Cow Testing

There has been a steady increase in the butterfat production of the herds in the Thurston county testing association during the last three years, according to E. B. Stookey, the county agent. The August record shows 31.1 pounds as the average of all the herds, while in 1921 the average was 27.6 pounds. Otto J. Hill, the tester, reports 507 cows being listed and 496 of the number were milking during August.

The three high herds of 15 cows or over averaged 38.9, 35.7 and 35.3 pounds of butterfat. The three high herds of less than 15 cows averaged 50.3, 47.5 and 42.5 pounds.

The high cow for the month was A. E. Lundeen's purebred Jersey, St. Mawes of Glen Thelma, with 68.7 pounds of fat. The high grade cow was Sommers Bros. grade Holstein, Bonnie, with 67.2 pounds. Last month Bonnie led this class and was also high cow in the mature class, with 76.2 pounds. Unfortunately she was left off the July list.

There were 91 cows in the association making 40 pounds or more of butterfat for the month. They were distributed as follows:

E. Munn and Son, 7; Lee Kegley, H. W. Myers and L. G. Nelson, 5 each; Ed Cross, D. R. Hughes, Elmer Kaiser, Sam Kegley, John McGowan, Sommers Bros., and Utterback and Son, 4 each; C. C. Aspinwall, F. C. Baker, Frank Clough, Cloverfields farm and Paul Hacker, 3 each; Charles Gifford, E. E. McPherson, Charles E. Starr, Robert Smith and L. L. Snow, 2 each, and Ansell Erickson, John Hagglof, R. E. Hawthorne, A. E. Lundeen, Wilfred Mattson, Ernest Neat, T. A. Rutledge, Fred Schultze and J. T. Sinclair, 1 each.

For Comfort and Economy

The efficient operation of a home heating plant depends on many factors, some of which, such as the correct degree of humidity, good ventilation and tight house construction, can be controlled with a little careful attention at the start of the winter season, experts of the United States deparment of agriculture say.

Cracks around doors and windows and in floors should be filled in with storm sash, weather stripping and calking materials.

The proper amount of ventilation and humidity is best determined by experience and individual conditions as a rule. If frost forms freely on the inside of the window glass on a cold day there is no doubt but that the inside air has sufficient humidity. If there is no sign of frost the air is likely too dry.

SPRAY FOR ANTHRACNOSE.

Apply second spray for anthracnose of apple and pear immediately after fruit is picked. Use Bordeaux 6-6-50.

Grape-Nuts and Milk—

One of the few

COMPLETE FOODS

WHEN you watch robust men and women at work or at play, does it ever occur to you that their strength and health are largely due to the kind of food they eat?

Grape-Nuts and milk supplies complete and balanced nourishment of the highest order. This delicious dish provides the valuable wheat and milk proteins; the "food minerals," phosphorus, iron and calcium; also the vitamins.

Because of its nutritive properties, its crisp texture, and its easy digestibility, Grape-Nuts is the best-balanced cereal food for young and old.

When used as an ingredient in other foods, it adds remarkable zest and valuable nutritive elements. Recipes will gladly be furnished on request.

Too Many Remedies

Farmers Must Unite on a Proposal

By T. C. ATKESON, Washington Representative National Grange.

Much noise has been made in Washington in the last two weeks by congressmen, high government officials and others in the suggestion and discussion of proposed remedies for what is generally recognized as the serious condition of the farmers. The Washington representative of the grange has been at some pains to make a list of the proposals which have been advanced and many of them proposed to the president and made the basis of an argument for calling a special session of congress, to which request, up to this time, President Coolidge has not decided. Here is a partial list of what has been proposed:

Storage of wheat in farm elevators to be licensed as warehouses and made the basis of loans from intermediate credit and other banks.
Government fixing of wheat prices at $1.75 a bushel.
Government purchase of 200,000,000 bushels of wheat to be held off the market.
Creation of a $50,000,000 government export corporation, possibly by the revival of the United States grain corporation.
Increase of tariff rates on wheat.
Payment of an export bounty on all wheat exported.
Twenty-five per cent reduction of freight rates on wheat and flour.
Repeal of section 15A of the Esch-Cummins transportation act.
Decrease in tariff rates on all manufactured articles which farmers must buy.
Reduction of freight rates on everything the farmer produces and buys.
Appropriation from the federal treasury for loans to farmers.
Closing of the grain exchanges or more radical control of exchanges and boards of trade.
Repeal of the grain futures control act.
Abolition of the federal reserve bank system and issue of large amount of treasury notes.
Enactment of a federal compulsory cooperative marketing law.
Sale of Muscle Shoals to Henry Ford.
Sweeping reduction in federal, state and county taxes.
Campaign to induce farmers to grow different kinds of crops.
Eat-more-wheat campaign.
Collection and publication by department of agriculture of complete data on farmers' intent to plant.
Compulsory reduction of crop acreage, especially wheat.

The mere statement of these suggestions coming from the professed friends of farmers indicates the great diversity of proposed remedies. How many of these suggestions are economically sound or will accomplish any good results?

President Collidge's reply has been uniformly an expression of sincere sympathy for farmers and others who suffer financial losses and a statement that he will not call congress in special session unless something definite can be suggested which offers hope of a remedy.

Better Sire Demonstration

Polly and Beauty were two of the visitors at the Grays Harbor county fair at Elma, Wash., August 28-September 1, and spent the entire week there. But, being only grade Holstein cows, Polly and Beauty did not take much interest in the fair as most of the other visitors took in them. They were part of a better sire demonstration made by Cow Testing Supervisor Clarence Wivel nad County Agriculturist Robert Cowan.

This is one of the largest associations of the kind in the state, with 45 herds and 810 cows. As a proof of the value of this association, it is pointed out that the average increase per cow yas 57 pounds of butter fat and the returns for butter fat above cost were $38 per cow. These facts were set down in large letters. Besides this, two representative daughters of two of the five purebred bulls used by A. A. Seifert, of Ford's Prairie, were shown. These were Polly and Beauty, referred to above. Both are good type grade Holsteins, Beauty being mostly white and Polly mostly black. Beauty produced 370 pounds of fat in a year, beginning at 2 1-2 years of age. She is a daughter of King DeVries, whose daughters at mature age average 443 pounds of fat. Polly, at four years old, produced 468 pounds of fat. She is by Sir Violet Blossom Fayne, whose daughters average 412 pounds of fat.

This demonstration was alongside of the exhibit made by the state college showing the feed consumed by a cow producing 400 pounds of butter to be greater than that consumed by a 200-pound cow, and yet the cow eating the most returned much the greater profit. Together the two booths contained a valuable lesson for the dairyman, and judged by the number who spent time visiting and studying the figures, as well as the cows, the lesson went home to a great many.

HAUL OUT THE FERTILIZER.

Remove the manure from the barnyards before heavy rains come. This manure can be used as a top dressing or plowed under.

Cash for Your Opinion

The Washington Farmer will award three cash prizes amounting to $10 to the three best articles on the following subject:

"What Advertisements in the four October Issues of the Washington Farmer appealed to me most strongly and why."

Each article must not exceed 100 words. First prize, $5; second prize, $3; third prize, $2. All entries must be received by November 1. Address:

McCormick-Deering
Ball-Bearing
Cream Separators

FIVE FACTS *That Prove Dairy Farmers Appreciate Easy-Turning, Slow Crank Speed, and Long Life!*

1 Already, *thousands* of dairy farmers in every section have invested in McCormick-Deering Primrose Ball-Bearing Cream Separators in preference to plain-bearing machines! Satisfactory performance in everyday service explains this instantaneous success.

2 McCormick-Deering Primrose factories are working at the topmost peak of production. This year more Primroses will be built than ever before, in an attempt to keep pace with the growing demand for modern equipment.

3 Letters from enthusiastic McCormick-Deering Primrose owners in every state point out easy-turning, clean-skimming, slow crank speed and long life as results of McCormick-Deeering Primrose advanced design.

4 McCormick-Deering Primrose success has spread rapidly. Already, dairy-farmers are *demanding* ball-bearings in the cream separators they buy. Only the McCormick-Deering dealer can supply such modern machines.

5 In answer to a nation-wide demand, all five sizes of the McCormick-Deering Primrose are now equipped with ball bearings. The same design, the same easy-turning—a McCormick-Deering Primrose for any size of farm.

Consider the facts—then act! There is a McCormick-Deering Dealer near you.

INTERNATIONAL HARVESTER COMPANY

VETERINARY

By DR. S. B. NELSON.

Sick Cow—My cow has been sick for a week. The first two days she trembled all over and she is so stiff she can hardly walk. The left hind quarter of her udder is swollen hard and has no milk in it, only blood and pus. We are not feeding anything as the cows are on pasture, but she don't eat anything. M. L. T.
Tonasket, Wash.

Inject the quarter of the udder affected with mammitis or garget with a 2 per cent solution of boracic acid in boiled water. Boil the instruments used for injection and dip the end of the teat in iodine just before injecting. Your animal has a very bad case of mammitis, I would judge. Apply to the quarter of the udder morning and evening the following liniment: Fluid extract of belladonna, 1 ounce; fluid extract of phytolacca, 1 ounce. Apply with considerable friction.

Give the cow 1 1-2 pounds of Epsom salts in three quarts of water. Do not feed her anything to speak of. Then after this you can give her daily a teaspoonful of potassium nitrate in her drinking water. As she gets better in a couple of days begin feeding her soft feeds, like bran mashes, etc., and a little hay or grain.

Garget—Will a calf get garget from drinking the milk from a cow that has it? Is there any danger for yearlings running with a cow with a light case of garget? How is it contracted? Is there any way of preventing it? Would there be any danger from using the same salt lick or eating out of the same feed boxes? J. H.
Bellingham, Wash.

No, calves will not get garget from the milk obtained by sucking the cow; neither will yearlings. There is no danger of using the same salt lick. The danger is that the barn becomes infected and is never disinfected.

A good cleaning and disinfection of the barn is to first scrub it with a 1-1000 solution of corrosive sublimate in water. Three or four days later scrub the barn thoroughly again with a saturated solution of copper sulphate, hot. Manger, floors and walls should be treated.

Four or five days later give it a good white-washing, and it is a good habit to spread, every day or so, a little lime about the barn.

The disease is caused by bacteria infesting he barn, and, of course, the contact of the udder and teats on the floors is one of the common ways of obtaining the infection.

Worms—I have some calves that cough. They are not doing well and do not have a good appetite. I think they have worms in their throat. Is there a cure? V. R.
Alder, Wash.

Put the animals in a tight room. Place a tub with three or four inches of water in the room. Put a few bricks in the water and on the bricks put a pan of sulfur. Set fire to the sulfur and allow the animals to breathe the fumes until they are nearly overcome, and then turn them out into the fresh air. This treatment may be repeated three or four times four or five days apart if necessary.

Lymphangitis—I have a mare that has a big leg. She is strong and has a good appetite and is in fair condition. Is there anything I can do to take this swelling down this winter? She also has small pimples or sores come out on her belly and legs and she bites them, causing open sores. E. E. R.
La Center, Wash.

Your horse has the trouble which we know as chronic lymphangitis. It is questionable whether you can help her any. First give your mare an alloe ball composed of one ounce of alloes, two drams of ginger mixed together with a little glycerin and give to her as one dose, then the second day give her one dram of potassium iodide once daily for a week and then follow with one ounce of Fowler's solution of arsenic morning and night for a week or 10 days. This last medicine may be given on the feed. For the external open sores, try painting them with a 1-2 per cent solution of picric acid in water, morning and night.

Tries to Eat Bones—I have a cow that tries to eat bones every time she finds one and I fear she may choke on one. What does she crave? I have another cow that was hit by a train a year ago and since then she has trouble to urinate. Can anything be done for her? C. H. H.
Camas, Wash.

The cow craves bone meal and I would suggest that you purchase a quantity of bone meal and begin giving it to her in her feed. Begin with a small quantity and enlarge it a little bit if necessary. For your second cow you will need the services of a veterinarian to see what the trouble is that prevents the natural functions mentioned, and see if it can be relieved. It may be that the bone was broken which gives pressure on the urethra or it may be calculus that has become lodged in the mouth of the urethra. It will take an examination to determine the trouble.

LEARN AUTO AND TRACTOR BUSINESS IN 8 TO 8 WEEKS

EARN up to $500 a Month

Let your Dealer prove to you that now is the time for Royal Cords all around

MOST men expect a certain amount of tire trouble in winter driving.

But go to your Royal Cord Dealer and let him show you how the three new U. S. Discoveries have *changed all that.*

Web Cord has no cross tie-threads. So a Royal Cord Tire flexes easily over the ruts and bumps of frozen roads.

The Flat Band Process of cord tire building ensures the *equal resistance* of each individual cord. A Royal Cord Tire is an organic unit—and combats winter hardships as a unit.

Sprayed Rubber is the first absolutely pure rubber. A Royal Cord maintains vitality against weather that ages ordinary rubber.

These are advantages that nobody can give you but the dealer in U. S. Royal Cords.

He can show you how it will be worth while to take off your old tires *now*, and put on *Royal Cords all around.*

United States Tires are Good Tires

NOTE TO LIGHT CAR OWNERS—*The three U. S. Discoveries apply to Royal Cords in all sizes from 30 x 3½ inch up.*

LIVESTOCK AND DAIRY

What Is a Dairy?

When Subject to Inspection?

By A. H. RISHOI, Instructor of Dairy Manufactures, State College of Washington.

What are the requirements exacted by law in the handling of cream for shipment to a creamery? What constitutes a dairy subject to state inspection? Is an outside separator room obligatory? What are the regulations concerning the stable as to gutter, manure piles, whitewash, etc., on the average farm? Mrs. L. A. S.

Your question as to what constitutes a dairy, subject to state inspection can, I think, best be answered by stating the definition of a dairy as found in the laws and regulations of the state as relating to that subject. The laws of Washington define the term dairying as any place where milk from two or more cows is produced for sale. You will note that this paragraph makes no mention of the word cream, but in preceding parts of the same section of the law reference is made to the word cream and for that reason it would seem that the law intends that any place where the milk or cream from two or more cows is produced for sale constitutes a dairy and is therefore subject to inspection. The regulations as contained in the law deal with the sanitary conditions under which the cream must be produced and kept, and are, I think, very reasonable. The regulations are for the purpose of preventing cream that is impure or unwholesome from being offered for sale and being manufactured into food for human consumption. A part of the regulations read that a dairy is deemed unsanitary if the milk or cream shall be cooled, stored, mixed, bottled, canned or kept in any room or place occupied by any person as a sleeping or living apartment; or occupied by horses, cows, hogs or other animals; or by fowl of any kind, or if any urinal, privy vault, open cesspool, pig pens, stagnant water, accumulation of manure or other filth, shall be permitted within 100 feet of a milk house or milk room or within 50 feet of any cow stalls or stanchions or other place where milking is done.

The provisions of the law relative to a separator room or a milk house read as follows: "A dairy is considered unsanitary if a suitable milk house or milk room is not provided and maintained, properly screened to exclude flies and insects for the purpose of cooling, mixing, bottling, canning, keeping or separating the milk and cream. Such milk house or milk room shall not be located in or be a part of any barn or poultry house. It shall not be used for any other purpose whatsoever, and if contained in any building or structure in which any business, occupation or trade other than handling, bottling, or processing milk is conducted or carried on, such milk rooms shall be separated from the portion of each building or structure in which such business, trade or occupation is conducted or carried on, by a tightly sealed or plastered partition constructed in such a manner to meet with the approval and comply with any regulations issued by the department of agriculture.

In regard to separators specifically the law states as follows: "No person shall sell, offer for sale, or propose for sale any milk or cream taken from any cream separator kept in any stable or other buildings wherein any animal or fowl is housed, or kept in any place where the conditions are unsanitary or the air is foul, or contaminated; or in the open air or in any place other than a milk house, milk room as defined above; provided, however, that this shall not be construed to prohibit the keeping of such cream separator in any room which is wholly separated by tightly sealed or plastered partitions having no openings from that part of the stable or buildings in which milking cows are housed or kept. Further, that any milk or cream produced or kept in a dairy must at all times while at said dairy be kept in a milk house or milk room as defined above."

This would seem to indicate that a separate separator room is necessary, while it is not necessary that this room be in another building.

A further regulation regarding separators states as follows: "No person shall sell, offer to sell or dispose for sale any milk or cream taken from any cream separator not kept thoroughly washed and cleaned, and not regularly washed and cleaned in a thorough manner within three hours after each use thereof." You understand that this direction simply means that a separator must be washed thoroughly after each time it has been used.

In regard to that part of your question which deals with the handling of cream for shipping to a creamery, the law reads as follows: "Milk, cream, ice cream, iced milk and other products when being shipped or transported by freight, express truck or wagon or other carrier, shall be handled, kept and maintained during such transportation in a clean and sanitary condition and manner and shall not be exposed to contamination by dirt, dust, foul odors, or to other contaminating influences; nor shall such milk, cream, ice cream, or iced milk be allowed to remain in any place where it or its container shall be exposed to the direct rays of the sun."

This, you see, is a further safeguard to the buyer of creams that the milk or cream has not been exposed to such conditions as would render it unwholesome or spoiled.

In all the regulations concerning the production and sale of milk or any of its products we find that while they may become somewhat lengthy and involved they seem to be very reasonable, a safeguard to both the producer and the person who buys the milk or cream or the products made from it.

If you will write to Mr. E. L. French, director of agriculture, department of agriculture, Olympia, Wash., and ask him for a copy of the laws and regulations relating to live stock and dairying for the state of Washington and also a small pamphlet issued by that department on the subject of "How to Produce Cream That Makes Good Butter," you will get a comprehensive understanding of the requirements of the law, besides some helpful instruction regarding the handling of milk and cream.

LOADING HOGS.

Crowding too many hogs in a car, particularly in hot weather, is likely to result in a number of them dying in transit. Loading hogs after a heavy feed is injurious to them. A little hunger is far better for them on the journey than indigestion. There is nothing to be gained in added weight of the animals by forced feeding just before shipping. The aim should be to get as many hogs as possible to the stockyards in good condition.

NEW LAMP BURNS 94 PER CENT AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 95% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 161 Union Ave., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

Potato Show

Also Potato Growers' Conference

The Pacific Northwest Potato show puts forth as its sole purpose that of the betterment and development of the certified seed and commercial potato industry of the Pacific northwest by affording an opportunity for the growers from all districts to get together, compare the results of their last year's work and discuss the various problems that confront them.

This, the third annual potato show, will be held in the assembly rooms of the Chamber of Commerce building, Spokane, November 20-23, 1923.

In class A of certified seed potatoes there are six series of prizes, running from the first prize of $40 to a fourth prize of $5 for each of the following varieties: Netted Gem, Idaho Rural, Burbank, Bliss Triumph, Irish Cobbler, Early Ohio and a seventh series of similar prizes for miscellaneous varieties.

In class B the commercial potato prizes for the same varieties are from $25 down to $5.

The fourth annual meeting of the Pacific Northwest Potato Growers' association and the potato growers' conference will be held in connection with the show, an attractive program being prepared by Secretary E. R. Bennett of Boise, Idaho. One of the leading speakers at the conference will be W. C. Edmundson of Greeley, Col., superintendent of the federal potato experiment station, will talk on "Five Years' Experiments With Potatoes."

For a copy of the premium list and any further information address W. P. Romans, general manager, Chamber of Commerce building, Spokane, Wash.

Crop Estimates

Slight reduction in crop production forecasts for a month ago, except for potatoes, hay and flax seed, are shown in the department of agriculture's October report.

Corn registered a decline of 54,332,000 bushels, the forecast being placed at 3,021,454,000 bushels. This would make it rank as the country's fourth largest corn crop and make the fourth time it has passed the three billion figure. Wheat was estimated at 7,490,000 bushels less than a month ago, production being estimated at 781,737,000 bushels. Oats production declined 9,234,000 bushels and tobacco showed a severe reduction of 89,005,000 pounds.

Potatoes improved to the extent of 11,750,000 bushels more during September, tame hay estimates increased 4,667,000 tons and peanuts 40,737,000 pounds more than a month ago.

Frost damaged corn in practically all of the north central and northeastern states, but while the damage was severe in a number of sections it will not affect the yield so much as the quality. Indications were that the quality would be below that of last year, the report said.

The reduced spring wheat yields were attributed largely to rust and hot weather just before harvest. Extremely low yields were reported for North Dakota, South Dakota, Nebraska and Kansas. The quality for the country as a whole was given as below the 10-year average.

Yields of potatoes in eastern states are turning out better than expected, the report said, and the quality was reported to be excellent. Frost in Wisconsin and Ohio, and wet, unfavorable weather in Tennessee and Kentucky, were said to have caused heavy losses in tobacco.

Apple production was reported as 10 per cent less than last year.

Preliminary estimates of spring wheat by important producing states follow:

Minnesota, 20,024,000 bushels; North Dakota, 56,466,000; South Dakota, 26,106,000; Montana, 40,695,000; Idaho, 19,404,000; Washington, 23,320,000.

Other Crop Estimates.

Rice, 32,737,000 bushels.
Peaches, 45,555,000 bushels.
Apples, 199,727,000 bushels.
Hay (tame), 86,538,000 tons.
Hay (wild), 16,376,000 tons.
Sugar beets, 6,623,000 tons.
Grain, sorghums, 105,877,000 bushels.

Construction and Repair

A new Houghton-Mifflin publication which it is a pleasure to greet is that entitled "Construction and Repair Work for the Farm," by F. Theodore Struck. It not only abounds with diagram as clear and as full as the busiest farmer could wish, but in half-tones equally useful. The tabling of all specifications, materials and even the successive steps in the directions for construction makes the volume quick reading and the more easily fastened in memory. Tools and the sharpening of tools, common materials, self-made equipment for the shop, belt and harness repairing, etc., form the themes of general chapters, while field and truck crops, horticulture, poultry and every other staple live stock and the farm home are subjects of a special chapter each on construction. An appendix treats of the strength of materials. The work is indexed and fills nearly 400 pages.

You Can Increase Your Chances of Profit This Way

BY using the best dairy equipment you cut out every possible waste, increase the productiveness of your time and labor, and thus increase your chances of profit.

We help you do this because we sell only the best dairy equipment—lines that we have been selling for years and in which our faith is proved over and over again. Every year our satisfied customers increase in number. If you are not already one of our patrons we welcome your inquiry for detailed information and prices on the supplies you will need.

POULTRY AND RABBITS

Vigor Is Vital

May Pullets Be Used as Breeders?

The hatching results for the season of 1923 were generally unsatisfactory throughout most parts of the United States, according to reports. There are doubtless a number of contributing causes and, according to Dr. M. A. Jull, in charge of poultry investigations of the United States department of agriculture, one of the causes of poor hatches has been the use from year to year of pullets as breeders.

In a general sense it is apparent that the hatchability of eggs depends upon the constitutional vigor of the breeding stock producing the eggs. If the breeders are healthy and vigorous and are kept in comfortable quarters, then the eggs should hatch well, providing the methods of incubation have been satisfactory. Taking the country as a whole, however, Dr. Jull believes that the hatching results from one season to another are not as good as might be expected.

The use of pullets as breeders may affect this situation in the following manner: The practice of using pullets as breeders frequently leads to the use of immature birds. In this way hatching results are affected because the young pullets do not seem to have the abundance of constitutional vigor possessed by older birds. Moreover, birds as pullets usually lay a smaller egg than as yearlings. Since the size of chick hatched depends to a considerable extent upon the size of the egg producing the chick, it is obvious that, as a rule, larger chicks are produced from the eggs of yearlings. Then again, it has been a matter of common observation among poultrymen that the chicks from yearlings are usually stronger and grow better than the chicks from pullets.

Another very important matter to which poultrymen should give more attention is the influence of forced feeding on hatchability. Many flocks of pullets are fed heavily throughout the fall and winter to induce heavy egg production, and then in the hatching season the eggs from these pullets are used for incubation purposes. This is a questionable practice, says Dr. Jull, since heavy egg production is a heavy strain upon the stamina of the hen and the eggs from birds that have been fed heavily are very apt to be low in hatching quality. Finally, it would seem that all factors point to the advisability of the use of yearling birds as breeders rather than pullets.

Poultry Problems

By W. D. BUCHANAN,

My chickens have layed very well since they started, but now they have stopped. I give them grain morning and evening and mash during the day, then as they have free range, I cut out grain in the morning and was short on sour milk, which they always had before them. Do you think if I give them plenty of milk and grain and beef scraps that they will start again? They are a year old.

MRS. C. L.

Your chickens quit laying because they did not have enough to eat. If they are in a moult it will be hard to get them back. If they were carefully culled you would probably find about half of them that it would pay to keep for fall and winter eggs. A properly balanced ration should bring them back in two months. Feed a light grain feed in the morning, keep a dry egg mash before them during the day and give them all the grain they will eat in the evening.

What would you advise sowing in chicken yards for green feed at this time of the year?

A. H. A.

If you want to pasture it this fall, nothing is better than rye for quick growth. For early spring I would advise fall oats and vetch. Fall sown kale is sometimes highly successful. So also is rape. Your county agent can give you expert advice.

I am losing several of my year-old pullets. They are not sick long and apparently look well, except that they don't eat. In the morning I notice one standing around and the next morning I find her dead. I feed sprouted oats in the morning and wheat and cracked corn at night and they have prepared mash all the time with plenty of clean water, oyster shell and grit; they also get some sour milk. I have some hens that are fed the same, but kept in a different house and I haven't lost any of them.

J. W.

It is impossible from your description to tell whether this is a disease or due to something wrong with the feed. If you examine a dead bird and find blood in the intestines, or in the "blind pouches," it is coccidiosis. This means getting them on new ground at once, cleaning and disinfecting the brooder house every day or two, and giving them 2-3 ounce of catechu in every 30 gallons of water for a period of three weeks.

If no disease is found, look to the feed. It may be musty or moldy, or it may be too rich, that is, too much protein without enough green feed. If the latter, I would recommend mixing 50 pounds each of ground corn and bran in each 100 pounds of the mash. Wash and scald the milk vessels daily; see that they have plenty of fresh air; that they are not crowded at night; that there are no mites in the house and no lice on the chicks.

Flock Average

Rather Than Individual Records

The very keen demand for heavy laying strains has sometimes led to injudicious practices and has frequently produced harmful results, according to Dr. Morley A. Jull, new man in charge of poultry investigation of the United States department of agriculture. In many cases breed type and other characteristics have been neglected and constitutional vigor has been lowered. Sometimes also the size of the birds is below standard and there has been evidence of decreased egg size. The value of high individual egg records from a breeding standpoint has often been overemphasized. In this connection the fact should not be overlooked that flock averages are much more significant than individual records.

There have been certain features in the management of many flocks which seem open to question. There has been very extensive use of pullets as breeders, when it is becoming more apparent that yearling birds lay larger eggs, which produce larger and stronger chicks. Constitutional vigor is certainly inherited, but the extremely poor hatches of the last season would indicate that breeders in general are not paying enough attention to this important problem. Then again, many breeders feed rather heavy rations to their layers to force production and then use the eggs for incubation purposes, and this practice may be a major cause of poor results.

Mail-o-Grams

From Washington State College

Apiculture—If you do not know how to pack your bees, obtain directions from the extension service, State College of Washington.

Clothing—Simple clothes cost less, wear longer and look better than fussy ones.

Dairy—Arrange plenty of tall windows in your barn so your cows will get abundance of light and sunshine this winter.

Farm Crops—Make an effort to save seed of every kind for next year. Take it from well matured plants.

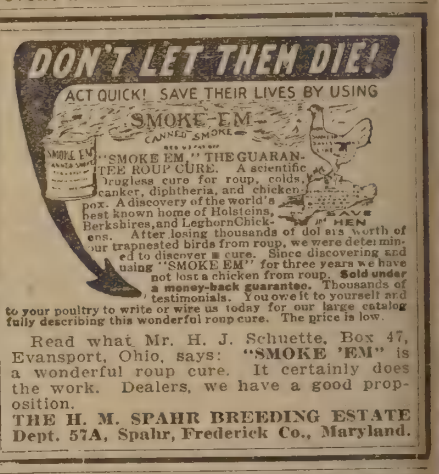
Farm Management—Reduce the most per egg by producing more eggs per bird.

Home Management—In setting colors the first attempt on new garments or material may not be permanent. It may be necessary to repeat before each washing.

Horticulture—Rush the apple to good storage. Every day's delay shortens their season and lessens their quality.

Live Stock—Successful farmers and hog men know that small pigs use less feed per pound of grain than do older hogs. Keep small pigs growing.

Plant Pathology—Good potato storage is necessary. Proper ventilation and a temperature of about 36 degrees F. will prevent black heart and most storage rots.



Read what Mr. H. J. Schuette, Box 47, Evansport, Ohio, says: **"SMOKE 'EM"** is a wonderful roup cure. It certainly does the work. Dealers, we have a good proposition.

PILOT BRAND OYSTER SHELL FLAKE

FOR POULTRY

NOT GRIT, A FOOD

GROUND oyster shell is sometimes regarded simply as a grit. To be sure, it has some grinding capacity in the craw. But it is very soon reduced to a lime fluid and contributes to bone and egg shell construction.

Grit acts purely as a grinding agent and has no food value.

PILOT BRAND contains no dirt, no clam shells—nothing but pure, ground oyster shell, analyzing 98% calcium carbonate.

When you buy oyster shell get PILOT BRAND. It is washed, dried and graded in both adult and chick sizes.

Keep it before the fowls all the time, every day in the year.

Most feed dealers carry PILOT BRAND. If yours does not, write to us, sending his name.

Packed by Oyster Shell Products Corp., Security Bldg., St. Louis, Mo.

Savage Model '99—

Note the hammerless, solid breech. Nothing can get in to jam that powerful action. Built for .22 hi-power; .250-3000; .30-30; .300; .303.

From woodchuck to bear — a Savage for every kind of game.

. . . handles fast, holds steady as a rock

You can depend on the smooth, sure action of a Savage. It functions *right*.

And accuracy—the most important thing in *any* rifle. You can't beat a Savage for deadly, lasting accuracy.

And it's light—a Savage high-power doesn't carry an extra ounce—*but* it's proportioned and hung to hold as steady as a rock.

This perfect balance is always the same. For the Savage magazine is of the box type—full or empty—its balance is unchanged.

A Savage for every kind of American game

.22 hi-power. The amazing *Imp*—ideal for woodchuck, fox and wolf. Accurate at long and unknown ranges.

.30-30. The choice of many seasoned hunters for deer and medium size game at moderate ranges.

.303. A hard, knockdown hitter—has dropped deer, bear and caribou for 20 years.

.250-3000. An all-around rifle. Terrific speed and accuracy make it *the* gun for mountain sheep, goats, and deer at extreme ranges.

.300. Delivers a crashing blow that will drop the great Alaskan brown bear in his tracks. Powerful enough for any American game.

And the Savage .22s—the *Sporter*—the new bolt-action repeating .22—the gilt-edge accuracy of the finest target rifle built into a sporting model. Or the slide-action, Model '14—every feature originally and distinctively Savage—sturdy and accurate.

Ask at your dealer's or write direct for our interesting catalog.

SAVAGE

Savage manufactures ammunition for every Savage high-power rifle. Savage ammunition is advised for use with Savage high-power rifles. Savage is now also manufacturing other well-known cartridges. Look for the Savage Red Box.

ORCHARD AND GARDEN

Storing Cabbage

There are various ways of pitting the cabbage for winter use. One of the most common ways is to open up a trench in the fall one and one-half to three feet wide, according to the number of heads to be stored on the bottom layer, on a well-drained slope which has a sandy or gravelly soil. It will depend somewhat on the size of the heads as to what width to make the trench and also on the amount of cabbage you have to store. If two heads are placed side by side probably one and one-half feet will be sufficient, but if three, four or more heads are to be placed side by side in the trench the width will have to be greater. The depth of the trench will vary from six inches to one foot, depending on the size of the heads to be stored.

The cabbages to be pitted are pulled roots and all and placed in the trench, heads down. Do not remove the outer leaves. After filling the bottom of the trench, which may be two, three or four plants wide, the next layer of heads must be placed so that the heads will fit between the stalks and the roots of the bottom layer. For example, if the bottom layer is four plants wide, then the second layer will be three plants wide, or if the bottom layer is only two plants wide, then the second layer will contain only one row of plants. After packing the heads together in this fashion put a covering of burlap or a thin layer of straw over the plants in the trench, to protect them from the layer of dirt which is to be put on next. Only a sufficient amount of soil to protect the plants from freezing should be put on at this time. After severe winter weather sets in a sufficiently large amount of manure or straw should be put on to prevent severe freezing and alternate freezing and thawing. This will also enable the grower to remove the heads as the market or home desires them during the winter.

The outside leaves of the heads will have rotted some by late spring, but this does not affect the flavor of the cabbage in any way. After removing the decayed leaves you will have a beautifully bleached head of cabbage, which is crisp and juicy and consequently of higher quality than heads simply stored in the dry cellar or basement without paying any attention to the humidity of the air.

If only a few heads are to be stored for winter use, the following is suggested: Cut the heads from the stems of the plants and wrap them first in the large outer leaves of the plant and then in paper and pack between layers of sand in a barrel or in boxes. The sand should be kept moist, but not wet. Keep the barrel in a cool cellar. In this case also the outer leaves will decay, but, as suggested before, the flavor is in no way impaired.—C. L. V.

A Beekeepers' Library

About three years ago there passed from earth possibly the most widely known practical beekeeper that ever lived. His name was Dr. Charles C. Miller, and for 60 years he lived at Marengo, Ill. He was in his 89th year when he died. He had written more on the subject of bees and beekeeping than any other man. During the last 25 years of his life he answered over 10,000 questions about bees and their management, in one bee periodical alone.

Dr. Miller held the world's record in comb honey production, having secured an average of 245 pounds from each of over 70 colonies of bees in one season. And he was 82 years old when he did this!

As a memorial to the greatness of Dr. Miller and as a token of their esteem for him, the beekeepers have raised nearly $2000 for the endowment of the "Dr. C. C. Miller Memorial Apicultural Library," located at the University of Wisconsin, at Madison. Already it has over 1000 volumes. On August 18th it was dedicated. There were over 350 beekeepers present, 75 of whom came from 13 different states.

After the dedication ceremonies, a caravan of 16 automobile loads of beekeepers proceeded from Madison to Marengo, Ill. (a distance of 90 miles), for the purpose of placing a bronze tablet in the church that Dr. Miller attended and where he led the Sunday school singing for 60 years. The wording on the tablet is this:

"This tablet is erected by beekeepers to Charles C. Miller, a former resident of Marengo, in appreciation of his service to beekeeping and as a mark of esteem. A Library of Beekeeping Literature has been endowed at the University of Wisconsin to his memory."

The Bark Louse

Many a farm orchard is troubled by oystershell scale, or bark louse, and many a farmer is at a loss to know what to do about it. The results of this pest are more evident as the season progresses and many an inquiry is made at this time of year as to what should be done and when.

The shell-like objects on the small limbs and twigs at this season of the year contain the eggs from which the scale will hatch in the spring. The pest can be destroyed either in the egg stage or after hatching.

During the dormant season the proper spray is lime-sulphur. This should be applied at a time when the tree is completely inactive—after the leaves are all off and the sap down and before they begin to swell in the spring. It should, of course, be applied in a period of settled weather if possible.

In the spring careful observations should be made to see when the eggs that are not destroyed hatch. This can be learned by the presence of the tiny scales or lice moving about on the bark. These live insects may be killed by the application of a nicotine spray, of which blackleaf 40 is the most commonly used.

In many an uncared-for orchard these pests virtually destroy the trees. They are also destructive of certain shrubs, among them lilacs. They are sap suckers, taking the very life blood of the tree or shrub on which they live.

A PROMISING FORAGE CROP.

Hungarian vetch is one of the many promising forage crops introduced in the United States by the department of agriculture.

The crop has been most extensively tested in the Pacific coast states, where it is especially well adapted.

Dairy cows at the experiment station at Corvallis, Ore., and elsewhere, have consumed it readily.

In western Oregon and Washington the best seeding time is with the first fall rains during September and October.

MAKES SPRAY TOO THIN.

Rapid growth of apples tends to spread the cover spray so that on parts of the apple it is too thin to kill the worm. That is why one cover spray is not enough.

YOU'LL get quick relief from pain with the first application of Gombault's Balsam. It penetrates without blistering, drives out the pain, leaves you feeling fit as a fiddle.

Sprains, bruises, burns, open cuts, deep seated strains, muscular and inflammatory rheumatism, lumbago, sciatica, sore throat and chest colds yield to its healing power with but one or two applications. It's so effective that one bottle lasts a long time.

For forty years Gombault's Balsam has been the one indispensable remedy in thousands of households here and abroad. You'll adopt it, too, once you've had a chance to prove its remarkable healing qualities.

Don't wait till you feel the sting of pain. Get a bottle of Gombault's Balsam today.

Sold by druggists everywhere for $1.50 per bottle or sent by parcel post upon receipt of price.

HEALING and ANTISEPTIC

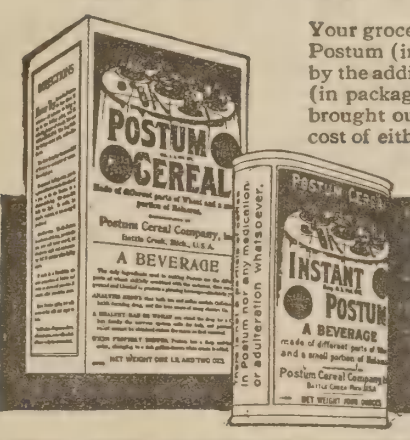
Why the Doctor asks: "Do you drink coffee?"

IF you are troubled with headaches, insomnia, indigestion, or sluggishness of the liver or bowels, probably one of the first questions your doctor asks is, "Do you drink coffee?"

He knows, better than anyone else, that the drug, caffeine, present in coffee, tends to irritate the nervous system and is a frequent cause of disturbance to health.

If coffee causes trouble, and you value health, stop coffee and drink Postum.

Postum is a pure cereal beverage—absolutely free from caffeine or any other drug. It has a delicious flavor, that many people prefer to coffee.



Your grocer sells Postum in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer the flavor brought out by boiling fully 20 minutes. The cost of either form is about one-half cent a cup.

Postum
— FOR HEALTH —
"There's a Reason"

Insures Healthy Hogs

An occasional RED SEAL Lye bath for Mr. and Mrs. Hog and their pen pays big profits. Lye will also sweeten the swill and insure healthy pork at killing-time.

Successful stockmen, dairy-farmers and poultrymen use RED-SEAL Lye in a hundred different ways—as a spray for trees when dormant, a cleaner for automobile transmission-cases, farm-machinery and household needs. (Do not use on aluminum.)

RED SEAL Lye softens water and makes the best soap you ever saw. Booklet explaining uses in detail, sent on request.

Full directions in each can. Be sure and buy only the genuine RED SEAL Lye.

A LITTLE "WANT AD" FREQUENTLY OFFERS A BIG BARGAIN. MAKE IT A PRACTICE TO READ OUR "WANT ADS."

Trapping Suggestions

By Isaac Motes.

To catch coons, dig a perpendicular hole in the ground four or five feet deep and some three feet square, in a part of the woods which you know is frequented by them, and near a stream of water. Into this hole throw a quantity of crawfish and other small fish. Coons are very fond of fish, and when they find them here they get into the hole after them and can not get out again. The sides should be smooth and perpendicular, and it will be better if the soil is loose and loamy rather than hard clay, so the coons can not get a foothold in it and climb out. If the soil is loose it will crumble when they attempt to climb up the sides.

A trap of this kind may catch a mink, as they are also fond of fish, but are a good deal more suspicious of anything to which attaches human scent. To catch a mink the pit should be five feet deep, as a mink has a longer body than a coon and can jump higher.

Muskrats can also be caught in this manner if near the water, though if you don't visit the place soon they may dig out and get away. A better way to catch muskrats is to sink a barrel into the ground near the water, with the top just level with the surface of the ground, and put some green vegetables, parsnips or turnips in the bottom. The inside of the barrel should be smooth, otherwise the muskrats may get out, though they are not very good climbers.

Another way to catch muskrats is to take a thick, heavy, water-tight barrel and sink it into the water out in some shallow pond or lake, where you know there are muskrats, and where the water remains at about the same height all the time. Select a place where the water comes up to within two or three inches of the top of the barrel. Put sufficient rocks inside the barrel to weight it down. Throw in a quantity of vegetables or fruits, such as apples, parsnips, turnips, cabbage leaves and the like. Visit the barrel in your boat early every morning, and you are apt to find muskrats in it. They get in after the fruit and vegetables and can not get out again. In very cold weather keep the ice broken up and thin around the outside of the barrel.

Muskrat pelts are worth real money nowadays.

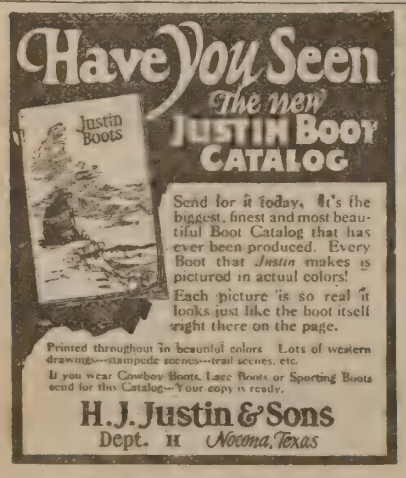
To catch wolves, foxes, wildcats, opossums, skunks and coons in a steel trap take a barrel and knock out both ends. Drive a staple on the inside, about midway from the ends, and tie a live rabbit or chicken by the legs close down to the staple. Be careful to tie it so it will be as comfortable as possible. Then take the barrel out some distance from the house into the field, or wherever you have seen signs of any of these animals, locate it in a smooth place and prop it with rocks or pieces of wood, with the side to which the chicken or rabbit is tied resting on the ground. Then set four good No. 1 1-2 or No. 2 steel traps, two at each end of the barrel, so that an animal can not reach the chicken rabbit inside without getting caught.

winter, when timber wolves, coyotes foxes are hungry, and inclined to around farmhouses this is a good way to catch them, for when the animal in the barrel sees them approaching it begins to flutter or jump and jerk, and in the case of a chicken it will doubtless squail, and this will excite the night prowler, and in its eagerness to seize its prey it will rush up to it regardless of human scent about the place, which it might not do if the chicken or rabbit were not there fluttering or jerking.

It will be best to fasten the chain to a rock or good-sized piece of timber, rather than to a stake, so the animals can drag it away slowly. If fastened to a stake they may gnaw or twist a foot off and escape, but if fastened to something they can drag a little they will delude themselves into believing they are escaping, and will drag the weight until tired out, and you can easily follow them next morning.

SOME PUNKINS!

A. G. Woodward of Fairbanks, near Oakesdale, in Whitman county, had on exhibition at the recent community fair at the latter place five pumpkins weighing 184 pounds. They were grown on the same vine, and still a sixth pumpkin would have been shown had not the horses reached over the fence and mutilated it. Mr. Woodward was unable to identify the variety of this pumpkin, this being the first year that it was grown. Its appearance would have led many to consider it a squash, had not Mr. Woodward stoutly maintained that it was a pumpkin.



Emphasized Value of Milk

That milk is the indispensable food for children and that they should have plenty of milk to drink, was the thought emphasized by large signs placed about the child welfare lunch booth at the Western Washington fair at Puyallup. The booth was fostered by the farm bureau women of Pierce county, and has been carried on for the last four years, the original plan being to furnish milk and milk products to the children who attended the fair, but it was later decided to sell lunches to any one, except on children's day, when the booth was crowded with school children.

The milk used for drinking and for preparing cocoa and soup was a special milk produced by members of the Pierce County Dairyman's association. It was sold for 5 cents for a one-half pint bottle and was served in the bottle, a straw being furnished with each bottle. Over 20 gallons of milk was used at this booth daily during fair week this year.

Eight women from the farm bureau had charge of the work or preparing the sandwiches and other dishes to those who came at noon hour and in the evening. Everything was served cafeteria style and 36 chairs were placed at tables and counters about the room, all of which was screened in. Ice cream sandwiches were made from graham crackers and vanilla ice cream produced at the dairyman's association creamery at Tacoma. Much credit for carrying on this work is due to Mrs. Frank Kehr of Puyallup and Mrs. A. W. Langdon of Sumner.

The menu consisted of the following: Cream of tomato soup, 10 cents; egg sandwich, 10 cents; cheese sandwich, 10 cents; lettuce sandwich, 10 cents; whole wheat bread and butter, 5 cents; jams, 5 cents; cottage cheese, 5 cents; milk, 5 cents; cocoa with whipped cream, 10 cents; ice cream sandwich, 10 cents.

It is needless to say that such an attractive menu as the above drew many of the fair attendants and stockmen, as well as children and their parents who visited the grounds.

GREAT NORTHERN PREPARES FOR BUSY SEASON

The territory served by the Great Northern Railway harvests its crops and ships to market its heaviest load in the fall season.

This year the Great Northern is prepared to handle a larger traffic than ever before. It has purchased nearly a hundred large, new locomotives of the most modern type, as well as four thousand new freight cars; it has built new track and improved old; it is equipped to do the people's work well. A supply of cars is one of the important elements in this preparation. The Great Northern not only owns ample equipment for the crop moving season, but it has these cars on its own lines ready for business and in excellent condition. Here is the actual record:

	Owned by Great Northern	On Great Northern Lines
Box Cars (including automobile and furniture cars)	32,572	34,046
Stock Cars	1,893	1,946
Refrigerator Cars	5,508	9,352
Other Freight Cars	18,926	20,315
Total Freight Cars	58,899	65,659

So prepared the Great Northern is confident that it can give adequate service to the Northwest throughout the busiest season of the year. It appreciates your patronage and asks, in your own and its interest, that you help it to

Load cars to capacity

Load and unload promptly

Avoid diversion wherever possible

LOUIS W. HILL,
Chairman of the Board.

Talk No. 8.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising, 10 cents per word per insertion. Open also to nonsubscribers.

In using these columns advertisers must observe (1) No advertisement will be accepted for less than $1.00 per insertion. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review building, Spokane, Wash.

51 ACRES, IRRIGATED; CROPS, ALFALFA, berries, asparagus, potatoes, corn; house, barn; highschool and station two miles; terms if desired; will trade cattle or sheep. Chris H. Olsen, Benton City, Wash.

FOR SALE—10 A., IMPROVED, IRRIGATED; early crop belt; stock, implements, tools, crops, furniture, $3500; crippled, must sell; terms. Henry Hays, Richland, Wash.

WHY RENT WHEN LANDLORD'S SHARE will pay for well imp. home? Write Western Bureau of Exchange, Twin Falls, Idaho.

FOR SALE OR EXCHANGE 703

FOR SALE OR TRADE—200 A. GOOD BLACK soil, in Oneida county, Idaho; 120 a. summer fallow; 160 under plow; 8 head of good mules and horses, 9 head of cattle, 3000 bu. this year's wheat goes with place; all necessary farm implements, 4 sheep, 200 chickens. $4500 cash, or trade for tract on coast. A. W. Featherkile, Arbon, Idaho.

2-STORY BRICK HOTEL, FURNISHED; FOR stock, dairy or timber land; $30,000. Name your terms. W1504 Fairview ave., Spokane.

TO EXCHANGE—Real Estate 703

360 ACRES, GRANT COUNTY, ORE., WITH stock and equipment, to exchange for dairy and mixed farming combined; partly improved; would assume to $5000. A. F. Murphy, Range, Ore.

Cattle Ranch To College

By Russell Doubleday Copyright by Doubleday & McClure Co

CHAPTER XVI.
A Broncho Buster.

The Sun River Ranch was a large one, and many cowboys were employed to look after the stock; practically all the work was done on horse-back, the cow-puncher or the ranchman never deigning to go afoot—indeed it would not have been possible to cover the necessary ground by any other means. A great many horses therefore were needed, each cowboy requiring three or four, especially at those times of the year when they are ridden very hard and have to be changed frequently. The care and raising of the horse herd were consequently very important parts of the cattle-ranch business. The cow-ponies were bred on the ranch and allowed to run free (it being a well-known fact that they would not stray very far) until the colts were old enough to break to the saddle, when they were taken in hand by certain of the men who showed particular skill in that direction.

John did not appreciate the full significance of the order to return to the home ranch till Frank, who seemed to be a walking information bureau, enlightened him.

"If you want to go on the horse range Harris will take you," he was informed. "It's cleaner work than chasing cows, and there's more money in it. Want to go?"

"You bet," was John's short and emphatic answer. His encounter with the little buckskin broncho was exciting and he wanted more; then, too, cattle are tame, stupid creatures compared with horses.

"Here's your man," said Frank to Harris, the head of the horse outfit, introducing John. "He says he's ready now."

"Good! You'll find Matt and Jerry in the corral now. Go over and pitch in. There's twenty-five head that I want ridable by the time round-up begins; that's only a week, and you'll have to work 'em hard."

And so John became a broncho buster.

He reached the rough circular enclosure made of split rails laid one over the other alternately and strongly braced to stand the strain that would surely be brought to bear. Inside the corral were about 25 horses that had not seen a man half a dozen times in their lives; they were now trying to get as far away as possible from the two men, Matt and Jerry, and ran frantically around close to the fence that walled them in. They were as wild as deer and about as swift.

Swish! hissed the rope. As John climbed the fence it settled over the neck of a big bay. In a second the boy was inside and hanging on with the other two men to the end of the rope. The bay plunged and [illegible] almost frantic with fright and [illegible] but the three kept their grip and [illegible]ually pulled him by jerks away from [illegible]unch and towards the center.

[illegible]arer and nearer he is worked towards the "snubbing post," a stout log stuck upright in the ground; a couple of turns round this holds him fast. Jerry takes in the slack as he plunges and jumps until he faces the post only a few yards off; then he stops, plants his feet, and sets back on the rope; the tightening noose shuts off his wind, and he wheezes and struggles for a few moments, totters, and falls breathless. Matt springs to his head and sits down on it, the rope is relaxed, and the poor beast is allowed to breathe again. Matt still holding him down, though he struggles with might and main, John knots the rope loosely round his neck and shoulders, runs it back under the hind fetlock, draws it tight, pulling the leg up close to the body, and makes it fast. At a word from Jerry, Matt jumps to one side and the bay struggles to his feet—helpless, as he has but three legs to stand on. John rubs his neck soothingly, keeping a sharp watch the while for nipping teeth; he believes even a horse has some feelings. Matt then takes the noose from the neck, and, forcing it into his mouth, leads the end back to the ears, makes a half-hitch round the nose, then passes the end through the noose again—lo! a rough sort of bridle or "hackamore." Taking the loose end, Matt begins to pull the animal's head from side to side until he understands that he must follow. The first lesson is, never run against a rope; it prevents comfortable breathing.

Saddling comes next. A saddle blanket is thrown over the horse and rubbed gently up and down his back to acquaint him with the feel of it, then comes the saddle; the trappings frighten him and he struggles, trips, and falls. The operation is repeated, until finally the cinches are drawn and buckled securely. The big bay snorts and trembles in every fibre, terrified at his bonds, the first he has encountered in his wild, free life—he can not understand it.

Matt and Jerry have ridden two wild horses apiece that morning, so John volunteers to tackle the bay. The horse is still thrashing round at a great rate, but his foot is still tied up and he can do little. John reaches up and knots his handkerchief round the poor beast's eyes, then releases the foot, mounts quickly into the saddle, and leaning forward removes the blindfold. The frightened animal stands still, cowering like a whipped cur or a chicken that sees a hawk circling above her; he seems to be waiting for the strange, dreadful creature on his back to strike him some fearful blow or sink its claws into his flesh—dreading he knows not what. He bounds forward a few steps—still the burden sticks, and he stops and looks round at it. His fear fades and the courage and energy of his race return; he determines to get rid of this thing that clings so tightly. He leaps forward, runs a few yards full tilt, then stops short, fore legs stiff, hind legs crouching; it's a very sudden jerk, but John hangs on with his knees, leaning far back in the saddle. Again the horse tries the manoeuvre; no use; he rears on his hind legs and then on his fore legs; he jumps sideways, bucks, pitches, kicks, without a moment's rest for fifteen minutes. There is no pause, no chance to get a better hold, to take breath; it is a continuous violent paroxysm of motion. At the end of it the bay is well-night exhausted and all in a tremble, while John, though pretty well jarred, is calm and master of the situation. The horse at length submits to the superior will, and, magnificent still but now under control, does his best to carry out his master's wishes.

By the time the bay was well in hand and John was ready to take the saddle off and let him go free for the rest of the day, Matt and Jerry had roped another horse and the same tactics were pursued with it. So the work was carried through till dark, each man taking his turn riding horses that had never been bestrode by a living creature before. There was a kind of wild, exhilarating excitement about it, but it was terribly wearing, and the jar and strain were enough to use up a dozen men unaccustomed to the work.

The following day all the horses were ridden again, with less difficulty this time, though they were lively enough to suit any one. Some took a week's training, some a month's, some were never wholly subdued. To this latter class belonged the little buckskin "Outlaw," with which John had had such a lively time and who made his reputation as a broncho buster. The boy and the horse had much to do with each other for a number of years. Their close acquaintanceship came about thus:

The little buckskin was roped regularly every morning, choked down, and after a great deal of struggling, saddled; then some one of the cowpunchers would ride him until he was thoroughly exhausted. This was continued so long that the little horse became but a bag of bones, chafed and bruised, a wreck, but unbroken in spirit. In spite of everything he continued a fighter with each ounce of strength that was in him—a "dead game horse."

"He's an outlaw if ever there was one," said Harris one day. "If we can't give him away we'll have to shoot him, for he's making every other horse wild, though he's near ridden to death."

"Let me have him," said John, who happened to be standing near and overheard the remark. "He's a dead game little beast and I like him. I think I can work him."

"Take him and welcome, kid," said Harris, with an air of relief. "The wilder he is the tougher. Tame him and you'll have a star."

And so John came into possession of the little buckskin, whom he named appropriately "Lightning" or "Lite." Jerry said, when the question of giving him a proper name was under consideration, "I've known several horses named Lightning, but I've never seen a hoss as would fit the name like him." The boy's heart had not so gone out to a horse since Baldy's time, and though the two ponies were very different in appearance and disposition, in after years John found it hard to tell which he most cared for.

Before beginning the training he let up on the terrible strain, the constant struggle, to which "Lite" had been subjected and allowed him to recuperate; he took care of him himself, and later, when he grew stronger, allowed no one else to ride him. Gradually the horse learned to know his master and understood that that master would not ill-treat him; and so there grew up a sort of sympathy between them. "Pitch" he always did when John first mounted him, but he soon settled down to steady business, and a mighty capable beast he proved to be.

Though John found the wages of a broncho buster good, the work was very hard, it being the most violent sort of gymnastics all day long. When night came he was glad enough to sit down and rest; he would, in fact, not have been sorry to turn in right after supper, but the talk and stories the men told were too good to be lost. It was near round-up season and the riders were being gathered, preparatory to starting off on that great yearly summing-up expedition. There were men from all over the United States and Mexico, college-bred men and men of the soil. No man knew the other's history, nor would any one ask questions. There was hardly one but had strange experiences, some of which they told. Then there were songs, many of which were familiar to all and therefore popular. Frank Bridges soon became a favorite with every one; his good nature and jolly fellowship won him many friends. Moreover, he had a good voice and was constantly called upon to exhibit his ability.

It was on a restful evening, after supper was over and the last rays of the sun were sinking; the men were lounging about in the most comfortable positions they could find; the talk had died down to a monosyllable now and then. Matt, the broncho buster, broke the silence: "Frank, give us the 'Grass of Uncle Sam'; you're only feller that can remember words and tune both."

There is no pause, no chance to get a better hold.

And Frank, obliging as always, without any excuses or palavering, sang the following in a good, strong baritone:

THE GRASS OF UNCLE SAM.

Now, people of the eastern towns,
It's little that you know
About the western prairies:
Where the beef you eat does grow;
Where the horses they run wild
With the mountain-sheep and ram;
And the cow-boy sleeps contented
On the grass of Uncle Sam.

We go out onto the round-up
To brand the sucking calf.
The stranger gets the bucking horse
(You bet then we all laugh).
He flings his arms towards the sky,
His legs get in a jam;
He turns a flying somersault
On the grass of Uncle Sam.

The angry bull takes after us
With blood in both his eyes;
We run, but when his back is turned
He gets a big surprise;
Our ropes jerk out his legs behind
And he goes down kerslam!
We drag the fighting out of him
On the grass of Uncle Sam.

The horse-thief comes along at night
To steal our ponies true
We're always looking out for him,
And sometimes get him, too.
We ask him if he's ready
And when he says "I am."
The bottoms of his feet they itch
For the grass of Uncle Sam.

And when the round-up's over
To town we go for fun.
The dollars we have hoarded up
Are blown in, every one.
Then broke, we hit the trail for camp
But we don't care a ———
Wages are good when the grass is good,
The grass of Uncle Sam.

By the time the singer was half-way through most of the impromptu audience were singing the familiar air too. Their voices were none too sweet or soft, for the icy blasts of winter and the dust-laden breezes of summer did not tend to improve them; but it was with a right good will that they applauded Frank when he finished. The song over, the talk began again, quietly, with long pauses, while this man puffed his pipe or that rolled a cigarette. The light had entirely gone out of the sky now, and only the dim glow of the shack lamp through the open door showed one man to the other.

"Well, kid, think you can tame the buckskin?" drawled Jerry lazily.

"Sure—after a fashion. 'Lite' 'll never be an easy thing; he's got too much life in him, but we have got to know each other pretty well now and we'll get along all right."

"You get that little horse so's you can ride him and you'll have the best pony goin'." Matt spoke with conviction.

The talk grew more and more disjointed, and finally stopped altogether. Then one by one the men stalked without a word into the cabin, and in a few minutes all hands were drinking in the sleep as only thoroughly tired, healthy men can.

(To be continued.)

A FEW GOOD IDEAS.

In beating eggs for icing add a pinch of baking powder.

Sticky fly paper can be removed with kerosene or alcohol.

When eggs are scarce one tablespoon of corn starch is a good substitute for one egg.

When whipping cream, if the beaten white of an egg is added it will make the cream stand up better.

Bits of Fun FOR Everyone

A Big Job.

"Let me kiss those tears away, sweetheart," he begged tenderly.

She fell into his arms and he was very busy for a few minutes. But the tears flowed on.

"Can nothing stop them?" he asked breathlessly.

"No," she murmured. "It's hay fever."—Exchange.

Something in This.

"Please read me the poem you are reading, mother," begged a little boy, sweetly.

"But I'm afraid it's too old for you, dear," his mother answered. "I'm afraid you wouldn't be able to understand it."

"Oh, yes, I would," was the calm answer, "so long as you didn't try to explain it."—Washington Star.

Out to Tea.

Warden: "Whom do you wish to see?"

Welfare Worker: "Lifer No. 439. Is he in?"—Exchange.

A Good Comeback.

Sometimes the Yankee's humor of exaggeration is met by as good as he gave. An American in London stopped at a coster's stall, and lifting up a good-sized melon, said:

"Are these the largest apples you have?"

"Put that bloomin' grape dahn, will yer?" said the coster.—Boston Transcript.

Dismissed Him Gently.

The head of a large shop, while passing through the packing room, observed a boy lounging against a case of goods and whistling cheerily.

The chief stopped and looked at him.

"How much do you get a week?" he demanded.

"Five dollars."

"Then here's a week's money; now clear out."

The boy pocketed the money and departed.

"When did we hire that boy?" the chief inquired of the departmental manager.

"Never," was the reply. "He had just brought a note from another firm."—The Christian Evangelist.

Right.

Teacher: "Willie, what is a cubic yard?"

Willie: "I don't know for sure, but it must be a yard that them Cuban kids play in."—New York American.

Cannibalistic.

"My dear, listen to this," exclaimed the elderly lady to her husband on their first visit to the States. She held the hotel menu almost at arm's length and spoke in a tone of horror: "Baked Indian pudding! Can it be possible in a civilized country?"—Western Fruit Jobber.

A Reliable Mining Business.

"I think you said, 'Rastus, that you had a brother in the mining business in the west?"

"Yes, suh, dat's right."

"What kind of mining—gold mining, silver mining, copper mining?"

"No, sah, none o' dose; kalsomining."—Everybody's Magazine.

A Little Slip.

Sunday School Teacher: "Who can tell me the name of the first man and the first woman?"

Little Boy: "Adam and Evil."—Selected.

GOODYEAR RUBBER CO. GOLD SEAL 1872 TRADE MARK

This is the one Gold Seal —round and gold colored — not rightfully used by any other organization.

Red Soled Boots *of pure para rubber!*

GOLD SEAL red soled 'manure' boots are practical boots for the practical farmer.

You can depend on Goodyear Gold Seal rubber footwear—it is made from the finest pure para rubber. We guarantee all Gold Seal models not to crack. They are scientifically constructed and vulcanized by our own exclusive processes.

Any good store on the Pacific coast can fit you with Gold Seal rubber footwear in your choice of style, weight and size. If you are out in the weather much, you'll also appreciate Gold Seal oiled clothing.

We are the original and only Goodyear Rubber Company. Portland and San Francisco.

Avoid Motor Oils

containing paraffin, asphalt or any other non-lubricating substance. Aristo Oil is refined by the most advanced processes, designed to remove everything in the crude which has no lubricating value.

A "Gritty" Carbon

That Scores Cylinders and Rings

There's a Softer, Fluffy Kind

Some carbonaceous residue is deposited by all motor oils. Every manufacturer of motor oil knows that.

But there are **two kinds of "carbon."** One is hard, flint-like and gritty. It clings to the pistons, cylinders, valves and rings.

Cylinders can be scored by it. And chisels or acetylene torches are required to remove it.

Causes "Knocking"

Being hard and gritty, it acts as an abrasive, causing pistons, cylinders and rings to wear.

Small pieces become incandescent, causing pre-ignition so the motor "knocks."

Spark plugs become coated. So the spark is short-circuited and your motor misses.

Particles attach to valve heads and seats, preventing proper seating and resulting in loss of compression and weak power.

And this "carbon" of flint-like hardness collects in quantities two to three times as great as the other kind.

Can Not Wear

The small residue which **Aristo Motor Oil** deposits is of a different kind. It is soft and fluffy. Most of it blows out with the exhaust. What is left is softer than the metal of cylinders, pistons and rings so can not score or wear them.

Motors so lubricated run thousands of miles farther and tractors months longer without the necessity of cleaning.

Your motor retains tight compression and full power, and you save repairs.

Aristo is made by the lubrication specialists of the **Union Oil Company,** equipped with every accepted facility for producing perfect motor oil. A durable, fine film penetrates to and protects each working part in any weather and at all motor heats. Tested by famous drivers under conditions far more severe than any you will ever cause your motor to encounter.

If you would operate a smoother, well-protected, longer-lasting motor, always use an oil like this. For sale at all first-class garages and service stations.

ARISTO MOTOR OIL

Union Oil Company of California

ARISTO Motor Oil

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

The world wants men—large-hearted, manly men;
Men who shall join its chorus and prolong
The psalm of labor and the psalm of love.
The times wants scholars—scholars who shall shape
The doubtful destinies of dubious years,
And land the ark that bears our country's good
Safe on some peaceful Ararat at last.
The age wants heroes—heroes who shall dare
To struggle in the solid ranks of truth;
To clutch the monster Error by the throat;
To bear opinion to a loftier seat;
To blot the era of oppression out;
To lead a universal freedom on.
—Selected.

Experience Letters

Dear Mrs. Barland: Of late the home page of THE FARMER has been very interesting, especially the discussion among the young people.

These are questions I have had a vital interest in for years and no doubt will have for years to come .

I have always rebelled at a double standard for young men and women. Why should a young man ask a young woman to do something that he disapproves of himself? "Just another boy," of Washington, says "it is natural to take when no resistance is put up." And also says, "They don't hesitate to take what opportunity offers." This makes my blood boil! Why should it be left to the girl to do all the refusing? According to the Golden Rule he shouldn't only refuse to offer what he doesn't want her to accept but also it is his business to refuse anything that a girl might seem to favor, providing it is not in accord with what he considers right. Men are very inconsistent, most of them. I will make an exception of the one I married. He is as good and clean as any girl.

Concerning the use of tobacco, it is a fact which is well known that women are of a much higher strung nervous organization than men and therefore more susceptible to injury from the use of any stimulant than men and future generations will naturally suffer because of the use of tobacco by women as well as men.

I married 10 years ago and now have six children and am much interested in everything that will affect their future. I have always considered smoking a very filthy habit.

I have found many valuable recipes on this page and the latest is for rhubarb conserve. I didn't think anything so good could be made from rhubarb.

You may be sure I have quite a time making ends meet with my growing family, and another valuable help I got was the suggestion of making rompers from men's pants.

I help with the outside work quite a good deal, with the milking and raising poultry. This summer my husband and I hauled in 25 tons of hay. One of my rewards for work is $5 in premiums at the county fair. I took four blue ribbons and two red ones for poultry.

I hope to see more suggestions in the paper for school lunches, as I have three to put up. We don't care for meat and it is a problem to fix up food so the children will have the proper amount and yet be economical.

JUST ANOTHER READER.

Family Circle Girls

Dear Mrs. Barland: One of the most beautiful things in the world is a pure, comrade sort of friendship between a man and a woman, but such friendships are very rare. After all that has been said we must agree that the plan of things is the right one. If one would but spiritualize his thinking the quest of man for his mate and vice versa would always become a supremely beautiful thing.

It may be some of you will question the "vice versa," but I have no patience with the common idea that women should have nothing to say or do about the choice of a husband. We don't acknowledge it, but I believe nine-tenths of the matches are made by the women. The mother instinct in a normal woman is very strong; why shouldn't she have the privilege of selecting the man who is to be the father of her children? As things stand now, convention denies woman this right.

In order to attract the man of her choice, she must "doll up" and paint her lips and cheeks and often she stoops to things that are unworthy of her, thinking the men like that sort of thing. They really seem to, but if they would be honest with themselves and the girls the false would disappear and fewer mistakes would be made.

Women will do about anything for the men they love and stand by them through trouble and disgrace. Men seldom do that.

Women are often disloyal to each other because there is so much competition between them. Love is as necessary to a woman as sunshine is to a flower. There are, it is true, some fine, strong women who seem happy independent of any man's love, but they are in the minority.

I think if men could be led to feel some responsibility where girls' morals are concerned everybody would be the happier for it. At the present time it seems they are trying to find out how big a fool they can make out of a girl and are succeeding better than they know.

Boys need to be taught more reverence for womanhood and shown the divine side of it. It is true some women make the whole sex blush for their shame, but it is unjust to hold such as representatives of womanhood.

I am an old maid and so far my life has been spent in caring for those I love. I have experienced much trouble and my hair is quite gray.

If you would live your life to the fullest, learn to live generously, but remember you must first be true to yourself and then you are sure to be of service to others.

AN OREGONIAN.

Dear Mrs. Barland: You asked us to tell what we are doing. I live on a 1320-acre stock farm and wheat ranch 14 miles from the nearest town. We have a car and I don't mind the distance much, as it doesn't seem far.

I help in the house and do all the riding in the spring and summer and most of it in the fall, too, but I like to ride and I don't mind it.

We have four saddle horses, so when I get tired riding one I catch another and ride it a while. I also like to read and dance and listen to music. My favorite authors are Zane Grey and Peter B. Kyne. I like to read ancient history, too.

We have beautiful scenery here. From the house we can see Mount Hood, Mount Adams and most of the southern range of the Klickitat hill and if we go on the top of a hill near the house we can see Mount Rainier, the Goat rocks, the Simcoes, Mount St. Helen, the top of Mount Jefferson and a number of other smaller peaks.

We live 23 miles from Goldendale, but we can see the lights of the city every night and from the other side of the prairie we can see miles and miles down the Columbia valley.

We have the most gorgeous sunsets, but it gets very dry, and oh, how the wind blows! We have a canyon on our place and I like to go down there and explore it. The Goldendale flyer goes through the canyon.

We have a car, but we can't go anywhere without traveling on hills and I am afraid if I learn to run the car I shall break my neck on some of the grades. I am a girl of 17 and in high school.

A COTTAGE PUDDING that is anything but humble

"Eat more wheat"

A cottage pudding, topped off with chocolate sauce, can be glorified into an uncommon dessert—if it's made uncommonly well. And that means Sperry Drifted Snow Flour. Pure, smooth, uniform and always sure to work out. For example:

1 egg
½ cup sugar
1 cup Sperry Drifted Snow Flour
1 teaspoon baking powder
¼ cup milk or water
2 tablespoons melted shortening
½ teaspoon vanilla
½ teaspoon lemon

[*Note:* All measurements are level and flour is sifted once before measuring. One-half pint measuring cup is used.] Sift dry ingredients, except sugar, beat eggs until very light, add sugar gradually, beating with egg beater. When creamy, add dry ingredients alternately with liquid, mixing well. Add flavoring and melted shortening. Bake in a shallow well-greased pan about 15 minutes. Cut into squares and serve with chocolate sauce.

How to make chocolate sauce: Use one-half cup sugar; one tablespoon Sperry Drifted Snow Flour; one-fourth cup ground chocolate; one tablespoon butter; one cup boiling water; one teaspoon vanilla or one-fourth teaspoon cinnamon. Mix all the dry ingredients, add boiling water and cook until thick; then add butter and vanilla.

You'll want this Cook Book—free! The Sperry Cook Book will show how to make many new, as well as many time-tried, dishes. The coupon below will bring your copy—write today!

SPERRY DRIFTED SNOW FLOUR to be sure

Mail this coupon to Sperry Flour Co., Dept. T Sperry Bldg., San Francisco.
Please send me, without cost,, the Sperry Cook Book.

Just Folks

Does devotion clear your mind or does it confuse you?

To be taken advantage of is no better than to take advantage of another.

Wife and two children complete the family of a young man with whom I was talking. He is getting into the prime of his business career. Knowing that his location calls him into daily contact with many city men of large affairs, I judged that the probabilities all pointed more or less to his following his patrons onto the golf links. Hence my surprise when speaking of Saturday afternoons and Sundays he said:

"No, I do not play golf. I have my own ideas about that. I believe that when a man marries and children come into his home, his time, outside of his business, belongs to his family. I do not believe in going off after I am through with my work and leaving wife and kiddies to themselves. I have a summer place, less than three hours by automobile from my own home. The week-end finds me bundling the family into the car and spending it with them in fishing, boating, as well as in fixing up things about the place. The family enjoys it hugely. So do I. No golf for me."

I know something about this man's work and I do not see that he loses anything in the way of business by not associating with his patrons on the golf links. I know him to be remarkably successful in his line of work.

When a man divides his time between his work and his family, whether he is a city man or a farmer, he is on pretty sure footing in life. EAS

GAME OF WELL-KNOWN SONGS.

One night the family whom we read about in "Home Play," and who hold a weekly party just for the family, were given by mother a list of very well-known songs, the name of each song being part of a question. For instance, we were asked, "Who wrote 'Home, Sweet Home'?" "Who wrote 'America'?" "Believe Me, if All Those Endearing Young Charms"? "Home to Our Mountains"? "Battle Hymn of the Republic"? etc. If we could give the name of the writer of either words or music we were forfeit-free, but if we could not, we were required to sing or whistle a stanza of the song which came, in its proper turn, to any of us as the list was handed round.—From "Home Play."

Latest High Class Patterns for the Home

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all state and national food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.
Wells & Richardson Co., Burlington, Vt.

Free to the Ruptured

Reduced Fac-Simile Gold Medal

STUART'S PLAPAO-PADS are different from the truss, being mechanico-chemico applicators, self-adhesive purposely to hold the distended muscles securely in place. No straps, buckles or spring attached—cannot slip, cannot chafe or press against the pubic bone. Thousands have successfully treated themselves at home without hindrance from work—most obstinate cases conquered.

Reduced Fac-Simile Grand Prix

Soft as velvet—easy to apply—Inexpensive—awarded Gold Medal and Grand Prix. Process of recovery is natural, so afterwards no further use for trusses. We prove it by sending trial of Plapao absolutely **FREE**. Write name on coupon and send today.

High Points in News of the Week

The action of President Coolidge in sending personal and official representatives to the wheat growing districts to investigate the condition of the wheat farmer and to urge and assist in the development of the cooperative grain marketing is considered by many leaders to be little if any short of official indorsement of the idea of cooperative marketing. The president has virtually gone on record as in favor of the extension of the cooperative marketing of grain throughout the entire country, and this indorsement in the face of the fact that cooperators are just now launching a movement for the signing up of 65 per cent of the total yield of next year's crop is significant.

Three representatives of the government are now touring the wheat growing districts consulting with leaders in agricultural work. The delegation is headed by Eugene Meyer, director of the war finance corporation. This delegation entered the Pacific northwest this week, where it will spend a few days, the first hearing being held at Spokane Wednesday of this week.

President Coolidge last week in a telegram to the international farm congress which was in session last week in Kansas City, said:

"I shall note your proceedings with the utmost interest.

"An international consideration of agricultural problems is particularly appropriate now," the message declares, "for the agricultural crisis is, in truth, of international as well as domestic character. It seems that in almost every country which has a considerable variety of international problems, agriculture in particular confronts a difficult and in many cases a menacing situation.

"Of all the productive activities it seems most universally to have suffered by reason of the war."

* * *

News dispatches indicate little progress in negotiations between Germany and France for a settlement of the reparations question. While Germany has to considerable extent ceased her passive resistance in the Ruhr district the indications are that she is seeking special benefit from the resumption of activities in this section rather than taking steps to bring about agreement on the entire reparations issue. France has declined to enter into any negotiations regarding such special benefit until the entire reparations matter is settled.

There has been some rioting in the Ruhr district and other sections of Germany during the last week, though in the main order has been easily restored. Shortage of food and fuel supplies as a result of the chaotic conditions that have existed for several months is the immediate cause of the disturbances.

* * *

The American Federation of Labor closed its convention at Portland last week by the reelection of President Samuel Gompers, together with the reelection of most of the other officers. El Paso, Texas, will be the scene of the 1924 convention. The Portland convention adopted, among others, the following resolutions:

Favoring the modification of the Volstead prohibition law so as to permit the manufacture and sale of light wine and beer; opposing the Ku Klux Klan; favoring the direct election of federal judges; favoring a congressional veto power over the decisions of the United States supreme court; opposing recognition of the Russian government as now organized by the United States; denouncing communism as an enemy not only of democracy but of organized labor; authorizing a continuation of the federation's nonpartizan political campaign committee; opposing the submission of any question concerning wages and working conditions to any government commission; favoring the principle of old-age pension; favoring conscription of property as well as persons in national emergencies; favoring the pardon of Thomas W. Mooney and Warren K. Billings who are now in federal prison as the result of bombing operations in California during the war; abolition of the government railway board.

* * *

Prohibition Commissioner Haynes in a recent address declared that the Coolidge administration is four-square for strict enforcement of the prohibition law. "We all know how valiantly President Harding supported and sponsored it," said Mr. Haynes. "No less wholehearted is President Coolidge's position on law enforcement."

* * *

A Southern Pacific passenger train was held up south of Ashland, Ore., last Thursday, the bandits killing the engineer, the fireman, a brakeman and a mail clerk. At this writing the bandits have not been arrested.

* * *

Following a long controversy between the members of the legislature and Governor Walton of Oklahoma, the legislature convened last week at the call of the governor. The governor asked that a measure be passed prohibiting the secrecy of the Ku Klux Klan. Up to this time the legislature has ignored this request, but has started instead the investigation looking toward the proposed impeachment of the governor and other public officials.

* * *

Declaration is made by those in charge of prohibition laws throughout the United States that there is a regrettable indifference being manifested by prohibition organizations, churches, etc., toward the liquor question at the present time in view of the nation-wide movement that is being conducted by the liquor forces for modification, if not destruction, of the Volstead act and of the national prohibition amendment. Prohibition forces are urged to be on the alert.

* * *

A report that the name of Henry Ford was being placed on the presidential preferential primary ballot in Nebraska has caused his personal secretary to issue a statement saying that Mr. Ford did not desire to answer at this time the question of whether or not he would be a candidate for president for next year.

* * *

Former Premier Lloyd George of England is now visiting in Canada. He will swing back across the American line and visit several points in the United States closing his tour of the American continent early in November.

* * *

Owing to a reported shortage in last year's corn supplies and to damages to the present crop from frost, corn was quoted exceptionally high last week. At New York it reached $1.22 1-2 per bushel, or about 6 cents per bushel higher than the highest priced wheat on that market. Corn normally sells for about 25 cents per bushel below wheat.

* * *

The interstate commerce commission has refused to grant changes in transportation, refrigeration and car heater charges on apple shipments from the Wenatchee and Yakima districts of Washington in accordance with petitions filed by growers of those districts.

"INLAND SEEDS ARE QUALITY SEEDS."

THE INLAND SEED CO.

913 First Ave. Spokane, Washington

We Have No Secrets

There is nothing mysterious or unusual in the conduct and operation of a public utility like a light and power company. It functions just as any other corporation except that it is regulated by the state and its profits limited by the state to a reasonable return upon its investment.

A public utility has to meet the same problems and is affected by the same conditions as the manufacturer, the merchant and the farmer.

A public utility can only prosper as the district in which it operates prospers. It occupies the same position in your neighborhood as any other form of business endeavor. It desires to cooperate with you in building up your community and the state.

NORTHWEST ELECTRIC LIGHT AND POWER ASSOCIATION

One little girl hopes the cousins and Aunt Nellie are happy and well. She says she is. Her home is in Lincoln county, Wash., and her name is Dorothy Timm.

Loretta Santo is the owner of three goats and a pony named Cricket. She also has two cats and a dog, but the dog is an old dog and she is going to trade him for a puppy and then train the puppy to look after Rose and Blossom, two cows on the Santo farm. The Santos live in Stevens County, Wash.

Birthday Greetings

THURSDAY, October 18—Margaret Anderson, 9 years old; Keith Weston, 10.

Friday, October 19—Frances Zumwalt, 11 years old; Dorris Eddings, 11; Alma Tarter, 9.

SATURDAY, October 20—Vera Louise Linsey, 11 years old; Emma Miller, 11; Cynthia Harlow, 11.

SUNDAY, October 21—Walter Colley, 9 years old; Florence Waugh, 11.

MONDAY, October 22—Doris Groff, 9 years old.

TUESDAY, October 23—Thordis Fjerlie, 9 years old; Agnes T. Johnson, 9; Raymond Larsen, 6; Vera O'Neil, 11; Evelyn Aleen, 11.

BEDTIME STORIES

By THORNTON W. BURGESS.

FARMER BROWN'S BOY REPAYS.

A little kind and good deed
Is like a tiny little seed;
It grows and grows and grows and grows,
And where 'twill stop nobody knows.

The little friends of Farmer Brown's boy who were trying to help him by killing all the bugs and worms in the old orchard, the garden and the berry patch were doing it to repay him for his kindness to them. They did not expect any further reward. No, indeed! Such a thought had not once entered their heads. They didn't even know if Farmer Brown's boy would know what they were doing, and they didn't have the least idea that he would know why they were doing it.

But Farmer Brown's boy did know what they were doing. He listened to the chattering of the birds in the old orchard and when they didn't know it he watched them. Then he called Farmer Brown to listen and watch. "There are the best friends we've got," he whispered. "I guess we'll have plenty of apples this year, for those birds won't leave a bug or a worm on the trees if they keep on. It's the same way down in the garden. Old Mr. Toad is working his head off down there, and I found a lot of places where Jimmy Skunk has dug up grubs. Of course, I don't suppose they know that they are helping us, but they are just the same, and I'd like to do something for them."

When they had drunk their fill and bathed to their hearts' content, they sang with all their might.

"Why don't you?" asked Farmer Brown with a twinkle in his kindly eyes.

"What?" demanded Farmer Brown's boy.

"Well, it seems to me that those little folks must get dreadfully thirsty these hot, dry days, and they must have to go a long way for a drink and a bath."

"The very thing!" cried Farmer Brown's boy delightedly. "I wonder I didn't think of it before."

With this he strode off toward the barn and there for a time he was very busy, and while he worked he whistled. By and by he came out to the Old Orchard and began to dig a hole just where the sun broke through the branches of one of the apple trees. The birds stopped their work and their singing to watch. What could he be doing?

When the hole was deep enough to suit him he brought a post and put in it. Then he pounded the earth down all around it so that it would stand solidly. On top of the post he fastened a shallow pan. Then he brought a pail of sparkling fresh water and filled the pan, after which he went away and hid where he could watch. At first the birds looked at the post and pan a wee, wee bit suspiciously. Was it a scarecrow or a kind of trap? Then Tommy Tit the chickadee came along and right away he guessed what it was.

"Dee, dee, dee! See me! See me!" he cried joyously, and flitted down to the edge of the pan and began to drink, for he was very thirsty. Then he hopped right in and took a bath. How he did make the water fly! It was so cool and refreshing. "Dee, dee, dee! See me! See me!" he sang joyously.

Then one after another the other birds did the same thing, and when they had drunk their fill and bathed to their hearts' content they sang with all their might and main to let everybody know how happy they were, especially Farmer Brown's boy, for they knew then that he had done this to repay them for their work in the old orchard.

Farmer Brown's boy chuckled. Then he put a pan of water in the berry patch and another in the garden, only these he put on the ground for the little people who like the ground best. Every day he saw to it that each pan was filled with fresh, clean water, and so he won his way still farther into the hearts of the little people of the old orchard and the green meadows. They knew then that he was indeed their friend.

Three Winter Wheats

Eastern Washington farmers grow many varieties of wheat, but the State College of Washington believes there should be but three varieties grown. Based upon the experiments conducted at Pullman, Waterville and Lind, it is shown that Triplet, Hybrid 128 and Turkey Red are the three winter wheats recommended for eastern Washington farmers.

Figuring yields upon a price basis for two years in every case, the three wheats recommended exceed the value of Red Russian, Jones Fife and Fortyfold, the latter varieties being used on many of the farms at the present time.

An exhibit of these three wheats and what they have done in the past years has been shown at many of the fairs in Washington this year. Leonard Hagnauer prepared the exhibit which shows that the three recommended varieties will yield higher than what is being used, making a difference of $8 per acre to the farmer in the Palouse country, $2 to $3 in the Waterville country and $1 to $2 in the Big Bend district around Lind.

Turkey Red is recommended for the central and southern part of Okanogan, all of Douglas, Grant, Franklin and most of Adams, and the drier portions of Whitman, Benton and Walla Walla counties.

Hybrid 128 is recommended as the winter variety for the eastern portion of Okanogan, all of Ferry, Stevens and Pend Oreille counties growing wheat, the northeastern portion of Lincoln, most of Spokane, and a strip through Whitman, Garfield, Columbia and Walla Walla.

Triplet grows best in the southern part of Spokane, eastern Whitman, a large part of Garfield and some of Walla Walla and Asotin counties.

Turkey Red is also recommended as the winter wheat for the dry sections of the irrigated counties of Chelan, Kittitas and the extreme eastern part of Yakima counties.

Lacey Holds Local Fair

The boys and girls played an important part in the recent fair held in the schoolhouse at Lacey, Thurston county. The potato club displayed many varieties of potatoes that had excellent size, were well graded and the quality was very good. The girls displayed a large assortment of canned goods and sewing.

The general display of fruits and vegetables showed that the farmers in this district are raising as good products as many other parts of the state. The women had a complete exhibit of baking and canned goods. The flower show brought out some well-selected cut flowers of the season and the potted plants added to the display.

The curio display was varied and interesting. This collection was under the supervision of Mrs. Jennie Bagley, and included pewter plates, some of which were over 150 years old. The Fleetwood family contributed an old muzzle-loading rifle that was brought to Washington in 1862 over the old Oregon trail. There were Indian arrowhead, idols and many yother interesting things. Mrs. Bagley showed a pair of pillow shams made from linen woven on a hand loom by her great-great-grandmother.

The manual training department of the Lacey school showed several articles that had been produced in the school shop.

Industrial exhibits were also displayed. Miss A. Belle Shelton, home demonstration agent, displayed several good charts on diets. Lunch was served in the basement of the schoolhouse by the ladies.

The officers of the fair are: M. W. Tobin, president; Andy Chors, vice president, and Lawrence Huntamer, secretary-treasurer.

NEW JERSEY RECORD.

Lulu Mary of Ashburn, a Jersey cow owned by J. M. Dickson & Son of Shedd, Ore., has recently completed a new world record in the 305-day division, under the rules of the American Jersey Cattle club, by producing 844.27 pounds of butterfat in the 305 days and dropping a calf well within the time prescribed for class AAA. By so doing she displaced St. Mawes Pretty Lady, with 827 pounds, and, besides this, is the fifth Oregon cow to raise that record since last November, when another Jersey owned by the Dickson farm brought the record to the state. Mary is richly bred along producing lines, having St. Mawes, Rosaire's Olga Lad and Golden Glow's Chief close up in her pedigree. Her dam is by the senior herd sire at the farm and is closely related to the ex-world record senior yearling, Lulu Alphea of Ashburn, that was also bred on the farm.

Snohomish County Fair

The seventh annual Snohomish county fair at Granite Falls, September 27-30, was a real success this year. Ever increasing interest in the fair has crowded the exhibit buildings to their full capacity and keen competition was felt in nearly all departments. The superintendents in all the various departments are satisfied that this year's fair was the best so far and that the quality and number of the exhibits have not been equaled in the past.

Parley Twogood, a well-known pioneer in the community, and superintendent of the live stock show, displayed his string of high-grade Percherons and made a clean sweep of the prize money in all the classes in which he exhibited. One lonesome little saddle pony, owned by Mrs. George Pinkston, composed the entire light horse class and displayed a blue ribbon after the judges had passed, which it might well have earned in the presence of many other entries.

The leading display of purebred cattle was the string of Guernseys from the Valley Gem Farms, owned by W. A. Wrage and C. H. Crewe of Arlington. They have 45 head and are breeding only purebred stock. The herd bull, Lishman's Son, which was on exhibit, is an animal of fine type and a descendant of Governor of the Shene, the daughters of which are claimed to have made more A. R. records than those of any other bull of any other breed.

The live stock exhibit contained other breeds in both grade and purebred stock.

The poultry exhibit was not large, but the birds on display were all good types and what little competition there was was sharp.

The boys and girls' clubs and school exhibits were of high quality and extensive and showed well the tendency of the younger folk to do things.

The various sections of the county worked well together in supporting the fair and there were large numbers of out of town visitors. The fair attracted great numbers of children who found only too much to keep them busy during their visit.

BEES NEED WINTER FOOD.

Make sure your bees have between 40 and 50 pounds of stores for the winter.

PESSIMIST AND OPTIMIST.

The wise man from the city was watching the farmer boy hoe corn. "Looks like you have got only half a crop there, Sonny," he said.

"Yep," said the boy, cheerily, "landlord gets the other half."

"Corn looks kind of yellow, doesn't it?" inquired the wise man.

"Yep, that's the kind we planted," said the farmer boy.

ABSORBINE

will reduce inflamed, swollen Joints, Sprains, Bruises, Soft Bunches; Heals Boils, Poll Evil, Quittor, Fistula and infected sores quickly as it is a positive antiseptic and germicide. Pleasant to use; does not blister or remove the hair, and you can work the horse. $2.50 per bottle, delivered. Book 7 R free.

W. F. YOUNG, Inc., 571 Lyman St., Springfield, Mass.

Market Quotations by Wire
One Valuable Feature of
Your State Farm Paper

Like any other business man, the producer of grain, fruit, live stock and other farm products must watch market conditions closely. If he does not do so, he is sure to lose by selling when he ought to hold, or by holding when he ought to sell.

Appreciating this fact, The Washington Farmer gives its readers each week a complete, reliable summary of prices in the principal market centers. Quotations are flashed to this paper by wire; then put into type and printed by means of speedy modern machinery; thus reaching our readers at the earliest possible moment.

In addition, The Washington Farmer presents a weekly survey of crop and weather conditions; reports yields; gives data upon price tendencies; prints the details of cooperative marketing movements; in fact, assembles information of every kind which will enable Washington farmers to market their products more intelligently and profitably.

This market service is just one of the many ways in which this magazine is striving to help you week in and week out. The price of $1 for five years, which we ask in payment, is surely small payment for such service. Cooperation from you and other loyal readers will help us improve our service still further without increasing our subscription rate.

"Cooperation" means renewing your subscription at least 60 days in advance of the expiration date on the wrapper, and including the orders of friends and neighbors with your own.

We say to our friends: "Send your subscription orders direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, help us make our plan an even greater success than it has been in the past. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

Must Treat Show Hogs

W. H. Lytle, state veterinarian of Oregon, has issued a ruling that all hogs exhibited at the Pacific International Live Stock exposition at Portland in November must have been given the standard treatment to protect them against hog cholera. In part, the notice sent out by Dr. Lytle reads as follows:

"If what is known as the serum alone treatment is used it must not have been given earlier than 30 days before exhibition. If what is known as the serum simultaneous or the virus treatment has been given it should not have been given within five days before date of exhibition. All hogs given the serum simultaneous or vaccination treatment for hog cholera must have their bodies dipped or sprayed in some of the standard disinfectant solutions before being shipped.

"It will be necessary that all owners have a certificate of immunization, describing in a general way their animals that are to be exhibited, so evidence will be at hand showing this immunization to have been given."

GRAND CHAMPION.

The typical milking Shorthorn heifer here shown was junior and grand champion at the Grays Harbor fair at Elma, Wash. She is owned by E. C. Truesdell & Son of Centralia. She had only the Truesdale herd to compete with at Elma, but defeated a mature cow that had beaten her at one other place.

GUERNSEY BREEDERS BANQUET.

The Guernsey breeders held a banquet on Wednesday night during the Western Washington fair at Puyallup and elected the following officers for the coming year: J. E. Grew, Arlington, president; J. H. Taylor of Chehalis, secretary, and Miss Katherine Gile of Chinook, assistant secretary. Joe Vance of Yakima and Dr. J. W. Keyes of Spokane were reelected to the board of directors.

The speakers at the banquet were E. L. Westover of Portland, Dr. Park Weed Willis of Seattle and Senator William Bishop of Chimacum, who talked on the butter substitute referendum. There were about 40 who attended and George Gue acted as toastmaster.

HOGS IN THE MOVIES.

The National Duroc Jersey association is again this year making moving pictures of representative herds and individuals and their breeders for use throughout the country as breed advertising. Of especial interest is a new film soon to be completed showing a litter of Duroc Jersey pigs as they were at the end of each 30-day period in their lives. The last pictures of the film will show them dressed in the packing house, with one cut up into hams, bacon, spareribs, etc., to show the way they dress out.

CONSISTENT BREEDERS.

There are no subjects that S. L. Banks of Tekoa and A. G. Woodward of Fairbanks like to discuss better than dairy cattle and hogs. That each is consistent in his ideals of live stock characteristics is realized when it is known that Mr. Banks is a breeder of big-type Duroc Jersey hogs and rugged Holstein cattle, while Mr. Woodward thinks that no other hog can equal the Berkshire and no other cow the Jersey.

BUYS PERCHERON STALLION

Announcement is made of the purchase by Adolph Johnson of Yakima, from Herbert Kruger of Colville, of the aged Percheron stallion, Pickett. The reported price is $2000. Pickett was shown on the fair circuit this season, winning wherever shown, including the Spokane Interstate fair and the state fair at Yakima.

RESERVE HOLSTEIN NAMES.

"Laurelhurst," "Millerdale" and "Limberlocks" are three prefixes or herd names recently reserved by the Holstein-Friesian association for the exclusive use of three Washington breeders. They are, respectively, the property of N. P. Sorenson, Bellingham; Albert Miller, Chehalis, and O. A. Seward, Yakima.

STATE ASSOCIATION TO HOLD SALE.

The Holstein-Friesian association of Washington state will hold a two-day consignment sale of from 150 to 200 head, December 3 and 4. The sale will in all probability be held at the Skagit county fair grounds at Burlington.

Hardiness!

Every man who milks cows for a living knows that *Hardiness* is a necessary characteristic of a good dairy cow.

HARDINESS IN HOLSTEINS MEANS:

The ability to do well for the general farmer, as well as for the commercial dairyman.

The ability to readily adapt themselves to any climate and to profitably turn available farm feed into milk and butter-fat.

Fifty Guernseys at Auction
North Portland, Oregon, November 7, 1923
Western Guernsey Breeders. Pacific International Guernsey Sale

The Pacific International Guernsey sale contains an exceptionally choice lot of cattle, A. R. and show cows, bred heifers, herd bulls and young calves, both sexes, selected from the leading herds in the northwest. Many of them will finish the show circuit here and will be sold. The sale will include such Guernseys as:

LILY OF CHICONA, A. R. record 517 lbs. fat, class C, a show cow and from the same dam as Daisy of Chicona, 748 lbs. fat, class EE, world's champion in class.

Janis of Sequoia, A. R. record, 846 lbs. fat, Pacific coast record when made. She is a show cow as well as a champion producer.

A yearling bull that is a double grandson Langwater Traveler, the sire of the world's class champion Daisy of Chicona.

And others. Some of them have excellent show and production records, others are of desirable conformation but young and untested. If you want an outstanding show cow and producer, a bred heifer that promises to develop into a noted cow, a foundation cow or a profitable cow or bull for the dairy herd it can be found in this lot.

Remember the day, WEDNESDAY. The management of the Pacific International Livestock show has promised to have the judging completed by that date so plan on being there. The catalog gives details regarding the offering. Send name to sales manager and one will be forwarded as soon as published.

Sale Committee:

THE WASHINGTON FARMER

ESTABLISHED 1894

SPOKANE. SEATTLE.

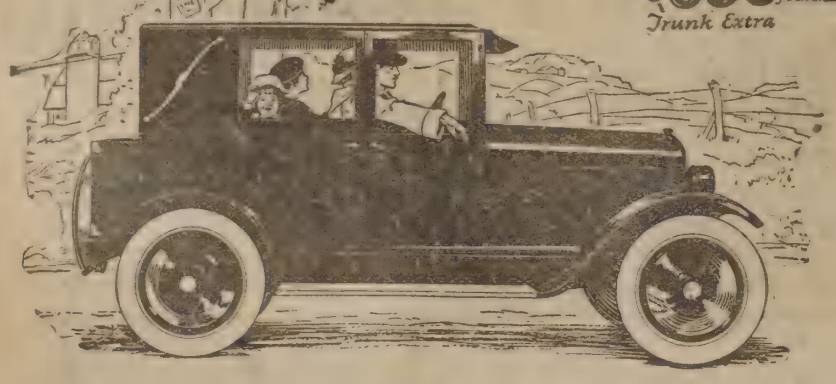
The Head of the Herd

Farming Without Livestock Is Like Building Without a Foundation

Another Innovation

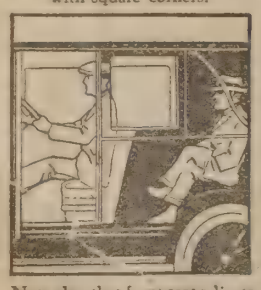
THE Overland CHAMPION

$695 f.o.b. Toledo
Trunk Extra



America's Only Versatile Car

Observe the generous loading space back of the front seat—50 cubic feet of clear space with square corners.



Note also that front seat adjusts backward to make tall people comfortable without crowding people in rear seat.

Front seat adjusts forward to put foot pedals in easy reach of short people. Adjustable to three positions.

Here at last is restful sleep on camping trips, with seats and upholstery made into full length, full width bed on floor.

See the large, comfortable seating capacity and the wide doors both front and rear—no seat climbing.

Willys-Overland now presents the first real all-purpose car—the new Overland Champion! Exclusive features, utilities and economies! Benefits never before offered the farmer, the dairyman, the stockman, the business-man and the American family!

The new Overland Champion fits itself to you. Both front and rear seats are adjustable forward and backward to accommodate short people and tall people—no stretching for pedals—no leg cramping!

Both front and rear seats and upholstery are entirely removable. Take out the rear seat and upholstery and you have 50 cubic feet of clear space for farm tools, truck, groceries, milk cans, luggage, camping duffle—anything!

For camping, front and rear seats and upholstery make up into a wide restful bed the full length of the body!

Doors both front and rear—like the famous Willys-Knight Coupe-Sedan! Real ease, without seat tilting or climbing, when getting in or leaving the car—for loading and unloading bags, boxes, tools and cans.

A handsome family car with body of steel, and washable blue Spanish long grain upholstery. A sturdy work car of unmatched utility, cradled on Triplex springs (Patented).

An all-year car. And above all, *Overland quality and reliability, with astonishing economy!*

See the new Overland Champion quickly!

Touring $495, Roadster $495, Red Bird $695, Coupe $750, Sedan $795; f. o. b. Toledo. We reserve the right to change prices and specifications without notice.

Every Bump Costs You Money

There can be no real argument against anything that *saves a farmer money*—particularly right now.

The keen, business-headed farmers of America have made the Hassler shock absorber the world's leading automobile accessory.

Because they know, from their check stubs, that Hasslers DO save them money on their Fords.

And their wives and daughters have come to appreciate the superior COMFORT of riding on Hassler shock absorbers.

Incidentally, passenger comfort means that you're saving money on gasoline, tires and upkeep.

Write for "An Auto Biography." This new Hassler booklet, sent free on request, will grip you with its human interest, no matter what car you drive

There is the proper type Hassler for every Ford model and there is a Hassler dealer in your nearest town

ROBERT H. HASSLER, INC.

Shock Absorbers
PATENTED

"One car out of every ten in use today is Hassler equipped."

The Firm Foundation

Many a worn-out farm has been rejuvenated and made productive through the introduction of live stock into the system of farming. Cattle, horses, hogs or sheep are the greatest tonic for sick farming that medicine man ever prescribed, and as for keeping the medicine man away from a well farm they have the proverbial apple-a-day for a well man beaten to a finish.

Take a look about you. Which farmers have best weathered the storms of the past few years? The ones who have devoted their entire time to the production of a single crop from the soil, wheat, for instance? We heard a man say the other day that he believed he had made more clear money this season from his 80 diversified acres than any of his strictly wheat growing neighbors from their 500 to 1000 acres. Live stock is the balance wheel of his system of balanced farming. We know another farmer who has one square quarter section. His neighbors have from twice that much to 10 times a quarter. Live stock makes it possible for this farmer to be one of the most prosperous men of his entire county.

Balanced farming is growing into greater and greater favor in the state of Washington, and live stock is a basic essential in this system. While animals convert great quantities of farm waste into products of value, they also lead to the production of other crops than the one which inevitably dominates where live stock is not grown. With rarely an exception, these crops mean a better type of farming. For example, the wheat farmer puts in a few head of dairy cows and a few hogs. His next logical step is the seeding of a portion of the farm to alfalfa, clover, peas, corn or other feed crop. The wastefulness of the summer-fallow system is reduced and the fertility of the soil increased. The cattle and the hogs yield incomes at seasons when otherwise little or nothing is coming in. They provide profitable employment all the months of the year. They afford a great measure of insurance against failure, which, in the case of the one-crop farm, is total failure.

Washington, already on the road to permanent agricultural success through the aid of live stock, has a great possibility before it. As it develops more farm flocks of sheep, more well-cared for dairy cattle, more horses, beef cattle and brood sows will be found playing their fundamental part in the upbuilding of the commonwealth.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Surplus Milk Problem

The surplus milk problem comes sooner or later to the dairymen who are organized to market their own product. The Inland Empire Dairy Producers' association, having its headquarters in Spokane, is now vigorously attacking that problem.

At the various district meetings of the dairy producers, held recently, the proposition of a new building and equipment for a powdered skim milk plant to cost $65,000 has been fully discussed and the sentiment is reported to have been generally favorable.

"We are convinced that the addition of the plant for powdering milk will solve the question of our surplus milk supply for all time," said G. D. Railsback, secretary of the association. "The proposed plant will have a capacity of handling 50,000 pounds of skim milk a day. The greatest amount of surplus skim milk we had in one day last spring was 30,000 pounds. Butterfat is now worth 49 cents a pound and sweet cream 61 cents. The country has a shortage of dairy products and all indications point to a good market in this field for several years to come."

It is of interest to note that the Inland Empire Dairy Producers' association in September handled milk worth from $45,000 to $50,000. The total amount handled was 1,405,000 pounds, for which the farmer was paid at the rate of $2.50 for 100 pounds of milk testing 4 per cent butterfat.

The Medicine of Good Cheer

If we became aware that one of our neighbors was going about his business in our community, though sick with smallpox or other contagious ailment, we would notify the health officer and urge that he be placed under strict quarantine. If we discovered him entering our gate, we would in all probability request him, more or less politely, to remain away.

There are many persons going about spreading contagion as harmful as smallpox. Sometimes we keep away from them; sometimes we seem actually to cultivate their comradeship. They are the people with diseased dispositions and diseased minds. They are those who spread discontent and gloom by the looks upon their faces and the words that they utter. They discourage us in our ambitions to go forward and upward in our various undertakings. They make us dissatisfied with our lots. Some of them take another tack and gossip about our neighbors. They make us suspicious of the people of our locality. They make us dislike somebody that is worthy of our admiration and cooperation. They use irreverent and sometimes indecent language, filling our minds with uncleanness to whatever extent we listen and absorb.

A man has no more right to poison the mind of a neighbor than he has to poison his live stock or to expose his family to a contagious disease. It is a part of the moral duty of every person to radiate good cheer, to manifest reverence, to speak the truth, to refrain from maligning his neighbors. He gains nothing by his discontent or uncleanness, but on the other hand loses much personally and does these with whom he comes into contact much injury. But he who radiates good cheer, wholesomeness, courage, friendliness, reverence and confidence in the goodness of mankind and the world in which he lives does much for himself and for those whom he influences.

Develop the Home Market

Cutting of food costs to consumers and increasing the returns to producers by encouraging farmers to meet better the demands of local markets is seen as a possibility by the United States department of agriculture. Much of the food consumed in cities comes from distant producing sections. Some of this food could be produced in near-by farm sections, thus shortening the route from producers to consumers and effecting savings in marketing costs that might well be shared by both producers and consumers, the department says.

Many instances are known where a city's supply of a commodity is brought from distant sections when the same commodity is being grown in the immediate territory and shipped to cities hundreds of miles away. The savings on transportation alone would go far toward reducing distribution costs, the department says. Railroads would also welcome the more efficient use of cars resulting from a better development of home markets.

More Rapid Shipment of Apples

F. G. Robb, specialist in inspection of fruits and vegetables of the United States department of agriculture, told the Wenatchee fruit growers the other day that in his opinion the one thing that the apple shippers of that district should provide is more rapid shipment of the fruit after it is taken off the trees.

To prevent deterioration fruit should be at once placed in storage at low temperatures or loaded on cars within a very short time after it is plucked.

If this were done no dealer would complain as to the condition of the apples when they arrived at an eastern market, and this would be a real factor in improving marketing conditions.

The total shipment of apples out of the Wenatchee district to October 10 for the season was 3574 cars, or a decrease of 833 from the corresponding date of last year. This is an increase of nearly 700 cars over the 1922 shipment.

The Virtues in Orcharding

One can readily imagine that pretty nearly all the virtues—patience, perseverance, punctuality, industry, faithfulness, and a good brand of hope—entered into the production from 63 Grimes Golden apple trees in the J. P. Taggard orchard in Waitsburg, Walla Walla county, this year.

The reports from the orchard relate that these trees, planted 27 years ago, averaged 51 loose boxes, or 39 packed boxes. The highest yielding trees producing 70 boxes. All these averaged 75 per cent extra fancy; 13 per cent fancy, and 12 per cent C grade, under federal inspection.

Seek the Right Training

The basic factor in success is the individual. A man must have it in him to succeed. Must have what in him? There has been some divergence of opinion as to the details, but in any list would occur the following: Honestry, initiative, judgment, knowledge, industry, vigor, personality, health. There must be the spark of these virtues in the individual, but they may be fanned into flame by training of the right sort, just as training of the wrong sort may all but extinguish the native spark.

Washington State Gleanings

Having practically completed his investigations with respect to the mildew and the apple scald, Plant Pathologist D. F. Fisher of the United States department of agriculture, with headquarters at Wenatchee, is now devoting time to the study of the cause and cure of water core in apples, under the direction of Charles Brooks, chief of the division, who is spending some time in the Pacific northwest.

BUYS TWO PAIRS OF SILVER FOX.

Two pairs of silver fox valued at $2000 a pair are in pens owned by D. D. Phillips of Lower Naches, following their arrival from Wisconsin. Mr. Phillips intends to use the fox for commercial purposes. They are the first registered fox to be brought to the Yakima valley, according to Mr. Phillips. He also has a pair of raccoons and a pedigreed German police dog which he recently purchased in California.

SET SPELLING BEE DATES.

Superintendent H. A. Ellis has mailed his circular of instructions to all school principals in Whitman county relative to the series of spelling contests, which are to be held this year. The grades included in the contests are from the third to the eighth. Fifty words for each grade will be mailed from the county superintendent's office to each graded school in the county so that the tests may be given on the following dates: November 9, January 4, March 7 and April 25. Results of each contest will be tabulated and sent to all the schools entering the contests and at the end of the series the schools making the highest and second highest scores will be awarded a pennant.

GRANGER WATER SYSTEM READY.

The Granger irrigation district's system is completed and will be ready to deliver water early next season, says a Yakima report. It has been constructed under the federal reclamation service at cost of about $250,000 and will irrigate 1600 acres of fine fruit land on Snipes mountain. The cost an acre was $160 and is considered low when the original price of land is placed at $10 an acre. Water is being turned into the main canal and laterals to harden them and prevent possible damage to cement when frost comes. This leaves only one more project, possible of construction under the Sunnyside canal, the Mabton irrigation district, containing 1800 acres, and this will be undertaken soon. Charges on these projects are spread over 20 years, according to J. L. Lytel, project manager.

WHEAT YIELDS AT WILBUR.

The general average yield of wheat around Wilbur, in Lincoln county, according to Roland Short, clerk of the Grain Growers' Warehouse company, is 25 bushels an acre.

Robert Sheffel, northwest of Wilbur, harvested more than 1700 acres that averaged 30 bushels; John Kunz, Sherman, harvested 30 bushels an acre from 1200 acres and Henry Krause, near Wilbur, averaged 30 bushels from 1000 acres. Two miles north from Wilbur Victor Laurentzen's yield averaged 30 bushels on 240 acres. One quarter yielded 42 bushels an acre. Holgar Jurgensen in the same district got 30 bushels an acre from 130 acres. Mr. Jurgensen experimented with hard Federation wheat on 40 acres and harvested 34 bushels an acre. The Samuel Mar 900 acres on the Kenneway yielded 24 bushels an acre.

STEVENS COUNTY APPLE CROP.

Shipping apples from the Columbia river valley will begin soon. Apples are being hauled to the stations. Meyers Falls is the largest shipping point, as it receives all apples raised in the upper Columbia river valley consisting of Kettle Falls, Rice, Daisy and Gifford. Springdale receives apples from Hunters and Fruitland, while Marcus and Marble are large shipping points, the upper Columbia river company, which has one of the largest fruit orchards in Stevens county, being located at Marble.

It is expected that more than 200 cars of apples will be shipped from Meyers Falls, and about 100 from Springdale. There are two large warehouses at Meyers Falls, and a large unit of the Skookum Packers' association was formerly located there. The shipping will be handled by several concerns, although the Kettle Falls Growers, which comprises many of the large growers of Kettle Falls, is handling its crop cooperatively.

ENGLISH LIKE RED APPLES.

Yellow Newtown apples are no longer the favorite fruit of people in the United Kingdom, according to A. L. Ryan, who has been purchasing apples in the Yakima valley for export to England and her colonies. After reigning for years as the most tasteful apple marketed, in the estimation of people across the water, the Newtown has been supplanted by the small red apple, according to Mr. Ryan. Buyers in England are calling for Rome Beauties, Jonathans and Winesaps, the exporting agent declared. And above all the importers explicitly state in their orders that they want small apples. "Five tier Jonathans are the ideal apples for export to the United Kingdom this year," Mr. Ryan answered upon question. "Demand is also heavy for Romes and Winesaps, two of the best shippers. Although demand for Newtowns is still heavy in England, the greater demand is for the small, red varieties.

SOIL SURVEY COMPLETED.

Completion of field work on soils surveys, the first and basic phase of the federal investigation of the Columbia basin project, was announced October 8 by Homer J. Gault, chief engineer of the federal investigation. Seven experts, headed by A. T. Strahorn, were engaged in the soils surveys which have been under way all summer.

The data will now be assembled for the soils report, which Mr. Gault said would require five or six weeks of office work. It will be the first report of the investigation, being the basis of the whole calculation, inasmuch as the soils report will indicate the quantity of water required by the project.

Field work on Priest lake, which is being considered as a substitute for Flathead lake as the main source of water supply, was practically finished on October 6.

Mr. Gault intimated that Priest lake was gaining favor as the water source, saying that the preliminary estimates indicated that "the overflow damages will not be extremely heavy; nothing like the damages at Flathead lake."

Violate the Constitution

Travel Road of Lawlessness and Sow Seeds of Destruction

Senator Borah of Idaho told the law enforcement conference at Washington recently that wealthy Americans who violate the 18th amendment and "reds" who denounce the constitutional provisions designed to protect property "are both traveling the road of lawlessness, sowing the seeds of destruction and undermining the whole fabric of law and order."

Plain and stinging words, these. But are they the language of exaggeration? If citizens of wealth choose to violate one provision of the Constitution, by what right, consistently, can they deny the right of another group to repudiate other provisions of the Constitution? If they choose to violate the prohibition law and thereby give profit, aid and encouragement to the criminal elements that are carrying on the illicit liquor traffic, on what basis of reason can they point the finger of indictment at criminals who choose to break other laws?

The right of an individual or any group of individuals to advance repeal of the prohibition amendment is not denied. That is not the point at issue. The evil is disregard of the Constitution, attempted nullification of that great charter of the people's rights and liberties and violation of laws passed to enforce the Constitution.

One of the glorious principles of this government is equal rights to all and special privilege to none. The Constitution and the laws are to be obeyed by all citizens, regardless of class, wealth or social status. No element of American citizenship can afford to go against that principle, least of all citizens who have property at stake, who owe everything to the protection of the Constitution and the enforcement of the laws. They are playing with two-edged swords and tampering with dynamite when they go against the Constitution and dealings with the criminal element that violates the Volstead law.

CAN THEY MAKE A TRADE?

Wallace's Farmer: The general farm organization has service departments in such fields as law, publicity and transportation. It has a strong system of local units. It needs better financial support and more concrete benefits to show to its members.

The commodity marketing association has a big overhead expense on service departments that duplicate those of the general farm organization. It needs a better local contact with producers. It has fairly strong financial support, as a rule, and holds its membership by virtue of the dollars it saves for them in handling their business.

Is it feasible for the general farm organization and the commodity marketing association to work together to their mutual benefit? Can the marketing concern save money and gain strength by turning part of its service and field work over to the general farm organization? Can the general farm organization secure a better financial backing and a more interested membership by giving the marketing concerns representation on its governing board and employing local field agents to care for the interests of both groups. In return for this service in the local field and in the maintenance of special departments, the general farm organization would, of course, be entitled to a fixed service charge from the marketing association, to be paid from association profits.

Plans along these lines are being tried out in a number of places at the present time.

World Farming--British India

Agriculture is the chief industry of British India. Out of a population of 313,000,000 nearly 225,000,000 are supported by agriculture. In 1921 rice was grown on 78,000,000 acres, producing 28,000,000 tons; wheat on 26,000,000 acres, producing 6,500,000 tons; cotton on 21,000,000 acres, producing 3,500,000 bales; sesamum on 4,333,000 acres, producing 368,000 tons; rape and mustard on 5,000,000 acres, producing 848,000 tons; sugar cane on 26,000,000 acres, producing 2,500,000 tons, and tea on 700,000 acres, producing 345,000,000 pounds.

The total area cropped in British India in 1919-20 was 255,000,000 acres, and the net area (deducting areas sown more than once) was 223,000,000 acres.

Of the 49,000,000 acres irrigated 23,000,000 acres were irrigated by canals, seven and one-third millions by tanks and 13,000,000 by wells.

There are 250,000 square miles of forests, the net revenue from state forests being about $10,000,000.

Live stock in British India, census 1919-20: Oxen, 117,428,000; buffaloes, 28,493,000; sheep, 21,984,000; goats, 24,134,000; horses and ponies, 1,699,000; mules, 75,000; donkeys, 1,372,000; camels, 408,000.

India has a population of 319,000,000.

BREAD A STAPLE IN CHILE.

Bread constitutes a staple of diet for the great mass of the people in Chile and is consumed in large quantities. The American white bread loaf is practically unknown to the Chileans, the bread eaten by them being of a coarser grade and very similar to the American "hard rolls." The sizes of the loaves vary greatly, some of them being as small as the ordinary breakfast roll, while others would probably weigh about one and one-half pounds. Bread-making machinery is not extensively used, most of the work being done by hand.

The Day of Small Things

From a Single Grain of Wheat Huge Crops Are Grown

For who hath despised the day of small things?—Zachariah, iv., 10.

This article is an account of the marvelous things that came from a grain of wheat—the discovery and development of a new variety, Marquis, which has profoundly affected wheat growing in North America, tremendously increased Canadian production and made possible the building of new lines of railroad, the quick settlement of wild prairie regions and the rise of towns and cities.

And, moreover, a discovery and a development that have injected a terrific question into the minds of the wheat growers of the northern part of the United States—the uncertainty of profitable wheat growing in regions like the Palouse country, the Big Bend, the wheat counties of northern Idaho, of eastern Oregon and Montana.

There was recently published in London and New York a new science encyclopedia, under the title "The Outline of Science." Professor J. Arthur Thompson of the University of Aberdeen, Scotland, contributes these significant paragraphs in that work, pages 189 to 192 of volume 1:

"One of the factors that assisted the allies in overcoming the food crisis in the darkest period of the war was the virtue of Marquis wheat. * * * In 1917 upward of 250,000,000 bushels of this wheat were raised in North America, and in 1918 upward of 300,000,000 bushels, yet the whole originated from a single grain planted in an experimental plan in Ottawa by Dr. Charles E. Saunders so recently as 1903.

"The parent of Marquis wheat on the male side was the Mid-Europe Red Fife—a first-class cereal. The parent on the female side was less promising, a rather nondescript, not purebred, wheat called Red Calcutta, which was imported from Indiana into Canada about 30 years ago. The father was part of a cargo that came from the Baltic to Glasgow and was happily included in a sample sent to David Fife in Ontario about 1842.

"From one kernel of this sample David Fife started his stock of Red Fife, which was crossed by Dr. Saunders with hard Red Calcutta. The result of the cross was a medley of types, nearly 100 varieties altogether, and it was in scrutinizing these that Dr. Saunders hit upon Marquis. He worked steadily through the material, studying head after head of what resulted from sowing, and selected those that gave most promise. Each of the heads selected was propagated, most of the results rejected; the heads were sifted again and again, and finally Marquis wheat emerged, rich in constructive pos-

(Continued on page eighteen.)

FARM BUSINESS AND MARKETS OUTLOOK

THE outlook for industry and trade in the next few months seems to vary with the lookout—with the interpretation he places on the symptoms shown. It is pointed out, on the one hand, that volumes are running large in most lines of production while others see a general downward trend of output and buying even though a moderate increase may occur in the fall months when trade usually is at its best.

Unfilled orders held by the leading steel concern are the smallest since March, 1922, and the rate of operations is smaller than last spring. These are significant trade barometers. On the other hand, reports of steel sales are slightly more optimistic at present, railroad inquiries for new cars last week were said to be the largest of the year and steel mills are running at 75 to 98 per cent of capacity, which is slightly higher than last month.

Ups and Downs in Cattle Trade.

Cattle prices have been working up and down rapidly in the last three weeks, but at present are practically back to the low point of the fall on mature steers and not far above that level on handyweights and yearlings. Receipts have been heavy, as a host of short-fed and warmed-up steers is attracted by every upturn in prices and the range states are sending large delegations. The beef market was higher, but slaughterers and eastern shippers were less active buyers. Veal calves were slightly lower.

Less than 10 per cent of the steers placed on Kansas and Oklahoma pastures are still to come forward and these will be distributed over the next 30 days, but the northwest has much of its beef harvest to complete, while most of the fleshy steers which went into the corn belt from Kansas City and adjacent markets during the late summer will be returned in the next 60 days. The high price of corn and the failure of prime and choice grades of steers to advance in the last few weeks leaves many feeders anxious to liquidate.

Hog Market Dragging Lower.

The hog market advanced early last week, but has declined again and is lower than a week ago. Receipts are gradually expanding and are maintaining a big lead over the corresponding period of last year. The percentage of discarded brood sows remain high, probably reflecting some tendency to reduce breeding stock.

It is doubtful if prices have reached bottom as yet, even though the market is fluctuating less violently than a few weeks ago.

Lamb Market Lower.

The advance in lamb prices attracted an increase in receipts, with a possibility that the current seven-day period will exceed any preceding week for the year. Prices declined sharply under the avalanche which was accompanied by a slump in the dressed lamb market. Most of the range lambs arriving are in feeder flesh.

The department of agriculture reports that developments to October 1 indicate that at least as many sheep and lambs will be fed in the corn belt and western irrigated regions this fall and winter as were fed last year. Shipments from 12 leading markets during July, August and September were 38.3 per cent larger than in 1922. Most of these went into the corn-belt states, where the increase was 33 per cent. It is stated that in the western irrigated feeding sections the number fed probably will not be greater than last year, owing to the higher prices for both foodstuffs and feeder lambs and the small profits obtained on last winter's operations.

Demand for wool was more active last week for practically all grades. Low wools were stronger than medium wools, as domestic mills were in the market for them and further buying of such wools held in bond to be reshipped to Europe occurred. Fine wools also were picked up by buyers who anticipated shortage of such wools later. Total exports since the middle of April are said to be about 15,000,000 pounds. Imports at present are quite small and foreign markets are firm. The domestic goods market is fairly healthy.

Wheat Market Weakens.

The undertone in the wheat market has weakened in the last few days and prices have swung moderately lower.

Primary receipts for several weeks have been running below normal for this time of year, but the visible supply was extremely heavy a month ago and small additions to it have been made since that time. While deliveries of wheat by Canadian farmers at country points this far do not bear out the estimates of a larger crop than in 1922, yet the total is large, the Canadian visible has been gaining about 5,000,000 bushels weekly and it is now the largest on record at this season with the exception of last year.

Flour mills are buying quietly and the amount of wheat ground since July 1 is slightly smaller than a year ago, but the apparent disappearance of wheat in the form of flour has gained about 10 per cent over the same period of 1922. Furthermore, exports are at a sufficient rate to exhaust our surplus if continued to the end of the year. But there is no urgency to foreign buying, while there is a great deal of Canadian wheat trying to find a market, the Argentine and Australian surpluses are lasting longer than expected and the Balkan regions and Russia are putting moderate quantities afloat. Furthermore, deliveries from this year's European crop are still fairly heavy.

It is significant that the amount of wheat apparently disappearing into consumption from international trade channels since July 1 has been about 171,000,000 bushels, compared with 177,000,00 bushels in the same period of last year. A larger decline might have been expected in view of heavier crops in Europe than last year.

Rains have helped to give the winter wheat crop an excellent start, a fact which may offset much of the decrease in acreage compared with last year, when winter killing as a result of dry weather in the southwest was unusually severe. The first estimate of the new Argentine crop, which will be ready for harvest in a month to six weeks, is 250,490,000 bushels. This is 45,000,000 bushels more than last year and the largest crop on record. The new Australian crop promises about 10,000,000 bushels more than in 1922.

Corn Still in High Ground.

Cash corn prices remain high, although recipts have begun to increase in the last 10 days and feeding demand is less keen, so that the market is quite certain to work lower as more new corn becomes fit to market. Fancy figures are being paid for the small amounts received at terminals thus far. While the amount of live stock is greater than last year apparently, feeders will undoubtedly economize, as feeding ratios are unfavorable in many cases.

Oats prices are not especially strong in spite of the discount below corn. Primary receipts are holding up better than usual and the visible supply is gaining, although it is only half the size of last year and about one-fourth that of two years ago.

Clover and Mill Feed.

The clover seed market has lost some of its gains, but is developing a firmer undertone again. Receipts of new crop seed have increased recently and dealers are uncertain as to the extent to which higher prices will curtail the demand for seed next spring.

Millfeed markets are said to be inactive, as buyers are indifferent at the prevailing scale of prices. Flour mills are increasing operations and stocks of wheat feeds in storage are accumulating. Cottonseed meal and linseed meal are offered freely at lower prices. Heavy feeding of home-grown grains is reducing the interior demand for purchased feeds, but at the same time the strength in the grain markets causes a firm undertone in by-product feeds.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $33; standard middlings, $33.50; flour middlings, $35; cottonseed meal, 36 per cent, $45; 43 per cent, $50; hominy feed, $40; gluten feed, $40; old process oil meal, $52; tankage, $60.

Hay Crop Estimate.

The hay crop estimate was increased about 4 per cent in the October returns, but the total is about 10 per cent less than in 1922. Timothy hay prices are firm as a result of light receipts and good demand, but the prairie hay market is slightly lower.

Prices per ton in carlots: Chicago—No. 1 timothy, $26@27; No. 2, $22@25; No. 1 light clover mixed, $23@25; No. 1 clover, $21@23; No. 2 clover, $17@19; No. 1 alfalfa, $18@20; rye straw, $13@14; oat and wheat straw, $11@12.

Eggs, Butter and Cheese.

Receipts of eggs at the leading markets are exceptionally heavy for this season of the year. Thus far in October they have been nearly 30 per cent greater than last year, when they were of normal volume. Arrivals of good,

The President Backs Cooperative Marketing

His Personal Representatives Visit Wheat Growers and Promise National Aid in Forward Movement

The principle of cooperative marketing of grain and other farm products has received the official indorsement of the administration of President Coolidge. As a result, the movement already under way for the immediate signing up of two-thirds of the entire wheat crop of the United States for cooperative marketing next year will probably be rushed with a view to influencing the marketing of that portion of the wheat of the 1923 crop which is still in the hands of the farmers.

At a recent meeting in Chicago attended by representatives of the grain-growing sections of the entire United States and by Managing Director Eugene Meyer Jr. and Director Frank W. Mondell of the War Finance corporation a committee was appointed to have general charge of coordinating the cooperative grain marketing movements in various parts of the country. The growers of the Pacific northwest are represented on that committee by George C. Jewett, formerly manager of the Northwest Wheat Growers, Associated, but now manager of the American Wheat Growers, Associated, which combines the pooling organizations of the northwestern states and several middle western states that have such organizations. Former Governor Frank O. Lowden of Illinois, Robert Bingham of Kentucky, W. H. Settle of Indiana, Carl Williams of Oklahoma, Dan Wallace of Minnesota, and Senator Arthur Capper of Kansas are the other members of the committee. A special committee, consisting of Carl Williams, C. V. Gregory of Illinois and Walton Peteet of Illinois, was appointed to work out the relationships of the nationwide movement to the various state marketing organizations.

On October 30 there will be held in Denver a meeting of the American Wheat Growers, Associated, and others interested in the marketing movement to take up this nationwide question and other questions involved.

Series of Meetings Held.

The Chicago meeting was the first of a series attended by Directors Meyer and Mondell of the War Finance corporation, who were sent west by President Coolidge to confer with growers on wheat marketing problems and to help stimulate the movement for cooperative control of the crop. At the Chicago meeting Director Meyer pledged the support of the finance corporation to the farmers who join cooperative associations. Director Mondell declared unequivocally that the movement being undertaken had the whole-hearted approval of President Coolidge and those associated with him in the national administration.

Northwestern Meetings.

Three public meetings have been held in the Pacific northwest by Directors Meyer and Mondell: One in Helena, Mont.; one at Spokane, Wash., and one in Portland, Ore. At each of these meetings these representatives of the government urged the wheat growers to extend their cooperative marketing program as rapidly as possible. These meetings were all largely attended by bona fide producers, farm organization officials, bankers and public officials. Following the meeting in Portland, steps were taken by the Oregon Bankers' association for the immediate appointment of a committee of bankers to consider the cooperative marketing problem and assist in bringing bankers, business men and farmers into harmonious relationships for the perfecting of marketing organizations.

At the Spokane meeting J. K. McCornack, a banker as well as an owner of wheat lands, presided. When speakers from time to time had made direct or indirect charges that bankers were not friendly to the cooperative movement, Mr. McCornack declared that every well-informed banker in an agricultural state knew that his own financial welfare and that of the bank which he represents depends largely, if not entirely, upon the financial success of the farmers and their industry. His remark that sometimes farmers did not desire even financial advice from their bankers and frequently resented what they sometimes felt to be undue activities on the part of bankers in considering the farmers' problems caused W. J. Robinson, manager of the Washington Wheat Growers' association, to invite Mr. McCornack to make a personal investigation of the principles and policies of the Washington Wheat Growers' association, with a view to condemning it if he found it unworthy or unsound and of lending its assistance if he deemed it worthy of such.

"If, after a thorough investigation you consider our organization worthy of your support, I invite you to make such report to other bankers in your jurisdiction and invite them to join you in supporting it. If you find it deserving of further development you and your fellow-bankers can assist in that development by saying to the wheat growers that do business with you, 'Join the cooperative association and we will provide you with all the money that you need. Stay out of the association and we can not help you.'"

Accepts Invitation.

Mr. McCornack replied by stating that he would be glad to meet with Mr. Robinson at any time and go thoroughly into the matter. He then introduced Mr. Meyer, who indorsed the position taken by Manager Robinson, declaring that with the bankers lay much of the responsibility for the success or failure of the cooperative movement.

Mr. Meyer said that he had spent three months studying wheat conditions in Europe and that everywhere he found a condition not greatly unlike that existing in this country today. He said that while so many European countries are operating upon a paper money basis the United States, operating on a gold basis, must finance the carrying of stocks of foods. He declared that the limitations placed upon dealings in grain futures had made it impossible for the speculative buyer to finance this carrying of grain, and that for this reason, in addition to others, cooperative associations of producers should be formed to carry their own wheat and place it upon the market in an orderly fashion. Director Meyer was more enthusiastic than any other speaker at the meeting over the possibilities of cooperative marketing, declaring that it was not necessary that the cooperatives have a sign-up of even 50 per cent of the nation's crop in order to be a very material factor in regulating the market. He declared that there was no other means by which satisfactory results could be so quickly obtained as through immediate extension of the cooperative marketing associations and urged the necessity of speed in signing up growers who still hold a large portion of this year's crop.

One of the speakers, urging that the United States department of commerce should be made the clearing house for all cooperative marketing endeavors, declared that such organizations as those of the northwest had little or no stable basis upon which to operate. This brought emphatic denial from Director Meyer, who said: "The war finance corporation has loaned over $200,000,000 to 32 cooperative marketing associations and it has not yet lost a dollar of these loans. If your organizations are not founded upon sound principles and a stable basis, how do you account for these facts?"

At the meeting in Montana, Director Meyer criticized the grain dealers of the country severely, declaring that "not one constructive suggestion has been made by the grain trade or by grain dealers, nor has one solitary effort been made by them to our knowledge to help the producers of grain from whom they have always made their living." He declared that, while the grain dealers may be justified in their opposition to a fixed price for wheat, they oppose every suggestion that seems sound and helpful to the wheat growers. They are against cooperative marketing, against government assistance and against self-help on the part of the growers, he said, adding that they had nothing constructive to bring forward and that their attitude generally is that the grain trade should stand pat and the growers go on in an unorganized, demoralized condition.

At the various meetings held, other proposals than cooperative marketing were made, notably the fixing of a guaranteed price for the 1923 crop by the government and erection of a high tariff wall with the appointment of a federal commission to handle all the exportable surplus. The bill introduced in the last congress by Senator Gooding of Idaho for a guaranteed price of $1.75 per bushel was urged by some of the speakers.

The tariff-export commission plan, as recommended by the bankers and farmers of Minnesota and North Dakota and which is called to the attention of the northwest by H. C. Taylor of the markets bureau of the department of agriculture, who is on a tour of the west also as a representative of the Coolidge administration, received some consideration. Under this plan a tariff would be placed on wheat at an amount per bushel which, when added to the world price in the open market, would make a reasonable price for the producers in this country. The export commission would then sell abroad at the foreign price all surplus wheat above American home needs. The losses thereby sustained would be pro-rated against all wheat sold in the home market. Thus, if a loss of 40 cents per bushel were experienced on one-fifth of the total American production, the remaining four-fifths, sold for domestic consumption, would bear one-fourth of this 40 cents, or a 10-cents-a-bushel charge against the home price, which, friends of the plan believe, would be the world price plus the tariff.

Several representatives of northwestern wheat growers' associations will attend the meeting of the American Wheat Growers in Denver October 30. Immediately upon their return it is expected that steps will be taken for putting on a speedy campaign for the signing up of a large percentage of the 1923 crop and succeeding crops in the associations for these states for marketing through the nation-wide agency.

As a result of the meetings that have been held, a movement is under way at this writing for a massmeeting of Washington farmers, bankers, business men and heads of farm organizations at Colfax, Whitman county, Wednesday of this week. This meeting was suggested by Congressman Summers in telegrams to the president of the state bankers' association, leaders of farm organizations and others. Congressman Summers takes the position that definite action of some kind should be taken immediately to carry out the recommendation of the war finance corporation directors.

E. L. French, director of the Washington state department of agriculture, has issued an appeal to wheat growers to hold their wheat for a higher price than is now quoted. He says that the country will not have more than 120,000,000 bushels for export and that 34,000,000 bushels have already been exported. He takes the position also that, if cooperative marketing is to be made effective for the marketing of considerable of the remaining portion of the 1913 crop, every farmer who can do so should hold his wheat until the movement now under way enables the cooperatives to exercise resultant influence on the market.

The Cost of a Bushel of Wheat

The cost of wheat production has become an item of vital interest to the farmers of the wheat growing sections of the northwest. All manner of figures, estimates and guesses are available on the subject. Herewith is given a table of detailed figures, as presented at a growers' meeting by W. F. McCauley of Dayton, Wash., a grower of wheat. As will be noted, Mr. McCauley's figures indicate that a 30-bushel crop costs an average of $1.12 per bushel and that a 17-bushel crop (the Washington state average for 10 years) would cost $2.20 per bushel. Mr. McCauley's detailed figures follow:

Actual Cost to Produce One Acre of Wheat on 1000-Acre Farm.

	Per Day.	
Summer Fallow—		
One man, wages and board	$ 3.00	
Feed for eight-horse team	6.00	
Repairs for plow	.25	
Five acres plowed	9.25	
Cost for plowing		$ 1.85
Harrowing—		
Man and board	3.00	
Feed for eight-horse team	6.00	
Harrowed 30 acres per day	9.00	
Three harrowings at 30 cents per day		.90
Disking—		
One man and board	3.00	
Feed eight-horse team	6.00	
Disked 15 acres	9.00	
One disking per acre		.60
Weed Skinning—(Same as disking) 15 acres per day		.60
Drilling—		
Man and board	3.00	
Feed six horses	4.50	
Drilled 18 acres	7.50	.42
Seed Wheat—Cleaned and treated and delivered to the field		1.90
Total cost per acre in the ground		6.27
Threshing—		
Threshing and delivering in bulk in warehouse	187.00	
Horse feed for 92 head	69.00	
Horse hire, 40 head	30.00	
Thresh 45 acres per day	286.00	
Total cost per acre		6.35
Taxes—		
$2 per acre for two years on land		4.00
Interest on Land—		
6 per cent on $100 land, two years		12.00
Depreciation—		
10 per cent depreciation on $10,000 plant, per acre		1.00
Interest on Plant—		
Interest on $10,000 plant at 6 per cent		.60
Repairs and Upkeep—		
On machinery, $100		.70
Taxes on personal property		.14
Salary—		
Foreman salary at $125 per month, $1500		1.50
Horse Keep—		
Pasture 40 head horses for six months at $2.50, $600		.60
Incidental expenses		.50
Total cost per acre		$33.66
Wheat at present value with a 30-bushel average at 90 cents		$27.00
Wheat at 10-year average for the state, 17 bushels, 90 cents		15.30
Net loss on 30-bushel crop	$ 6.66	
Net loss on state 10-year average of 17 bushels per acre	18.36	
Actual cost on 30-bushel crop		1.12
Actual cost per acre on state 10-year average		2.20
Insurance not tabulated		

Use Old Wheat for Seed

"When seeding fall wheat it is best to use seed from some previous year's growth, since it has shown a higher percentage of germination than newly harvested grain," says E. G. Schafer, head of the farm crops department of the State College of Washington.

"The seed of the new crop seems to be somewhat dormant, particularly at the higher temperatures that prevailed at that time. The germination of new seed is slow, but improves rapidly with a few weeks' aging and the lower temperatures that occur as the season advances.

"A test recently made in the seed laboratories of the state college showed that both new and old seed of Fortyfold and hybrid 128 gave a high percentage of germination, but that new seed of Turkey gave a much lower percentage of germination than old seed.

"If the crop is seeded early in the fall old seed is to be preferred to new, as in certain cases the new seed will have a tendency to remain dormant. The old seed will germinate more rapidly and the plants will become established more quickly. If planting is delayed until the latter part of September, or October, the new crop can in most cases be used safely for seed."

FORAGE POISONING REPORTED.

Several cases of forage poisoning have been reported in the Yakima valley and the local veterinarians have advised growers to exercise care in feeding first cutting alfalfa which may have been spoiled. Usually such poisoning is not reported until in winter, but this season it is present earlier. Much of the first cutting was damaged in the field or in the stack and hay that is moldy or rusty may cause the poisoning, which is said to be botulism, but commonly known as forage poisoning.

Balanced Farming Replaces One-Crop Plan

By J. E. NESSLY

Slowly but surely the farmers of the wheat sections of the Pacific northwest are coming to realize that a change must be made from the old one-crop system, and that other crops than wheat must be grown if a profit is to be made. No one expects that wheat will cease to be the "major" crop in the Palouse, Big Bend, Walla Walla, Nez Perce, Camas prairie, Umatilla and Union county (Oregon) districts for many years, if it ever ceases to be the principal one. But each year the conviction that wheat alone can not be depended upon to produce wealth is growing stronger.

It is a slow and difficult process to change from a condition that has existed so long and proved so profitable as wheat growing in many of the districts mentioned. It is simpler to grow wheat and other small grains than to raise a number of different crops. The big farmer who has been in the habit of working hard and farming extensively for several months in the spring and fall and spending the winters in California, as some wheat growers have done, is loath to engage in a kind of farming that will require his presence on the farm 12 months in the year, but most of them are coming to realize that they can not farm their land profitably if only half of it produces a crop each year and the other half has to be farmed at an expense much greater than a decade or two ago, but produces nothing. It seems the wasteful system of "summer fallowing" half of the land each year is doomed to be dropped.

One can not think of wheat farming in the Palouse country and neighboring districts without thinking of that "grand old man of Whitman county," the late Senator R. C. McCroskey of Garfield, who won the reputation (officially) of being the "best farmer in the United States" when he was awarded a medal by the federal department of agriculture for producing the largest number of bushels of wheat on 1000 acres in a single season. No one who knew Senator McCroskey will deny that he was a good farmer and a very successful farmer, yet he raised nothing but wheat. Senator McCroskey kept no live stock except that needed to operate his constantly growing wheat farm, and he raised wheat, just wheat, and he sold it direct from the thresher as soon as harvest was over. He made it a practice to sell his wheat as soon as it was threshed and after all expenses of the season had been paid usually invested the profit in additional lands.

I have before me a letter I received from the late Senator McCroskey about two years ago, in which he wrote: "During the first 16 years that I farmed in Whitman county I bought and paid for $90,000 worth of farm lands, and I made every dollar that I invested in this land by raising wheat, and I never sold a bushel of wheat for $1 and only twice did I receive as much as 75 cents a bushel."

I remember many years ago, when I was discussing wheat prices with Senator McCroskey, he said: "If I could be assured of 60 cents a bushel for wheat every year I would own Whitman county in 15 years." I believe he could have done that, too, for Senator McCroskey was not given to boasting nor to making wild statements. He had figured out the cost of producing a bushel of wheat under conditions then prevailing and he "knew whereof he spake."

But who, of the farmers of the Palouse or of any other wheat-growing sections of the northwest, would undertake to grow wheat now at a guaranteed price of 60 cents a bushel? The fact that it is generally admitted that it can not be done is proof sufficient that there have been radical changes in conditions and new systems must be adopted.

This is shown by the fact that Senator McCroskey's sons, R. C. Jr. and J. Houston, probably equally as good farmers as their illustrious father, for they were trained by him, and they are farming the same land their father farmed when they were boys, have given up the system that made their father's fortune and are raising not one, but several crops, and both are enthusiastic and successful breeders of live stock and purebred live stock at that. The McCroskey brothers are among the first to realize that the methods so successful two decades ago, when Palouse country farms could be bought for $20 to $40 per acre, with $50 per acre an extremely high price, can not succeed on land values at $75 to $150 per acre. They can not afford to let half of this land lie unproductive each year and raise one crop on the other half. Not only have land values increased, but the cost of production has increased and, while the prices received for wheat seem high, as compared with the prices (ranging from 18 cents in 1893 to 40, 50 and occasionally 60 cents during the next 10 years) the cost of production has increased more than has the price of wheat.

One who has seen the Palouse, Big Bend, Walla Walla, Eureka flat, Potlatch, Camas prairie and other wheat sections gradually changing for a third of a century (I "landed" in Whitman county, Washington territory, June 29, 1889) can realize by comparison how great are those changes. If everything else has changed, why should not farming methods change, too? Instead of a Palouse farmer being able to own his county in 15 years with a guarantee of 60 cents a bushel for wheat, he would probably land in the county poor house in less than 15 years if he tried it under conditions now existing.

The changes which have convinced Senator McCroskey's sons that good live stock, legume crops, corn, root crops and other products must be grown on the wheat farm are sufficient to convince the observing that more than one crop must be produced on an Inland Empire farm if profits are to be made.

What is the answer? What must be produced to take the place of so much wheat? Hundreds of farmers are trying to solve this problem and find the answer. Some of them are succeeding. There seems to be no diversity of thought that something must be done to make the wheat farms produce more dollars than they have been producing, and there seems no diversity of the thought that wheat and small grains can not do this. During 1922 I traveled more than 9000 miles by automobile through the farming sections of Idaho, eastern Oregon and eastern Washington. I visited every county in Idaho where farming is the principal industry and inspected the farms and the methods employed in Idaho, in five counties of eastern Oregon and in six counties of eastern Washington and I found that the most prosperous farmers are those that produce not one or two, but several crops, whether they be grain, potatoes, vegetables or live stock, poultry or dairy products.

Dairy Short Course

The winter short course in dairying at the state college at Pullman will begin January 7 and will continue four weeks. This is a course that has been prepared especially for practical dairy farmers who wish to improve their methods of handling their herds. Emphasis is placed on herd management, feeding, housing, breeds and breeding, pedigrees, records, testing and judging. This course has been popular in the past and a good enrollment is expected again this year. If interested write to the dean of agriculture, college station, Pullman.

PEARSON COMMUNITY FAIR.

The Pearson community of the north central part of Kitsap county, held its third annual community fair September 21. There was a neat display of seasonable fruits, vegetables and garden plants, and the competition was keen in many of the classes. The garden club had a special display of vegetables and canned fruit; while the sewing club girls put on a demonstration in addition to their well arranged display of dresses and fancy work. A delegation from Bremerton attended the fair in the evening and had a general good time.

The Wade One Man Drag Saw

A Mighty Helper for the FARMER

Backed by a Half Century in the Farm Implement Field

Compare the WADE point for point with any saw on the market. Comparison will unfailingly bring you to the WADE

Note its many features: Multiple Disc Clutch; V-Type Frame with wheel and handles; simple, positive Log Dogs; quick, detachable Saw Holder, and the sturdy, reliable Wade

Engine Develops Full 4 Horse Power

—Makes easier operation —Gives better control and efficiency.

What One User Says:

"I am in timber which runs from two to seven feet through. I fall and cut about 20 to 25 cords per day. I find time to split some myself * * * It is a one-man saw [redacted] in timber and is satisfactory in every detail. I would consider no other. C. J. Shipman, Milwaukie, Ore.

The WADE is the "old reliable" of the Drag Saws— It will pay you to own a WADE Investigate today

LIVESTOCK AND DAIRY

The Silo and Silage

By R. C. Hanson.

One urgent need of the farmer today, as every day, is economical production. He must cut down his production costs to meet present-day conditions. We must use all our land and get maximum yield from it. All the byproducts must be utilized. Waste and spoilage can not be tolerated.

Silage has been proved to be one of the important factors in reducing feeding costs, and silage crops can often be profitably grown on land that will not produce a good grain or hay crop.

Where corn can be grown it is perhaps the most profitable crop to grow for fall feeding, as it will produce much food value at minimum cost of production. The silo is the best place to store the corn crop, for an acre of corn can be placed in the silo at a cost little exceeding that of shocking, husking and grinding, and it will preserve more feed nutrients and produce more milk per acre than any other system of handling. It saves value of the corn crop that is otherwise largely wasted. Farmers selling corn by the bushel will market only 55 or 60 per cent of the entire crop, while the man who is feeding corn silage to his stock is saving 90 to 95 per cent of his crop.

Vetch makes excellent silage. As it does not require any cultivation after planting, it can be produced cheaper than corn, for the tonage per acre is practically the same. Several prominent feeders claim that a larger tonnage per acre can be grown where the different grains are mixed.

The value of sunflowers has been proven as a silage crop, ranking only a little below corn.

In California thousands of tons of bean straw are burned each year, yet it has been demonstrated that a silo will earn a high net return when filled with bean straw. This is because the silo salvaged what would otherwise be wasted. Bean straw silage is high in protein and corn silage is high in carbohydrates, therefore when mixed they make an almost balanced ration. If the corn is ripe the mixed silage can be fed as an entire ration for fattening.

In rainy regions the silo is the greatest crop-saving device ever known. In the northwest the farmer always takes a big risk in growing all very early or very late forage crops, which must be dried in the field. Rain can not hurt hay when it is to be stored in a silo, and everything valuable for stock fodder can be saved and utilized.

Silage provides feed during slack periods and when grain is very high. It is not necessary to feed silage as soon as it is put up; in fact, it should stand at least three weeks. The use of summer silage is especially valuable to provide food immediately following the depletion of pastures and before the corn products are sufficiently mature.

Not only do silos reduce feeding costs, but silage-fed stock are more vigorous and healthy. Silage also brings stock into condition quicker and produces greater milk yields.

To Tell Cow's Age

By F. W. ATKESON.

Is there any way to tell the exact age of a cow? Are the horn rings correct and do they come at different ages on different breeds of cattle? If so, please state the difference.
Priest River, Idaho. J. H. K.

The three general methods of determining the age of cattle are the horns, the teeth and general appearance. The wrinkles on the horns are only general indication, of age, since there is no absolute uniformity in the time at which the first wrinkle appears. Each wrinkle is supposed to represent a year after the first two years, but the wrinkles may not develop with regularity after the cow becomes old. Another thing to bear in mind is the fact that in the case of purebred cattle that have been fitted for the show ring or sale the horn rings have been removed by filling and polishing The horn rings are a general, rather than a specific, indication of age.

The approximate age of cattle can be determined by the teeth, although this is relied upon more generally with horses than with cattle. Cattle have 20 temporary and 32 permanent teeth. They have eight incisors in the lower jaw, with no incisors in the upper jaw. The age is estimated by the permanent incisors. At about 1 month of age the full mouth of temporary incisors is shown. At 2 years of age the center pair are replaced by the larger permanent incisors. At 3 years the two incisors, one on each side of the first permanent pair, appear fully developed. At 4 years of age another pair becomes fully developed, one on each side of the permanent teeth. At 5 years of age a full mouth of permanent incisors is exhibited. At from 5 to 6 the center pair are leveled, at 7 years leveling of next outer pair, at 8 years leveling of another outer pair, at 9 years leveling of corner teeth. Beyond 9 years the indications are less graduated, but the teeth continue to wear, becoming more rounded and tending to separate from each other and showing a greater dental star.

The age of cattle can be judged to some extent by the general appearance of the animal if the person is experienced. Normal dvelopment indicates age up to about 7 or 8. Beyond this age sunken eyes, shrunken cartilages at tail head, gray hairs in case of black animals and general action indicate advanced age, but some animals are better preserved at advanced ages than are others.

Purebred Cattle Prices

Sale prices of purebred dairy cattle were relatively higher in 1922 than those of any other kind of purebred animals, according to a recent survey made by the United States department of agriculture.

Although prices were not high compared with the peak reached in 1920, the averages indicate that cattle have apparently been produced at a profit to the dairymen. Reports were received on a total of 7597 dairy animals representing five breeds, as follows: Holstein 2796, Guernsey 2160, Jersey 1975, Ayrshire 509, Brown Swiss 157.

Average prices received by breeds, including all ages and both sexes, at both private and auction sales were: Ayrshires, $181.73; Brown Swiss, $123.53; Guernseys, $273.36; Holsteins, $187.15, and Jerseys, $186.50. All of the Brown Swiss reported were disposed of at prvate sales. Comparing the private and auction sale prices of the breeds, these data show that the difference in the prices received by the two methods is so small that in 1922 a heavy auction sale expense was not justified.

The highest prices by breeds indicated by the reports were: Ayrshire, $3000; Brown Swiss, $500; Guernsey, $7500; Holstein, $5000, and Jersey, $5000.

Of the 7597 animals reported, 3187, or nearly one-half, sold at a price above $150. This number was divided by breeds as follows: Ayrshire, 185; Brown Swiss, 35; Guernsey, 979; Holstein, 1068, and Jersey, 920.

It has been sufficiently demonstrated to the department of agriculture officials in almost every community in the United States that it pays well to use good type purebred sires.

This report indicates that purebred sires may be had at reasonable prices.

More Milk Profits

Clipped Cows

give more milk and butter fat. They are cleaner, healthier—feel better, feed better. Filth and lice cannot accumulate—bigger returns are positively assured.

Stewart No. 1 Clipping Machine

makes clipping quick, easy, thorough. Very highest quality, lasts long.

The Utility of the
CHESTER WHITE
Is Unexcelled

The pork and lard of the Chester White swine is nearest perfection as demonstrated year after year at the International Live Stock Show and Exposition, Chicago, Illinois.

Good Chester White sires are always in great demand, not only by the breeders, but the feeders as well. Packers and butchers pay a premium for Chester White hogs, as they are clean dressers—making a good-looking carcass. If you are a feeder use Chester White sires.

Chester White dams are a good investment whenever profitable swine breeding is desired. They have good dispositions, are prolific breeders and excellent sucklers.

The records made by Chester White pigs in boys' and girls' club contests throughout the United States are to be envied. The easy-feeding qualities and rapid growth enable the boys and girls to win, even when showing against all other breeds of swine.

Remember this—The ultimate end of all pork is family use. Your family deserves the best when it costs no more.

Write for circular and other information.

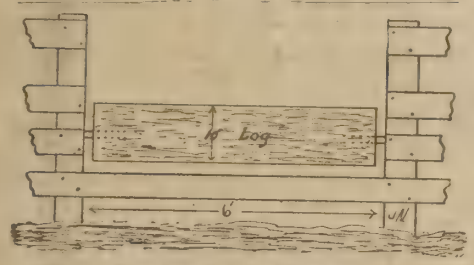
Stop the Hog

But Let the Other Animals Pass

At times the lot arrangements are such about some farmsteads that it becomes almost essential to pass the cattle or horses through hog lots to get them to and from their pastures, or even to get them to the watering place. Ordinarily gates will have to be opened and an attendant will have to be present to perform the work. Or it may be accomplished by lowering the fence sufficiently to permit the cattle and horses to pass over and still retain the hogs. Often the hogs, however, get accustomed to jumping the gap so that it must be raised uncomfortably high to stop them and by so doing cause trouble for the other stock to the extent that injuries may result. Legs may be bruised or skinned, cows may injure the udder, or any one of a large number of troubles may arise.

A comparatively simple yet effective device may be made by pivoting a log in the gap between the two posts that form the opening. It is better to make this gap about six feet wide or even wider, so as to avoid crowding when the animals attempt to rush through. Below the log the fence should be solid, so that the stock do not get their feet caught in crossing.



Log pivoted in the gap.

The log should be from 6 to 10 inches in diameter and be swung in between the posts on iron pegs that are about an inch in diameter. For this purpose gas pipes will do. They should extend into the log at least 10 to 12 inches and almost through the posts on the one post where it may be swung first and in the other post the hole must be drilled through so as to make it possible to pivot the log in position without removing the post. The end play of the log need be just sufficient to afford easy play and enough freedom so the log turns or revolves with ease when weight is placed on it.

The posts into which the log is pivoted should be set substantially, so they will not yield to quite a bit of pressure, as it is apparent that they must serve as brace posts in a broken line. In the diagram board fencing is indicated on either side of the gap. This is not essential, but advisable, inasmuch as the horses can more easily see the gap when they approach it in a rush.

When the hog places his fore feet on this log in an attempt to jump over he is surprised to find that it rolls his way and affords him no foot hold whatsoever. A few trials soon convinces him that his efforts are futile.

The Neuwaukum Fair

If the Neuwaukum fair, held in the southeastern part of King county, continues to make rapid advances as it has made in the last three years, it may become the county fair, which is the ambition of the directors. This is the third annual event held by the association, which was first started by the Neuwaukum grange in a district by the name just east of Auburn and west of Enumclaw. It was too large a fair to be housed in the grange hall, so the second year it was moved to the farmers' picnic grounds, near Enumclaw, at which place it was held this year.

The old pavilion building was used for the main exhibits and the different departments were lined out by four long tables on which the entries were arranged. The agricultural and fruit entries occupied two of the tables, while the women's department and the flowers made use of the other two.

There was an unusually fine exhibit of apples which were well colored and had good size. The pears were high class but were not so numerous. The prunes, peaches, and soft fruits were exceptional, considering that it was past their season. It was a surprise to see such a large showing of squash, pumpkins and mangles. In fact, the latter display showed that the people believed in providing root feeds for their dairy cattle, which are kept in large numbers in this community. Other vegetables which should be mentioned are the carrots, potatoes and corn, while there were many good showings of such plants as kale, grasses, sunflowers and corn.

The display of baking and canned goods was very complete and the honey exhibit was attractive. The flower show consisted of cut flowers and house plants all of which went to make up a beautiful department.

The livestock department was at one side of the baseball field. There were dairy cattle, both Jersey and Holstein, and the poultry section had White Leghorns and some of the heavier breeds. The center of the field was used for an auto show which would have been a credit to any fair.

In Class by Itself

What is filled milk and what part is it playing in the dairy industry? Probably not one person out of 10,00 has ever heard of filled milk and yet its manufacture is now on an immense scale.

The manufacturers of filled milk are modifying the product of the dairy cow. They skim the cream from the milk, then replace it with a like amount of coconut or other vegetable oil. This is then evaporated or condensed, canned and sold as a substitute for evaporated or condensed whole milk. When this product is put on the market it is placed on the same shelves in the stores and in more or less direct competition with condensed or evaporated milk.

Dairymen throughout the entire country are protesting against this imitation product. These dairymen realize that children who are being fed on filled milk can not develop as do children who get whole milk because when the cream is removed it takes practically 90 per cent of the fat soluble vitamines.

Growing children should have some source of vitamine A. If the vitamine known as fat soluble A is not present in food the child will not continue to grow. This vitamine is found in milk, butter, livers of animals, leafy part of plants, yellow corn and in the yolk of eggs. How much of this vitamine is needed is not definitely known. For infants the preferable supply is whole milk. Skim milk is low in vitamine A and vegetable oils do not contain any vitamines. So it is easy to understand why filled milk can not compare with whole milk as a food.

It has been proved by Dr. E. V. McCollum, professor of chemical hygiene of John Hopkins university, that sore eyes and rickets result largely from the diet which contained no milk. In an experiment he found that the absence of butterfat caused rats to die as of starvation, even when fed on a large amount of vegetable fats. He proved that men fed on a normal diet of vegetables and fat pork with milk left out developed pellagra and were cured of pellagra by adding milk to their diet.

In another experiment two dogs—twin brothers—were used. When one month old one was taken to a home in town, where he got no milk at all, while the other was taken to a farm and was fed whole milk. Four months later the dog in town was found to be stunted and had made very little growth. His brother on the farm was a fine big fellow. Then the dog in town was brought out to the farm and they were both fed milk and four months later the stunted dog had gained in size and weight until he was almost as large as the other one.

Fat soluble A can be obtained in other ways, but they are not as available for feeding to growing children as in milk. Mothers woud not make much headway in feeding large quantities of kidneys, liver fats, carrots and yolk of eggs to babies in order to obtain fat soluble vitamines. These vitamines are easily supplied in milk.

In the nutrition of the young, whole milk stands in a class by itself as a great food.

Prevent Smut Fires

Threshing machine fires can be prevented if proper precautions are taken when smutty grain is being threshed. is the opinion of Doneen, Oakesdale, Whitman county, Wash. "In fact, I have had no threshing machine fires for the last five years," he said. "Many threshing machines could have been saved this year from smut explosions, if they had been equipped with smut fans.

"Five years ago a demonstration was started on my threshing machine by George L. Zundel, extension specialist in plant disease. The machine was equipped with a smut fan, aspirator and wiring system. When the wiring system was installed the state college made tests which showed that 2200 volts of static electricity were being grounded."

Mr. Doneen is firmly convinced that fires are unnecessary when machines are equipped in this manner. The aspirator has been improved since it was first put on the separator and Mr. Doneen is convinced that it has saved him as high as 5 cents in cleaning costs.

SAVE ALL the CREAM

The Anker-Holth Cream Separator

meets with the approval of the most critical users. Why? Because of its self-balancing bowl and interchangeable disks. Place the disks in the machine any old way and they will be automatically thrown into place by centrifugal force.

PERFECTION MILKING MACHINE.

It has a gentle suction, spiral downward squeeze and a period of complete release.

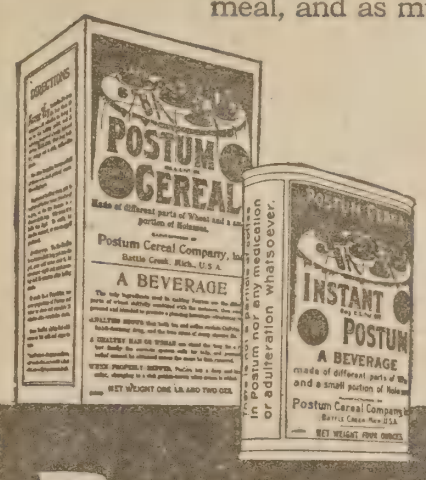
Do *you* take orders from a Coffee Pot?

IT must be humiliating for thousands of people to confess that they lack the will-power to stop coffee.

They know from experience that it results in irritated nerves; keeps them awake nights; makes them nervous. Yet they don't seem to be able to say "no."

If you find that coffee harms you, change to the pure cereal beverage, Postum. You'll find it delicious and satisfying. And it is absolutely free from caffeine or any other harmful drug, so you can drink Postum at any meal, and as much as you want.



Your grocer sells Postum in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer the flavor brought out by boiling fully 20 minutes. The cost of either form is about one-half cent a cup.

Postum FOR HEALTH

POULTRY AND RABBITS

The Early Molter

Ability to choose between the laying hen and the nonlayer is easily developed by poultry owners and should be put into practice in culling the flock if the best returns in both eggs and meat are to be had. In any flock some hens will be found which are such poor producers that they are unprofitable, and these are the ones to eat.

All hens molt in the fall or early winter. This molting characteristic is easily observed and, when it starts to take place, means that the hen has about finished her laying season and is turning her attention to growing a new crop of feathers for a vacation before she starts her next year's work. If it is desirable to use a part of the flock for meat, says the United States department of agriculture, the early molters are the ones to select for eating first because they are laying very few or no eggs during this molting season which usually lasts about three months. The hens in the flock which have not yet started to molt should be retained for egg production. They should not be killed until they begin to molt and their combs begin to lose size, color and flexibility, for if these changes have not taken place the hens will probably still be laying when eggs are especially valuable.

The early molt is not, however, an infallible evidence of unprofitableness, for many conditions tend to hasten or delay the molt.

As a rule hens of the general purpose breeds are not profitable layers after they are 2 years old, and Leghorn hens rarely lay profitably after three laying years. Many of the hens should be culled before they reach these ages and replaced by well matured pullets in the fall.

Fattening Turkeys

By R. T. PARKHURST.

What is the best method of fattening 100 turkeys? I have both corn and soft wheat available. Would you recommend either? How much would you begin feeding and when would you increase and in what amounts?
Salmon, Idaho. J. F. C.

As soon as the weather begins to turn cold and insect food becomes scarce and increased grain diet must be provided for the young turkeys. A ration of wheat and corn is the best. Do not feed them too much at first, but gradually increase the supply until they are having all they can eat.

Those who succeed best in having the turkeys ready and in fine condition for the early market are those who allow them their freedom and feed them all they can eat of fattening and wholesome grains. Even when finishing them it is not well to confine them. If they are fed each day at regular hours and at the same place, it will be an easy matter to have them come there three times a day for their feed.

Old corn is better than new for heavy feeding, as the latter is very apt to cause looseness of the bowels. If necessary to use new corn, it should be introduced into the ration gradually. If the poults have gained a strong, well-developed physique by early fall, they will be in fine condition for heavy feeding. As soon as they have become accustomed to grain feeding, they may be fed once or even twice a day on ground oats and corn meal mixed with milk. This should be given in addition to an abundance of wheat and corn. They should be fed each time just what they will clean up with relish. Feed the grain morning an devenings and the mixture at noon or twice between morning and evening as best suits your convenience. See that plenty of sharp grit is always at hand for their use and provide a constant supply of fresh water where they may help themselves.

Poultry Breeding

It is obvious that when one is breeding for standard points and egg production at the same time progress must be relatively slower than where only a single objective is sought, says Dr. Morley A. Jull of the United States department of agriculture. That perhaps is the crux of the whole breeding situation; some breeders are wont to develop one line to the total exclusion of the other. In this connection, two important things must always be kept in mind. First, since separate breeds and varieties long since have received official recognition, all poultry breeders should exercise reasonable efforts to maintain breed and variety characteristics. Second, since the continued expansion of the poultry industry depends in a very large measure upon the productive capacity of the birds kept, standard-bred breeders naturally should be expected to give some consideration to economic qualities.

The chief difference between the practice of some standard-bred breeders and most utility breeders is largely a matter of degree. The object in view should determine the method of procedure in breeding operations. If the breeder wishes to develop Silkies, Frizzles or certain varieties of Games, for instance, to the highest possible state of perfection in respect to body type and feathering characteristics, he is certainly justified in adopting as standard points whatever may please his fancy. In fact, breeding for fancy points has done much to stimulate interest in the science and art of breeding. On the other hand, if the strictly commercial poultryman is interested exclusively in egg production he may be justified in running his plant more or less on the factory plan. The keeping of birds that are just "chickens" in order to make a living is justifiable, as long as a living can be made.

Backyard Poultry

By R. N. MILLER, Extension Division, State College of Washington.

That many owners of good-sized back yards are making considerable income from well-bred hens is shown by several yearly records kept by back yard poultrymen. A well-bred hen is a very economical user of feed, eats practically any palatable food, is interesting to work with and requires no great amount of time or money for equipment. The returns from back yard flocks may or may not make them worth while, according to the skill of the owner.

The record of E. E. Hupp, Newport, Wash., who keeps from 150 to 200 hens in his large back yard, shows an average labor income of $25 per month. This is an exceptional record, but records of from $1 to $2 per bird are not exceptional. To make good records the owner must be ready to give the birds the feed and careful attention they require.

The proper size for a money-making flock, or the minimum number which a person should keep depends entirely upon the size of the lot and the ability to manage. Many people are content with the eggs of a few pets, while others keep 100 or 200 with all the ardor of a large poultryman.

Keeping a few birds differs greatly from keeping a sufficient number to make a living from them. On a small number the labor is merely a recreation, but as the number of chickens increases, labor costs become a consideration. On a fairly large scale the average labor income can be figured at $1 per bird per year, but this income depends upon many bactors.

W. H. Pitrie of Ellensburg, with about 400 layers, averages 220 eggs per hen, and the labor income per hen is above $3.

GENERAL ADVERTISING.

Swedish Inventor Has New Oil Light

Claims Whiter and Much Cheaper Light Than Electric or Gas.

Edison enabled us to enjoy the benefits of electric light, Count Welsbach's mantle made it possible to have the incandescent gas light, but it remained for a Swedish engineer named Johnson, now living in Chicago, to devise a lamp that would burn ordinary, every day kerosene oil and produce a light said by the many scientists who have seen it to be whiter than electric. The lamp is as simple to operate as the old style oil lamp, burns without odor, smoke or noise and is proving a sensation where oil light is needed.

Mr. Johnson offers to send a lamp on ten days' free trial and will even give one to the first user in each locality who will help introduce it. A letter addressed to W. R. Johnson, 31 N. Fifth St., Portland, Ore., will bring full particulars about this wonderful new lamp. He has an interesting agency to offer, too.—Adv.

Read what Mr. H. J. Schuette, Box 47, Evansport, Ohio, says: "SMOKE 'EM" is a wonderful roup cure. It certainly does the work. Dealers, we have a good proposition.

Garfield Stock Show

That farmers in the Garfield district realize the value of good draft horses was indicated at the live stock show held there October 12 and 13, when over 50 head of purebred and high-grade horses competed for honors in the class of grade mares. 18 head were shown, while 17 head of draft geldings competed in one class.

The outstanding feature of the horse show was the string of purebred Clydesdales shown by R. C. McCroskey. These Clydesdales have completed the show circuit of the leading fairs and are now awaiting shipment to the Pacific International to complete the season. Several head of purebred Percherons were shown by Dr. W. N. Divine and Sam Ransier. A number of good Shires were exhibited by Nye & Boyd.

Beef cattle probably ranked second in general interest, with a strong showing of Shorthorns, for which the Garfield section is well known. N. Williamson, J. Houston McCroskey, J. E. Trimble, George Imler and Howard Burgess are among the principal breeders of that region and McCroskey, Trimble and Burgess made up the show with over 40 animals. Mr. Trimble's white 2-year-old bull, Hercules Snowstorm, sired by Village Sultan and out of Hercules Matchless, won first in the two-years-and-over class, but McCroskey's red yearling, Perfection's Star, sired by Knight's Perfection, defeated him for the grand championship. The competition throughout was largely between the McCroskey and Trimble herds, with the honors fairly well divided, though McCroskey won the cup for best showing of beef cattle. All but one of his winners were of his own breeding. Mr. Burgess won first in the milking Shorthorn cow class, McCroskey taking second and Trimble third.

In the dairy cattle division, 38 head were shown, mostly grades. Peringer & Salzman won the silver cup offered for the best dairy herd, with their herd of purebred Brown Swiss.

There were about 100 head of hogs shown, with Chester Whites predominating, though all breeds were well represented. C. L. Patton won the cup offered for the best sow and litter, with a Duroc Jersey sow and 11 good pigs.

On the first evening of the show, a well attended banquet was given, among the leading speakers being Dean E. C. Johnson of the College of Agriculture at Pullman, and Senator Wilmer of Rosalia. Several stockmen also spoke.

Steps are already being taken looking toward a repetition of this year's success in the show next fall. Several cattle breeders who did not show this year have already agreed to exhibit their herds at the next show.

S. W. Shoemaker is president of the show, with W. Duling, vice president, and Dr. A. R. Galbraith, secretary-manager.

Will Market Eggs

Announcement is made that, beginning November 1, the Farmers' Union Egg and Poultry association will begin handling the product of its members through a selling office in Spokane. For the present the business office will be in the farmers' union headquarters in the New Madison hotel building, but other quarters will be selected later. Aa a meeting of members held in Spokane October 20 D. F. Mitchell of Spokane, a producer and member of the association, was elected secretary-treasurer. Members of the board of directors include O. O. Groh of Clarkston, A. W. Anderson of Spokane, C. H. Cross of Greenacres and Fred Boyd of Garfield. J. Q. Adams, president of the farmers' union, is a member of the board of directors, representing the public, having been appointed by Director E. L. French of the state department of agriculture, the law requiring the commissioner of agriculture to appoint one member of the board.

All officers and members of the board are temporary only, the state marketing cooperative law requiring that the membership in a cooperative association shall elect its own officers. All directors, other than the one appointed to represent the public, must be members of the organization and all members must be producers of the commodity to be marketed.

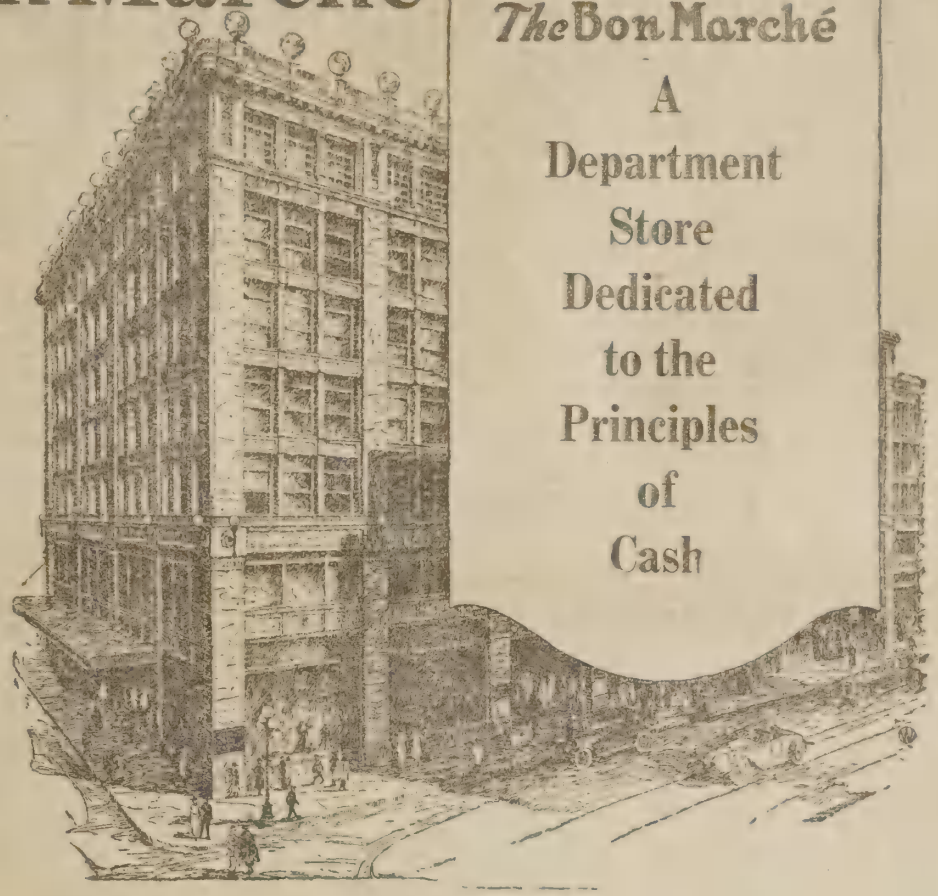
It is announced that about 35,000 hens are owned by the present members of the association. Contracts of the present members were entered into on the basis of a 50,000-hen sign up.

FARMS SERVED BY RADIO.

Reports to the United States department of agriculture from county agricultural agents estimate that there are approximately 40,000 radio receiving sets on farms in 780 counties. This is an average of 51 sets per county for those reporting. The county agents' estimates cover every state. These farmers are receiving federal weather forecasts, crop reports and market quotations, together with agricultural news in the form of "agriograms" and talks on various phases of work in the department of agriculture, broadcast from cooperating commercial stations.

The Bon Marché

Brings "Personal Service" to Your Very Door



The Bon Marché
A Department Store Dedicated to the Principles of Cash

WOULDN'T you like to have a member of your own family represent you in Seattle? Someone you could depend upon to shop for you almost as well as you could shop for yourself?

That's just exactly the kind of intimate service The Bon Marche offers the out-of-town woman---a practical, reliable, economical "Personal Service."

The Bon Marche "Personal Service" is composed of a group of practical home women, with years of training and experience which have fitted them to give you just this kind of intimate, personal shopping service.

In the matter of any household want—clothes, for instance—just make your wants known in a letter to "Personal Service" and you'll be agreeably surprised with the efficient way in which your wishes are cared for. And if for any reason the choice is not satisfactory, return the goods and The Bon Marche will cheerfully refund your money.

The Bon Marche is a "cash" store — because we believe that buying and selling for cash mean savings for all of us.

Explain what you want to "Personal Service" and this group of thoughtful, caretaking women will give your shopping needs the same personal attention you yourself would give them.

A Stupendous Livestock Show

By HORACE ADDIS.

Every week since August county fairs have been held and the best of the live stock exhibited has been awarded blue and purple ribbons. All fall the battle for supremacy at the home fair has been going on. Some owners have not been satisfied with defeat and, being prepared, have exhibited at two or three district or county fairs. The winners have gone on to these larger fairs and the battle has been renewed. As the season wore on some of the stock has been eliminated, owing to failure to win. And all the time the winners have been looking forward to the date of the Pacific International Live Stock exposition, for they know that there winners not only from the state and larger fairs of the northwest will compete, but that California, British Columbia and the east will send their best representatives, in the hope of winning the laurels that go to the grand champions in the live stock department. To one interested or versed in the breeding of purebred live stock the prospect is thrilling. It is the test of sporting blood, just as really as in the case of the long distance race or the prize fight or any other test of skill or endurance and quality. Quality—that is the word in the live stock show ring. And in the Pacific International it is a "battle of giants," so far as fine live stock is concerned. There is education in the study of these awards, and there is a satisfaction in watching the placing of the ribbons and viewing the prize stock in the stalls that quickens the pulse and the heart beat.

The East Is Coming.

Ten carloads of stock, including horses, beef and dairy cattle and sheep, are coming in a special train from the east, most of them being dairy cattle from the National Dairy show. The best in the east is coming to "measure swords" with the greatest of the west. What live stock man, whether a breeder of purebred or only grade stock, will not want to attend?

The importance of the Pacific International has grown from year to year, and its scope has widened. For two years now the Land Products show has been held under its sheltering wing. In this the best in the way of fruit, especially apples, and vegetables, especially potatoes, have greeted the eye of the visitor. And if that visitor was a stranger, the exhibits have usually been an "eye opener." For the beauty and quality and uniformity there seen are almost beyond belief.

Hay and Grain Show.

And this year that department is to have such an addition as to almost dwarf the original show. For the Northwest Grain and Hay show, after two successful years at Pendleton, goes down to swell the interest and importance of the Pacific International. A premium list of $2500 is offered, and the total of the Land Products and Grain and Hay show is over $6000. O. M. Plummer, manager of the Pacific International, confidently expects over 2500 entries in the one bushel of wheat class. And this is only one of the many departments in which there will be great competition.

A dairy products show will again depict the value and life giving qualities of milk and milk products. It will show the right and wrong way of caring for them. It will be informative in every part of its interesting eight days.

The horse show is the society event of the organization. Still, it is composed of draft as well as fancy horses and is visited by more people than any other one department of the show. Good judges declare it actually outstrips Madison Square Garden this year. There will be more fancy and heavy drivers competing than ever met in one show before. The completeness of this show, with its big premium money, can not be overemphasized.

Poultry is not only one of the great sources of wealth to the people of the northwest, but its importance as an industry is recognized, and the poultry show of the Pacific International is no insignificant part. In fact, it draws many who come chiefly because of their interest in the poultry show. It comes late enough that most of the birds are in good feather and show well. It is one of the important features.

The Washington Farmer has often emphasized the point that all fairs and stock shows should be primarily educational. The Pacific International emphasizes the educational idea above all others. It is not alone in studying and comparing the purebred stock. The stock judging contests are a school feature. The young people who take part and those who stand on the side lines and watch are given a schooling not obtainable in any other way. First of all, and serving the greatest number, are the club boys' and girls' stock judging contests, where those who have qualified by superior work in district and county fairs have won the right to compete here. They run into the hundreds. The Smith-Hughes vocational classes from the various high schools probably come next in numbers. And the college teams probably create the greatest interest, because there is a natural and healthy state rivalry. Added to all this live stock judging this year there is a grain judging contest, as a part of the grain and hay show, with liberal premiums, which is intercollegiate. Six hundred dollars will be distributed to the winners of this contest alone.

As if to add still more to the educational idea of the show, the American Holstein-Friesian association is putting on a "Holstein school." W. S. Moscrip, the noted Holstein judge of Minnesota, will be in charge. There will be lectures and special judging contests. There will be Holstein pictures and the statues used to show the "model Holsteins." Breeders of this popular breed are delighted. For this is the third and last of these "schools" this year, the other two having been at the National Dairy show and the Eastern States exposition.

Sales Will Be Held.

One thing more, of as much interest to live stock breeders as anything else can possibly be, is the sales. At shows of this kind the breeder who wants the best of herd headers or foundation stock is wont to come. This has resulted in the building up of the public sale idea. The Pacific International, like the other great national live stock shows, has one or more sales almost every day of the show. This year a swine sale—Duroc Jerseys—has been definitely added to the others and, it is probable, a Shropshire sheep sale will be held, although it can not be positively announced at this time. The following is a complete list of the sales to be held during the week::

Guernseys, Wednesday afternoon, November 7.

Duroc Jerseys, Wednesday afternoon, November 7.

Fat cattle, hogs and sheep, Thursday morning, November 8.

Jerseys, Thursday afternoon, November 8.

Shropshires (probably), Thursday afternoon, November 8.

Shorthorns, Thursday afternoon, November 8.

Holsteins, Friday, morning and afternoon, November 9.

Hereford consignment sale, Friday, November 9.

Thiessen Hereford sale, Saturday, November 10.

Win National Championships

Not only the state of Washington, but the entire west won distinction when two Washington Holsteins won championships at the recent National Dairy show at Syracuse, N. Y. The senior and grand champion cow of the show was Tillamook Daisy Butter King De Kol and the junior champion heifer was Carnation Matador Adelina Segis, a senior calf. These two

Tillamook Daisy Butter King De Kol.

national championships were in the herd of 22 animals taken on the eastern show circuit by Carnation farms of Seattle. The herd left Washington on August 20 and will finish the show circuit at the Pacific International in Portland November 10. On their eastern trip they showed at the Wisconsin, Indiana, Illinois and Kentucky state fairs and the interstate fair at Trenton, N. J., and the National Dairy show. They won 14 championships and 46 first prizes in competition with the best Holsteins in America.

The winning of such signal honors by Tillamook Daisy is even more noteworthy when it is remembered that last spring she completed a year's official test with a record of 32,472.6 pounds of milk containg 1012.56 pounds of butterfat, which made her second highest milk producer under full age in the world. All ages considered, she is the 12th highest milk producer on record.

As indicated by her name, the grand champion cow was bred in Tillamook county, Ore. Arthur L. Moses of Tillamook was her breeder. Her sire, Sir Bessie Fayne De Kol Fobes, and her dam, Topsy Lola Butter King De Kol, both are in the herd of F. R. Beals of the same county. She is today's leader of the Homestead family, intense Homestead breeding appearing on the side of her sire, a son of Sir Bessie Homestead Johanna Fayne, he by Johanna Bonheur Sir Fayne. The latter is a grandson of Homestead Junior De Kol and Sarcastic Lad, a wonderful show bull, and is out of Jessie Fobes Bessie Homestead, formerly world champion 34-pound 4-year-old and "three times 33-pound cow." Daisy's granddam is a daughter of Fobes Tritonia Mutual De Kol and hence a sister of Mutual Fobes Longfield De Kol, the famous Marks-Davis sire of the Yakima valley.

The Curse of Colin

"Jack——" she hesitated; "do y'u s'pose it could be the red lock that made Ken act like 'e did?"

The question was so at variance with the man's trend of thought that he was a long time considering it.

"It ain't the red lock," he finally answered in his slow way, "it's the drop of blood that come with it. F'r that matter, though, every man gits a bad drop 'r two out of the past. But them bad drops can be overcome, if a man bucks ag'in' 'em. The trouble with Ken was it didn't 'pear like he wanted t' buck ag'in' his."

"The 'curse of Colin'" was the girl's musing comment. "F'r hundreds of years—ever sence the days of 'Red Colin,' the old sea pirate—it's be'n breakin' out in the family every few generations. It alw'ys worried Ken that it broke out on him. I've some times thought it would 'a' be'n better if he'd never 'a' found out the meanin' of that red lock—that it was the 'curse of Colin'——"

"That's it," he commented. "I 'low Ken fig'r'd the curse had 'im anyhow, and so it wasn't wo'th while t' buck ag'in' it."

"The Red Lock," our next serial story, from which the foregoing extract is taken, abounds in blood-stirring situations, villainy that makes us grateful for the good that we find in those about us, heroism of an unusually appealing and inspiring type and, for those who like it—and who does not?—mystery and suspense. This new story begins as soon as Cattle Ranch to College closes.

ELECTRICITY

on the Farm

Electricity has transformed the drudgery of the farm into a pleasant and productive occupation.

Electricity has had a share in making it possible for one man with modern equipment to accomplish as much as a dozen men in the old days.

Electricity can be more and more useful and profitable to you as rapidly as we can show and convince you of the desirability of the new ways for it to work on the farm.

We want you to know all about our efforts to serve you and the problems we encounter. When we understand each other better we can be mutually helpful.

Marketing Honey

By George W. York.

How about marketing your honey crop? Do you know just how much it has cost you per pound to produce it? Some very unbusinesslike beekeepers seem to think if they have a few pounds of honey above what they want to use in their families they can afford almost to give it away! Does any one do that when he or she has a few extra dozens of eggs or a surplus of butter? No, of course not! Then why do that way with honey, which has a higher food value than many other things that are sold for food?

You should try to find out from the commercial beekeepers at what price they expect to retail their honey, and then help to keep up the price by asking as much, if not more, per pound for your honey than they do, for you may have only a few pounds to sell and it will soon be gone at a good price. If you don't ask a fair price you surely won't get it?

If you have extracted honey the best way to put it up for the market is in 2 1-2, 5 and 10 pound tin receptacles. Perhaps the two smaller sizes will sell the best. The two and one-half pounds should bring at least 65 cents, the five-pounds $1.15 and the 10-pounds $2.20. These prices are not too high for good table honey. There is never such a vast amount of the best grade of honey produced.

Comb honey, of course, should bring at least 30 cents a pound and possibly 35 to 40 cents in some places.

The sections or frames containing the beautiful comb honey should be carefully scraped of all bee glue or stains of any and all kinds, so that the wood frame holding the comb will be neat and clean.

All tin or glass packages of honey should be neatly labeled and also bear the instructions for reliquifying if the honey should granulate, as practically all pure extracted honey does in cold weather. But such granulating is one sign that it is pure bees' honey. However, some people prefer to eat it in the moist, granulated form, as it can be spread on bread without "running off," as it does when entirely liquid.

If the general public knew the great food value of honey they would use much more than they do. It should also be used more and more in making candies and also in the kitchen, and thus less sugar would be consumed; and the health of the people using more honey would be greatly improved.

"Eat more honey" is a favorite slogan these days in some parts of the country. It is a good one, too, especially for children. Dr. H. W. Wiley's children do not get any candy, and all the "sugar" they have is found in the fruits they eat. But they have all the honey they want. Dr. Wiley was our government chemist some years ago, and so should know the comparative values and effects of the various kinds of foods.

Control of Cabbage Lice

By A. L. LOVETT, Entomologist.

Is there any method of control for cabbage lice? B. H. M.

These insects have a sucking tube through which they obtain their food, therefore poison sprays are of no avail against them. Likewise, their rate of increase is very rapid; they have wings by which they can fly and reinfest gardens, so that frequently where one has applied control practices against them, later on you will again find a heavy infestation. The type of spray we regularly recommend for their control is known as contact spray. One of the best and easiest to apply is nicotine spray. This is the commercial nicotine, such as black leaf 40; use two tablespoonfuls; soap, one-half pound (fish oil or whale oil soap is preferred, if available); water, 12 gallons. As the name indicates, to be effective this spray must actually wet the insects, and on a commercial planting of cabbage with the leaves turned down a good deal and the pocketlike areas in which the aphis feed, to thoroughly wet them with the solution is difficult. Another material which can be prepared at home is the kerosene emulsion. This is one of the best contact sprays we have, but some care must be taken to be sure that a thorough emulsion of the material is sustained. The formula for the preparation of this is as follows: Fish oil soap, one-half pound; water, one gallon; kerosene, two gallons. Dissolve the soap in boiling water, remove from fire and add the kerosene, stirring vigorously. The solution should now be agitated until it assumes a thick creamy consistency and does not separate on cooling. This condition is most readily brought about by the use of a small bucket pump, pouring the solution through the hose and back again into the container. This emulsion so obtained is known as a stock solution. To one gallon of the stock solution add eight gallons of water. This will prove a most efficient contact spray for aphis. During the warmer portion of the year one may use a dust nicotine. The nico-dust, so-called, a commercial material now on the market, is very effective during the summer time, when temperatures are high. It is better, however, to have some of this material on hand and apply it at intervals of about every two weeks, rather than to wait until the aphis are serious on the plants and then attempt a control.

Gooseberry Maggot Control

What is an effective way to fight gooseberry maggots? C. L. A.

The following discussion of the gooseberry maggots and methods of control is taken from the O. A. C. station circular 42, "Insect Pests of Currants and Gooseberries":

Standard sprays are ineffective. A sweetened poison spray consisting of lead arsenate (2 ounces), sirup (1 quart) and water (3 gallons) is attractive to the flies and will kill them where sprayed lightly on the foliage during May while the flies are out. Due, however, to the frequent showers at that season of the year washing off the spray and the consequent necessity of frequent repetition of the application, this treatment has not proved commercially successful in tests made by the experiment station.

Taking into account the fact that for nearly 11 months of the year the insect occurs in a helpless state in the first few inches of surface soil beneath the plants; any practice that will disturb or destroy these resting forms is of value in control. Frequent stirring of the surface soil under and immediately adjacent to the bushes during late summer, fall and early spring will expose many of these pupae to adverse weather conditions, to attacks by birds, etc. In tests at the experiment station better cultural practices alone—i. e., closer and more frequent cultivation—have reduced the infestation to a negligible factor.

Poultry allowed to run in the yards just after harvest will destroy many of the pupae. Their interest should be aroused by raking the surface trash and debris from under the bushes to the center of the row. After they once discover the dainty titbits they will search out a goodly share for themselves.

Early maturing varieties are less heavily infested than are the later berries. Commercial fruit should be picked just as soon as ripe. Often the worms are so small as to escape detection and have no apparent deleterious effect on the fruit.

Removing Apple Trees

The best methods of removing trees from orchards planted too thickly will be shown at a special demonstration given by County Agent Roy Larson early in November. How thickly spaced trees should be thinned out, what varieties can be pruned back to the best advantage and other points in connection with the matter of reducing the number of trees in the older orchards, will be demonstrated by Mr. Larsen and growers who have experience in this work.

That the Jonathan apple will gradually disappear from the north central Washington district is the prediction of many growers and shippers. Already hundreds of Jonathan trees have been removed, others have been grafted over to varieties that yield well and are marketed to better advantage. The Jonathan gets into the market at the wrong time, in the opinion of those who have studied the situation closely, and will give place to other apples that can be grown and sold at a profit.

Apples in Seasou

Here is a bit of advice which is timely again, as to the right time to consume the different varieties of apples. This was compiled by O. M. Morris, head of the department of horticulture, Maud Wilson, state home demonstration leader, and E. G. Wood, extension specialist in horticulture of the State College of Washington.

October and November, Eating—Delicious, Gravenstein, Jonathan, King David, Grimes Golden, Winter Banana. Cooking—Jonathan, Grimes Golden, Gravenstein, King David.

December and January, Eating—Delicious, Spitzenburg, Jonathan, Grimes Golden, Winter Banana, White Pearmain, Stayman Winesap, Wagener, Rome Beauty, Ortley. Cooking—Jonathan, Spitzenburg, Rome, Wagener, Grimes Golden, Red Cheek, Ortley.

February, Eating—Spitzenburg, Stayman Winesap, Rome Beauty, Black Twig. Cooking—Spitzenburg, Rome, Stayman Winesap, Black Twig.

March, Eating—Winesap, Yellow Newtown, Rome Beauty, Black Twig, Arkansas Black. Cooking—Rome, Winesap, Newtown, Black Twig, Arkansas Black, Black Ben.

April, May and June, Eating—Winesap, Black Twig, Arkansas Black, Yellow Newtown. Cooking—Winesap, Newtown, Black Twig, Black Ben, Arkansas Black.

Adopting Boxed Apples

Pacific northwest fruit growers will be interested in two news items, each dated October 5, one from New York and the other from Sturgeon Bay, Wis. The New York City dispatch declares that a fruit firm on that day received the first two cars of Maryland box apples. "These are the apples that are packed in accordance with the style and grade of the northwestern box fruit, and the variety is Jonathan." The Wisconsin item states that "apple growers in this section expect to market nearly 200 cars of boxed apples. The growers for the first time are marketing their crops graded and boxed like products of Oregon and Washington."

HARDPAN A HANDICAP.

"The orchardist in sections where volcanic ash has left a hardpan deposit a foot or more below the surface, need not withhold the planting of trees," says O. M. Morris. "It is a great handicap, however. If this hardpan is a thin stratum of earth, subsoiling or blasting and immediately filling the land with a crop of alfalfa, clover or vetch will obliterate it. If, however, the hardpan is one to two feet thick it will be a very difficult task to overcome it and to grow a successful orchard on the soil. The same is true in regard to berries."

OVER A TON OF GOOSEBERRIES.

J. A. Thompson harvested 2410 pounds of fruit from 510 2-year-old gooseberry bushes on a half acre on his farm in the Dungeness valley in western Washington. The bushes were planted six feet apart each way and Mr. Thompson feels that it will be about the right distance when the plants are larger. In addition, he has seven acres of logans. The canes are trained on two single wires in the fan method. The patch is two years old.

Highland Grove Farm Offerin

at the

PACIFIC INTERNATIONAL HOLSTEIN SALE

PORTLAND, OREGON, NOVEMBER 9, 1923

The farm that developed, fitted and showed LADY AGGIE ORMS OF ROCK, the great cow that was Grand Champion at Pacific In national 1921, and has a record of almost 30,000 pounds milk 1100 pounds butter.

We also owned and fitted TILLAMOOK DAISY BUTTER KING DE KOL, grand champio Pacific International, 1922, four-year-old record 32,400 pounds milk and 1267 pounds butter, ing her Pacific coast champion producer in class and second in the world.

This farm also owned and developed the grand champion cow at the Oregon State fair, and the grand champion bull, 1923, and a large list of champions and prize animals not pra to enumerate here.

Highland Grove farm in all has bred, developed or shown seven grand champions at impo fairs and expositions of the northwest within the last two years, of which five are still own our farm.

These achievements are largely due to our herd sire, SIR BESSIE FAYNE DE KOL FC Three-fourths of our animals carry 50 per cent or more common blood with him. He has 20 daughters, and is the sire of the wonderful cow, TILLAMOOK DAISY BUTTER KING DE above referred to, and many other big producers and noted show animals. Five of his pro are at this writing touring far eastern and Mississippi valley show circuits. These animals been at the top in every show ring, having won two firsts in Wisconsin, the greatest Ho state in the Union; two firsts in Illinois, and two firsts and grand champion in Kentucky. notable winnings can be looked for.

It will be remembered that TILLAMOOK DAISY and LADY AGGIE (the latter also havi per cent of the same blood as SIR BESSIE) have been classed by Judge Moscript as two greatest show cows in America. No other two cows up to this time have the distinction of ing won grand championships at a great national exposition with the authenticated produ records these cows have, and we assert without fear of contradiction that they are the gre pair of cows of all time for combined type and production.

We are giving you an opportunity to purchase from these blood lines, as 70 per cent o offerings are close relatives of these cows, many of them blue ribbon winners at the Pacif ternational and the Oregon State fair. This is the most select offering ever made in the n west. Your great opportunity to buy foundation Holsteins combining correct type and production.

Wheat Raising in the Palouse

J. M. Martin Says He Has Found Source of Present Trouble Among Grain Farmers

Martin, was a welcome visitor at The Washington Farmer office the other day. Mr. Martin has practically sold out his wheat farming interests in the Palouse country, but his interest remains in his life work.

For more than a score of years Mr. Martin has been known as one of the best wheat farmers in the Palouse country. He took most excellent care of his summer fallow.

"Ordinarily I plowed as early as I could," said Mr. Martin. "I disked in the spring, then plowed. I harrowed as I went along and when through disking I was through harrowing. I plowed later and harrowed it down. I used to harrow as many as eight times, sometimes using the cultivator, sometimes the harrow, sometimes the weeder and sometimes the disk.

"I came in here to talk about the price fixing question. The price problem is as great as the problems of raising a crop. I was crop reporter for our township for 30 or 40 years and so was familiar with the government statistics. I have been associated with the farmers' union and the wheat growers' association. I put the second hundred dollars that was ever put in the Tri-State warehouse. Three years ago I quit and in the last two years have sold off everything.

"What are we going to do to take care of the wheat raiser? We hear a great deal about the packing trust and the sugar trust, but the greatest trust in the world is the milling trust and nobody ever opens their head about it. It and the board of trade work together—may be one and the same for all I know. At any rate, the results are just the same. They work hand in hand. We might be able to get the right price for wheat if we could get rid of either one.

"Stop and think—what does the miller get on a barrel of flour? The miller has made from 50 to 100 per cent profit in the last four years. Nobody but the miller gets the benefit. He robs it from the consumer and the producer. What took place when the government said $2 would be a good price for a bushel of wheat? The board had to stay down until the government took the price off. Take, for example, 100 men who have 100,000 bushels of wheat apiece. They are able to hold it if they can't get the right price. What do they have to do? What is advocated? Sell wheat for market price and go and buy futures. What is the effect on the market? The market is held down for six months to a year. They could hold off till everybody had an equal chance of getting a price. The board of trade won't let prices go up. It puts it wherever it wants it. What are we going to do? Put a price on wheat and get after the milling trust and board of trade. We will find the price will be different than it is now.

"Did you ever think about the milling trust? I am not like some farmers who have grown up on a little quarter section. For the last 20 years I have had a pretty wide range. How many little mills are there between here and Garfield? There are three running. I saw five standing idle and I saw the ashes of six more. Small A 1 mills are put out of existence. Others sell at less than they can grind at. The big millers squeeze them out on prices. They buy them out or they burn out. Anyhow, they are forced to quit and the milling trust makes the price of wheat and flour.

"In '93 I was back in Iowa visiting. I was surprised to see no corn bread. Price of flour there was no different from what it is here. There was not 25 cents difference on a sack. The millers can afford to ship flour back there and sell at the same price because they have such a margin. The greatest trust in the world today is the milling trust of the United States and there is never a word said against it.

"They are still trading in futures. There was a law passed, but so far they have managed to evade it. It is not in effect. No inducement now to buy futures. They are bidding a little extra for cash wheat in the east.

"The warehouse is merely a branch of the mill. The warehouses are nothing more or less than agencies of the milling company.

"The price of wheat shipped at Portland or Seattle is regulated by the foreign price. Foreign countries naturally buy where they can buy cheapest. They only buy from the United States when they can buy there cheaper than any place else. That is why the board puts the price down. Out of all wheat grown in the United States, at least three out of every four bushels is ground and eaten in the United States. That being the case, the millers have to buy at least three-fourths of this wheat. Make the millers buy independently. Then they couldn't get it unless they paid a fair price. They would still be able to sell at the same price they do now. The government allowed 25 cents a bushel for grinding the flour. For every four and one-half bushels we sell them they have received not less than $7 for a barrel of flour during the last four years and often they have sold for $9, and I would say that $8 was the average. It doesn't even take four bushels to make a barrel. They have made 100 per cent profit.

"We used to raise wheat for 50 to 60 cents a bushel. Our taxes now are 10 times what they were 12 years ago in Whitman county. We are paying there on an average of almost $1.25 an acre taxes a year. Forty-three per cent of taxes are school tax and still they are not enough to make them go right. It isn't the extra rating, but the extra price that is put on the property. I believe in taxing everything—every dollar, no matter in what it is invested. All property belongs to somebody. One dollar is not one bit better than another. Why should one dollar have a privilege over another? There should be no tax-free bonds except such cases as Liberty bonds. State or county road bonds should in most cases be taxed. Each and every dollar should bear its burden of taxation.

"I believe that $1.25 a bushel is the lowest a farmer can raise wheat, unless he raises a great big crop. It can't be grown for less than $1.25. Wilson gave the farmer the worst lick he ever got when he passed the eight-hour day law. I am a democrat, but have never voted a straight ticket. I kept an account of my wage expenses for almost 40 years. For 10 or 12 years labor cost ran from $2700 to $3300 or $4000 a year and the last year it was $7600 and there was a threshing bill on top of that. I kept six head of horses to keep the weeds down and haul wheat. I never got that team in the field all season. It I got an extra man to use the team some of the crew would leave. I couldn't get the work done for love nor money. It used to be that the hired men would put in from 10 to 12 hours a day. But how is it now? They don't get out of bed until 5:30 or 6 o'clock, start to work about 7:30. At 11:30 they are on the way to the house for lunch. At quarter to 6 they are in the barn with the team unharnessed. The weather is pretty, they have everything at hand with which to work, they have nothing in the world to do, the wheat is falling down to the ground, Russian thistles are choking it out, yet they stop at that time. They are being paid $6 a day and I have paid as high as $20 a day for combine men. I had to quit the whole business and it is the best thing I ever did.

"The labor problem is the first problem in production, as the milling trust is the first problem in marketing. It isn't, though, altogether a question of labor, but of short hours. The valuable season goes by and the farmers' profit is all gone in boarding the teams and men when at least two good hours of daylight are wasted every day. Wheat can not be grown for a dollar any more. There is an exception. Take, for an example, a Russian man with two sons and a strong wife. The wife does the housework, takes care of the garden and the cows and chickens. The whole family gets up early and works late without outside help. When they do hire help, they say: 'You get up when we get up and work as late as we do or you leave.' You can hear them up before daylight almost, and long after you have gone to bed you will hear their engines chugging. They can raise wheat for a dollar and have something left. But you can't if you hire help.

"The average farmer is not unreasonable—he only wants a fair price. He will hang on as long as he can, but he can't, if the price is less than it costs him to produce.

"Why is it that the government gets after the packing trust and the sugar trust and allows a far more dangerous trust to exist? The farmers' fences are falling down, their houses go unpainted. I have heard it said that there would be 50 per cent more wheat sowed next year than this. I woul dsay that there will not be 10 to 20 per cent as much. I only saw two decent pieces of summer fallow from here to Rathdrum. Down toward Cheney I saw hundreds of acres unplowed.

"Men who have been on farms for years and who had a good start 40 years ago are now having trouble. One of them told me last spring that it was the first time in his life that he had to mortgage his farm in order to pay expenses and taxes. The last four years have beat the life out of the farmers. There was a young fellow down in our country who had done his own work and had 235 acres of good farming land and owed nobody a dollar on it. He had some horses, his farm was well fenced, he had hot and cold water in his house—it was a swell little place. Ten

SPOKANE, WASH.

Guernsey Herds Are Dispersed

Sixty-nine head of purebred Guernsey cattle brought an average of about $330 at the two herd dispersal sales in the Yakima valley last week, those of Wallace & Fordyce of Sunnyside and H. E. Angel & Son of Mabton. The two top animals of the sales were in the Wallace & Fordyce herd, being the outstanding champion cow, Edna of Mountain View, that brought $2800 from R. W. Krobitzch of Troutmere farm, at La Honda, Cal., and the well-known grand champion herd sire, Chicona Lover Bold, that went to the same purchaser at $1315. These two high figures brought the average of the Wallace & Fordyce herd of 31 animals to about $389. The Angel & Son herd of 38 head sold for figures about the same as those in the Wallace & Fordyce herd, other than these two outstanding individuals, the Angel average being $283, with a top price of $605 for the outstanding 4-year-old cow, Khedive's Yeksa Eavdrop of Rose City. This animal was also purchased by the California breeder. She holds a record of 507.65 pounds of butterfat in class GG. Her sire was Langwater Khedive, a grandson of Imp. King of the May, and is out of a cow for which Mr. Angel paid $1320.

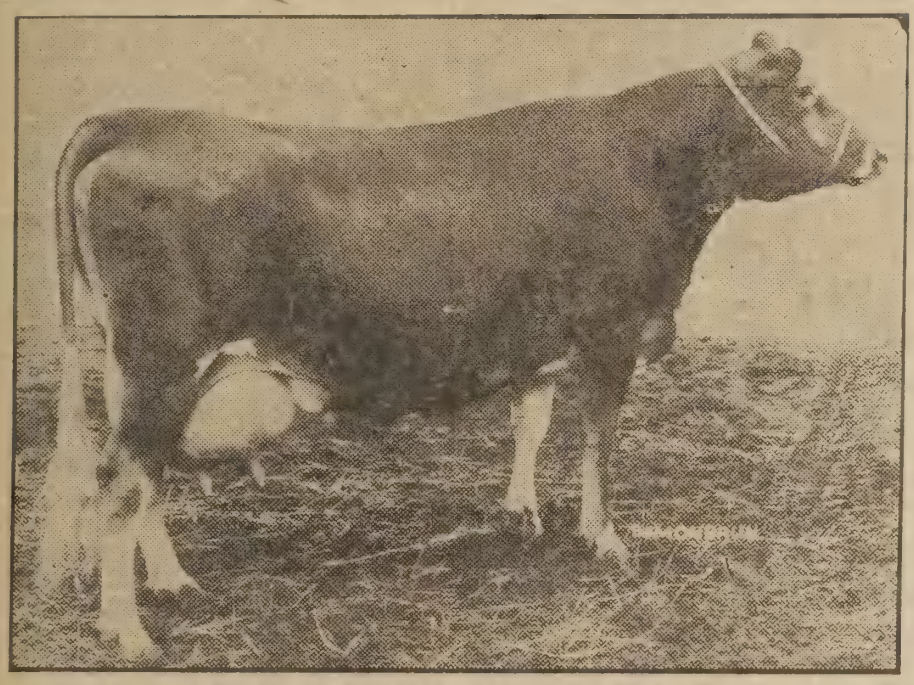
Of the 38 head sold by Angel & Son 12 were purchased by Craig L. Spencer of Seattle, owner of a farm at Grangeville, Idaho, where the cattle will be shipped. Eight were taken to La Honda, Cal.; three to Montana for the Plains Guernsey Breeders' association; three to Potlatch, Idaho, and one to Centralia. There were only 11 head that stayed in the Columbia river valley, five of these going to Martin Hansen of Walla Walla.

The Angel senior herd sire, France's May King, a great grandson of Imported King of the May on the sire's side, and a grandson of Imported Masher's Sequel on the dam's side, sold to the Plains Guernsey Breeders' association, where he will be used as one of the association bulls and moved from one block to another as his usefulness is needed.

Mr. Angel expressed himself as being well satisfied with the result of the sale, although he said that he had expected a $300 average from all animals. He gives as his reason for selling, the high cost of feed and the difficulty of getting help, with a complication of finance.

A list of the animals sold by Angel & Son, together with the names of the purchasers and the prices paid, follows:

Middledale September Morn 2d, Craig L. Spencer, Grangeville, Idaho, $215; Dairymaid of Ruby Dell, Spencer, $215; Ruby Dell Morning Star, Spencer, $180; Middle Grace Darling, R. W. Krobitzsch, La Honda, Cal., $365; Aloah of Ruby Dell, F. H. Sharkey, Yakima, $300; Ruby Dell Hambrolett, Spencer, $210; Angel's Lila May, Krobitzsch, $430; Lila May's Daisy, Sharley, $320; O. C. Butter Girl, Krobitzsch, $420; Ruby Dell Butter Queen, Krobitzsch, $300; Ruby Dell Goldie, Spencer, $290; Golden Rod of Olga, Spencer, $325; France's May King (senior herd sire), Plains Guernsey Breeders' association, Plains, Mont., $255; Golden Rod of Ruby Dell, Plains Guernsey association, $240; Ruby Dell Queen Frances, W. H. Harrison, Sunnyside, $300; Khedive's Yeksa Eavesdrop of Rose City, Krobitzsch, $605; Lura's Kate of Bonnie Brae, Krobitzsch, $300; Rosella of Pleasant Acres, Seb Henricher, Centralia, $290; Glenwood Diamond Gladys, Krotralia, $290; Glenwood Diamond Gladys, Krobitzsch, $390; Glenwood of Yakima, Spencer, $105; Imported Osceola's Creampot, Spencer, $110; Georgianna of Ruby Dell, Martin Hansen of Walla Walla, $190; Creampot's Margaret of Ruby Dell, Hansen, $165; Middledale Bernice (consigned by Harry West of Yakima), Spencer, $380; Lila May, F. M. Yackey, Outlook, $180; Hambro's Janetius, Mrs. Phillip Kays, Parker, $290; Rexetius, Spencer, $300; Ruby Dell Rexola, Hansen, $250; Alga Dunn, Plains Guernsey association, $430; Ruby Dell French Girl, Spencer, $275; Ruby Dell Rexella, Hansen, $210; Pearl of High Rock, Emil L. Boller, Potlatch, Idaho, $230; Ruby Dell Hambro Sunderland Rex, O. E. Jones, Yakima, $185; Ruby Dell Sultana, Hansen, $485; Lavina Goldine, Spencer, $160; Dame's Prospect of Ruby Dell, J. L. Balch, Idaho, $150; Ruby Dell Acord, Krobitzsch, $400; Show Girl of Ruby Dell, Boller, $320.



Edna of Mountain View, that sold for $2800.

The Second Sale.

Interest was keen and bidding spirited at the Wallace & Fordyce sale the following day, October 19. Even though it was a strictly cash sale, 15 animals were purchased by breeders of the immediate district. The two outstanding individuals, prices of which are noted above, gave exceptional zest to the bidding. Edna of Mountain View is not only a show cow of merit, but has a record of 933 pounds of butterfat in a year. Chicona Lover Bold is well known as a championship winner in many of the western shows, and on the production side has 13 A. R. daughters, while his dam has a class A record of 565 pounds of butterfat and was of such show caliber as to win grand championship at the Pacific International in 1917.

Three Wallace & Fordyce animals went to California, while the Plains Guernsey association bought five head and Spencer secured five for his Grangeville herd. There were three outside buyers who bought one animal each, who did not buy at the sale the day previous. They were W. D. Olsen of Elma, R. T. Burkey of Wenatchee and A. Patterson of Thornton. There were in all eight local buyers who took one animal each and George Lett of Granger purchased seven head.

Both Mr. Wallace and Dr. Fordyce were well satisfied with the result of the day's sale and T. F. Meyers of Outlook received all he expected from six animals he consigned to the sale.

This sale was the result of a termination of the partnership between Mr. Wallace and Dr. Fordyce.

Following is a list of the animals, buyers and prices:

Aloha Darling, Plains Guernsey association, $335; Catherine's Dimpled Queen, Plains Guernsey association, Plains, Mont., $320; Anchor Lily of Outlook, George Lett, Granger, $325; Edna of Mountain View, R. W. Krobitzsch of Troutmere farm, at La Honda, Cal., $2800; Chicona Lover Bold, Krobitzsch, $1315; Anchor Rose of Fawndale, Krobitzsch, $705; Fawndale Prima Donna, Martin Hansen, Walla Walla, $500; Molly of Lavaland, W. D. Olsan, Elma, $500; Filipina of Groton Farms, George Lett, $315; Fawndale Lover Bold, George Lett, $130; Jean of Fawndale, George Lett, $305; Glenwood Jean of Clover Hill, Plains Guernsey association, $280; Fawndale Dixon, R. T. Burkey, Wenatchee, $230; Dairy Maid of Muskego, Craig L. Spencer, Grangeville, Idaho, $300; Matilda of Autrim, George Lett, $385; Midget of Elmwood, George Lett, $330; Ella Velma, J. C. Thrush, Granger, $203; Fawndale Matador, A. Patterson, Thornton, $165; Kate of Fawndale, Martin Hansen, $300; Pollyanna of Springcrest, Plains Guernsey association, $240; Dot of Fawndale, Spencer, $485; Glenwood Dewdrop of Oak Knoll, George Lett, $300; Branford Warrier's Coamo, Dr. J. F. Scott, Yakima, $305; Coamo's Lover Bold, Spencer, $205; Twinkle's Daughter, Spencer, $225; Princess Twinkle, Spencer, $230; Fawndale Comet, W. J. Knight, Outlook, $160; Dimple of Fawndale, Hansen, $205; Hopeful's Enchantress of Muskego, Plains Guernsey association, $125; Pride of Outlook, John Golob, Sunnyside, $75; Lily's Fair Lady, J. L. Balch, Potlatch, Idaho, $200; Thallia Princess, Ray W. Spiers, Outlook, $250; Heifer calf out of Midget of Elmwood, Hansen, $120; Adventurre's Lily, Spiers, $250; Serenader, Mrs. Roy Bush, Outlook, $95; Fawndale's Bold Anchor, Thompson & Pickering, Yakima, $75; Bull calf out of Anchor Lily of Outlook, $60.

Both sales were conducted by George Gue of Auburn, while E. D. Hobson of Sunnyside worked the ring.

Raising Wheat in Palouse

(Continued from preceding page.)

or 12 years before he didn't have anything. He married a nice, smart little woman and together they had built up the place. They had chickens, sheep, cows and horses and were bound to get up. If he had raised just wheat he wouldn't be anywhere. He came to me and wanted to buy my place. I felt like telling him he had better stay where he was. He didn't know what he was biting off. He will have to hire too many men. If we could just do something to bring wheat up to $1.25 or better he might do something. This fellow is young and ambitious and strong, and he can make it if anybody can.

"The family farm is the one that succeeds. We should have not many big farms, but farms of a quarter or half section. A man who owns a farm of 5000 or 7000 acres in Whitman county came to me to manage his farm at commencement of harvest. I almost accepted the place, but then I thought that is just what I had jumped out of. I told him I would rather not do it. The family farm is the one that is going to make it.

Russian thistle is a big problem. If you don't get your wheat harvested when you ought to, the weed is going to grow up and choke out the wheat. Put it in sacks with the wheat, and it will rot the sacks. There is not much morning glory in that country. I fought it like I would rattlesnakes. Many times on a day when the sun was fiery hot I would haul straw and spread over it and then set fire to the straw.

"Unless things change soon there will not be bread enough to feed us. The farmers can not afford to raise wheat any more. You can not make me believe that the soil value is not run down. We couldn't raise the amount of wheat we used to if we tried. If you do away with that board of trade and with the milling trust, the problem is solved."

Are Testing Dairy Cattle

Many of the dairy cattle in Grays Harbor county have been tested for tuberculosis and so far close to 5000 head have been examined. Dr. Ralph A. Parson of the United States department of agriculture is doing the work and hopes to have 100 per cent of the cattle tested before winter. Some communities have been practically cleaned up. In the Alder Grove, Fairview and Wynooche Valley communities all the herds have been tested but four, and arrangements have been made to test these. Although some towns have regulations prohibiting the sale of raw milk except from tuberculin tested cows, it is not the rule in all towns. This indicates that there has been and, probably is at present milk from tubercular cows being sold to be fed to babies. The majority of farmers are interested not merely from the human health side, but from the health of the herd standpoint.

Better Tires at Better Prices

A glance at the above simple chart tells you how extremely fair present Goodyear Tire prices are.

Below 1920 prices by 37%; below 1914 prices—the first European war year—by fully 30%.

And these attractive prices are accompanied by a higher quality in Goodyear Tires today than ever before.

Goodyear Tires are made of top-grade, long-staple, high-tensile-strength cotton. They have the powerfully tractive and longer-wearing All-Weather Tread.

For years, as the chart shows, Goodyear Tires have represented extreme value. Today that value offers you the best tire bargain to be had. Now is a good time to buy Goodyear Tires.

Made in all sizes for Passenger Cars and Trucks

GOODYEAR

How to Cure Your Meat

The following is an answer to a subscriber who desired the government recipe for curing meat:

Meat must be properly and thoroughly cooled to insure good keeping qualities when cured. If salted before the animal heat is out, the shrinkage of the muscles causes the retention of injurious gases, giving an offensive odor to meat. Neither should meat be frozen when salted, as the action of the frost will prevent the proper penetration of the salt and uneven curing will result. It is important, also, that curing should begin as soon as the meat is cooled and while it is still fresh. Tainted meat may be cured so that it will keep, but nothing in the line of preservatives can bring back the natural flavor when it is once lost. The safest rule to follow is to salt meat as soon as the animal heat is out, and before it freezes or starts to decay. Ordinarily 24 hours to 36 hours after slaughtering will allow sufficient time for cooling.

Vessels for Curing.

A clean hardwood barrel, is a suitable vessel in which to cure meat. A barrel made for the purpose is best, but where it can not be had a molasses or sirup barrel will answer.

A kerosene barrel that has been burned out and used for water barrel for some time is often used for a meat barrel. The important point is to have it clean and tight enough to prevent leakage. A large stone jar is the best vessel that can be had. One holding 25 to 30 gallons is expensive, however, it must be carefully handled to prevent breakage. The jar is more easily cleaned than a barrel, and is in every way preferable if the first cost can be afforded. A barrel or jar that has once held meat may be used again and again unless meat has spoiled in it. If used repeatedly it will be necessary to scald it out thoroughly each time before packing fresh meat in it.

Preservatives.

Salt and sugar or molasses are the preservatives most commonly used, and are considered the only ones necessary for perfect curing and the finest quality of cured meats. Borax, boracic acid, formalin, salicylic acid, and other chemicals are sometimes used in preserving meats, but they are considered by so many authorities to be harmful to the health of the consumer that their use should be avoided.

Salt is an astringent, and when applied alone to meat renders it very hard and dry. Its action is first to draw out the meat juices. In a few days it will contract and harden the muscle fibers, thus shrinking the volume of meat. Saltpeter is used to preserve the natural color of the flesh or give a reddish color. It is more astringent than salt. Sugar is not an astringent and its presence in the pickle softens the muscles and fibers and improves the flavor of the meat. Saleratus (baking soda) is used in small quantities to sweeten the brine. In warm weather a small quantity will aid in preventing the brine from spoiling.

In Brine and Dry Curing.

Brine-cured meats are the best for farm use, for the reason that a suitable place for dry-curing is not usually obtainable. It is also less trouble to pack the meat in a barrel and pour on a brine than to go over it three or four times to rub in the salt. The brining method also gives better protection from insects and vermin. Trouble is sometimes experienced in keeping brine, but if pure water is used and directions followed in making the brine there should be no difficulty in keeping it for a reasonable length of time. During warm weather brine should be closely watched. It becomes "ropy," like sirup, it should be boiled or new brine made. A cool, moist cellar is the best place for brine curing. Dry curing may be done successfully in a cellar also, though even more moisture is needed to effect a thorough cure. The cellar should be dark and tight enough to prevent flies and vermin from damaging the meat.

Corned Beef.

The pieces commonly used for corning are the plate, rump, cross ribs and brisket, or in other words the cheapest cuts of meat. The loin, ribs, and other fancy cuts are more often used fresh, and since there is more or less waste of nutrients in corning, this is well. The pieces for corning should be cut into convenient-sized joints, say 5 or 6 inches square. It should be the aim to cut them all about the same thickness so that they will make an even layer in the barrel.

Meat from fat animals makes choicer corned meat than that from poor animals. When the meat is thoroughly cooled it should be corned as soon as possible, as any decay in the meat is likely to spoil the brine during the corning process. Under no circumstances should the meat be brined while it is frozen. Weigh out the meat and allow 8 pounds of salt to each 100 pounds; sprinkle a layer of salt one-quarter of an inch in depth over the bottom of the barrel; pack in as closely as possible the cuts of meat, making a layer 5 or 6 inches in thickness; then put on a layer of salt, following that with another layer of meat; repeat until the meat and salt have all been packed in the barrel, care being used to reserve salt enough for a good layer on the top. After the package has stood over night add, for every 100 pounds of meat, 4 pounds of sugar, 2 ounces of baking soda, and 4 ounces of saltpeter, dissolved in a gallon of tepid water. Three gallons more of water should be sufficient to cover this quantity. In case more or less than 100 pounds of meat is to be corned, make the brine in the proportion given. A loose board cover weighted down with a heavy stone or piece of iron, should be put on the meat to keep it all down under the brine. In case any should project, rust would start and the brine would spoil in a short time.

It is not necessary to boil the brine except in warm weather. If the meat has been corned during the winter and must be kept into the summer season, it would be well to watch the brine closely during the spring, as it is more likely to spoil at that time than at any other season. If the brine appears to be ropy or does not drip freely from the finger when emersed and lifted, it should be turned off and new brine added, after carefully washing the meat. The sugar or molasses in the brine has a tendency to ferment, and, unless the brine is kept in a cool place, there is sometimes trouble from this source. The meat should be kept in the brine 28 to 40 days to secure thorough corning.

The Day of Small Things

(Continued from page five.)

sibilities, probably the most valuable food plant in the world.

"It is like a romance to read that 'the first crop of the wheat that was destined within a dozen years to overtax the mightiest elevators in the land was stored away in the winter of 1904-5 in a paper packet no larger than an envelope.

"Thus from the wild wheat of Mount Hermon there evolved one of the most important food plants in the world. * * * It is now the dominant spring wheat in Canada and the United States, and it has enormously increased the real wealth of the world in the last 10 years."

It is fascinating to speculate on what would be the price of wheat today if western Canada were out of the world markets, or if there, were offering the small production that Canada could have grown before hardy and quick-growing varieties were developed that are suited to that northern climate.

World production of wheat at this time is substantially in the same quantity as before the war. Russia has dropped out for the time being, but western Canada has come in, and consequently there is about the same supply of export wheat that was available before the war.

Back in 1915, when the World war was young, Russia produced 18 per cent of the reported wheat yield of the world, and exported the bulk of that. But Russia ceased to be a wheat-exporting country several years ago and, in the judgment of authorities, will not soon be exporting on a considerable scale. It is selling some wheat to Germany this year, but the quantity is small, and Russia is parting with that, not because her own people do not want it, but because they have urgent need of other things that Germany can supply them.

Still, it seems certain that Russia will come back as a large exporter of wheat. When that time comes, and Canadian production is greater still, what will be the lot of the wheat growers of the Pacific northwest?

He would be a rash prophet who would make a sure prediction where so many unknowable factors enter in. Twenty years ago James J. Hill, who had studied wheat crops and markets for all his adult life, thought it certain that the United States was approaching a wheat production that would meet its own needs and leave nothing to export beyond the seas. But even the astute James J. Hill missed his guess and missed it widely. He could not foresee the speeding up of production by the forces of the war, nor the enormous increase of the Canadian crop, nor the falling off in per capita consumption in the United States.

Still it seems probable, unless the unexpected shall arise, that 10 or 20 years from now wheat growing will be waning in the Pacific northwest. Before that time our growers may be driven to other crops.

The possibility is not to be overlooked, however, that ways may be found by American inventive genius and resourcefulness still further to cheapen production.

A WEST SIDE CHAMPION.

Herewith is a picture of Norlum Inka Vale Wayne, the grand champion Holstein heifer at the Skagit county fair at Burlington in August. She was exhibited by the state hospital at Sedro-Woolley, being a member of the excellent Holstein herd being kept in that institution for the production of dairy products for the use of the state's wards there.

DO NOT FEED POOR HAY.

Hay is plentiful, so feed your cows good hay. Poor hay with coarse stems is worth more for bedding than for feed.

Many Like Bacon Type of Hog

Wherever two or three hog men are gathered together, there one is able to start a debate at the drop of the hat, the question being, Resolved: That the bacon hog is (or is not) superior to the lardy type. Usually these debates end with each side to the argument unconvinced of the merit of the opposing argument. Nevertheless, we now and then find an excellent herd of the bacon type hog, usually in the northwest, represented by the Tamworth. One of the outstanding Tamworth herds in the northwest is that of I. J. Oder of the Yakima valley. The picture herewith shows two of the pize-winning sows on a recent fair circuit.
